For a nation that claims above all to be efficient in war, the whole record is disastrous. It has another aspect. As the French official record says: "The Germanic race must be very sure of itself, or very certain of the shortness of men's memories, not to fear vengeance." And in the meantime, if there is not vengeance, there is indignant contempt—the contempt of mankind for a performance so clumsy, so brutal, and so stupid that there is hardly a breed of lower animals in whose racial history one could find its equal.

# THE BATTLE CRY OF FREEDOM

A nation-wide campaign conducted weekly by The Independent as the official publication of the Committee on Patriotism Through Education, of the National Security League. To teach American ideals in the schools, colleges, homes, offices and workshops of the nation

## THE HERITAGE OF FREEDOM

BY ROBERT McNUTT McELROY, Ph. D.

**V**OLTAIRE once said: "The art of government is to make two-thirds of a nation pay all it possibly can pay for the benefit of the other third." Had we inherited that ideal we should have no just ground for resenting German aggressions upon the rights of weaker states. But that is a theory which, in nations with modern governments, perished long ago, slain by the declaration, "All men are created equal."

Our heritage has nothing in common with the European doctrine of special privilege, or the divine right of power, or the superiority of class over class. We have been taught by Washington, Jefferson, Jackson and Lincoln to think always of the many, not of the few; our inheritance belongs not to the elect, but to all, whether we speak in terms of men or of nations. Voltaire expressed the theory of a France that is no more; since our heritage of freedom is now hers also, and our torch-bearing statue of Liberty is her eloquent testimony to the belief that this liberty is destined to enlighten the world.

**V**OLTAIRE'S friend, Frederick II of Prussia, miscalled by a conspiracy of history "the Great," voiced the same heresy when he declared, "there is only one person in the kingdom, that is myself"; and even today the Prussianized German Empire, still fettered by the creed of privilege and divine right of kings, hears the same theory from the lips of its Kaiser, "Looking upon myself as the instrument of the Lord, without regard to the opinions and intentions of the day, I go my way."

*This campaign in The Independent is endorsed by the United States Commissioner of Education, the Commissioners of Public Instruction of forty-seven states, the Governors of many states and the Presidents of leading colleges and universities.*

America has many citizens of Teutonic stock; but, if they are real Americans, they can give no assent to this theory of government, which is a direct contradiction of the doctrine of personal liberty, upon which this republic was built.

**A**T some period in the history of each race from which our race is formed sentiments like these have been uttered by men deemed entitled to speak with the voice of the nation. The immigration which peopled our shores was a protest against them all. Our ancestors, when they landed in America, left behind them the theory of the divine right of kings and classes, to link their futures with the divine rights of men and of nations. Our loyalty belongs to principles, not to races; to ideas, not to persons. We follow ideals rather than idols. Our heritage of freedom, the sign of our common brotherhood as Americans, whatever our race, is a heritage of abstract conceptions, spiritual beliefs, and theories of right and justice, to which as Americans we are bound to offer an allegiance as devoted and constant as that which our ancestors, in more primitive days, gave to sovereigns of flesh and blood. President Wilson thus phrases it: "The greatest forces in the world, and the only permanent forces, are moral forces." And he adds, as the corner stone of our national philosophy, "The only thing that will hold the world steady is . . . (the) silent, insistent, all-powerful opinion of mankind." Public opinion as the basis of government is part of our heritage of freedom. "Governments derive their just powers from the consent of the governed," says the Declaration of Independence; and the war of the world is now reading this lesson, written for individuals, into the relations of nations.

Our liberty-loving ancestors, the men of many races who made America safe for democracy, are equally the political ancestors of all self-governing peoples throughout the world. The Revolution which they fought and won was not a

local conflict, but a war for the preservation of representative government in the world. In 1775 this idea was practically dead in England and upon the continent. Victory in America restored it to life, even as victory for the Allies will one day restore it to Germany, the land of its birth. But this coming victory will do more. It will make us the spiritual ancestors of many nations, leagued together to protect the Rights of Nations, as the Thirteen American Colonies in the Revolution were leagued together to protect the Rights of Man. As that war gave to this nation a Bill of Rights, embodied in the first ten amendments to the Constitution, so victory in the present war will give to the family of nations a Bill of Rights, insuring the safety of each. The analogy is clear. Our Revolutionary fathers fought to secure democracy among individuals, to assure equality of rights through government by representation. We fight to secure democracy among nations.

**C**ONTRAST these two statements: "The essential principle of peace is the actual equality of nations, in all matters of right and privilege," said President Wilson, in defining our reasons for entering the war. "The triumph of the greater Germany which some day must dominate all Europe," said the Kaiser, "is the single end for which we are fighting."

The heritage of Freedom and the heritage of Violence. Between these there can be but one choice for any American, whatever blood runs in his veins: for an American does not mean a person of [Continued on page 388]

# CAN GERMANY REVOLT?

BY COUNTESS ALIDA VON KROCKOW

WHEN a New York Socialist asked Dr. Karl Liebknecht whether there would be a revolution in Germany, he answered, "Nein. The German people have been made like sheep. Sheep don't revolt."

But that was two years ago. What would he say now? And what may all radicals be thinking now, in view of the fact that great strikes have occurred and multitudes of workers given proof of a will to rebel, tho only in a conventional way?

The leaders who instigated the movement must be experiencing a sense of elation. That the strikes could actually be successful they have not of course expected. Strikes, for one thing, can succeed only when backed by a fund of money for supplying the men with food while out of employment. And the greater portion of their Trade Union funds were lent to the Government in the early period of patriotic enthusiasm for the war. So the Government has the custody of their capital. And the Government has also the food. Even if adequate new funds should be collected, bread could not be obtained an hour longer than the authorities willed.

No conjunction in history has presented such fatal obstacles to strikes as this era of bread cards and government controlled markets. An order against issuing, or honoring, cards, and strikers would instantly stand face to face with certain starvation. But would the German Government dare to draw down upon its head the obloquy of starving its own subjects? Or did the organizers of the strikes hope that in case it should dare—and there exists ground for such a hope, seeing how Prussia has defied the moral sense of civilization in other matters—in case it should dare, I say, did the leaders hope the strikers would turn into rioters? Out of indignation and desperation, would the workingmen become furious?

Was this a possible contingency in the minds of the leaders? Who knows! I think probably not. And for the reason that, after all, the strikers composed but a moiety of the whole number of workers. And that moiety was unarmed, totally without weapons. Guns, rifles and ammunition are all in the hands of the military and police. A few machine guns, stationed at street crossings, could down a multitude. And no fresh mobs could be counted on to take the place of the killed. The people are not yet desperate enough. The millions of the Kleinbürger and middle classes suffer, yes, but they still cherish faith in the Government and its power to win the war. And just as long as there is hope there will be patience.

Those err who suppose that conservative Germans can change easily into radicals. Nor must anybody base his calculation of the possible number of radicals in the empire on the oft-quoted four million of Social-Democratic votes cast at the last Reichstag election, as publicists encourage us to do. The votes are there, yes, it is true; but not the democratic hearts. Men will cast ballots for the Social-Democrats in Germany simply because it is an easy way of hitting back at the authorities. All sorts of men. The officials being amenable only to tribunals of their own, and these tribunals observing a persistent policy of taking the part of the Government's employees against citizen-complainants, complainants drop the effort to get redress from the law. Such efforts are fraught only with vexation. The disgruntled resort instead to the polls. They vote there against the Government, which is to say, they vote with the Social-Democrats. But one should remember that sore heads are apt to heal. The same burgher who voted once with the "enemies of the state" would in this crisis look on perhaps and see those enemies slain with keen approval.

Take an example. A banker lived on the first floor of the house of the Dorotheastrasse in which a friend of mine occupied the second floor. One morning I was mounting the stone steps of the winding staircase when the echoes of loud voices came ricocheting down along the enclosing walls. Abruptly a police commissioner passed down and the volley of wrathful ejaculations being hurled after him was striking me. A turn brought me in the next instant face to face with the Herr Bankier. He stood before his open door on the landing place and was so beside himself that, on seeing me, he switched off into explaining that the police had served a

notice on him tho they well knew it was not he who had failed in his duty to provide lids for his garbage cans, but thieves who had removed them. And he wound up by swearing he meant to go and vote the Social-Democratic ticket.

"He really may," explained my friend in horrified concern. "His temper knows absolutely no bounds." The same year in the country we received the unannounced visit of a military officer, who made a reference to Socialism as if it were a current phrase. "I came down," he said, "t isolate myself for a while. It has been my observation that the best thing a man can do while smarting from a disappointment about promotion is to retire where he can hold his tongue. Let him fall to discussing the circumstances with old comrades and he is soon a Socialist. So I'm putting my theory into practise. They 'phoned me from the department this morning that my major-generalship must go by the board. One of the royal Saxon princes wants the cadre. The same damned old story! We serve twenty-five, thirty, forty years up to a post, then have to make way for some royal stripling—but fetch the devil, if I'm not doing the very thing I came away to prevent myself from doing! I am growling like a wounded bear. Where is a Lafoucaux, cousin? Let's go hunting. I must do some shooting or I'll burst!"

When voters of the middle and upper classes used the ticket of the Socialists wrathfully as a dumping-box for their bad humor, they cherished no real desire or any real expectation of the box ever becoming Pandoran, ready to erupt ill, likely to cripple the Government. They wanted only to annoy the Government. And even that desire has been suspended since the war, and suspended it will remain so long as the Government needs strength for prosecuting the war. Only when the Government is beaten, with the army, on which for generations all their ambitious hopes have been based, stricken to the ground, will their grudges and grouches, their own losses and sufferings, be allowed to erupt again. Bismarck in power, you remember, was borne with by the people as a whole despite all his tyranny. But Bismarck abased, and unanimously press and people fell to execrating him. Let the idolized army be undone and a psychological reaction will take place. The whole people will rise. Burghers will join the proletarians and strikes will develop into revolutions. The harsh manner in which the strikes were put down may prove those strikes to be for Kaiserdom what "1905" was for Czardom.

## "I. H. S."

BY CHARLES H. CRANDALL

Borne in the tender arms of faithful friends,  
Back from the trenches where he whirled and fell,  
It seems to him an angel o'er him bends,  
After the fading of the battle's hell.

And gentle hands have washed the boyish face,  
So white, as now he whispers in a trance;  
His name, his home, that far-off dwelling place,  
And the last happy words: "I die—for France."

"And did it have to be?" A mother sighs  
Over the ashes that they say was he.  
O could she see the angel's tender eyes  
As he inscribes: "*He died for liberty!*"

"And did it have to be?" A woman said,  
In dark despair beneath a bloody tree,  
Amid Judea's hills, when all seemed dead,  
The angel wrote: "*He died to make men free.*"

# UNDER FIRE

"It took will power to travel toward Boche land then"

BY IRVING BACHELLER

ON my way to a busy part of the battle line I saw a little peasant lad standing erect and alone by the roadside. He was about five years of age. His slim, straight figure and beautiful face caught my eye and I asked the chauffeur to stop. So we pulled up to the curb near him. He did not observe us, for a battalion of infantry was coming near and his eyes were on its Captain riding in front of the line. The Captain saw him standing there alone and saluted with a smile. The little lad returned the salute—not lightly but with a dignified face and a perfectly correct flourish of the right hand. Then he stood erect as a general reviewing a brigade and looking thoughtfully at the soldiers. He seemed to be making acknowledgment for the tender heart of childhood. Considering that the war is being fought for those unborn it was an impressive picture.

One who talks with Tommy might think that he has no such serious view of the matter. He will tell you that this 'ere fightin' game is a bloody bore and a nuisance; that he'd like to get a scratch an' go back to blighty. Sometimes he kicks a football ahead of him up to the German trenches and stops to jab his bayonet into a Boche. He jokes under fire. An officer tells me of hearing one say when the bullets of a sniper were zipping near them: "If that bloody 'Un don't watch it 'e'll be 'urtin some one."

All this is the veriest irony, a kind of reaction from the immense seriousness that is underneath it. He volunteers for the most desperate adventures and kicks if he doesn't get what he calls "is chance."

The road on which we travel this bright morning is lined with Tommies. When we get within a few miles of the front the country road is about as crowded as Fifth avenue at three o'clock on a bright afternoon. A gentleman riding beside me remarked: "It seems that all the races of the earth are here marching up to the end of the world."

For many that little strip of No Man's Land is indeed the end of the

Mr. Bacheller, the author of "Eben Holden," "Dri and I" and "Keeping Up With Lizzie," has just returned to this country from the Western Front, where he was accorded unusual privileges as the guest of the British Government. Mr. Bacheller's previous articles for *The Independent* written from the firing line were published January 19, January 26 and February 16

world, altho I take it that he was thinking of the boundary of civilization.

Here in the road are loaded lorries, Red Cross ambulances, long battalions of infantry, batteries of artillery; traffic officers, Highlanders in kilts with pipers playing, Englishmen, Irishmen, Egyptians, East Indians, Australians, Canadians, Portuguese, Chinese workers, Algerians, and Ford cars which might, I suppose, be called Yankees. On either side of the road is a wide flung, temporary city of tents, huts and hut-

ments—the latter rudely made of sheets of rusty, galvanized iron laid over a frame such as I have often quickly made with an ax in the Adirondacks; long lines of horses resting or feeding, some under canvas shelters, and hundreds of lorries and transport wagons parked near them.

Such roughly is the moving, thrilling picture that one sees on his way to the front. There were little touches of gaiety here and there in my foreground. One regiment of Highlanders was whistling "The Bonnets of Bonnie Dundee"; a regiment of English were singing "A Long, Long Trial" and "O Take Me Back to Blighty."

We came by and by to a station in the edge of a ruined village just back of an active sector of the line. There was heavy firing near by. A sergeant stopped us. No cars were allowed nearer the front, so we drew into a street just around the corner and stopped in the shade of some brick buildings, standing, altho pierced with shells. There in an open doorway were two French women and a young lad. It is unusual to see women so near the firing line, and I asked a Tommy who stood near how they happened to be there.

"It's their 'ome, sir," said he. "The rich people they gits out, ye know, when the Boches begins to shoot up the 'ouses, but there is some as can't leave their 'omes, sir. They've got nothing else, it would seem, sir—no money an' no friends, sir—when their 'omes fall it's like the end o' the world, sir. It is, indeed."

He told me that a Boche plane had been over them that morning and that the day before some big shells had fallen near.

We had our luncheon in a near building—probably a freight shed. A number of live Mills bombs lay in a corner—hellmakers not needed by the British in their hand to hand fight with the Boches for the possession of this shot-up village. We were glad of its shade, for the sun was warm.

Having finished with our sandwiches and Sauterne, we turned into the paved road and started [Continued on page 382]

## COME INTO THE GARDEN

BY RUTH DEAN

THE final test to which any of the kinds of planting must be put, is that of appropriateness. The object of each especial planting must be considered, the purpose for which it is planted, or the atmosphere it is designed to produce, and those shrubs, trees and flowers used which will contribute to this effect.

Types of planting are just as definitely distinct as the various types of human beings, with personalities as different, and they must be arranged with the same care one expends in choosing guests at a dinner party, if the effect is to be harmonious and satisfying.

Foundation planting, border planting, the planting along drives and walks, screen planting, specimen planting, and miscellaneous flower planting—all of these are worth discussing separately, because very often one of these kinds, or a combination of two of them, constitutes all the gardening which is done about a place.

Foundation planting, or the planting about the base of buildings, should have for its purpose not masking the foundations, but making the house look as if it fitted comfortably into its general surroundings.

*The first two are advisable forms in which to shear a hedge, the third inadvisable*

A judicious amount of planting here and there about a house—at the corners or in angles, with something tall to carry the green line up where there are no windows, and lower growing things where they are—will take the raw new look away from a house and tie it down adequately to the lawn's green carpet.

The first requirement for the right sort of foundation planting is appropriateness. All other requirements, namely, strength, permanence and proper skill, are included in this one term.

Probably the most common of the inappropriate sort of foundation planting is that which appears to consist of one each of all the different kinds of evergreens contained in numerous catalogs.

THE chief quality of our evergreens—known for their popularity—the quality which endears them to most people—is their evergreenness, and indeed their color in the winter landscape is very desirable, but other colors than green contribute cheer to winter's dullness and shrubs with colored berries and branches may be combined with the evergreens into a much more pleasing and natural-looking planting than one of evergreens alone. This is true of rhododendrons as well as of conifers, for a house which rises up out of a heavy somber bank of broad-leaved evergreens fits as poorly into the landscape as one whose base is concealed by the close ranks of little conifers.

Some of the berried shrubs which add to the agreeable appearance of a foundation planting, as much by their graceful habit of branching as by their colored fruits, are the barberries—*Thunbergii* and *vulgaris*; high bush cranberry; members

*The very crowdedness of things is not without its charm—garden of M. Anna Embury H., architect, at Englewood, New Jersey*

A garden with an open center. Grounds of Mr. Jonathan Godfrey, at Bridgeport, Connecticut, Marian C. Coffin, landscape architect

of the viburnum family: *dentatum* or arrow-wood, *Carlesii*; the honeysuckles, Indian currant and snowberry, and the red stemmed dogwoods. Most of these shrubs have attractive flowers as well as berries, and thus provide at the same time for the summer and winter appearance of the base planting.

A few shrubs interesting chiefly for their summer dress do not come amiss in any group near the house, and some of them look especially well with the dark foliage of evergreens: lilacs, white and purple; deutzia, pink weigelia, are all good stand-bys which improve by their presence any planting of evergreens.

Another danger to be avoided in connection with evergreens near the house is the use of forest trees. In most cases, either eagerness for a quick effect or ignorance of the real character of the trees is responsible for their presence close to the house. They belong out where they have room to stretch and grow into the dignified trees Nature meant them to be.

Some of the smaller, less-spreading trees, such as cedars, arbor-vitæ, may be used against the house if they are planted where they will not come in the way of windows.

Quite at the opposite end of the scale from forest trees are flowers as a foundation planting, and for a correspondingly opposite reason they are inappropriate. I refer, as in the case of evergreens, to flowers used alone. Some of the stronger growing sorts, planted in connection with shrubs or vines, are both pleasing and appropriate; but the border of pinks and pansies or cannas and scarlet sage which very often forms the sole decoration around the base of a big house is too obvious a violation of the requirements of good foundation planting not to be censured.

Flowers alone lack strength and that feeling of permanence which good base planting should have, and, moreover, they are out of scale with the size of the house. They need shrubs or vines as a background to make them count as

a mass rather than as individuals, and to leave something growing in their stead when they die down at the end of the season.

BY the term border planting I mean combination of shrubs, or shrubs and trees, such as one finds planted along a fence, substituted for a fence at the edge of a piece of property, around a garden, or at the end of the lawn. These borders divide themselves into two classes: naturalistic or woodland borders, and *gardenesque* or suburban. They are two very different types, and a sharp line should be drawn between them.

The first sort of planting is made up of native trees and shrubs—those which grow naturally along meadow hedgerows or in woodland borders: this kind of border

should be used away from the house and the cultivated garden, in places where a transition is to be effected between the wild and the cultivated, or where the spirit of native things is to be introduced or preserved.

This bigger, freer sort of planting should be founded on the particular kind of landscape in which it occurs, and should follow Nature as closely as possible. Discard the bad characteristics of your especial piece of property, pick out its good features, and emphasize them, if you wish your garden different from your neighbor's, with a quality of its own.

If you have a stream on your place plant the borders near it with those shrubs and trees which grow in the neighborhood of water: alder, red-stemmed dogwood, the lacy, yellow-flowered spice bush, willows,

birches. If your border goes up hill, plant in it the shrubs which do not mind burning in the sun of a long hot July afternoon—sumach, wild roses, hawthorn, crabapple, sassafras, bayberry, red bud and witch hazel. But above all things, in planting such a border as this, keep out the petty *gardenesque* feeling—one weigelia will ruin the character of a whole group of field plants; save the nursery shrubs for the flower garden and the planting near the house.

The converse of this warning is not true—any number of native shrubs and trees can be introduced into a border of lilacs and spireas and altheas, without hurting it in the least: but one shrub of this tamed company is enough to dispel the illusion of an entire naturalistic planting.

These principles are true of the elements of planting along drives and walks. The form which the planting should take depends upon the form of the drive or walk.

The avenue type of planting, that is straight rows of things, should be confined to walks or drives which are straight; irregular lines demand irregular planting—both as to height and breadth—and a drive which twists and curves [Continued on page 373]

A curving path well planted. Garden of Mr. Edward E. Sprague at Flushing, Long Island, Marian C. Coffin, landscape architect

*The Lily Lehman is a matchless lily in both name and form; it is pure glistening white*

NO flower appeals more to all interested in gardens than the gladiolus, and its increasing popularity is clear evidence of the ease of culture which insures a wealth of beauty and enjoyment with a minimum of expense. There are perhaps no flowers which have been so developed in a short time thru such radical improvement. This development has been international, for England, Holland, France and America have been most influential in bringing the type of the modern gladiolus to its present state of perfection.

In the selection of varieties for individual tastes a careful study of catalogs ought to satisfy all demands. The range of colors is endless, the combinations countless. One needs but to go to nature for suggestions in order to produce the same effects by selections for the gladiolus planting. In almost every garden we find the beautiful soft pink of Panama and America, and Niagara, a maize yellow of exotic beauty, and one feels a sense of pride in remembering that these are American productions, as are also Dawn, the incomparable coral pink and Mrs. Frank Pendleton, the dazzling carmine-throated blush pink. Daybreak is a charming pink of such fine form and texture as to be always a favorite wherever grown. Halley the gladiolus of good cheer, has all of the gladiolus charms, in abundance. A glowing salmon pink, graceful wide open flowers and within the financial possibilities of every garden enthusiast. In whites, Lily Lehman, Glory of Holland and Europa are the best for purity and form, while Peace and Augusta are invaluable for their beauty and general utility. Yellows are always in great demand, a demand which is correspondingly hard to satisfy. Large flowered yellows are wanted and nature does not give them in abundance. Golden Measure—wonderful but prohibitive in price—Schwaben, Golden King, Oriole, Sunrise and Sunset are the best, but the new Primulinus Hybrids are now satisfying the most discriminating tastes. The exquisite beauty of these gladiolus butterflies is difficult to describe. In form and color, nothing equals them in the Floral Kingdom. Smaller than the other types of gladioli, the daintiness of form and arrangement on the graceful spikes adds to their decorative value. Colors ranging from the lightest primrose, thru apricots, yellow, orange and bronze, to deep rich rose and reds, all placed together in one vase, give a startling picture of nature's work of art. "Have you that purple gladiolus," is an oft repeated question. Baron Joseph Hulot is the only real purple gladiolus, altho you will find many so-called purples listed in European and American catalogs. Most of these will prove

# GLADIOLI, THE GARDEN ARISTOCRATS

BY B. HAMMOND TRACY

to be Burgundy reds or Dahlia purples, beautiful, but not real purples. Each year some color comes into the front line of popularity, and this popularity is always reflected in the demand for gladioli. Last season it was purple and lavender of every shade. Baron Hulot led, for a real blue purple, but the rich deep coloring of Mystery and similar tones in Violet Perfection were magnificent. Scarsdale, a mauve of great beauty and grace, was fine when used with Peace or with Hollandia. The lavender and mauve tints of Hortense, Jacinthe, and Wistaria were quite wonderful in combination with the Primulinus Hybrids. In many gardens all reds have been tabooed, but this is a deplorable loss. Such reds as Harvard, Crimson Glow, Negerfeurst and Princeps are too regal in both coloring and form to have no place in either garden or home.

If it is necessary to be mindful of expense it is still possible to have a wealth of bloom for all purposes from the mixtures and varieties which are fascinating and inexpensive. For forcing purposes many of the large summer flowering varieties give the greatest satisfaction. The Primulinus Hybrids sometimes produce their finest specimens under glass. The Covilli type are for forcing purposes only and are the small flowered, delicate pink and white blooms found in the florist's shop in the early spring.

THE culture of the gladiolus is very simple. Any good garden soil will give splendid results if well prepared in the spring with a coating of agricultural lime

*"Smaller than other types, the daintiness of form and arrangement of the Primulinus Hybrids satisfy the most discriminating"*

*Daybreak is orchid-like and a charming light pink, with a blazed white throat*

and bone meal, thoroly worked into the soil. Fresh stable manure should not be used unless it has been worked into the soil the previous fall. We advise against planting in shade or in beds where the foliage of other plants will retard the growth. They are especially well placed in borders of perennials or in front of shrubbery, allowing space for free cultivation. For cut flowers, excellent results are obtained from planting in vegetable garden, in rows eighteen inches apart, bulbs two or three inches apart in the row. The most essential point in the cultivation of the gladiolus, for satisfactory results, is in the manner of planting. The bulb you plant dies away, and the new one forms on top, bringing it nearer the surface. It is for this reason that deep planting, from six to eight inches, is absolutely essential for the production of perfect bulbs and flowers. It insures a solid hold for the roots and a solid support for leaves and flower spikes. It is also necessary that the bulb be planted right side up.

In the selection of bulbs size is not always virtue. Many of the best varieties do not produce large bulbs and the largest bulb often give no flowers. A medium size bulb is generally the cream of the collection. It is most essential that the bulbs are of blooming age.

For the amateur a word concerning care of bulbs may be acceptable. Bulbs should be dug when frosts have blackened or touched the leaves and then thoroly cured or dried, preferably in the open, before storing for the winter. They should never be wintered in sand or sawdust or even in closed paper bags, unless thoroly dried, but should be placed in trays or baskets and kept in a temperature of about forty degrees. Before final storing it is better to separate the old corn and the little bulblets.

There are no finer garden flowers, but the finest specimens are gained if the spike is cut when the first bud opens and allowed to develop in the house. In cutting it is ruinous to cut where the flowers end. There must be foliage to add grace. Three or four leaves should be left on the root stalk giving you a long graceful flower stem and leaving plenty of strength on the plant for bulb development. When shipping flowers as gifts or for identification, cut when one or two blooms have opened, allow stem to fill with water and pack absolutely dry. The gladiolus resents any sprinkling or moisture when in transit.

Often called the poor man's orchid, the gladiolus may well be named Everyman's comfort. In the Gladiolus kingdom there is such infinite variety, in color, marking and form, that they stand without rivals for garden charm and decorative value. No garden is quite complete without them.

# GOOD CHEER IN WALL PAPERS

BY GEORGE LELAND HUNTER

**I**N the spring a livelier iris changes on the burnished dove. In the spring a young man's fancy lightly turns to thoughts of love. So sang the poet Tennyson about the season which in Bishop Heber's mouth "unlocks the flowers to paint the laughing soil," and which in art as in nature should replace the solid and somber colors of winter by the lively and cheerful ones of spring.

Especially in suburban and country houses should the gaiety of outdoors be reflected by gaiety indoors. Arabesque and geometrical ornament should recede before flowers and sunny landscapes; and birds and shepherds with their happy flocks, and arbors and pergolas and pagodas and pavilions and other fanciful architecture of the kind created most luxuriously by the Chinese and by the Romans, should have right of way over historic scenes and heavy architecture. The wall papers illustrated in connection with this article were chosen by the writer because of their cheerfulness, and can be procured anywhere in the United States or Canada. Number 1, Numbers 12 and 13, and Numbers 5 to 10 were made in England; Number 4, Number 11 and Numbers 14 to 15 in America.

Number 3 is one of the ancient Roman ancestors of wall paper, a fresco from the time of Christ, buried by Vesuvius for over 1800 years at Boscoreale near Pompeii, and now preserved in the Metropolitan Museum of Art, where all can learn from it. It is part of one of the walls of a bedroom. Certainly it is completely cheerful and altogether charming. In the foreground a grotto, fountain and chirping birds; in the background, a garden with pergola; and all in colors that have stayed bright for nearly 2000 years.

Number 2 is a wall paper painted by hand in China, which hung for over two centuries on the walls of a house in England, and now furnishes an appropriate background for Chippendale furniture in the Cadwalader room at the Metropolitan Museum, and incidentally informs the visiting public how wall paper began. It also is delightfully cheerful in color as well as in design, and puts to the shame those modern decorators and architects whose ignorance of color constrains them to seek refuge in plain surfaces and flat tones.

Number 4 brings us to a

Numbers 2, 3, 4, reading from the top. Chinese. Roman. American

modern American wall paper, a landscape called the Esplanade, which can be used effectively to give spaciousness to an interior, and suggest the cheerfulness of out of doors. It is, of course, hand-blocked as the size of the repeat indicates. Machine papers have small repeats, seldom over 24 inches, and consequently cannot reproduce designs on a large scale, but must always be monotonous by comparison with hand-blocked or hand-painted papers. In using Number 4 I should background it with a plain paper, or one of conventional pattern with tiny repeat.

Numbers 14 and 15 are American reproductions of old Colonial papers, both of the pastoral type that drives away melancholy. Nothing could be gentler or more idyllic than the damsel of Number 14, with her doves and sheep backgrounded by an ancient tower, and framed in rococo scrolls, all in gray, rose and green; or than the farmer with his horses at the watering trough of Number 15, and the sheep pasturing below, all in gray. Number 14 is reproduced from the paper that for seventy-five years adorned the walls of a room at Livingston Manor, Catskill, New York.

Other cheerful American papers are Numbers 16, 17, 18, all of Chinese inspiration and all containing much black, the flowers of 16 and 17 standing out in bright colors against a black ground, and the cockatoos of Number 18 against black foliage on a light ground.

Of the three nursery papers Number 11 is American, and Numbers 12 and 13 are English. Number 12 suggests a toy village with its quaint children, huge geese, and decorative roosters, while Number 13 is distinctly educational, picturing the months of the year, not, to be sure, on the huge scale made familiar in tapestry by the Renaissance Months of Lucas and the Gobelin Royal Residences, but in the form of children costumed à la Kate Greenaway. Number 11 can be used as a frieze above the picture molding or above the wainscoting or even below the chair rail, and is supplemented by rolls of similar but not the same design that hang vertically. Often the figures are cut out and applied so as to form original groupings especially suited to the room, and having less appearance of repeat.

Birds and flowers are closely associated with cheerfulness

in wall papers as well as in literature and life, and the English papers Numbers 5 to 10 are particularly happy presentations of them, gracefully composed and vividly but not too emphatically colored in tones blended and contrasted by skilful printing. Number 7 is appropriately named "Japanese"; and Number 10 is "Pekin" with its truly Chinese bridges and pagodas, but with trees and sun they suggest Japan. Number 5 is an English paper showing a river landscape with European bridge and architecture, framed in foliage, but not in foliage of the somber type based on verdure tapestries. Here cheerfulness has been added by the reds of the roses that dominate the trees, producing with the assistance of the lines that cross-hatch the whole, a pattern which is distinctly adapted for expression on wall paper.

Number 1 is an English frieze paper, painted by hand and running 35 feet without a repeat, thus avoiding the monotony that is characteristic of most roller printed and many block printed papers. The texture of Number 1 also displays the qualities of paint and brush as distinguished from block and roller, and hangs exceedingly well above plain papers of rough surface, as well as above tiny repeats and patterns of subdued tone.

Very intimately is the whole question of

*Numbers 5 to 10: English roller printed wall papers in gay colors. They are suggestive of spring and outdoors, chiefly birds*

cheerfulness in wall paper associated with the size of the repeat. The tendency of roller printed papers with their small repeats is to "spot" the wall, and thus spoil the effect of whatever cheerfulness they may contain. The papers here illustrated do this less than most, because of the skill of designer and printer. On the other hand, the tendency of scenic papers that have no repeat like Number 1 is to "travel" as the eye follows them around the room, a tendency which is avoided, however, by Chinese hand-painted papers like Number 2, probably because of the flatness of the drawing and the decorative manner of the treatment. The decorator of the ancient Roman room, of which the fresco illustrated in Number 3 is a part, employed

both shadow and perspective emphatically, even with exaggeration, but avoided both "spotting" and "traveling" by repeating in moderation. One scene in the room repeats four times, four scenes repeat twice and one not at all. The repeating scenes are so placed as to balance on the same or opposite walls. The result is symmetry without monotony, and should be of practical assistance to the decorators of today when hanging wall papers which show either small repeats that tend to spot the wall and make it tiresome or large designs that tend to travel and produce a restless feeling.

*Three nursery papers. Numbers 11, 12, 13. Number 11 (at the top) is an American silhouette design. The other two are English patterns: Mother Goose and the months*

*Numbers 14 to 18: American roller printed wall papers, chosen for their suggestion of good cheer*

*Good soil, rich in humus, is the most important physical factor for successful raising of trees, shrubs, grass and flowers like these*

# MAKING THE SOIL PRODUCE

BY HAROLD A. CAPARN

FORMER PRESIDENT OF THE AMERICAN SOCIETY OF LANDSCAPE ARCHITECTS

**A**LL the noble and beautiful ideas about correlation of homes for the common good (they are not nearly as altruistic as they sound; for the correlator is likely to get at least as much as he gives, and at that he loses nothing that he gives) excellent and necessary as they are in themselves don't go very far until they can be carried into effect. One must know not only what a house and lot should look like, but how to make them, or they will never emerge from Spain, the dim and traditional home of such castles.

In the evolution of the outdoor home, the most important physical factor is the soil. If the soil is not good, your trees, shrubs, grass and flowers will not grow, or will not grow well. Yet it is astonishing in how many places the soil control has been left in the hands of the grader, a person whose only point of view has been too often to reconcile the existing levels at the street with new ones at the house. The easiest and cheapest way to do this is to use the material excavated from the cellar to fill up or spread over the rest of the property. This, of course, results in interring a greater or less area of the topsoil, that the processes of nature took ten thousand years or so to put there, under an impervious layer of comparatively worthless subsoil. What ought always to be done is to remove the topsoil from all surfaces where the grade is to be changed, from the sites of all buildings, roads and paths, make a pile or piles of it in some place or places where it will be easy to reach when wanted yet out of the way when not wanted, form the grades underneath, and finally, put back all the topsoil on the top where it belongs. The worst of the general grading and lawn-making problem is that no matter what may be underground, the whole surface may look just about as well when smoothed off by that instrument of nefarious camouflage, the rake, as tho it had been cultivated with the utmost conscientiousness and efficiency two or three feet deep. The average owner assumes that the grader knows his business and tells him to go ahead and grade, and the owner is apt to let him alone and pay the bill so long as the work looks well on top—and if the grader does not have to sort out his materials and cart away the refuse he is so much to the good. But in future summers Mr. Howson Lott pays the penalty of his carelessness in wondering why his trees and flowers don't seem to get along and why he always gets bare patches in the lawn when there is a dry spell.

What every one should do who has any interest in an outdoor home is to get some practical and workable knowledge of soil—and this is not difficult if you have access to the soil (any kind will do) an open mind and some resolution. A good garden soil, the kind you want, is made of two classes of materials, the inorganic and the organic. The inorganic is disintegrated rock (sand, clay, crumbled granite, etc.), the organic is disintegrated vegetation, known as humus. In a good garden, farm or nursery soil there should be a good proportion of humus which is black, and the degree of blackness of your topsoil is an indication of its richness (not the only one). Furthermore, the kind of soil you want should be friable, that is crumbly, to allow water and air (plant roots need air as much as water) and tender young roots to penetrate. If your soil is too stiff, that is if it insists on remaining in soggy lumps instead of breaking up easily, add separating material like sand, sifted coal ashes, manure, decayed weeds, leaves, etc. The more you add (up to, say, one-third or even more of the thickness of your topsoil) the sooner will you get your soil into good condition. And the more you grow on your soil and cultivate it the better it will become, for it is being continually exposed to the sweetening (really oxidizing) effect of the sun and air and getting penetrated and filled with roots and decaying tops. This is the way (barring the cultivation) in which the rich soils have been made that we inherit from ages of nature's processes.

**T**HE basic principles of the physical construction of soil are very simple (as I hope the reader has discovered) but the way to get a strangle hold on them is to go and dig in your own soil, pulverize, touch and examine until you feel that you understand how these principles apply. You will thus soon acquire that kind of semi-instinctive knowledge of what to do in any particular case that the gardener has taken many years to acquire, and which even at that he has usually not yet learned to explain.

It is amazing how difficult it often is to get even a professional gardener to take any especial pains with the preparation of the soil. He will just plant the things, and so long as there are no brickbats or tin cans in the hole, and the soil is halfway

decent, let it go at that. But unless the soil is much more than halfway decent this will not do. You should treat your flower or shrubbery border as you would your vegetable garden, add to the soil so as to make it as deep as you can, manure it and cultivate it. For an isolated or "specimen" tree or shrub, make a hole eighteen inches deep and four feet wide or more (the wider the better; there is no especial virtue in any of the dimensions for soil making given here or elsewhere; the important point is that there should be enough depth and width of soil for the roots to reach out and get a living) and see that nothing but good soil goes back into the hole. Some manure may be added if it is kept out of the way of the roots. It should be put where the roots can get at it when they are ready, not before. Use barnyard manure rotted if you can get it, especially if your soil is deficient in humus, a condition you will soon learn to diagnose in a general way. One of the best ways of improving your soil is by keeping a compost heap made of weeds, leaves, lawn sweepings or anything vegetable. If it is turned over occasionally the mass will decay quicker especially if you add enough soil to hold the leaves or weeds down. If your soil is heavy you can add sifted coal ashes until it becomes friable or crumbly—but let the ashes be exposed to the weather for a few weeks until the rain has had time to wash certain detrimental matter out of them, before you dig them in.

If your soil shows a tendency to produce moss, it is "sour" that is, it has too much acid in it and needs lime, slacked or unslacked, spread on at the rate of about 1000 pounds to an acre. As an acre contains 43,560 square feet, it will be easy to calculate how much your plot to be limed requires. If the symptoms still persist, repeat the application. If you suspect acidity in the soil, you can test it by putting in a piece of litmus paper and observing if it changes color. If it does, lime is needed. But be sure not to put lime where you wish to grow rhododendrons, azaleas or Norway spruce.

In transplanting anything at all, remember that it has received a severe shock from the amputation of a greater or less part of its root system and that it has to establish its connections with the earth all over again, it must produce numbers of new small and delicate thirsty rootlets. So when you transplant anything, be sure that it has as much good friable soil around it as the roots can reach for at least a year to come.

# A BETTER GARDEN THIS YEAR

## The Independent-Countryside Model Gardens Campaign

**T**HE battle is on and we must do more than "our bit" in gardening this coming season, we must do our best. We must not become garden toads dozing in the warm sunshine of dreams. We must stop our preaching and overcome our pretence of practise.

Do not be so anxious to plant the seed in early spring that you neglect to properly prepare the soil. Of course, no matter what your soil may be, clay, garden loam, sand, or even muck, you may have a garden and raise certain types of vegetables, but you would thus make only a pretence at gardening.

The soil, being the foundation of success or failure in all garden practise, must receive the proper treatment according to its type.

### CLAY

There are three different types of clay—blue, yellow and red, and no one of them is desirable if very stiff. If a heavy coating of well decayed horse manure, where the horses have been bedded in straw, is applied and dug under to a depth of from six to eight inches, it will go a long way to make the soil productive. The straw manure will prevent the clay from puddling or running. Never try to dig or fork it over while there is much moisture in it. Allow the clods to stand in the rough and weather for a week before smoothing the surface. Walk on it as little as possible. Apply a liberal amount of bone meal and where possible pulverized sheep manure over the surface and work this into the first four inches with a cultivator. Clay soil is cold and best suited for late crops. If it is made friable, most any variety of vegetable will grow in it except musk and water melons, and sweet potatoes.

It is best suited for cabbage, cauliflower, Brussels sprouts, kale and endive.

Last year I raised onions measuring nearly two inches in diameter on a clay soil. The soil was made loose by forking in about two inches of decayed horse manure. The garden line was set and the surface soil cultivated on each side of the line with a Norcross weeder. It was then raked as shown in the illustration. A furrow was drawn about three inches deep and a little pulverized manure was added. The surface of the soil was again raked and the onion seedlings set out the first of May. Both the roots and tops were cut back a little. The roots came in direct contact with the manure and by very frequent cultivation the onions were full size by September 15. The tops were thrown down October 1 and the bulbs ripened by October 15. I harvested one bushel of large onions from a row less than forty feet long.

The early cabbage did exceptionally well even tho' the old rule, that manure should not be placed at the roots, was broken. A hole was made four inches deep where the plants were to be set out. A handful of pulverized decayed cow manure was mixt with the soil. The roots of the young plants came in direct contact with the manure. It has generally been believed that this practise would cause the heads to develop loose centers, but both the early Jersey Wakefield and early Erfurt were solid.

This practise is also recommended for the culture of head lettuce.

The rabbits began to eat the cabbage leaves just before the heads started to form. I dusted the leaves with powdered arsenate (a deadly poison) while the dew was still on them. The destructive intrud-

BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN  
SYRACUSE UNIVERSITY COLLEGE  
OF AGRICULTURE

ers were destroyed. The head of the cabbage forms from the inside out so that the poison did not spoil the cabbage for table use.

Peas should be planted not deeper than two inches in a clay loam and they should receive a frequent and deep cultivation. If the air is shut off from the roots the vines turn yellow and die.

### GARDEN LOAM

In another garden I planted Nott's Excelsior peas between the rows of late potatoes. The potatoes were planted the last of June and stakes placed at the end of each row. The soil was carefully raked between the rows of potatoes and a furrow about three and one-half inches deep drawn. As the season advances peas sown in light soil should be sown deeper until a depth of four to five inches is reached. This is to supply the much needed moisture.

*A typical picking from a heavy crop of well filled pods on the Nott's Excelsior pea raised between rows of late potatoes*

*Raking the surface soil before drawing the furrow in which the seed is to be planted*

A little nitrate of soda, phosphoric acid and potash were mixt and scattered in the furrow. The pea seed was then sown and covered. The soil was prest down over the seed as shown in the illustration. This practise hastens germination. Cultivation was begun as soon as the tops appeared and continued until the vines came into bloom. The peas were harvested before the potatoes needed the room.

It is a common complaint in spring that something eats off the tops of the early pea vines. More than likely the thief is the English sparrow. Scatter a little tobacco dust on the vines while they are wet with dew.

All varieties of vegetables will thrive on a rich garden loam.

### SAND

This is the poorest type of soil on which to make a garden for two principal reasons. First, it lacks plant food, and, secondly, it cannot retain sufficient moisture. Nevertheless, if the sand is fine it may be made to produce by applying and working into the first four inches of soil considerable humus in the form of straw manure. Level the surface and rake in a free application of lime. From fifteen to twenty-five pounds of lime per square rod will have a tendency to bind the particles of sand together which will aid in holding the moisture. This should be done at least a week before planting. Sandy loam is the best soil for such early crops as peas, beets, radish or string beans and is especially adapted to sweet potatoes, musk melons and water melons.

### MUCK

This type of soil is seldom found in the home gardens but is sometimes introduced. It is a common mistake to think, because the soil is black, that it is rich in plant food. Of course, muck is rich in nitrogen because it is almost wholly made up of decayed and decaying vegetable matter; but it lacks phosphoric acid and potash, which may be applied in the form of commercial fertilizers. Potash is hard to get but may be applied freely in the form of hard wood ashes.

Muck soil is especially adapted to the culture of lettuce, onions and celery. The three principal practises to be considered in handling muck are to drain, to supply needed food, and to cultivate frequently.

Does this not show that beginning with the foundation, each gardener according to his own type of soil, there is better opportunity of worth while practise in this prepared soil and that produce because of quality as a result will make for efficiency?

**W**E cannot afford to waste by our selection of seed nor can we make our gardens inefficient thru the use of improper tools or misspent energy.

Know your soil and the treatment necessary. Select seed according to standard varieties and your climatic condition. Remember that a few well made tools used frequently when the soil is not too wet will save time and energy and bring you thrifty plants. Always water the garden in the evening when the water will go to the roots, and avoid that pretence of watering the roots which comes thru mere sprinkling of the surface.

Thrifty plants like thrifty people need room in which to grow. Eliminate plants, sickly or weak, and round up your garden practise with a harvest that will lend energy and inspiration to your neighbor.

# A NEW DEAL FOR CITY TREES

BY CARL BANNWART

NEW JERSEY by her shade tree statute converted the rocky pioneer trail of the municipal tree planter into a graded, progress-fostering roadway. The shade tree statute—which originated in New Jersey and under which we operate—calls into being a department which does what ought to be done for the street trees and provides money for the doing of it. That statute immensely facilitates the cause of tree planting and tree protection in the city.

Of old it was hard sledding for the tree planter, hard sledding on a rocky road: now, thanks to this statute, it is easy going. Here are three leading citizens—the Shade Tree Commissioners—adequately empowered by law, whose known integrity, zeal, civic patriotism, love of trees, and administrative ability are concentrated on maintaining and promoting the welfare of the trees and parks of their very own home city.

The advantages of this arrangement are not only obvious in prospect but have been demonstrated by the event in Newark and elsewhere. With three men of the caliber above indicated, put upon their mettle by the large powers entrusted to them, and given a free hand by the same token, what wonder that the fine stately old trees which have come down to us from the fathers, but which for so long were strangers to considerate treatment, have at length come into their own? What wonder that in thirteen years 30,704 new plantings have been set out on 220 miles of Newark's streets. Picture this! Two hundred and twenty miles of new plantings, adorning the streets, gladdening the eye, cooling and purifying the air, enhancing the city's beauty and health and wealth. There they stand; and there they grow, increasing in stature and fulfilling the promise of their sapling days.

The shade tree statute, be it noted here, also gives the same commission exclusive control of the city parks and the power to legislate for the parks and street trees, and to see that the legislation is enforced. The millennium not having yet arrived, the commission of the law is sometimes necessary to protect these garden spots and highway trees from the ignorant, from the careless, from the destructive.

Two features of the shade tree statute are decided novelties in legislation. All questions as to these may be answered by the compact proverbial wisdom "the proof of the pudding is in the eating." These two provisions work mightily for accomplishment. Each planting season, fall and spring,

## SECRETARY OF THE NEWARK SHADE TREE COMMISSION

the commissioners get together in a special meeting for the one purpose of considering where and what to plant—what streets, what varieties, how many trees. Then, as required by law, the commission gives public "Notice of Intention" to plant such and such streets, the notice requesting all persons who object to present their objections. At a later meeting after carefully "considering all objections filed" the streets to be planted are finally determined. Instructions are given to go ahead; and the season's planting is begun.

The second innovation is the authority

When the new soil has settled the tree is set in place surrounded with a wire guard; and a stake is attached to hold the tree steady until it has got its own firm grip upon mother earth. The trees for each street are all of one species and of equal size. Each tree is guaranteed. With forty clear days in both spring and fall, the two planting seasons, and setting out fifty a day, the year's "output" will be 4000 more trees to adorn twelve more miles of streets and to begin the transforming of commonplace thorofares into park-like highways overarched with waving trees uniform in species and size.

The assessment bill (an average of \$4.23

per tree in 1917) shows the property owner that the cost assessment against him for the excavating, the subsoiling, the tree, the guard, the stake and the guarantee is less than what he would have to pay a nursery for the tree alone. This saving to the property owner, made possible by the wholesale nature of the operations, will explain how the commission can advertise thirty miles of streets or sixty miles of property fronts, and not find one owner opposed.

The shade tree statute does not become operative until the "governing body" of a municipality authorizes the appointment of a commission. In all of these fifty-five communities of New Jersey, including the largest and the smallest communities, the problem of the care, increase and protection of street trees is being studied by these local conservers of the city's tree assets. To appoint a commission is to set in motion a legal mechanism toward adequate municipal control.

"Caring for" trees is a big job and requires many activities. One of these is to ensure the unimpeded access of air and water to the roots because it is a vital essential. It is fundamental—an indispensable condition. If you

do everything else imaginable for city trees and omit to provide adequate openings you will fail.

Akin to this is the work of "loosening up." The surface of the soil about the tree must be loosened and kept loosened. This facilitates the ingress of air and water. It forms that necessary thing: an earth mulch, which conserves the moisture already in the soil by hindering its evaporation. In time the winter covering of manure is applied to protect the roots from frost and to add plant food to the soil. Another item in our "caring for" trees is the combating of their insect enemies. "Raus mit" these and all their progeny and a shade tree commission can en-

[Continued on page 389]

*"We are beautifying Newark with trees and parks because Beauty is Beauty and is worthy of being loved just because it is Beauty"*

to assess the cost of new plantings against the property in front of which they are set out. This assessment becomes a lien. The money from this source is reinvested in other plantings. Only the actual cost of the tree, guard, stake and labor is so taxed. The average assessment last year was \$4.23. This covers cost for all the entire cost. If the tree dies it is replaced under guarantee without extra charge to the property.

Our first concern in new plantings is to prepare the ground for them. Planting pits are dug at a distance of 33 feet apart. From each pit 56 cubic feet of earth is removed and replaced with good soil enriched with fertilizer.

# AN ALL-THE-YEAR-ROUND HOUSE

RESIDENCE OF MRS. C. H. SMITHERS, GREAT NECK, LONG ISLAND. CARETTE AND FOSTER, ARCHITECTS

Evergreens round the house and along the drive make its setting attractive all thru the year. The house and garage (which is shown in the lower right corner of this page) are of brick, with a slate roof

The essentials of summer and winter comfort are admirably combined in this all-the-year-round residence at Grenwolde, Great Neck, Long Island

# HOW DOES YOUR GARDEN GROW ?

*For protection and forcing of early plantings. Easily placed—easily moved*

*If you prepared your cold frame last fall you are ready to prove its value. Cost, from \$16.50 up*

*You just guide this garden tractor and follow it around while it does the work of cultivating your crops*

*Early planted tomatoes can be trained and saved if a cold spell comes on. Note the wire frames and paper bag overcoats in the garden photographed above*

*Glass, easily placed in a wire holder, can be used to increase the effect of the sun on your young plants and temper the cold winds of early spring. It helps things to grow quicker. The device below is a convenient arrangement*

*A vegetable garden chart may help to increase your yield. The one above costs 75 cents*

*Save your knees and keep your tools by using a kneeling cushion and equipment bag like the one at the right. Cost \$3.50*

# What to Do in March

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## FRUIT AND BERRIES

**Grafting** On mild days, graft the apple, pear, cherry and plum. Three years after the scions are inserted they should bear fruit. Only rehead one-third of the tree each year. Use liquid grafting wax in cold weather.

If the trees have been girdled by mice or rabbits, bridge graft them before the sap flows. Be sure to remove the buds from the scions used as bridges.

**Pruning** This is the last call for pruning. Do not let it hang over into April. If large limbs are to be cut, saw the bottom side of the limb about two inches deep and three to four inches from the trunk. This will prevent a splitting off a strip of the trunk and bark when the limb is cut off. Burn all prunings. Clean up the orchard.

**Spraying** If you have not already sprayed for the scale insects, with lime sulfur one to eight, do it before the buds start. This dormant spray not only destroys these sucking insects but it also holds in check the scab that might become active. Spray on calm days. Do not try to spray against the wind.

A few warm days, the last week of this month, may bring out the buds and the tent caterpillars. Destroy this chewing insect by spraying with arsenate of lead, three pounds to fifty gallons of lime sulfur. Never burn the web of the caterpillar. This practice always injures the branches and often kills them.

**Planting** Plant blackberries, raspberries, currants, gooseberries, and the fruit trees as early as the soil is workable. Be sure that the roots are placed in their natural position with the best soil packed about them. Never place manure in direct contact with the roots, but decayed sod, chopped up fine, is highly recommended.

**Grapes** This is a good time to plant the grape vine. It is a long-time investment, therefore prepare the soil from three to four feet in depth before planting the vine.

**Strawberries** Remove the litter. Work in the manure close to the plants as soon as the frost is out of the ground. The straw should be saved to place under the fruit in order to keep the soil from spattering on the fruit during a rain. A little pulverized sheep manure and bone meal sprinkled about each plant will show results later. Keep all runners cut off if a high quality, large berry is desired.

## FLOWER GARDEN

**Pruning** The latter part of the month, prune back the hardy flowering roses. Do not be afraid to prune them close leaving three to four eyes to each stalk of new wood. Cut out only winter killed tips and bruised branches of the climbing roses. Never prune the climbing rose back until after it has bloomed.

Do not prune the spring flowering shrubs such as lilac, azalea, deutzia, forsythia and others until after they bloom. Foliage shrubs may be pruned now.

**Vines** As soon as the soil is workable, plant vines. Make a large hole four feet square and four feet deep close to the wall. Fill this with a well-mixed compost suitable for the vine that is to be planted. Prune back only the winter killed canes of flowering and foliage vines.

**Bulb Beds** Remove all manure and litter the last of the month. Use a five-pronged fork in lifting the litter. Be careful

not to injure or break the tulip tips which are about one inch long the last of this month. Keep some loose straw near the bed to throw on it should a hard freeze threaten.

**Planting** There is no better time to plant shrubs than during March. Get the soil ready and set out the plants as soon as they arrive from the nursery. Fit the fine rich soil around the roots. Prune back vigorously this first year.

Divide the roots of perennials and transplant them before the buds and roots become active.

Lily of the Valley and Funkia are both fine plants for shady places and may be planted the last of the month.

Sow sweet peas as soon as the soil is workable. Don't fail to make this soil rich six to eight inches in depth before sowing the seed. Place the support, especially if of wire, before the plants appear so as to prevent injury.

Plant out all roses the last week in March. Pack the soil tightly about the roots. A light clay is the best soil for most varieties. The soil should always be well drained and rich. Prune the bushes back after planting.

**Cultivation** Turn the manure, mixt with a little bone meal, under. Use only a four-pronged digging fork and do not fork deep enough to disturb the roots or crown of the plants. A spade is sure to injure both. If the soil is a clay type, do not spade it when moist.

**Early Flowers** After raking the lawn, sprinkle a few applications of finely ground bone on the parts where such flowers as the Crocus, Snowdrop, Squill (Scilla) are expected to appear.

## VEGETABLE GARDEN

**Soil Preparation** Spread a heavy application of manure over the ground even tho it was manured and left in the rough last fall. As soon as the frost is out of the soil, spade or harrow this manure into the first four inches of the soil. The plant food is then in a position for the young vegetables to thrive on. Have the soil rich, fine in texture and easy to cultivate.

**Seedage** If you have not already sown in the hot bed the seed of beets, cabbage, cauliflower, celery, lettuce, onions, eggplant, peppers and tomatoes, do it early this month.

South of New York City, sow the seed of kohlrabi, leek, carrots, beets, turnips, smooth peas, radish, salsify, New Zealand spinach and Swiss chard out of doors. If the soil is cold and wet, the last week in March, wait until it is in good condition before planting.

**Permanent Crops** If you anticipate setting out a new bed of asparagus, rhubarb or horse radish, first get the soil in good condition.

For a family of five, plant twenty-five asparagus roots, two feet apart in the row; seven plants of rhubarb, three feet apart in the row, and eight plants of horse radish, eighteen inches apart in the row. Before the growth starts top-dress the old asparagus bed with decayed manure and bone meal. Dig this in to a depth from three to five inches. Dig in the protective covering of manure about the rhubarb plants. Be careful not to disturb or injure the fleshy roots.

**Commercial Fertilizers** A little commercial fertilizer applied frequently and worked into the soil close to the growing plants is of more value than applying it broadcast.

Amount required per square rod (nitro-

gen), nitrate of soda, two pounds, one-half to six gallons of water for a solution. Sulphate of ammonia, two and one-half pounds (potash), kainit, two and one-half pounds, sulphate of potash two pounds (both difficult to purchase). Wood ashes one-half bushel (phosphoric acid), ground rock four pounds, dissolved bone one and one-half pounds, and basic slag five pounds.

Where decayed manure is available commercial fertilizer is not necessary.

**Hot Beds** Do not neglect placing a protective covering over the glass each night.

March is a changeable month. Close the sash early in the afternoon in order to retain the heat from the last rays of the sun. Do not allow a draft to strike the tender plants.

## GREENHOUSE

**Catch Crop** Sparks' Earliana, Bonny Best, or June Pink tomato plants may be planted among the last crop of lettuce. The plants should be kept to a single stem and trained to stakes or wire. A crop of fruit may be realized the early part of July.

**Ripening Bulbs** In order to keep bulbs over from year to year, it is necessary to give them a period of rest. Small and few flowers are the first signs of the loss of vitality among such bulbs as cyclamen and calla lilies. Place the pots or flats in a shaded place and allow the soil to gradually dry. After all the foliage has dried, remove the bulbs and pack them in sand. All bulbs should be kept plump. This is the month to start to rest the gladioli, oxalis, cyclamen and calla lilies. Forced bulbs of tulips, narcissus, and hyacinths may be planted out the last of the month.

**Cuttings** Propagate geraniums, coleus, stevia, lantana, ageratum, snapdragon and chrysanthemums. Keep the cuttings-bed cool, shaded and moist. Cuttings should be removed from the sand as soon as the root system is formed.

**Seedage** For an early bloom, sow the seed of marigold, snapdragon, stock, verbena, aster, ageratum, balsam, larkspur, pansy, lobelia, petunia, scabiosa, and other annuals. As soon as the second or third leaf appears, transplant the seedlings to thumb pots or into flats filled with rich soil.

**Dahlias** Break up the roots so that there are from one to three eyes left at the crown, and plant these in six inch pots filled with a rich soil, one-half decayed manure and one-half garden loam and decayed sod. A little sand mixt in is not objectionable.

**Early Start** Three to four cucumber seeds may be planted in a strawberry basket filled with rich garden loam. The bottom may be cut from the basket, the sides lifted off, and the plants transplanted to the open without disturbing the roots. Corn, stringbeans and potatoes may be started in this same way.

Gloxinias, caladiums and tuberous rooted begonias should be started the early part of the month.

**Roses** Spray frequently on bright days to keep in check the red spider. Be careful in ventilating so that mildew may not be encouraged to grow. Frequent applications of liquid manure will produce larger flowers and stems.

**Easter Flowers** Easter lilies, hyacinths, lilac, deutzia and eumerarias should be well in bud by the last of the month. Buds that are too far advanced may be checked by keeping the plant in a cool, dark place for a short time.

For raising several hundred chickens the stove brooder is best of all, as it makes possible the raising of all the chickens in one flock

These portable hovers many people like, are easy to handle and can be set down in a colony house or shed or a corner of the barn

## RAISING CHICKENS WITHOUT HENS

BY E. I. FARRINGTON

**I**F the plea of Uncle Sam's poultry experts that the amateur poultrymen of the country hatch earlier this season than ever before is heeded, thousands of chickens will be hatched this month. It is true that raising the chickens is easier when they are hatched a month or two later, but early hatching is imperative if the poultry work of the country is to be speeded up as it must be to meet the demand for food.

Pullets hatched any time before the end of March will be pretty certain to begin laying in the fall, and to continue laying thru the winter. This is of more than average importance this year because the food situation requires that no grain be wasted on poultry which is not providing an adequate return.

Much depends upon the way in which the newly hatched chickens are handled. If they are kept growing steadily from the time they are hatched, they will mature much more quickly than if their growth is checked, or if they are allowed to become stunted. Carelessness and neglect, together with weak breeding stock, results in a loss of chickens estimated to reach 100,000,000 each year. This loss ought to be cut in half at least the present season.

The loss from rats alone runs into the hundreds of thousands. Yet the chickens can be saved from rats by taking proper precautions. If one is fortunate enough to possess a brooder house having a cement foundation or a properly constructed cement floor, rats will be excluded. Houses with wooden foundations and earth or board floors can be kept free from rats by sinking closely woven poultry netting into the ground to a depth of two and a half feet all around the building. If the digging is hard, the wire may be run down a foot and then be bent outward a foot and a half. Rats usually dig down close to the foundation, and if they meet an obstruction which they cannot penetrate, give up the job as a bad one.

Wooden brooders can also be made rat proof. The newer metal hovers are not so easily protected. When they are used, the best plan to follow is to make a circular fence of poultry netting two feet high which can be set around the brooder at night.

Many losses are also due to overfeeding. Experienced poultry keepers get the best results by feeding five times a day when the chickens are small. It is best for the beginner to feed only four times a day the first week, and three times a day after that. When the chickens are fed little and often, they grow very rapidly, but the novice is

almost certain to feed too much. Experts like to keep their chickens always just a little hungry, except at night when they give them all they can eat.

Don't feed your chickens until they are at least thirty-six hours old in any event. Before they hatch they absorb the yolk of the egg, which provides all the nourishment they need for at least two days. Feeding too early is a prolific cause of trouble. It is this fact that chickens do not need to be fed as soon as hatched that has made the day-old chick business possible.

There are many so-called baby chick feeds on the market. Most of them are good, but after all none seem to give better results than stale bread soaked in milk, and squeezed dry. This is an admirable first ration for chickens and ducklings alike, but when the ducklings are being fed, the soaked bread should have a little sand sprinkled over it. Use a clean board or shallow dish for feeding, and give only as much as will be cleaned up in a short time. None should remain to become sour. After a day or two, make a gradual shift to cracked corn, cracked wheat, rolled oats, or a combination of these three feeds. If you are hatching only a few birds, use a ready mixt chicken feed such as all dealers sell.

When the brooder house floor is covered with clean sand, as it should be, there will be no need of a litter for the first few weeks. If some of the grain is scratched into the sand, so much the better. The chicks will be kept busy hunting for it. Later it is well to use a litter of cut clover or alfalfa, a little grain being scattered in it to induce exercise. After the first week or ten days, keep a hopper or pan of mash before the chickens all the time. A regular commercial mash will give good results, altho some poultry keepers use only bran with ten per cent of beef scraps. Have fine grit where the chicks can get at it readily. It may be well also to supply charcoal.

Overcrowding is responsible for many losses which might be avoided. The average lamp heated brooder will not properly accommodate more than fifty chickens, no matter what the makers may advertise. The claims made for the stove heated brooders, too, are higher than experience warrants. A small size stove brooder can care for 250 chickens, the larger size brooder from 350 to 400 chickens.

Before the chickens are taken from the incubator, heat the brooder to a temperature of 100 degrees. Keep it between 95 and 100 for the first week. Then lower it grad-

ually, depending, of course, upon the season and the outside temperature. A thermometer is needed, but after all the best way to regulate the heat is to watch the chicks themselves. If they are found crowding, it is evident that they are cold. In a stove brooder they will work up close to the stove, instead of forming a circle at the edge of the hover, as they should. If they are found stretched out on the sand and panting, you may be sure that the heat is too great. When they are nestled down comfortably, close together, but without touching, and are chirping happily, you may be sure that the temperature is just right.

If chickens are kept in large flocks, as when stove brooders are used, they are likely to crowd toward the direction from which the light comes as night approaches. This difficulty can be overcome by putting a window into the rear of the house.

**W**HAT kind of a brooder shall I buy? That is a common question just now. The well-known type of indoor brooder, made of wood, has proven its worth. Used early in the season, it may be the best kind of all, when only a few chickens are to be raised. Many people, tho, are attracted to the portable hovers, because of the ease with which they can be handled. These portable hovers can be set down in a colony house or a shed or a corner of the barn. The best place for them, tho, is a small portable house. They can be removed when the need of heat has passed, and the chickens be allowed to grow up in the same house. It is a little hard to keep up the heat in very cold weather, but it may be done by filling in several inches under the hover with sand and by banking sand up around the curtains at night.

Farmers who are raising several hundred chickens will find the stove brooder best of all. It saves much time and labor, and makes possible the raising of all the chickens in one flock. Whatever kind you buy, tho, don't make the mistake of investing in an outdoor brooder.

Many expert poultry keepers like to have litter in their brooders, or under the hovers, even tho the floor outside is not covered. Sweepings from the barn loft are sometimes used, but should be avoided, because the fine particles cut into the eyes of the chickens and cause trouble.

Every experienced poultry keeper knows that the quicker he can get his chickens out on the ground, the more likely he is to raise a large number. Commercial poultrymen who begin hatching in January or earlier frequently shovel [Continued on page 392]

## TWO WAYS TO IRON!

### Which is YOURS?

*The efficient, cheaper way—with the SIMPLEX*  
9 o'clock—the ironing finished—work beautifully done—kitchen cool—housewife fresh and smiling—the rest of the day for other duties, recreation or pleasure.

*The inefficient way—by hand—11 o'clock*  
in the morning—only a few pieces ironed—kitchen hot—housewife tired and discouraged—hours of hard work ahead.

No woman should do by hand what a machine can do better for her

# SIMPLEX IRONER

"THE BEST IRONER"

*Does the Work of an Expert Hand Laundress in One-Fourth the Time*

Conserve your time and strength by ironing "the Simplex way." Do your entire ironing in one hour. Eliminate lifting and pushing of irons and long tire-some standing. Cut down your fuel bills by using the Simplex—total expense of an ironing only 2 to 4c.

The even heat and uniform pressure of the Simplex produces a more beautiful finish than possible with a hand iron. The Simplex irons everything except shirtwaists and skirts. Can be had on Easy Payments and on Approval. Various Prices.

Electric Drive Simplex Ironer for homes with electric current. Power ironer for the farm or for the washing machine user. Hand Power Simplex for the home without gas or electricity. Write for our Free Illustrated Book "Clean Linen in Abundance."

*Laundresses and maids are enthusiastic over the SIMPLEX*

Consult our Service Department in planning and arranging your home laundry—no obligation.

# WHERE TO PUT YOUR PIANO

BY ABBOT McCLURE AND HAROLD DONALDSON EBERLEIN

WHEN we carefully analyze the reasons that ought to govern the placement of the piano, it matters not whether it be an upright or any of the types of grands, we shall see that the question is not a matter of mere arbitrary inclination, to be determined by chance or by some personal whimsical preference, but that there are certain positions that are inherently *right* and certain other positions that are inherently *wrong*. Inasmuch as the piano is usually a difficult thing to manage because, physically speaking, its weight makes it hard to shift and because, decoratively speaking, its size and shape impose obvious limitations, there is a strong temptation to let it stay when once placed in a position that seems to suit fairly well. Unfortunately, the position that seems to suit *fairly well* is very apt to turn out *wholly wrong* under close scrutiny. The disposition to be content with the placing that *apparently* answers fairly well is responsible for the ruin of many a good instrument and also for spoiling the decorative composition of many a room in which the piano *properly* placed might be an addition instead of an impediment to the scheme.

In the first place, *the piano is not an ordinary piece of cabinet work* like a cupboard or a bookcase. *It is an highly organized, delicate and sensitive piece of mechanism.* This *fact* altogether too few piano owners seem sufficiently to realize. No thermometer nor barometer is more susceptible to all atmospheric variations than is a piano. Cold, heat, dampness, dryness, all affect it and tend to disturb its nicely adjusted balance. Not only does it inevitably get out of tune periodically thru the ordinary alternations of expansion and contraction caused by change of temperature, but when such changes are either too violent or too sudden the whole physical well being of the instrument is endangered. These purely physical considerations supply the fundamentals of procedure in placing the piano.

The fact that every piano, no matter how carefully it is treated, requires tuning after the fires go out in the spring and again after they are lighted in the fall gives point to the foregoing observations. It is well to have a piano tuned four times a year by a systematic schedule, but upon the two occasions just mentioned the absolute necessity of tuning makes itself audibly noticeable. Since it is plain, then, that sudden and violent changes of temperature are injurious, it follows that the piano ought to be placed where the temperature is as even as it is possible to have it. Sudden changes in dryness and moisture, likewise, are to be avoided. If the piano is placed where it is subjected to an excess of any of these atmospheric conditions, its position ought to be changed.

Any of the following things are likely to happen if the faulty placing is not remedied. If the changes in temperature are too sudden or too great, there is an excess of expansion or contraction and the instrument is thrown out of tune, besides sustaining some other possible hurt that may not be at once apparent. If it is exposed to undue dampness, strings rust and the wooden hammer connections and supports swell so that the keys often stick and the whole action is apt to become sluggish. If it is kept in too dry a place, especially too *hot* and dry a place, such as close beside a radiator or a fireplace, the wooden parts of the mechanism become kiln-dry and con-

tract, the glue deteriorates and consequently the sounding board sometimes warps and cracks. To a pianist all these conditions seem self-evident to any one of ordinary intelligence, but so many people are utterly heedless of them, judging by the way in which they misplace pianos, that explicit advice, both precautionary and remedial, is obviously necessary.

THE following "do's" and "don'ts," set forth in concrete form, will prove useful to the prudent person in determining the judicious placing of the piano. In the room where the piano is, keep the temperature as even as possible and neither too warm nor too cool. Do not put the piano right beside a window, for there changes in temperature and in dryness or dampness are greater and sooner felt than anywhere else. Likewise, the part nearest the window will be colder than the part away from it. Furthermore, if it can in any way be avoided, do not place the instrument against an outside wall. An outside wall is appreciably colder than a partition wall, often differs considerably from the temperature of the rest of the room, and is apt to transmit quickly any external chill or dampness. So much for the avoidance of cold and damp. In order to protect the piano from the opposite extreme, do not put it too close to a radiator or register where it will be exposed to blasts of warm air and where one side of it will be perceptibly warmer than the other.

If the piano is in a room on the ground floor, do not put it immediately over the heating plant. If no other position than this is available, then sheathe the floor joists underneath with asbestos. To sum up, place the piano sufficiently far away from the outside walls, windows and heating apparatus not to be directly and markedly affected by the atmospheric conditions they transmit. It is desirable—and this, too, is an highly important consideration—that the light, both natural and artificial, should fall from the left of the player or come over the left shoulder slightly from the rear.

After reading all the foregoing strictures upon the various positions in which the piano ought *not* to be placed, it may, perhaps, seem that very little choice of correct placement remains in even the most favorably planned rooms, while in the vast number of others the finding of a physically satisfactory position is utterly impossible. The situation, however, is really not so difficult as it might at first appear, if we will only consent to view it with an open mind, the attitude which brings, after all, the easy solution of many a problem otherwise likely to be perplexing. Thanks to the large number of upright pianos in use and the general, but not necessarily justifiable, feeling that they must be set against the wall to hide their unsightly backs, the *genus piano* has come to be regarded by a great many people as essentially a piece of *wall* furniture. Now the piano is *not* essentially a piece of wall furniture and there is nothing in the physical structure of the *instrument* itself to warrant such an assumption. Indeed, the mere fact that it is an instrument to be played upon emphatically contradicts the assumption—and the assumption, unfortunately, has gone unchallenged until it has attained the mischievous sanction of an unreasonable and false convention—that it is an article of wall appointment like any other large piece of cabinet work, with the fortuitous addition

that it contains a musical mechanism. An harpist does not crowd his instrument into a corner, neither does a violinist back up against a wall to play. Nor is there any *reason* why the piano should be thrust out of the way.

● A piano is heard to vastly better effect if it stands away from the wall and out in the room; such a position, too, often ensures the most suitable light. If a room presents any of the conditions previously mentioned as satisfactory for wall placement, the piano may, of course, be set against the wall; if such a satisfactory wall position does *not* exist, do not hesitate for an instant to place the piano out in the room. Remember that the piano is first and foremost a musical instrument and its very *raison d'être* is the music that can be produced from it. If its presence in a room is *not* primarily for the music and if it is *not* to be cared for and accorded considerate treatment as a valuable and delicate instrument but is looked upon much as any other piece of cabinet work and, possibly, as a convenient repository for *bric-a-brac* besides, *it is far better not to have a piano at all and to have instead, a console or a cabinet or some other similar piece of furniture that will probably cost much less and will certainly serve the purpose better and be easier to manage.*

THE case of the upright piano was designed in a period lacking in imagination and grace of conception. The cases of the old harpsichords, spinets and early pianofortes fared better from the decorative point of view and the case of the grand offers manifold possibilities of acceptable treatment. But the accident of the awkward upright *case* does not justify the mistreatment of the *instrument* inside the case and, furthermore, the accident of awkward case is easily remediable by exercising a little ingenuity, so that the piano may be set out in the room without being in the least objectionable.

Having the upright piano stand out in the room means two things to be done; first, the unsightly back must be covered, and, second, the piano so placed must usually be made the foundation of a furniture grouping. Both of these things can very easily be done and with highly satisfactory results from the point of view of well planned furnishing. Against the piano back one may either place a screen or attach a hanging. Whichever method of concealment is adopted, there is always an opportunity to introduce an interesting decorative note.

When the piano in its independent position is made the basis for a furniture grouping, as is ordinarily expedient, the grouping need not be large to be effective but will be governed by the space conditions available. It may consist merely of a small table, with a flower bowl or lamp, placed against the screen or hanging at the piano back. Again, if there is more space, there might be one of the D end or semi-circular Hepplewhite or Sheraton tables, an oblong table, a console, a chest, a sofa or any other piece or combination of pieces that convenience and good taste suggest. In any event, whatever may be placed upon the object *back* of the piano, do *not* put things *on top* of the piano. The piano is not a *bric-a-brac* cabinet, as previously stated, and there is always the likelihood that anything standing *upon* an instrument will vibrate when certain notes are sounded and cause unpleasant rattling.

The illustration shows a Rug made of "Karnak" Wilton Carpet and Border in a classic Japanese design, effectively brought out in black and taupe colorings.

## The "Made-Carpet" Rug Solves the Problem

of obtaining immediately and at a moderate cost, a Floor Covering of suitable size, shape, design and coloring for any room or apartment.

The large variety of designs available from our stock, makes it possible to properly complete any decorative scheme.

## Our Foremost Private Citizen

IF you were to stop a citizen on the street and ask him who in his opinion was the greatest living American the chances are about even that the reply would be: "Why, Roosevelt, of course." There is at any rate no citizen in private life (if a man can really be called a private citizen whose every act is watched by the press and public as astronomers watch a comet) of greater influence on the mind of America. It is a political as well as a literary event when Colonel Roosevelt buckles on his armor of controversy and sets forth to slay *The Foes of Our Own Household*. In the words of the author these foes are:

The men who oppose preparedness in our military and our industrial life; the business or political corruptionist or reactionary and the reckless demagog who is his nominal opponent; the man of wealth and greed who cares for nothing but profits, and the sinister creature who plays upon and inflames the passions of envy and violence; the hard materialist, the self-indulgent lover of ease and pleasure, and the silly sentimentalist.

The substance of Colonel Roosevelt's message to America is, of course, the important thing; but its expression is also worthy of close study. It is an interesting fact that the two dominant American statesmen of our generation, President Wilson and Ex-President Roosevelt, are not only masters of domestic and international politics but of the English language as well. President Wilson shows a more sustained and distinctive originality in his writings and addresses; he rarely falls, as Colonel Roosevelt sometimes does, into mere truism or mere invective. On the other hand, no one has ever excelled Roosevelt as a master of the trenchant phrase and memorable sentence. With one stroke he obliterates the American who is for Germany because he is against England: "No man is a true American who hates another country more than he loves his own." We can fairly hear the chuckle in his voice when he points out the only way to "smash the trusts" and bring back the era of small business: "No change in the tariff will stop the upgrowth of big corporations. No moral reform in the world of business or the world of politics will stop it. But big corporations could be ended tomorrow by the abandonment of the railway, the telegraph and the telephone. The trouble is that the price would be somewhat heavy!" He drily reminds those who advocate birth restriction to the extent of race suicide: "Reforms are excellent, but if there is nobody to reform their value becomes somewhat problematical."

In one respect Colonel Roosevelt's style is to be preferred to President Wilson's. The President often drops into the midst of an otherwise perfect address a cryptic or ambiguous remark which his opponents, Roosevelt among the rest, have been able to twist to his disadvantage; "peace without victory" and "too proud to fight" are examples of what is meant. But Roosevelt is never otherwise than clear, concrete and specific. One may disagree with his opinions but one cannot disagree as to their meaning. No equally prominent statesman, for example, has so explicitly defined the peace terms which he hopes to see attained as a result of the war:

Belgium must be restored and indemnified. France should receive back Alsace and Lorraine. England and Japan should keep the col-

THEODORE ROOSEVELT

onies they have conquered. Austria and Turkey should be broken up. Poland should be made independent, with Galicia and Posen included, and reaching to the Baltic. The Czechs and their Moravian and Slovak kinsmen should be made into a Greater Bohemia. The Jugo-Slavs should be united into one state. Greater Rumania should take in Rumanian Hungary, and Italy Italian Austria. The Turks should be ousted from Europe; Constantinople can be made a free commonwealth of the Straits, or given to democratic Russia as events may determine. Arabia should be an independent Moslem state; probably Armenia should be independent; provision for the full protection of the Syrians—Christians, Druses and Mohammedans—should be made. Northern Schleswig should go back to the Danes; and the victorious Allies should themselves grant full autonomy to Lithuania and Finland; and, to Ireland, Home Rule.

No glittering generalities, no "pussyfooting," no "weasel words" here! He is equally emphatic as to the spirit in which America should enter upon the war with Germany: "We should fight this foe to a complete victory, if it takes five years, and ten million men, and even if all our allies made peace."

Altho most of the book is devoted to problems arising from the Great War, the chapters on "Industrial Justice," "The Farmer" and other domestic issues are not the least important and interesting. Very sane and judicious is the position taken on national intervention in labor disputes and disorderly strikes:

No government has any warrant for existing if it cannot keep order and suppress disorder and violence. This is the first step to take and until it has been taken all further progress is impossible. The trouble is that the government is apt to confine itself to keeping order, whereas it ought by rights to treat keeping order, not as in itself an end, but as a means for securing justice. . . . Those who invoke governmental aid must submit to governmental regulation.

At the end of the book there is a miscellaneous collection of public addresses and published correspondence dealing with current questions of interest. Among these is the full (and rather acrimonious) correspondence between Colonel Roosevelt and Secretary of War Baker over the sending of a volunteer army to France.

*The Foes of Our Own Household*, by Theodore Roosevelt. Geo. Doran Company. \$1.50.

## Ways of an American Manager

IT has to take a most interesting personality in the theater for theatrical biography to rise above the level of mere dates and performances. Augustin Daly was a man of strong intellectual attainments, and his activity in the theater was always marked by dignity and governed by a high standard. No matter how much he was given to the presentation of adaptations from the French and German, an evening at Daly's Theater—and he had several theaters during his stage career in New York City—was a momentous occasion. His actors and actresses, who developed under his hands, became favorites, and a Daly audience was able to measure the advance in acting shown from year to year. Even today, in players like Mr. Otis Skinner and Mr. John Drew, we see technic influenced by the Daly method.

*The Life of Augustin Daly*, from the pen of his brother, the late Judge Daly, has just been published. It considers, fully and adequately, the manager's activities, as well as his very picturesque and useful career as reporter and playwright. More skilfully than the biography of Charles Frohman, it outlines the plans and ambitions of a typical manager's life; and from its pages one is able to measure how far Augustin Daly's hopes were involved in the welfare and development of the American drama.

Every season he announced, as Charles Frohman did later, his hopes as to what plays the season to follow would have to offer. We are given interesting letters from Mark Twain, W. D. Howells and Bret Harte. Mr. Daly was continually arranging with such literary personalities as Robert Buchanan, Oscar Wilde, H. C. Bunner, Wilkie Collins, Julian Hawthorne, Blanche Willis Howard and J. C. Verplanck for possible manuscripts.

Checking up the notable productions given by Mr. Daly during his long career, we are inclined to believe that his mileposts in public interest were the revival of Farquhar's "The Recruiting Officer" and his restoration of Shakespeare's "The Taming of the Shrew." We are able, from this record, to trace Ada Rehan's advance in public favor from the time when she first applied to Mr. Daly for a position and even tho she asked for a salary of \$40 a week was forced finally to accept \$35.

Mr. Daly was one of three who practically monopolized the New York theatrical field in the '70's, the others being Lester Wallack and A. M. Palmer. But he lived to see the old régime almost entirely pass away, and, during one of his final trips to Europe, we find in a letter of his the realization that the Theatrical Syndicate, out of which present conditions have grown, had so blocked his way as to make it more than impossible for him to bid for any new plays in London without the expenditure of at least twenty-five or thirty thousand dollars.

Altogether this book is an entertaining one, as well as a serviceable one for reference by the theatrical student. It is sumptuous in its format and the illustrations are of an entertaining character. There might have been more copious quoting from Mr. Daly's letters, and an appendix might have been added giving a list of Mr. Daly's productions, together with some of the more

notable casts. While the casts are suggested in the text, the index is not sufficiently full to afford one ready access for casual consultation.

*The Life of Augustin Daly*, by Joseph Francis Daly. Macmillan. \$4.

### Political War Books

**T**HE unknown German author of *I Accuse* returns with a second bulky volume in *The Crime*. This is a comprehensive critical review of the diplomatic actions of the Entente and Ally powers during those fateful days when the supreme question of whether the Great War was or was not to be hung in the balance. In some five hundred pages the author strives to prove that since Germany had decided on war, nothing the Entente could have done would have prevented it. For Germany The Day had come to establish the reign, if not rule, of German *kultur* all over the world. It was fixed unalterably. Taking this view, the author acquits the Entente of all responsibility for the war, even Imperial "Russia the 'Incendiary.'" But here the author would seem to overlook the position of Hungary, to whom, from terrible experience, Imperial Russia was a veritable incendiary. The ravishing of her fertile plains have borne testimony to it, together with subjugation of her aspiration for independent nationality under Kossuth. Consequently it was impossible for Hungary to view without alarm Russia's mobilization, and to grasp the sword for the defense of her frontiers. Hungary was indeed hardly to blame for being suspicious of the pacific utterances of the Imperial Russian Bear, and, as a choice between two evils, to prefer what seemed to be the lesser in standing by the Austro-German Alliance. But the author ruthlessly questions the spoken utterances of all crowned heads. In a scathing paper on Royal Visits he charges them all with deliberate hypocrisy. "They dress and undress," he cries. "Royal Visits! Dust in the eyes of the people. Kisses and embraces. Judas kisses, with the dagger drawn behind the other's back." Perhaps erroneously he prophesies it will be the same again when the Great War is a horror of the past.

Karl Liebknecht is in jail, and one surmises the publication of his suppressed *Militarism* here is hardly likely to effect his speedy release. Certainly it does not make complimentary reading for the German military caste, or, for that matter, militarism anywhere. But, as Liebknecht proceeds to demonstrate, militarism lies "so deeply rooted in the very nature of societies divided in classes" that presumably only the elimination of all class distinctions would eliminate militarism. Here the bourgeois come in for the author's denunciation quite as thoroly as the aristocratic and capitalistic classes. Liebknecht, therefore, would seem to be in accord with the principles of the Russian Bolsheviks. Their pacifism, however, does not appear to have reached the extreme of the Jain Worshipers of India. In refusing to kill any living creature, the Jains, perhaps not entirely illogically, subject themselves to the irritation of the habitation of numerous assorted insects. The Jains consequently believe they are the only true pacifists, after all a caste, or class, unto themselves, be it observed.

*Out of Their Own Mouths*, with an introduction by William Roscoe Thayer, is a volume of extracts from German authorities, civil and military, on the destiny of German *kultur* to rule the world. Its superiority over other social forms is a keynote flamboyantly and frequently struck. While other volumes of a similar kind have

preceded this, we have herein intimation that Germany's eastern advance was not intended to halt at Bagdad. Thus, "It is quite possible that German regiments may march over the Indus to the Ganges." "So our gaze sweeps from the North Cape to the Indian Ocean."

*The Crime*, by the author of "I Accuse." George H. Doran Company. \$2.50. *Militarism*, By Karl Liebknecht. B. W. Huebsch. \$1. *Out of Their Own Mouths*. Appletons. \$1.

### The Soul of a Bishop

**A** pleasant Anglican bishop who had been popular in the old rectory of Otteringham, was removed to the see of Princeschester, a district "industrial and unashamed." Then his troubles began. He was obliged to dispute with modern rationalists. He was brought face to face with the conflict between capital and labor. He discovered that he had no authority with either side. The crudity of the environment and the lack of culture and kindness in the people troubled him. He began to wonder and then to doubt. Insomnia followed. In acute distress of mind and body he sought his family physician, only to find that that worthy had gone away and left his practise in charge of a strange young doctor. The new doctor gave him a drug with remarkable tonic effects which produced for the bishop the hallucination of a vision of God. Thru this vision and other similar emotional experiences the bishop is led to renounce his church and serve the God of whom Mr. Wells wrote in an earlier book. Briefly, this is the story of *The Soul of a Bishop*, by H. G. Wells.

Considered simply as a novel, the book leaves much to be desired. Mr. Wells allows his zeal as a propagandist of the new religion to overtop his skill as a literary artist. The story is too obviously made for a purpose and the machinery of the construction of it creaks and jingles and is too much in evidence. But we do find in the book many passages that modern thinkers will be glad to read, passages full of sound and sincere thinking about religious matters. And the character of Lady Sunderbund, an emotional feminine religionist of the painful modern type, is admirably drawn.

*The Soul of a Bishop*, by H. G. Wells. The Macmillan Company. \$1.50.

### Is Necessity Necessary?

**M.** EMILE BOUTROUX has stood in philosophy for the same movement in philosophy as his famous fellow countryman, Henri Bergson, and his American friend, the late William James. Like them he has championed the idea that ours is a plastic universe whose laws are not fixed and immutable mandates but the customs and habits of life and matter; or, to phrase it in M. Bourtroux's own words:

Laws are the channel along which rushes the stream of facts: these latter have hollowed it out, altho they follow its track.

*The Contingency of the Laws of Nature* is a systematic presentation of this philosophy which is astonishingly close to the most recent thought of the day altho it is translated from the doctor's thesis of the author, written more than forty years ago. His conclusion is that not only are chance and choice realities of the world we live in but that they may be greater factors in the future than they are today.

In proportion as beings cease to live solely for themselves, and as the subordination of the lower being to the higher, the inner adaptation of the conditions to the conditioned, of matter to form, becomes more spontaneous and complete: in like proportion do we find a diminution throughout the world of uniformity, homogeneity and equality, i. e., of the undisputed sway of physical fatality. The complete triumph of the good

## A Picture History of the Great War

IT has taken three years to prepare this book and to secure the pictures and drawings. No other volume in your library will picture the war in just this way. Its pictures, articles, cartoons and historic documents were written at the time of the event and its pictures were made on the spot. Not only is this a book of fascinating reading and vivid and inspiring pictures, but a volume of permanent historic value for the library of every American home.

### Written on the Moment—Pictured on the Spot

This book contains 437 pictures—photographs made on the firing line by the greatest war photographers, by the soldiers themselves in the trenches, by the aviators above the battle and by the men at sea. They have been carefully chosen from thousands of photographs of the Great War for their news value and their pictorial appeal. 100 cartoons by the world's most famous cartoonists are also included.

### A Permanent Record

A condensed history of the war, with a thorough analysis by The Independent's war experts of the successes, the failures and the strategy by land and sea of each separate year of the war from the beginning, sums up for the reader the important events to be remembered, and a day to day chronology is added which should prove of unique value for historical reference. President Wilson's War Message of April 2nd is published in full.

### Only Three Dollars

is the price at which we offer the first limited edition of this sumptuous war history, and we should explain why it is possible to make a price so low at this time.

The book contains 224 pages of highest grade coated paper. The size is 8½ by 12½ inches. It is richly bound in full cloth with a four color medallion of Paul Bransom's famous American Eagle painting.

We are able to place the price within the reach of all because we purchased the heavy coated paper used in this edition before the war began. The same paper would now cost 100% more.

By using the attached coupon promptly you will secure on very unusual terms one of the most valuable and beautiful books published in America since the beginning of the war.

and the beautiful would do away with the laws of nature, strictly so called, and would replace them by the free flight of human wills toward perfection.

*The Contingency of the Laws of Nature*, by Emile Boutroux. Chicago. The Open Court Publishing Company. \$1.50.

## Mexico and Big Business

**THE MEXICAN PROBLEM**, by C. W. Barron, is primarily a study of the development of the Mexican oil fields. References to political conditions and internal problems are frequent but only incidental. As an account of the possibilities of the Mexican oil fields and the potential wealth of Mexico when fully developed by American capital and industry under a peaceful and orderly rule, the book is interesting and stimulating. But the political bias of the author is so evident that only those who share it will feel much confidence in his account of present conditions. He regards the late Porfirio Diaz as free from every "taint of graft or personal ambition" and sees nothing but criminal anarchy in the uprising against his dictatorship. He believes President Wilson's policy toward the distracted country to be inspired by no better motive than hatred of American capitalists who invested their money in Mexico. He sincerely wishes industrial prosperity for the Mexican people, but he thinks an efficient despotism the best possible government for them. Dean Talcott Williams, of the Columbia School of Journalism, contributes a sympathetic preface.

*The Mexican Problem*, by C. W. Barron. Houghton, Mifflin Company, Boston. \$1.

## "Pioneering"

IT is not easy to convey a good idea of this book in a brief "notice." The author confesses she followed a "whisper" calling persistently to vagabondism; and seems to have chosen her husband by the same token—and found it (and him) good.

"These tales of our comings and goings," she protests, "all entangled with the thoughts and fancies that have grown up around our pioneering in China—a country which is so old that it possesses much of the far-away youth of the world—are for those who will always possess something of the spirit of eternal youth and love of adventure, even tho they labor within the four walls of a shop or office."

This country is Manchuria, into the remotest wilds of which Mrs. Tisdale accompanied her husband on his business trips, and where from time to time she lived in the most primitive way, and sometimes survived real hardship and peril. The reader finds little mention of routes or places; but ever before his eyes are the vividly drawn pictures of the people and the world they live in—impressions rather than facts—painted with exquisite and womanly art by the light of imagination sprung from long experience and much thought. The practically minded reader may find much in it, but the imaginative will get more.

*Pioneering Where the World Is Old*, by Alice Tisdale. Henry Holt & Co. \$1.50.

## History as Geography

**GEOGRAPHY AND WORLD POWER**, by James Fairgrieve, is an excellent study in what may be termed dynamic geography. With the aid of numerous small maps and lucid explanations many interesting historical problems are made clear to the student; why the first civilizations arose in Egypt and Mesopotamia, why the English built the greatest navy in the world, why Berlin is the metropolis of northern Germany, why Russian civilization developed more slowly than that of western and central Europe and how the distribution of rainfall, drifting ice, seasonal winds, forests and coal lands have

# N.B.C. GRAHAM CRACKERS

## Vary The Breakfast Menu

Breakfast in the average home is a most monotonous meal—the same foods are served morning after morning, with little or no variety. Surprise your family tomorrow morning. Instead of the breakfast food you usually serve, try N. B. C. Graham Crackers with milk—perhaps some of the family will want the milk hot.

N. B. C. Graham Crackers supply abundant nourishment besides being appetizing. Sweetened enough in the making they require no sugar. Already cooked, they save trouble and are easy to serve.

You can obtain the Year Book from no other source for less than the regular price—\$3.00. THE INDEPENDENT is \$4.00. Our price for both is only FIVE DOLLARS.—Address

**THE INDEPENDENT - 119 West 40th Street, New York**

enabled different parts of the earth to attain political and economic greatness in their turn. The author thinks in terms of topography, he grasps the essential features of a continent as a good general grasps those of the battlefield and his conclusions are those long ago worked out by geographers, but rarely so effectively presented to the general reader or the college student. The most original part of the book is the final chapter which discusses the possibility that civilization may yet find its home in the tropics, where natural energy is available on the largest scale.

*Geography and World Power*, by James Fairgrieve. E. P. Dutton & Co. \$1.50.

### A Realistic Universe

PROFESSOR JOHN ELOF BOODIN'S *A Realistic Universe* is characterized by such an imposing bulk and wealth of technical terms as to frighten the average reader who has not previously dipped into philosophy. The author has inherited from the Pragmatists, with whom he seems to be in general agreement, their easy lucidity of style and humanistic attitude. He keeps in close touch with the latest theories and conclusions of natural science and is sympathetic with the demands of religious faith. To him the will is the core of personal life and it is this factor, if any, which assures us immortality.

*A Realistic Universe*, by John Elof Boodin. The Macmillan Company. \$3.25.

### Human Side of Birds

A book that tells stories of birds, under such headings as "Feathered Athletes," "Giant Roadmakers," "Courts of Justice" and so forth, as if the birds had human minds. In this long-discredited method of presenting natural history not only are facts strained and dislocated to fit into the scheme, but many statements are totally untrue, as, for instance, that no bird except the Kiwi has nostrils. The illustrations are mainly photographs of the bird-groups in the New York Museum of Natural History, altho this artificial character is not explained; and a few colored drawings, one of which labeled penguins really represents guillemots and gulls on a cliff, probably at Bird Rock in the Gulf of St. Lawrence.

*Human Side of Birds*, by Royal Dixon. F. A. Stokes & Co. \$1.60.

### Books for Garden Makers

*Around the Year in the Garden* is by a trustworthy and widely-followed writer on vegetables, flowers and the use of land, Frederick Frye Rockwell, and it is written for the busy man or woman who has little time for gardening but who wishes to make the most of that time. It is alluring, interesting, convincing. It tells what to do, when to do it and how to do it. (The Macmillan Company, \$1.75.)

*Name This Flower* is based on the work of M. Gaston Bonnier, professor of botany at the Sorbonne, and is edited and translated by George Simonds Boulger, professor of botany at the City of London College. These two famed scientists have in this valuable book given information about all the plants and flowers of Europe, with an ingenious but simple key by which the name of any plant may be found easily and surely. Colored illustrations are numerous and accurate. The book is of pocket size. (E. P. Dutton & Co., \$2.50.)

*The New Business of Farming*, by Julian A. Dimock, is a condensed handbook on the business side of farming. It is valuable in that it shows the way to efficient farming and is a guide to beginners in that profession. (F. A. Stokes & Co., \$1.)

*Our Back Door Neighbors*, by Frank C. Pellett, is a more than ordinarily interest-

# DREER'S

## "GOLD MEDAL" GLADIOLUS

We grow this magnificent strain for the express purpose of being able to supply those who want the very best mixture possible.

When Gladioli are grown in mixture they are liable to deteriorate rapidly and finally contain but a few colors. To avoid this we grow small blocks of a large number of exquisite high-grade sorts from which this mixture is made and which embraces all colors from the richest reds through all the intermediate tones of pink, rose, salmon, blush, white, yellow to the new blue, heliotrope and "pansy colors." Indeed so great is the diversity of colors that there is little risk of any two being exactly alike.

Having a large stock of splendid bulbs, we are able to offer them at a very reasonable price, viz. 60 cts. per doz., \$4.00 per 100, \$35.00 per 1000. If wanted by Parcel Post add 6 cts. per doz. for postage.

The above is but one of our Specialties. For complete list send for

For 50c both collections, and a packet of our famous Early Flowering Cosmos.

**JAMES VICK'S SONS**

19 Stone Street, Rochester, N. Y.  
The Flower City

ing recital of a naturalist's observation of the life from birth of all his friendly neighbors who came to the grounds surrounding his home in Iowa; his success in making friends with them is due to the same spirit of understanding which pervades his pages and which gives them an unusually strong appeal. (Abingdon Press, New York, \$1.50.)

*The Study of Landscape Design*, by Henry Vincent Hubbard and Theodora Kimball, is the first comprehensive treatment of landscape ever brought out in one volume. It will be the best guide available to the landscape architect and to the person who takes a pride in the beauties of his own country place. It is of unique value to the supervisor of the city plans and the park superintendent. (The Macmillan Company, \$6.)

*Food, Fruit and Flowers*, by Walter P. Wright, author of "Everyman's Encyclopedia of Gardening," contrasts the garden of beauty with the garden of utility, shows the changed conditions of today under which the small garden must be planned and worked, and gives the necessary information to those who, untrained in practical gardening, are trying to do their best to help in this time of national need. (E. P. Dutton & Co., \$2.)

*Second Wind*, by Freeman Tilden, is in the form of a recital of actual experiences, a tract on the subject of going back to the land, and it is told with such convincing, simple truth that we believe it will influence many readers to decide that they, too, can be successful on the farm. The book shows that unremitting work is the price of success, and it shows, too, that the success possible to the untiring worker is more than some believe. (B. W. Huebsch, \$1.)

## Business Efficiency

*If I Were Twenty-one*, by William Maxwell, is a chatty, informal, instructive discussion of the problems and opportunities that confront the young man entering business. Some of topics considered are the landing of a job, the handling of men, the selling of goods, the writing of effective advertising, the understanding of customers and competitor. The book is characterized by human nature, good nature and good sense. (Lippincott Company, Philadelphia, \$1.25.)

*Scientific Office Management*, by W. H. Leffingwell, including an official manual and four supplements, is a report on the results of applications of the Taylor System of Scientific Management to offices, with a discussion of how to get the most important of these results. The handling of office problems, the training of employees, the selection of the best equipment, the elimination of superfluous records and the reduction of office costs and waste motions are among the pressing questions treated. This is a careful, painstaking work, in which many a puzzled executive will find needed suggestions. It is to be regretted that so large and important a book of reference is published without an index or even a table of contents. (A. W. Shaw Company, Chicago, \$10.)

*Applied Motion Study*, by Frank B. and L. M. Gilbreth, describes motion study as applied by various fields of activity, and outlines the principles and practise of motion study in such a way as to make possible its application in any and all kinds of work. As George Iles says in his preface, "This book is written from the heart as well as from the brain." It is full of useful suggestion, of the results of the practical application of the principles for which the authors argue, is illustrated in a way to show the patient study involved in its preparation, and is a highly important addition to our literature dealing with elimination of waste, scientific management and the reduction of fatigue. We have much improvement to make in all these lines and this careful, dependable work offers a basis for much that can be done. (Sturgis & Walton, \$1.62.)

## Read a Play

*Three Short Plays*, by Mary S. Watts, contain good material, especially the satire *Civilization*. The situations are forced, the continuity of action marred by disjointed exits and entrances, and the lines lack the snap of successful stage dialog. (The Macmillan Co., \$1.25.)

*Three Welsh Plays*, by Jeannette Marks, contains a trio of short plays of Welsh village life—very slender of plot, and very simply developed, but showing nevertheless a deep and sympathetic insight into human tenderness and foibles. (Little, Brown & Co., \$1.)

Sir Thomas Barclay, who is a personal acquaintance of the Kaiser, has put in dramatic form the personal causes of the war. *The Sands of Fate* pictures an ambitious Crown Prince, a selfish governing class, and an unstable Kaiser all greedy for an aggressive war. (Houghton, Mifflin, \$1.50.)

*The Contemporary Drama of England*, by Thomas H. Dickenson, is a comprehensive and thoro review of the English stage from 1866 to the present time. Mr. Dickenson lays his main emphasis on the past, sums up the present briefly, and makes no attempt to forecast the future. (Little, Brown & Co., \$1.25.)

Padraic Colum, unlike most of the well-known Irish dramatists, chooses to emphasize in his work not so much the mysticism of the Gaelic nature as its more homely and human qualities. His *Three Plays*, however, are none the less excellent studies of character and Irish peasant life. (Little, Brown & Co., \$1.25.)

*The Woman Who Wouldn't* legitimize her child by marrying its father, who loves another woman, opens an interesting discussion in a skilful first act. But in the last two acts Rose Pastor Stokes robs both theme and plot of dramatic value by giving her suffering heroine an ultimate incredible triumph. (Knickerbocker Press, \$1.25.)

*The Tidings Brought to Mary*, by Paul Claudel, a mystery play of old France, written in prose glowing in beauty like stained glass in a Gothic cathedral, remarkable for its deeply comprehending reproduction of medieval life, with its childlike and mystic religion. The translation by Louise Morgan Sill is excellent. (Yale University Press, \$1.50.)

## For the Churchman

Prof. Francis Peabody writes delightfully of the influences which direct *The Religious Education of an American Citizen* in a series of loosely connected essays dealing with religious training from infancy in the Christian home to the vital personal experience of Jesus Christ possible to a mature philosophical intellect. (The Macmillan Company, \$1.25.)

*James Monroe Buckley*, by George P. Mains, gives the story of one of Methodism's greatest living representatives. For more than thirty years Dr. Buckley was editor of *The Christian Advocate*, of New York, and a leader in all the work and councils of his denomination. The volume is written with appreciation and judicious reserve. It is a graphic picture of a highly honored churchman. (Methodist Book Concern, \$1.50.)

The first of a new series of handbooks on religious education, *Recreation and the Church*, discusses the relation of the local church to community play. While thoroly scientific in character, the book is popular in its presentation and will make readily available to lay folks the valuable methods and plans which Mr. Gates has wrought out in daily routine in the Brick Church, of Rochester. (University of Chicago Press, \$1.)

Dissatisfied with the results of the higher criticism of the Book of Daniel, Robert D. Wilson, of Princeton Seminary, attempts, in his *Studies in the Book of Daniel*, to remove all objections to its historicity. Much of his reasoning is convincing; but one lays aside the work with the

# \$6.00 Buys Enough Nitraco To Fertilize the Average Garden and Lawn for an Entire Season

4% Ammonia, 8% Available Phosphoric Acid, 2% Potash

NITRACO is a universal fertilizer in such highly concentrated form that 100 pounds are ample for an entire season, for a garden containing 8,000 square feet, if planted entirely to potatoes. Or for one of 12,000 square feet of general vegetables or flowers.

It will give abundant food, the season through, for a lawn containing 12,000 square feet.

Or to say it another way, 100 pounds of NITRACO are sufficient for both the average garden of 4,000 square feet and a lawn of 8,000.

Altho highly concentrated, it will not injure the most delicate plants, unless used to excess.

It is so perfectly balanced in the foods it contains, that it can be used with highly satisfactory results on anything that grows.

Being odorless, it can be used at any time without offense.

Being finely pulverized, it is easy to use.

Being so highly concentrated, every ounce of it is actual plant food.

Keeps from year to year.

Its use means conservation and economy in every sense of the word.

With NITRACO, you can give to your vegetables, flowers or lawn, just the right amount of nitrogen, phosphate and potash they need.

For your garden, sow it in the seed drills, scattering a little dirt over it. Then put in your seed and cover with dirt in the usual way.

As the season advances, if you want extra fine results, sow a little NITRACO along the surface near the roots and cultivate it in. The increased growth will be quickly noticeable.

Send us your \$6 for 100 pounds of NITRACO and we will pay the expressage anywhere within 150 miles of New York. We will do the same on smaller amounts.

The congested condition of the railroads makes even express deliveries slow, so it is important that you order early.

Informative "Hand-Book of Fertilizers" is yours for the asking.

And whatever your fertilizing problem may be, do not hesitate to put it up to us. Our Mr. Bunyard, an enthusiastic garden lover and fertilizing expert of many years' standing, will gladly advise you as to its most logical solution.

# TOWNSEND'S TRIPLEX

The Greatest  
Grass-Cutter  
on Earth

Cuts a  
Swath  
86 Inches Wide

The Public is warned not to purchase Mowers infringing the Townsend Patent, No. 1,209,519, Dec. 19, 1916

**Floats Over the Uneven Ground as a Ship Rides the Waves**

One mower may be climbing a knoll, the second skimming a level and the third paring a hollow

Drawn by one horse and operated by one man, the TRIPLEX will mow more lawn in a day than the best motor mower ever made, cut it better and at a fraction of the cost.

Drawn by one horse and operated by one man, it will mow more lawn in a day than any three ordinary horse-drawn mowers with three horses and three men.

Does not 'smash' the grass to earth and plaster it in the mud in springtime, neither

does it crush the life out of the grass between hot rollers and hard, hot ground in summer, as does the motor mower.

Write for catalogue illustrating all types of Lawn Mowers.

## Coming Next Week A TALK with **Trotzky**

By Edward Alsworth Ross, the eminent American Sociologist—first of a series of articles from Russia to appear in **The Independent**

feeling that a prophetic book which requires three large volumes in defense can scarcely be regarded as a satisfactory historical document. (Putnam, \$3.50.)

### About Other Countries

*Over Japan Way*, by Alfred M. Hitchcock, written with a delicious sense of humor, describes in an appreciative manner the beautiful country, the people and their unique habits and customs. (Henry Holt & Co., \$2.)

Altho making no profession to be a guide book, Archie Bell in *A Trip to Lotus Land* suggests a six weeks' itinerary thru Japan and succeeds admirably in his purpose "to convey to the reader something of the joys of a six weeks' tour of Nippon." The book is well illustrated and beautifully bound. (John Lane Company, \$2.)

*Hill Towns of France*, by Eugénie M. Fryer, is a series of descriptive and historical sketches of some of the most romantic and beautiful places in Europe. It is illustrated with fifty pen-and-ink drawings by Ray L. Hilton and many fine photo-engravings. (E. P. Dutton & Co., \$2.50.)

Pauline Stiles has given us a most artistic description of her travels in Europe just prior to the war in *New Footprints in Old Places*. The reader is charmed by the author's intermingling of fact and fancy, the quiet humor which pervades the book, and her impressions of European peoples. (Paul Elder & Co., San Francisco, \$2.)

One of John Muir's best books, indeed one of the most engaging of its kind written, is *The Cruise of the Corwin*, made up from his original journals. It is descriptive of the Corwin expedition made in 1881 thru Bering Sea and the Arctic Ocean in search of the lost Arctic explorer Delong and his ship the "Jeannette." (Houghton Mifflin, \$2.75.)

*Arizona the Wonderland*, by George Wharton James, is a member of the popular *See America First* series. The book is well written, copiously illustrated and describes the native Indians, the birds, the mountains, the forests, the flowers and the growing towns.

*Oregon the Picturesque* tells of the rambles and motor trip of the author, Thomas D. Murphy, in the Oregon country and in northern California, the industries of the people, the beauty of the country, and a survey of the towns and embryo cities is adequately presented. These books cannot fail to make the reader better acquainted with the Pacific Coast region and will make him desirous of seeing America. (Page, \$3.50 each.)

*First Through the Grand Canyon* is Major J. W. Powell's personal account of that brave exploration of unknown and dangerous waters which Indians fear, as they rush along over boulders, in falls and whirlpools, at the foot of canyon walls, often half a mile high. A restrained yet thrilling account of one of the most hazardous voyages in all the history of exploration. This trip was made in 1869 and the account has heretofore been buried in Government publications. (Outing Adventure Library, \$1.)

### For the Nurse and Doctor

Dr. Richard W. Müller, a specialist of troubles of the hair and scalp, explains in *Baldness* the anatomy of the hair and describes the various causes of the loss of hair and gives appropriate treatment. The book is intended for laymen and practitioners. (E. P. Dutton, \$2.)

There is no cure-all known to social workers, but probably prevention of sickness and maintenance of public health is the key to many problems. Lina Struthers, a pioneer in the field in *The School Nurse* surveys the duties and responsibilities of the nurse, presents a history of the work and guides both those engaged in the work and those interested in its possibilities. (Putnam, \$1.75.)

Frances Campbell in *The Book of Home Nursing* gives the essential "do and don'ts" for successful home nursing. The book is a practical guide written with no waste of words, covers the field pretty thoroly, and will be of great value to those needing such advice and aid. (E. P. Dutton & Co. \$1.25.)

A new volume, *Training and Rewards of the Physician*, by the widely known writer and recognized medical authority, Dr. Richard Cabot, has been added to Lippincott's Training Series. Dr. Cabot gives a deal of wisdom in a short space to those considering entering the medical profession. (Lippincott, \$1.25.)

*Recollections of a New York Surgeon*, by Arpad G. Gerster, M.D., is the story of an active life, begun in Hungary, but for over forty years finding its scenes laid in and about New York, and in connection with a profession that this active personality, whose book reveals a real zest for life, has honored and which has honored him. (Paul B. Hoeber, New York, \$3.50.)

Dr. William W. Keen, former president of the American Surgical Association, records his personal experiences during a professional life of fifty-seven years in *Medical Research and Human Welfare*. The tremendous advances made in surgery, asepsis, bacteriology and recognition of the importance of the ductless glands during the past century will interest both medical and laymen. (Houghton, Mifflin Company, \$1.25.)

*The Technic of the Carrel Method*, by J. Dumas and Anne Carrel, is written without the waste of a word. The little brochure, the product of the famous surgeon's colleague, assisted by his talented wife, is a snappy, right-to-the-point description of the Carrel method of treating war wounds; already convinced by contemporary results that the Carrel use of Dakin's solution should be widely known, the medical and surgical profession should welcome enthusiastically this opportunity to get in simple form the details they have awaited. (Paul Hoeber, \$1.25.)

There is none better of the kind than the new series, *Our Senses and What They Mean to Us*, edited by George Van Ness Dearborn. *Pain and Pleasure*, by Henry T. Moore, emphasizes that human struggle is the index of pleasure and pain, shows their bodily evolution as motives of behavior and places them among moral values. *The Sense of Sight*, by Frank N. Spindler, tells the story of the wonderful power of vision. Both books are authentic, readable, and will interest the reader whether or not he be scientifically trained. (Moffat, Yard & Co. \$1.25 each.)

## The Art of Writing

Believing that news writing as a craft can be learned, M. Lyle Spencer, a member of the Milwaukee *Journal* staff, has written a valuable little book, *News Writing*, which deals with the gathering, handling and writing of news stories. (D. C. Heath & Co., \$1.25.)

The Department of Journalism in the University of Kansas believes in expansion. Prof. L. N. Flint, the head of it, has prepared an outline for the use of teachers on *Newspaper Writing in High Schools*, telling how newspapers may be studied and newspaper copy prepared. (50 cents.)

A *Manual of Style* is now issued in its fifth edition. This 300 page codification of the typographical rules employed by the University Press results from slight beginnings over twenty years ago. Its steady growth and the adoption of its recommendations by many editorial offices, libraries and proofrooms thruout this country and Canada testify to its permanent value. (University of Chicago Press, \$1.50.)

Miss Blanche Colton Williams, who has been very successful in teaching the art of writing in Columbia University and Hunter College, has put her theories and experience into a *Handbook on Story Writing*. The questions, hints and references make the volume convenient for self-instruction. (Dodd, Mead, \$1.50.)

This is one of Fuel Administrator Garfield's signs. The Kelsey at 66 degrees gives same result as other heats at 72 degrees.

## 66 Degrees of Kelsey Health Heat Equals 72 Degrees of Radiator Heat—6 Degrees Saved

This statement is not simply an advertising claim made by us. It is a recognized fact long since established by science. It is an every day natural law with which you are perfectly familiar, but haven't just happened to associate with home heating.

It is based on the same basic reason that a so-called "humid day" in the summer seems so much warmer than other days at exactly the same temperature.

The moisture in the air holds

the heat in suspension. That is why.

The Kelsey Health Heat is automatically and scientifically mixed with just the right healthful, economical amount of moisture.

66 degrees of Kelsey Humidified Heat equals 72 degrees of dry, parched radiator heats.

It may be cheaper to tear out your present heating apparatus, and put in The Kelsey.

Send us the facts, and we will send you the figures.

they leave the rest of the place looking tidier.

Probably the most important point in the consideration of the formal or ordered flower garden is its location; this, it goes without saying, should be near the house, or, if it cannot be near the house, it should be definitely off by itself, away from it.

The garden which is planned along with the house should be "tied up" to it in some fashion if possible—perhaps the entrance to the garden may be thru a sun porch, perhaps the first flower beds border a paved terrace intimately, perhaps the paths run out from long windows or doors of the house and form flower-bordered vistas for its occupants; in any case the ideal garden picks up the lines of the house and continues them in its own, for this formalistic garden is of the house and its belongings; it dispenses with the roof and modifies the walls to let in sunshine and air, and substitutes flowers that are alive for the painted ones of silks and chintzes. In enlarging the scale of the house, however, it does not lose the intimate feeling of a living-room, but merely adds to it the free spirit of outdoors. This is accomplished by two factors: the first, walling the garden in; the second, proper proportion.

Walls used in this sense do not have to be of brick or concrete—a shrub border, a high hedge, the house wall, anything which confines the garden and limits the view, serves the purpose.

In the process of walling in the garden it is not necessary to shut out every prospect—to leave no distant views at all—the garden wall should contain windows even as the house wall does. Views glimpsed thru a frame of trees, or a gateway, are ever so much more inviting than panoramas, because they lure us on with a promise instead of satisfying us at a glance.

Proper proportion within the flower garden, the second factor which is responsible for its atmosphere of friendliness, relates to sizes of beds, paths, stretches of green, etc. Beds must be of sufficient size so that the flowers will count in masses, and paths should be wide enough so that two people may walk abreast on them. Big masses of flowers and paths wide enough to be in proportion are essentials, if a garden is to be comfortable and livable—and at the same time pictorially worth while.

A stretch of green in the garden with the beds grouped about it is a good plan to adopt, when lawn space about the grounds is limited, or when for any reason the garden is apt to have a shut-in feeling. In any case the scheme rightly handled is a good one.

Next in importance, after the location and design of the garden, comes the arrangement of flowers. I am sorry to say that almost every one is prone to look upon the flowers as of paramount importance. It is true that sheets of bloom will conceal a great many defects in design; but the flowers are passing, and may be changed at any time, whereas a garden once laid out is often impossible to alter.

Color and season are the two factors in flower arrangement which must be considered simultaneously. Red is the greatest trouble maker in the garden, and when one has made up one's mind to have the warmth of this color everything else must be planned around it; moreover, no two reds are alike, and a red garden must consist almost wholly of one flower or at least of the one which happens to be in bloom at the moment. Consternation is in store for the jumbler of reds—one has only to think of the cardinal of lobelia, and the good honest turkey red of scarlet sage ablaze at once to realize this.

## Dreer's Famous American Asters

Asters are now the leading late Summer and Autumn flower both for cutting and for effect in the garden, and every flower lover should make a generous planting.

We offer this season over sixty kinds and colors, all "Made in America," and of the highest quality.

We especially recommend our collection of *Six Famous American* varieties containing a liberal packet each of Peerless Pink, Crimson King, Crego's Giant Pink, Crego's Giant White, Rose King and Violet King. Price for any of the sorts 15 cts. per packet, or the entire collection for 65 cts. postpaid.

### Don't Let Drought Defeat Your 1918 Garden Hopes

MANY 1917 gardens failed for just one reason—*lack of proper watering*. Rain didn't fall. Owner didn't have time to water his garden thoroughly himself. The hose watering he did do, failed to give his plants the gentle, uniform spray they required.

Make such a failure impossible in 1918. Make your garden *water itself* and do so *correctly*. Do so by installing the Skinner System of Irrigation. All you have to do is turn a valve—the System does the rest. Waters your plants with a fine, uniform spray like heaven's own rains.

Means *sure* crops. Better crops. Bigger crops. Earlier crops.

As a starter, send \$18.75 for 50 foot Sectional and Movable Garden Sprinkling Line. Waters space 50 feet square.

*Catalog sent on request.*

**The Fertile  
Chemical Co.**

602 Ellastone Building  
Cleveland, Ohio

The fewer the varieties of any color in a garden, the greater are the pictorial effects obtainable, and a good plan to follow is to pick out a succession of twos, which will be blooming at once, and plant the garden all round with groups of these. White is always good, even in a garden which sets out to confine itself to rigid color combinations; in fact, it may be used to furnish the body or warp, so to speak, of the pattern.

In a garden of many varieties a somewhat different arrangement must be adopted so that the flowers will not have a scattering appearance. More varieties necessitate fewer flowers of a kind, and these must be planted in groups big enough to count as masses; and the masses, moreover, must drift into one another and not have the appearance of blocks. To accomplish this latter object it is necessary to lap the mass of one kind of flower by that of another; or, to put it another way, to scatter one group into the next.

In arranging flowers with respect to form, the main thing to remember is that a general uniformity in character and size of plants is undesirable. Low things need to be broken occasionally by taller plants, large leaves contrasted with small, and fine lacey foliage solidified by coarser-leaved plants.

The general rule that tall things should be kept to the back of the border with lower growing plants in front, ought not to be enforced to the point of giving the plants an appearance of tier arrangement. The hollyhocks and boltonia and foxgloves should run forward here and there into the phlox and sweet william, in order to break up their too even line, and the blue bells and forget-me-nots would suffer no harm from an intrusion of the phlox and sweet william.

Of informal gardens there are two sorts: the "studied haphazard" garden, and the pure naturalistic garden. Mr. Henry V. Hubbard makes the distinction between the two by saying that the design of the first "consists in informal masses arranged with no particular attempt at naturalness, to make a pictorial composition, and on the other hand, informal masses arranged to give this pictorial effect, but also to look as tho they were organized by some of the laws of untrammelled Nature."

But I am bound to say of this kind of informal garden in general that it seems to me to have no place in real garden art. It is a mongrel kind of garden, an in-between type—something that is neither formal nor naturalistic, but just a compromise. This sort of garden should be remote, or at least seem to be remote, from houses and artificial things, and these may be banished by means of tall planting or grading or a combination of both.

Probably the only way to get the right sort of atmosphere into a naturalistic garden is to study the country around it and adopt native characteristics; that is, the good characteristics. The bad ones should be discarded and the good ones emphasized, for this is the only way to preserve the individuality of each particular bit of country. In order to be convincingly naturalistic to charm us into thinking we have stepped out of the world into a lovely bit of Nature's gardening, we must follow her suggestions and use the materials she provides.

The prisoner appeared before the Magistrate and pleaded for leniency.

"I'm down and out, your Worship," he said.

"You're down, but you're not out. Six months," was the magisterial retort.—*London Opinion.*

## Remarkable Remarks

ELIHU ROOT—Away with all fear and pessimism.

SECRETARY REDFIELD—Make "E Pluribus Unum" a reality.

EMPEROR WILLIAM—America had better look out after this war.

THEODORE ROOSEVELT—I believe in every one having a good time.

SENATOR CHAMBERLAIN—I have no fear of God, man, or the devil.

PRIMA DONNA CAVALIERI—No woman is ever pretty when her feet hurt.

ED HOWE—Lately everybody in the world has been trying to raise hell.

GENERAL PERSHING—Never tell anything of a confidential nature to a woman.

JOHN BURROUGHS—Was ever a serious or profound word spoken in a parlor.

DAVID LLOYD GEORGE—Let the Germans say "Restoration," then we will talk.

SENATOR HARDING—The American republic is heading straight for socialism.

VICE-PRESIDENT MARSHALL—We hear the flapping of the black wings of anarchy.

MAXIMILIAN HARDEN—The Key to the Temple of Peace lies in the capitol at Washington.

JOHN D. ROCKEFELLER—There is nothing they can ask of me that I would not feel like doing.

MAJOR FREDERICK PALMER—Build, build and continue to build ships. Make a bridge of ships to Pershing.

SIMEON STRUNSKY—Only shrewd, hard-headed, practical business men have the right to make a mess of things.

PHILOSOPHER GEORGE TRUMBULL LADD—Without indemnities and annexation this war cannot issue in a lasting peace.

LEON TROTZKY—The hammer was wrenched out of the worker's hand and a gun put into his hand instead.

MRS. JOHN D. ROCKEFELLER—A woman can snuggle in anywhere with her tea kettle and make a home for herself.

DONALD WILHELM—I wonder if the sum total of Sunday marital happiness has increased 100 per cent by the Monday closing order.

PROF. GILBERT MURRAY—Trotzky is not only the hero of the hour but perhaps the most outstanding and startling figure of the whole war.

HERR SCHEIDEMANN—If France and Britain renounce annexations and Germany insists on them we shall have a revolution in the land.

DUKE ERNEST DUNTHIER, brother of the Empress of Germany—Russia is the only country where corruption is on a par with the corruption of America.

W. J. BRYAN—Why do we appropriate money to exterminate cholera among hogs, and then pay licensed men to propagate delirium tremens among human beings?

MRS. MARTHA WILLIAMS—In speaking of a woman it is considered better form for men to speak of "the lady," while women usually refer to each other as "a woman."

FREDERICK HARRISON—There never was in England a time when more readable verse without bad quality was produced—not even in the time of the Tudors or Stuarts.

CHARLES ZEUBLIN—If we were to put every boy and girl at the end of the high school course in a working army for a year we could develop the greatest vocational bureau ever conceived.

ARTHUR HENDERSON—Secret diplomacy, compulsory military service, profit from the manufacture of the instruments of destruction, should be rendered unnecessary in a society of free nations.

SERGEANT EMPEY—I was raised in Virginia and brought up on McDuffey's reader and I had the same opinion of England that a minute man or a Sinn Feiner would have, but I found Tommy Atkins the squarrest man that ever drew breath.

## Force your Garden

The Corona Garden Guide is a comprehensive, authoritative book on scientific gardening, made practical for home gardeners.

Get your garden produce early—reuse your soil the greatest possible number of times—grow the *right* things in the *right* soil—don't let the shady corner lie idle—plant right things at the right time—grow the things that have the greatest food value—which cut down the grocery bills the most. *Make every inch of garden soil do double and triple the duty, as it will do under scientific gardening.*

Yours is the direct pay of pleasurable hours that mean health and reserve energy for every member of the family, the keen joy of making things grow, the table delight of one-minute fresh vegetables—and the direct profit of real reduction in the grocery bills.

Don't handicap Uncle Sam by haphazard gardening—"Do your bit" to the utmost—garden scientifically as you can in your garden, big or small, if you will send for this authoritative book of scientific gardening—the Corona Garden Guide. A comprehensive, authoritative encyclopedia of scientific gardening for practical day by day, month by month application to your garden, big or small. It gives you full information about everything that is garden-grown, vegetables, berries, fruits, decorative shrubs, vines and flowers. Send 10c in stamps for this entrancingly interesting and valuable book, worth many, many dollars to you in garden productions and *new* information.

**10c  
for this Garden Guide**

If you don't see at first examination that here is just the thing you have been looking for just say so—back will come your 10c and you can still keep the book.

## HODGSON Portable HOUSES

If you intend to build a bungalow, garage, cottage, play house, chicken house or any other kind of small house—first consult a Hodgson catalog.

The Hodgson way is the easy and safe way to build. You order your house from an actual photograph of it, not just a blueprint full of arrows and

dimensions. You know exactly what it will look like and how much it will cost. You know there will be no extra expenses, no dirt, no noise. When the house comes to you in painted and fitted sections, it can be quickly erected by unskilled workmen.

By ordering now and paying 25% of the price of your house we will prepare and hold it until wanted. This will save you time and money. Send for catalog today.

## TO SECURE YOUR FIRST ORDER

**We Will Line Your First Suit  
with a Guaranteed \$4.00  
Satin Lining Free,**

instead of the usual serge or alpaca lining—a special proposition to introduce the unusual values offered by our system of tailoring.

We have no agents—no dealers—no traveling salesmen—our values make their own customers, and once a Bernard-Hewitt customer, always a Bernard-Hewitt customer. But we must secure your first order—hence this special offer.

**Guaranteed All Wool  
Blue Serge Suit \$15  
Made to Measure**

Yes, sir, tailored to your individual measure from guaranteed all pure worsted, serge, blue, light blue or black, by thoroughly reliable, experienced tailors, and in the latest metropolitan style—an almost unheard of value in these times of high prices.

If you don't care for a serge suit, our big book which we will send you free contains general samples of other fabrics; plain and fancy mixtures from leading woolen mills. Prices, \$15 to \$45.00.

The \$4.00 Satin Lining free offer goes—no matter what selection you make—and we pay all shipping charges. We take all the risk—you none—for this is

## Our Guarantee!

**Complete Satisfaction or Money Refunded**

You must be pleased in every particular in fit— in style, in workmanship and in materials, or we don't want your money. Could anything be fairer? Write today—wear real tailor-made clothes of exceptional style and value—dress better and save money.

Our big new Spring and Summer Book is ready for you. Contains 70 samples latest women's also latest men's, boys' hats, shoes and handbags. It is your guide to correct and economical clothes buying. Mail coupon below or send post card at once for your copy.

**Mail Coupon for  
Big New Style  
Book 70 Samples FREE**

**Bernard Hewitt Co., Desk G-253**

**424-434 So. Green St., Chicago, Ill.**

Please send me your new Spring and Summer Book. I am interested in the \$4.00 Satin Lining Free offer and details of your special lining offer.

## UNDER FIRE

(Continued from page 351)

to walk a mile or so up to the trenches under the cover of a long ridge beyond which was Boche land. As we came out into the road I saw an aeroplane in the distant sky beyond the ridge. It was far up among white clouds and looked no bigger than a lady's handkerchief. A long line of British captive balloons two thousand feet aloft were behind us. We had walked about seventy yards up the road when we heard the ominous, express train crash and whistle of a big shell coming toward us thru the heavens. It passed over our heads and came down with a "filthy cr-rump," as they say here, on the corner we had just left. Dust and smoke and fragments rose in the air. The spray of it just touched me. We stopped in dead silence. We had intended to be careful and pick no quarrels, but here we were under fire without any warning. The boche plane had spotted our cars and had been waiting for them to reappear on the road. Seeing us start without them it had directed a battery to fire at our group.

It was therefore a direct slam at us and far too personal for the best etiquette.

The officer who was our guide looked rather serious.

"Step in there," he said, pointing to a shot up villa beside us that still had a roof and part of its walls.

"Well, they seem to be gunning for us," he said as another shell went whining and whistling and crashing above our heads and came down a bit beyond the first.

The officer told us to stay where we were while he went to see what had happened to the chauffeurs and cars. While he was gone two other shells came over us—one a dud. We stood still and silent while the thought spread among us that the next might land upon the roof above our heads.

An Australian correspondent put his hand upon my arm and made some playful remark about my calmness.

He did not know and doubtless I did not show how scared I really was. If I had not kept hold of myself I should be running yet as they say.

The officer returned and announced that the chauffeurs and cars were all right and that he had sent them back. He thought a moment and added: "Well, gentlemen, I think that we had better go on, but let us keep out of the road."

It took will power to travel toward Boche land then—the direction from which the shells were coming—but we had to. Not one of us would have dared to show the white feather. That only our own eyes saw—just for a moment—not more.

We got our legs moving and took the field, one by one, and strung out some fifty yards apart. Shells went over us, as we went on, but mostly from our own batteries.

I see now that we had in our little group the spirit of valorous armies—the spirit which obeys the unwritten law that the worst thing of all is to be a coward.

For that reason a coward in an army is a rare thing.

An American from Memphis, who for two years has been fighting with the British army and notably in the Battle of the Somme, tells me: "I have seen but two cowards and I cannot be sure about them. In fact, I am inclined to doubt the evidence of my senses regarding them. Alone men may be cowards, but very rarely in groups or masses. To a mass of men battle is like a mighty game of hazard in which each takes his chance with the die. The

British do it rather merrily; the French with stern faces."

Up near the top of the ridge we came to a trench and jumped in with a sense of relief. We tramped on over a slatted bottom and soon came to men and their dugouts. Some were doing their washing, others winding wire on big spools. One was playing with a small dog. We found the general and his staff smoking at the luncheon table in a dugout and sat down and smoked and chatted for half an hour and then took a look at the dugout in which they sleep down thirty-three eight inch steps below the trench-side.

Going back we cut across lots behind a camouflage screen and saw shells falling on a ruined village half a mile away. It is a habit of the boche to keep pecking at villages where they have had to leave valuable stores of flour or the like. We hurried by the shelled corner. We had not time even to look at the shell holes. We found our cars half a mile back under some trees and jumped into them wet with perspiration. They looked good to us. On our way home we saw the shale dumps and towers of the shell-stricken, beleaguered city of Lens. One or two fires were burning there. It looked rather peaceful in the evening sunlight, but we knew that it was within the boundaries of hell. As if to signalize the fact there came suddenly a burst of shrapnel smoke a hundred yards or so ahead of us a little off the road.

One passes gangs of boche prisoners working on the highways. They work in a leisurely fashion and look well fed and quite contented. They have comfortable huts in their cages. I have met some members of Uncle Sam's contingent on the British front. Two of them were sitting on a heap of debris in a blown up city. I recognized the hat and uniform. They reached for my hand as I came near.

"New York," I said.

"Kansas City," they piped up in chorus.

"How are you?" I asked.

"Drenched in tea," said one. "Tea for breakfast, tea for luncheon, tea at four o'clock, tea for dinner. The tea habit has acquired us. We have walked seven miles to get a bottle o' wine and some tobacco. I know there's some shops here somewhere but I don't know French enough to find 'em."

"What's the matter with water?" I asked.

"Water! Say, the water wagon is a hearse here unless the water is sterilized and then some way it don't taste like home water."

"And we ain't seen a woman since we got here," said the other. "I'd just like to see some skirts movin' up an' down the street here. It would kind o' comfort me."

"What are you doing?"

"Gander-dancin'," one of them answered. "Workin' with pick and shovel. It ain't what we expected to do, but we ain't kickin', we have a purty good time. Of course it's new and sometimes we git kind o' lonesome for home but that's to be expected."

They complained that the tobacco they get here doesn't "bite back" quite hard enough and I am sending them some that will.

To one close to this line it is evident that the German machine is out-matched. On every sector I have visited I hear four shells going toward Boche land for one that comes this way and that also is the observation of others. When an advance is made they smother the enemy with artillery fire.

## THE BATTLE CRY OF FREEDOM

(Continued from page 346)

any particular race, or color, or creed. To be an American you have only to choose whole-heartedly the heritage of freedom, and stand ready to work for it, fight for it, die for it when the need arises.

As this old world, thru the smoke of battle, struggles on toward its new day, let those whose heritage is freedom hold fast the inspiration which gives a touch of glory to the grim fact of war. We fight to destroy war; to guarantee that even the weakest nation shall henceforth enjoy its rights in safety; that in future the sun shall shine, the winds blow and the rain fall upon no nation deprived by force of the Heritage of Freedom.

Rouse ye! blood of many nations!  
Birthplace of liberty, land of delight!  
Freedom calls you. She is menaced,  
By the mail-clad hosts of might—  
Loose your banners! Send them streaming,  
Gleaming with a holy light.

No. 6160A

*This armchair of Adam design is constructed of solid mahogany with finely woven cane panels in back and arms. It has a loose pillow and Karpenesque spring cushion seat.*

THE furniture which your children now perhaps treat with scant respect will be held in new regard when they are grown—the regard which comes from its associations. If it has stood the buffetings of years, and if it has the permanence of good design, it will pass on from your children to their children—a treasured possession.

### Karpén Furniture

is not likely to be discarded by any family. It carries itself proudly through the years, yielding to time nothing of its first excellence. The reasons for its permanence are simple—sound materials, good workmanship, the best known design. Added to this is a markedly individual feature—the Karpenesque loose spring cushion upholstery. Ask your Karpen dealer to tell you about this, and to show you the beautiful Karpen designs he carries.

Send 14c for Book 123 of Karpen Furniture showing suites and single pieces in both modern and period designs.

## Always Among the High Guns

High scores at the traps can be achieved only with guns in perfect working order. Always among the high guns at the tournaments you'll find the wise shooters using

# 3-in-One

*The Universal Gun Oil*

Successful trapshooters and game hunters everywhere have used 3-in-One over 20 years. They prefer this high-grade oil because it always keeps their firearms in the smoothest working condition. Never gums or collects dirt.

3-in-One not only lubricates perfectly the magazine, trigger, shell extractor, hammer and break joints, but it absolutely prevents rust forming inside or outside the barrels and on every other metal part. Cleans the barrel of burned black powder residue. Also cleans and polishes the wooden stock and fore-end. Keeps the whole gun bright and shiny, like new. Leading firearm manufacturers use and recommend 3-in-One. Try it yourself!

3-in-One is sold at all stores—in 25c Handy Oil Cans and in 15c, 25c and 50c bottles.

**FREE** Liberal sample of 3-in-One Oil and Dictionary of Uses—both Free. Write us a postal.

**Three-in-One Oil Co., 165 UG., Broadway, New York**

## THE BIGGEST BRITISH BLUNDER

(Continued from page 343)

living in trenches two years may have helped some; he was, I am inclined to think, maybe a trifle the worse for a drink himself. And yet—

He was human. He had put in two years in the bloody trenches fighting for his King and his Country. He had a wife and some kiddies, and he cared enough for them to walk eight miles in the mud to see them and spend Christmas with them.

And the King he served and the country for which he will probably die, without knowing just what for, did not care enough for him while he was "somewhere in France" to keep Drink away from his wife or protect his children from "another man in the 'ouse."

You can take it for what it is worth. It is only one such out of thousands. This one came within my ken. I doubt if even Tennyson could have made a poem out of it. And I am quite sure SIR Barclay Peats couldn't, not even for Allsopps.

Some cold facts that are calculated to make a Prohibitionist hot are these:

During 1917, every day, submarines destroyed the equivalent of 120,000 loaves of bread. But during that same period the breweries of Great Britain destroyed the equivalent of 750,000 loaves of bread a day.

The British Government allows brewers to outbid millers by one pound, six shillings, and three pence a ton for grain. As a result, the farmers sell the best grain to the brewers, and the poorest goes for bread.

Since the beginning of the war, the breweries of England have destroyed 390,000 tons of sugar, equaling thirty-eight weeks of sugar rations for the entire population.

The people of Great Britain are not allowed to vote on whether they will have the public house in a town or not; hundreds of towns and cities would go dry at once if the people had the right of local option. But the whole question of the public house is in the hands of a small Board of Magistrates appointed by the Crown, and the people are not allowed to vote on the matter.

In addition to all the special privileges granted it by the British Government, the Trade has just had allowed it a 20 per cent increase of beer output for the munition workers during the year 1918.

The Government gives as the excuse for this that if the munition workers were denied their beer they would go on a strike and seriously hinder the carrying on of the war. As a matter of fact, the Government has never given the workers an opportunity to express themselves at the polls in a legal election; but several plebiscites have been taken within the last few weeks by the temperance people with tremendous majorities for absolute prohibition in working centers. As for example, at Spennymore, a coal mining district, the plebiscite stood 2765 for prohibition and 143 against. At Clydebank, a boat building area, the vote stood 8207 for prohibition, 1861 against. At Barrhead, another great industrial center, the vote stood 3343 for prohibition, 299 against.

In spite of all this, the brewers make the Government believe that there is grave danger if the British workman is deprived of his beer.

In other words *drink* rules the present British Government. It is more afraid of its greatest enemy than of the German or the Austrian.

And here is where this question touches America, and will continue to do so more and more as the war goes on.

**CHAMBERLIN METAL WEATHER STRIP CO.**  
Headquarters: 119 Dinan Building, Detroit.

American soldiers and sailors come out of dry camps and off dry ships to be swept into the arms of prostitutes and thru the doors of public houses in Great Britain. Thousands of these lads will never reach France, and thousands will be sent home in disgrace, ruined in body and soul without ever having struck a blow for freedom.

At Plymouth, last November, American sailors were met by women of the town and by public house keepers, and practically forced into a drunken debauch, so brutal and disgusting that even the local press of Plymouth, not in sympathy with the prohibitionists, in leading editorials, expressed horror at the sight "of the young American sailors, many of them mere boys, who were enticed into the public houses of Plymouth." (Quotation from editorial, *Plymouth News*.)

The following comment by one of the leading citizens of Plymouth will, perhaps, give some faint idea of what America may expect to be the fate of her sailors and soldiers when they begin to come over to England in the spring:

FROM A DRY COUNTRY TO A WET.

SIR,—The United States of America, when she entered upon this war, at once put into operation the total prohibition of the liquor traffic in order that her sons might be the better fitted to do the work which the nation required of them.

Thruout the whole of this day, in the streets of this town, may be seen the sailors of sober America in various degrees of intoxication as the result of their coming to England with its free drinking facilities. Is this, may I ask, the way we are going to repay the mothers of America who are sending their boys to help fight our battles? What will America say about such demoralization of her men? Shame on us that we should be willing to allow it to be possible for another nation to cast reproach upon us for making her men drunk. If we have no pity for our own boys, for heaven's sake let us have some pity for the clean, sober lads who have come as guests to our shores, and as a proof of our sincerity let us deal with the drink as America has dealt with it.

ROBERT SIMPSON.

Berkeley Lodge, Plymouth, November 12.

SIR,—It has been amply demonstrated on the Plymouth streets today that the publicans' and liquor dealers' "blow" is effectual enough to satisfy any Hun. Scores of young sailors may have been seen this afternoon, chiefly Americans, more than likely from "dry" States, and themselves lifelong teetotalers, but overcome by the temptations our town offers to the unwary, they stagger under the influence of intoxicating drink.

ENGLISH MOTHER.

From the *Western Morning News*, Plymouth, November 13, 1917.

The American Young Men's Christian Association has a magnificent "Hut" on the Strand in London. I was speaking in it one night. The room was filled with soldiers and sailors from all the Allied countries. Our own lads were there from ten different states.

While I was speaking, a young lad lay in the middle of the floor on his back, so drunk he could not lift his head. He had been pulled in from the Strand by one of the secretaries, out of the arms of a woman of the streets. He wore a uniform. He was from America. And in all probability he will be sent home, as thousands have already been sent to Canada, in disgrace.

A few nights later coming into Piccadilly, another lad was found dead in that well known square, and by his side stood the girl with whom he had been living in London. He also wore a uniform, and he came from America. And he died in a drunken delirium.

Dead! SIR Knights and Brewers of the House of Lords. Dead! Right Honorable Members of Parliament. Dead! by act of the real rulers of Great Britain, the brewers of the drink that killed him, and will kill thousands more, some of them your lads, mothers of America, who have given your boys to make the "world free for democracy."

# MAZDA

"Not the name of a thing,  
but the mark of a service"

Instead of one manufacturer's spasmodic development of his product, MAZDA Service substitutes a systematic, all-inclusive, study of incandescent electric lamps for several manufacturers

## The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady,

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

## CON-SER-TEX

Save Money, Secure Satisfaction,  
Avoid Future Expense

## Use Con-Ser-Tex Canvas Roofing

It makes a neat, attractive, durable surface which will last as long as the house itself.

This roofing material costs less than most others, is inexpensive to lay. For years has been giving satisfactory service.

Wherever a neat, artistic waterproof surface is wanted CON-SER-TEX should be used. It will not leak, buckle, crack, stretch, peel or rot.

CON-SER-TEX is a canvas roofing chemically treated to protect the fiber from mildew and the detrimental action of the oil in paint.

### Water-proof, Weather-proof Wear-proof

CON-SER-TEX is a perfect material for a roof, porch covering, or porch floor; on sleeping balconies, garage roofs, etc. In the suburban sections of the towns and cities throughout the United States, you will find hundreds of attractive and artistic homes where CON-SER-TEX is largely used—it renders continued satisfaction.

Investigate its merits. Send us the dimensions of your roof, porch floors, sleeping balcony, or the surface you want covered. We will mail you samples showing quality, width, weight, and free illustrated copy of "Roofing Facts and Figures."

**Imperial Sanitary Floor**

Put On Like Plaster—Wears Like Iron

The Best Floor

**IMPERIAL FLOOR COMPANY**  
950 Cutler Building, Rochester, New York  
On the market 15 years.

The night before I sailed for New York, at the conclusion of my campaign, I went into several public houses in Liverpool. After getting back to my hotel, I sat down to write out a description of the scenes I had witnessed, but I found myself without language to tell the story.

American, Australian, Canadian, New Zealand sailors and soldiers, plied with liquor by English girls dealing it out behind the bars that were covered with drunken vomit; women, surging thru the arms of men, women in every stage of bestial drunkenness, from silly to obscene; American sailor boys pitched out headlong into the street by the public house attendants to give room for more inside before the pub closed; and all this before 8:30 p. m. Every night it is the same in every city of the Kingdom. Liverpool, Manchester, Leeds, Glasgow, London.

And meanwhile Sir Arthur Yapp and Lord Rhondda for the Food Control, frantically appeal to America to save the grain and send it over so that England may not starve. As Secretary Baker has said, most of our boys come from prohibition territory. Our camps are without a wet canteen. Our navy is without drink. But the English camps are all wet. The Australian, Canadian and New Zealand camps are also dry. But the outrage of the whole domination of the Brewers' rule of the military system in Great Britain is that as soon as the Australian, Canadian and New Zealand camps are set up in Great Britain, whether they want it or not, a wet canteen is imposed on them. Of course the British Government cannot do that to our camps even in England, but the moment our boys walk outside the camp and go into London or any other city they are at once the prey of the most unscrupulous and deadly temptations.

Incidentally, let me say as another "cold" fact that a little before Christmas, by order of the military authorities (which means the Brewer over all), 80,000 gallons of whisky were sent to one camp in France for the English officers alone, to cheer their Christmas festivities! And God alone knows how many battles have been lost in this war on account of the "festivities" of drunken officers.

Coming back to my hotel that night after my visits to the pubs, I went into the great room called the "Lounge."

Hundreds of people of the most fashionable, and as I learned by inquiry, of the titled and military circles of Great Britain, sat around tables smoking, and drinking. And on every table but one were from two to four kinds of drink. The King's example has not been followed. He pledged himself to abstain from drink during the war. But his subjects, at least the rich and the titled and the military, drink just as much as ever. They support the Brewers' government just as solidly as do the "low down" drinkers in the unscented pub.

The one table where no drink was being served was a table where sat five American naval officers. At the sight of it I felt like getting up and giving three cheers. At no time in my life have I ever been prouder of my country, or more glad to call myself an American.

It is only fair to say for the English press that never before have the prominent dailies in the big cities, Leeds, Manchester, Bristol, Glasgow, Huddersfield, Crewe, Bradford, Birmingham, given so much space to reports of prohibition meetings and that in the time of great scarcity of space owing to important war news. To any one who understands the hostile attitude of the English press, to anything that mentions prohibition, this fact is very significant, and as far as it means anything, very hopeful.

## Protect the Song Birds

Without the song birds all of our food crops would be destroyed by insects. They save millions of bushels of grain, fruit and vegetables every year.

It is your duty to protect them and furnish them with safe homes in which to raise their young this spring. You will be paid a thousandfold, for they will free your grounds and gardens from insect pests and gladden your heart with their beauty and song. There is just the right kind of a

## Dodson Bird House

### FIRE, BURGLARS

Many a home has been saved from Fire and Burglars by the intelligence of a thoroughbred Collie; it is conceded that all evil-doers always avoid a home where a thoroughbred Collie is kept.

We sold thousands of dollars' worth of Collies to the late J. Pierpont Morgan. We have letters from the late Mr. Morgan to prove this statement. PINE GROVE COLLIE KENNELS, Long Branch, N. J.; order immediately; directions for feeding with each puppy.

## RABBITS

A PROFITABLE SIDE-LINE OCCUPATION

Tells how to provide for the shortage in meat. Our book: "The Rabbit, How to Select, Breed and Manage the Rabbit and Belgian Hare for Pleasure or Profit," by breeders of long experience with rabbits. Eighth edition, nicely illustrated, enlarged and much improved. Price 25 cents with sample copy of the AMERICAN POULTRY ADVOCATE containing Rabbit and Pet Show Department.

POULTRY ADVOCATE, Dept. 312, Syracuse, N. Y.

**OPPORTUNITY** A beautiful farm, fertile and well tilled, large stock, all modern implements, grazing land for fattening cattle in most fertile part of Empire State, by auto one day from New York City on state roads, orchards just in bearing, certified milk contracts bringing in \$100 a day. Immediate sale, price, \$68,000. Apply Box O, The Independent, 119 West 40th Street, New York.

But to offset this is the fact (another cold fact, that makes the prohibitionist hot) that the churches in Great Britain are not united on the prohibition of the Trade. They are not only not united, they are in a large number of very influential instances directly opposed to prohibition. The Anglican church is actually in league with the brewer, in many cases, and a heavy shareholder in the business.

At our meetings, which were held without resolutions, and as far as the audiences were concerned were non-committal, on various occasions, vicars, archdeacons and bishops presided as chairmen. And in several instances, these Christian leaders, men high in the ecclesiastical life of the British Empire, went out of their way to express their disapproval of prohibition, and their conviction that the Trade could never be put down.

One of the most prominent bishops in England, at one of my meetings, asked as a personal favor of the press that it publish his distinct disapproval of the principle of prohibition, and also to publish that he would not have presided if he had known that the meeting was for the purpose of endorsing prohibition as a public measure!

Prominent brewers and wine merchants are pillars in the Church of England, and support with their enormous war profits cathedral charities and funds for hospitals. They are reckoned among the great philanthropists of the church and no social or ecclesiastical stigma attaches to them on account of the Trade in which they are engaged.

In this connection, it is a very peculiar fact (another cold fact, to make the prohibitionist hot) that the cathedral towns of England are the worst towns in the Empire so far as drink and slums are concerned. This fact is conceded by the church people themselves and by every well informed Englishman. One would naturally suppose that a cathedral town, the center of powerful church activities, would be the best and cleanest and best housed and temperate. But they are just the opposite. Canterbury, the oldest cathedral town in Great Britain, has more public houses to the 1000 people than any other town in England, and its streets swarm with drunken sailors and soldiers, and its slums smell to heaven of bad housing and vice. perhaps Sir Barclay Peat, of Allsopps, could throw a beam of light on the reason why.

The American public might possibly question the serious nature of the conditions in Great Britain in regard to the "Trade," and its effect on the war, and be inclined to put these statements down as the rabid utterances of a professional prohibitionist. But the most outspoken criticism of the English Government is being made by the English people themselves. Dr. John Clifford is the best known and most widely respected preacher in London. Here is what he said on New Year's Day in London:

Compulsory rationing is at our doors, and still the Government hesitates to reduce the amount of grain now given to the manufacturers of strong drink. How much more patriotic and sane the course adopted in Canada and America! For example, Canada, mistress in her own house, has banished Bacchus from her premises, and will give him no quarter so long as the war lasts, and with uplifted hands this daughter-land beseeches us, with cries and tears, not to lead her brave sons, who have come to help us in our fight, into the temptation to drink alcohol. America, strong and resolute, has banished the drink from the tables of officers, and will not suffer the Army to be damaged by it, adds her plea to that of Canada! Can we longer refuse their joint appeal? Can the dividend-holders in distilleries and breweries take their money stained with blood without shame? —The British Weekly, January 3, 1918.

**YES** it costs more to build **NOW** than it did one, two or five years ago. The cost of lumber, however, has not increased more than twenty-eight per cent since 1914, while other building materials have advanced as much as seventy-five per cent.

**I**N terms of farm products, present prices received for hogs, wheat, corn, oats, cotton, etc., will buy twice as much lumber this year as in 1914. Likewise prices received for nearly every commodity in trade represent a greater buying power in the lumber market today than at any time in the past decade. Therefore when we say

#### **BUILD NOW—WITH WOOD**

We are urging you to build the home you have longed for at a price that represents a smaller per cent of your surplus, than when the entire scale of commodity prices was materially

## Pebbles

Lady Visitor—So your poor friend was killed. Ah, but never mind—he is at rest! Billjim (sick of it)—Yus. He's at rest.—*Sydney Bulletin*.

"My wife burst into a flood of tears the other night."

"Did she cause any trouble?"

"I should say so. Swept away £5 for a new hat in the first torrent."—*London Opinion*.

Lady (intent on obtaining new novel)—Have you "The Soul of a Bishop"?

Flurried Assistant (new to the library business)—I don't know, madam. I've never given the matter any thought.—*London Opinion*.

Lady to Conductor—You will have to trust me. I forgot my purse. I am one of the director's wives.

Conductor—I'm sorry, but I couldn't do that even if you were the director's only wife.—*Mississippi Collegian*.

"Young man, I want my gas turned off!"

"This isn't the gas company. This is the water office."

"Well, then, turn off the water—I haven't time to come 'way down here for nothing!"—*Lamb*.

American Soldier (somewhere in France)

—What's the matter?

Injured Frenchman—A shell just hit me.

American Soldier (formerly traffic cop in U. S. A.)—Did you get its number?—*London Opinion*.

Son of the House (facetiously)—Enter Lieutenant Swifson—an officer and a gentleman.

His Sister (teasing)—Well, don't leave your friend outside, Bertie, do ask him in.—*London Opinion*.

Trotzky—Yes, Excellency, we have prepared the canaille by telling them you are democrats and brothers.

Von Bülow—And if they doubt you?

Trotzky—Excellency, we have the guillotine!—*London Opinion*.

Colonel—You're a thoro bad egg, your conduct's outrageous. How you ever came to be an officer, I don't know.

Subaltern (bitterly)—No, sir. If it hadn't been for this beastly war, I should have been in Holy Orders long ago.—*Froth*.

"Are you farmers worrying about the crops?"

"Not as much as the city folks," replied Mr. Cornrossel. "We farmers get ours first. The city folks will have to take what's left."—*London Opinion*.

The Author—The play's a failure—an absolute failure!

The Leading Lady—Whatever makes you think so?

The Author—Why, the critics are all in front and they seem to be enjoying themselves fiendishly!—*London Opinion*.

"The wrist-watch has done much for our trade."

"Where is your trade?"

"It is mainly in Africa. Formerly we couldn't sell a native a watch because he wore no pockets to carry it in."—*London Opinion*.

The man who saw an enormous service flag with thirty stars hanging under the three gold balls of Ikey Goldstein's credit emporium stopped short in surprise and amusement, and then, moved to patriotic wrath, went in to investigate.

"How does it happen you've got a service flag like that, Ikey?" he asked. "Have you thirty relatives in the American army?"

"No, I got no relatives."

"Well, you certainly never had thirty employees to send with the colors, did you?"

"No, I got no employees."

"But, look here, Ikey, this is serious then. What do you mean by putting out a service flag like that?"

Ikey grinned expansively and threw out his hands in a generous gesture. "Well," he said, "customers."—*New Idea*.

**B&B**  
**Blue-jay**  
**For Corns**

**Stops Pain Instantly**  
**Ends Corns Completely**  
**25c Packages at Druggists**

**How Blue-jay Acts**

A is a thin, soft pad which stops the pain by relieving the pressure.  
B is the B&B wax, which gently undermines the corn. Usually it takes only 48 hours to end the corn completely.  
C is rubber adhesive which sticks without wetting. It wraps around the toe, and makes the plaster snug and comfortable.  
Blue-jay is applied in a jiffy. After that, one doesn't feel the corn. The action is gentle, and applied to the corn alone. So the corn disappears without soreness.

## A NEW DEAL FOR CITY TREES

(Continued from page 360)

force the mandate. Just a word here concerning humans who assail our trees. Alas, yes, there are humans who thru carelessness or thru wantonness, sometimes thru both, inflict injury on these woody, leafy, shady, beauty-bestowing benefactors of our race. The shade tree statute and ordinance are effective in dealing with these.

But we depend more upon the increase of knowledge and the potency of love than upon the law. And so we conduct what we call our propaganda work. The object is to win people to the love of trees, parks, plants, flowers and the like. That which is loved, you know, is bound to be cared for by those who love it. Now the very work of planting and cultivating the trees in the streets and of beautifying the parks has, it is obvious, a direct educative influence in this direction. But over and above that we seek to awaken, encourage and stimulate an enlightened interest in the matter by printing and distributing literature, by exhibits, by lectures in schools and elsewhere, in a word by propagating continually whether by speech or pen or print or picture the evangel of the trees.

And now as to the "Why" of all this. The "practical" man is yet abroad with his ever resurgent question, "Why spend good money on such things as trees and parks? How does such an investment yield return? In the nature of the case, how can it yield returns? And so on. All right; we meet him on his own ground and proceed to discuss the matter from his point of view.

First, trees *beautify* a street, a city, as no other agency does or can do. And there is money in this. Then trees and parks conserve and promote a city's *health*. And there is money in this. Do you question that trees make for the public health? Ah, sir, the medical faculty is to a man against you. Their testimony is simply overwhelming. Well, just because trees and parks beautify a city and just because they conserve and promote that city's health, there comes prosperity to said city. Where do you want your home to be? In the midst of what is unbeautiful and squalid, and where the air lacks ozone and is laden with germs; or in the midst of beauty where the air is purified by lines of trees and health prevails? Why, no need to answer! Well, that's how other people feel about it, if you'll only stop to think.

But enough of this money phase of the matter. We are beautifying Newark with trees and parks because Beauty is Beauty and is worthy of being loved just because it is Beauty. We are planting these distributing centers of Health because Health is a good in itself and a thing to be desired for Everyman, and for Everyman's wife and children, and for Everyman's cousins and his sisters and his aunts, and for Everyman's neighbors and for his fellow-citizens all. And this shows faith another "why" for the existence and activities of the Shade Tree Commission.

And, after all, are not "all these fair ranks of trees" worthy of our regard, our affection? Look down that street there. A bit of woodland come to town. Look and let the charm of it lay hold on you. A beauty and a joy, the city street adorned with trees.

We expect cumulative progress in the next decade. Great is New Jersey and great is the tree statute thereof! Let our statute spread as spreads the light, till all the land shall share its beneficence.

Market Place Talks

BY LUIGI CRISCUOLO

A PENNY SAVED

NEARLY a year has passed since war was declared by the United States against Germany. Aside from the change in the national temperament, one result of the declaration of war will have a permanent influence upon our national character which will prove to be a great boon to future generations. We had been called a nation of spenders and the most extravagant people in the world. We were reminded of the fact that out of our population of over a hundred million, only about three hundred thousand persons could claim to be owners of investment bonds of any sort, while in some European countries the proportion of bondholders to the total population actually put us to shame. We were not a thrifty people but the war, horrible as it is, has forced us to become a nation of savers!

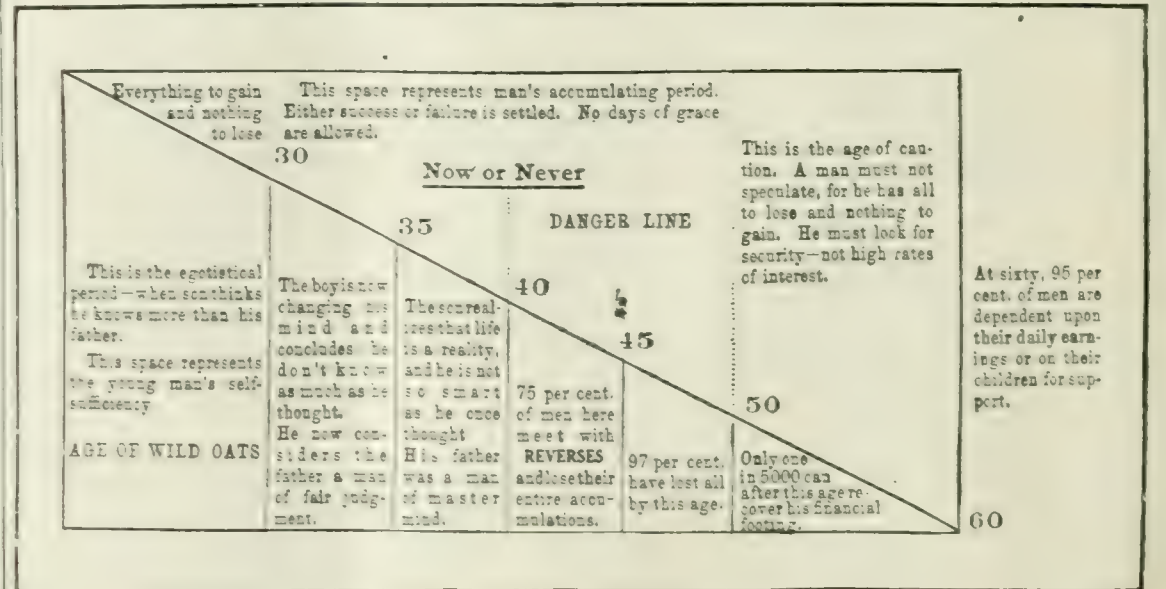

The First Liberty Loan offered last June was an issue of \$2,000,000,000; subscriptions aggregating \$3,036,226,850 were received from about four million individuals. Subscriptions amounting to \$10,000 and less were allotted in full while those above that figure were scaled down. The Second Liberty Loan offered in October was tentatively placed at \$3,000,000,000, but the provision was made that any over-subscription could be allotted to the extent of not exceeding fifty per cent of such over-subscription. The total subscriptions amounted to \$4,617,532,300 and there were about nine million four hundred thousand individual subscribers. All subscriptions up to \$50,000 were allotted in full.

This was a wonderful feat for a country which a year ago was upbraided for extravagance, improvidence and riotous living by all classes of people. For instead of but 300,000 people who own bonds we must assume that we now have nearly ten million of them, or a body comprizing ten per cent of our entire population. This is not the end, for the announcement has been made that the Government's requirements for the current year will amount to about eighteen billion dollars and that the Third Liberty Loan will amount to at least five or six billion dollars with a possible provision to take care of any over-subscription which may be made. Many of the small

subscribers to both issues of Liberty Bonds are still paying for their purchases on weekly or monthly instalments, but by the time the new loan is offered it is likely that a large proportion of these will either have made their final payment or will be in a position to assume an additional obligation. Their money will be in safe hands and will produce better results than if expended for luxuries or extravagant entertainment. It will be safer than if "invested" in some of the gaudily-printed stock certificates which are being offered for sale in rural communities in these prosperous times when the sharper is unusually active.

Thrift does not merely pay the expense of carrying on the war. It is creating character among just the sort of people who need it most and do not know how to acquire it. It is making young people and old acquire a sense of responsibility, of proprietorship, of an interest in their Government. It is a potent instrument for warding off anarchy and socialism of the radical sort, for the safety of one's hard earned savings depends upon the continuance of a stable government. Thrift and the investment of savings, past and future, in the bonds of our Government, will make a young man feel that he is accumulating a competency which will grow, which will undoubtedly be the nucleus of a fund to provide against want in old age. Fifty dollars invested in one of the Liberty Bonds has created in thousands of young men and women a habit which will prove to be the foundation of many a fortune of the future. The United States Government Thrift Stamps at 25 cents each and the War Savings Stamps at \$4.14 each may likewise make a schoolboy or girl acquire habits of thrift which will be a great standby in future years.

The public schools all over the country are espousing the War Savings cause and in a short while there should be very few children who do not know the significance of the letters—"W. S. S." A vast number will have their Thrift Cards and many will have their War Savings Certificates with one or more War Savings Stamps affixed thereon. The campaign is gaining great impetus among the foreign-born population

thru the aid of their leaders, the foreign language press and the fraternal organizations. War Savings Societies whose members pledge themselves to be thrifty and buy War Savings Stamps and Thrift Stamps, are being formed in many clubs, societies, lodges and factories, and the savings are being conducted on a definite, systematic plan which should produce good results in time.

We have been improvident and grossly negligent, there is no denying of that. In the race for supremacy we have overlooked the individual to some extent and he has had to struggle along and learn by hard experience that which the average successful man could have warned him of had the necessity for the warning been realized. We have not laid much stress on the importance of preserving the individual's self-respect, on the importance of making the individual realize that in order to be self-respecting it is essential to *save*, and that in order to save the individual must not disdain to save even quarters. A life insurance company published some time ago a small chart, reproduced herewith, which shows that at sixty years of age ninety-five per cent of men are either dependent upon their daily earnings or upon their children for support!

The reader will note that in the chart not much importance is attached to the period in a man's life when he is under thirty years of age. The author of the chart calls that period the age of "wild oats" when the young man is self-sufficient and thinks he knows more than his father. As a matter of fact, that period of life is one when a young man's future can be best molded. It is then that a young man or woman can either lay the foundation for a useful, successful and happy life or for a disastrous and poverty-stricken existence. Between the ages of twenty and thirty a young man can acquire the practical sort of education which will fit him for a position in life where his earnings will constantly increase so that, if he is thrifty, he can set aside a generous sum from his weekly or monthly income in order to provide against any sort of need in old age. It is not at all necessary for ninety-five per cent of the men in this country to be earning their daily bread at sixty or be dependent upon their children or upon charitable institutions for subsistence, provided the youth of today is taught the value of thrift. The school and the college should teach students how to *save* as well as how to *make* money.

The Government's campaign for the sale of Thrift Stamps and War Savings Stamps—"W. S. S."—has been in progress for several months and at this writing approximately \$57,000,000 in stamps have been sold. This is a small sum as compared with the many billions subscribed to the Liberty loans, but when it is realized that millions of adults and children have their Thrift Cards and are saving systematically at the rate of twenty-five cents or four dollars and a fraction every little while, the magnitude of the accomplishment is realized. To secure fifty-seven million dollars in minute payments on the argument that the war can be won with quarters, as well as with fifty dollar bills and thousand dollar bills, is a distinct credit to the National War Savings Committee.

Parents who cannot go to war and who cannot buy Liberty Bonds should buy "W. S. S." with their savings and make it their duty to advise their children to abstain from the purchase of objects which are not necessary and devote their allowance toward the purchase of Thrift Stamps. Not that a general boycott should be urged against the confectionery store, the soda-

## How to Invest \$1,000 to Net \$60 a Year

"I HAVE \$1,000 to invest. Where can I place my money so that I can be assured of

- complete safety of principal;
- prompt payment of interest in cash;
- protection against depreciation in value;
- freedom from care, worry, or management;
- six per cent interest?"

Such is the problem many investors are facing.

First mortgage serial bonds, safeguarded under the *Straus Plan*, solve all such problems. They meet each and every one of the above requirements. One thousand dollars, invested in these safe bonds, will yield \$30 every six months—\$60 a year. Five hundred dollars will yield \$15 every six months. An investment of \$5,000, netting \$300 a year, may be so diversified as to yield \$25 every month. Write today for our literature telling how the *Straus Plan* has protected investors for 36 years without the loss of a dollar to any of our clients, and describing safe 6% investments. Ask for

United States and Canada

counter or the moving-picture house, but that some moderation should be practised and a goodly portion of the allowance be devoted toward the purchase of Thrift Stamps and War Savings Stamps. The children should be taught the value of thrift, taught to watch the sixteen blank spaces on the Thrift Card become filled with Thrift Stamps with as much interest as the newly planted seed is observed every day as it begins to sprout from the soil. The child should be taught that the initial twenty-five cent Thrift Stamp can easily grow into a five dollar bill by January 1, 1923, and he should be told why it grows and what part his quarter is doing toward winning the war.

The war and the issuance of many billions of dollars of government obligations has, of course, retarded the normal growth of the investment business and held down security prices. But the issuance of government bonds to millions of people who never saw a bond previously is doing more for the legitimate investment business of the future than many millions of dollars in advertising would have done. The man who a year ago did not know what a bond or a coupon was now not only knows a bond when he sees one, but he actually owns one or more of his Government's obligations. When the war is over he will place a good portion of his current savings in standard investment securities sold by reputable investment firms.

The Thrift Stamp may start even the man with a substantial salary on the path to financial independence because the possession of one stamp, even a twenty-five cent one, will create the desire to have a full card valued at five dollars in 1923, while the possession of one War Savings Stamp on a War Savings Certificate will create a desire to possess a completely filled certificate with sixteen stamps with an aggregate prospective value of one hundred dollars. The reader who does not own any kind of stock or bond can begin to experiment without any remorseful after-effects, by the purchase of a Thrift Stamp.

## RAISING CHICKENS WITHOUT HENS

(Continued from page 364)

the snow away in order to give their newly hatched chicks an outside run. Get your birds onto the ground by the time they are a week old. The weather may be cold, but if the chicks are able to find warmth as soon as they begin to feel its need, they will not suffer.

Perhaps it isn't necessary to say that absolute cleanliness is demanded in the raising of brooder chicks. The use of sand and a litter helps to make this possible.

Just one other point must not be overlooked. Growing chickens require an abundance of fresh air as well as heat. Provide some way of ventilating the brooder house. The substitution of muslin for glass in some of the windows will help. Sometimes it is found wise to make openings in the rear wall just under the eaves, with shutters to close when desired. All openings should be kept high. If you have two doors on opposite sides of the house for the chickens to pass thru, there will be a perpetual draft, and drafts, like dampness, must always be avoided.

It is not possible to raise chickens without giving them a certain amount of intelligent care. At the same time, it isn't necessary to fuss over them. Too much coddling is likely to be as fatal as neglect. Make up your mind that you will establish a record this year in the percentage of chickens you raise.

## DIVIDENDS

MERGENTHALER LINOTYPE CO.  
New York, February 19, 1918.  
DIVIDEND 89.

A regular quarterly dividend of 2½ per cent. on the capital stock of Mergenthaler Linotype Company will be paid on March 30, 1918, to the stockholders of record as they appear at the close of business on March 2, 1918. The Transfer Books will not be closed.

JOS. T. MACKEY, Treasurer.

OFFICE OF  
FEDERAL MINING & SMELTING CO.  
32 Broadway, New York City, Feb. 15, 1918.

A dividend of one and three-quarters (1¾%) per cent. on the preferred stock of this company has today been declared, payable March 15, 1918, to stockholders of record at the close of business on February 25, 1918.

GEO. W. PETERSEN, Secretary.

## LAND SQUADRONS *of* COMMERCE

**I**N the huge task devolving upon motor trucks to relieve the short haul rail congestion, White Trucks are taking an heroic part. They are buckling down to fast freight service between cities a hundred miles apart. They are reducing days en route to mere hours. Deliveries are being made daily on schedule time.

One big fleet operates in nine different states, hauling every conceivable kind of merchandise—fuel, food, clothing, leather, raw materials, machinery, giant boilers, pile drivers, rugs. Eighteen trucks recently

carried 90 tons of phonograph records into New York in a single day.

In this high pressure interurban service White Trucks are in their element. The long, hard, heavy pulls through snow, mud and ruts, on fast schedules rigidly maintained day after day, search out the very marrow of trucking power and endurance. The White Trucks stand up and keep going, as they have been doing for years in road building operations, heavy contracting work and in the severest department store service. They have the **STAMINA**.

HOW TO STUDY THIS NUMBER  
The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Discuss Chancellor von Hertling's speech in answer to President Wilson's statement of the United States war aims.
2. Imagine that you are one of the survivors of the wreck of the "Florizel." Write a letter to one of your friends telling of your experiences, and your rescue.
3. Imagine that you were a passenger on one of the boats sunk by the "Wolf," and that you were taken on the "Wolf" and compelled to remain there until the end of her cruise. Write a vivid story of your experiences. Weave real and imaginary events into a plot. Imitate the method of Stevenson's "Treasure Island." Send the story to your school paper, or to some other publication.
4. You are a "Four Minute" speaker. Awaken the spirit of your audience by telling what Russia's withdrawal means, and by pointing out what America must now do.

Editorial Articles.

1. Give a spirited talk in which you show that the governmental system of the United States is superior to the governmental system of any other land.
2. Give an oral summary of the principal thoughts of "Australia's Attitude."

The Case for Mr. Garfield.

1. Give a talk in which you show the fitness of Mr. Garfield for the position of Fuel Administrator.
2. Give a "Four Minute" talk in which you show that the work of the Fuel Administrator has produced excellent results.
3. You are at a neighborhood gathering. Explain what methods will be employed to secure sufficient coal for next winter's needs.

The Battle Cry of Freedom.

1. You are the principal speaker at a meeting of people born in foreign lands. Show that the whole course of history has been in the direction of representative, democratic government. Make an appeal for aid in the present struggle against autocracy.

The Cheeryble Brothers' Banquet. By Charles Dickens.

1. Give a talk in which you show why Dickens' books have been so successful.
2. Join with your classmates in giving oral reports on the following topics: The Meaning of Good Cheer; The Life of Charles Dickens; The Office of Cheeryble Brothers; The Character of Timothy Linkinwater; The Character of the Cheeryble Brothers; Why Dickens Wrote about Tim's Sister; A Description of the Scene at the Dinner; An Account of the Dinner; The Life of Tim Linkinwater; Why Every One Likes the Cheeryble Brothers; Dickens' Humor in the Selection; Dickens' Truth to Life; Dickens' Way of Telling a Story; Dickens' Message in the Selection; A Comparison of the Selection with "Silas Marner"; with "The Vision of Sir Launfal."
3. Write an original story of Good Cheer, placing the story in your own times, and in your own town.

Creative Chemistry. By Edwin E. Slosson.

1. Imagine that you and your classmates are at a meeting of people interested in corn products. Give short talks on the following subjects: Gifts of the New World; The History of Corn; The Parts of a Kernel of Corn; The Making of Corn Products; The Value of Corn Products; The Future of Corn Products.
2. Write a summary of the principal points presented in the article.

Some of Our Folks and War. By Roy Dickinson.

1. Point out characteristics of the essay in this article.
2. What gives this article its literary value?
3. Read aloud effectively the part of the article that most pleases you. Tell why you like that part.
4. Point out examples of the following: Description; Character Presentation; Suggestion; Pathos.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. A Campaign for Intelligent Patriotism—"The World Moves On."

1. What is the central thought in this article? Quote a sentence which summarizes this thought?
2. "St. Augustine . . . wrote his 'Eternal City' by way of consolation," etc. Look this up in an encyclopedia.
3. Write a brief sketch of "the new idea of representation" as it developed in England. Of the attack which was made on that idea in the eighteenth century.
4. What part did the American colonies play in preserving the "idea of representation" for the world? What part did "the group of leaders headed by William Pitt" play?
5. "The American Revolution made thirteen colonies 'safe for democracy'; but it did more." What more?

II. Coal Supply and Transportation—"The Case for Mr. Garfield," "Railroad Bill Passes."

1. "Mr. Garfield was a man of experience in all sorts of commercial and financial undertakings," etc. What are the facts?
2. "The closing order was successful." Are your family and your neighbors satisfied with the result?
3. "The closing order was not an order designed primarily to save coal," etc. What, then, was its purpose? Was this purpose accomplished?
4. What remains of the fuel problem is almost wholly a problem of transportation." What method is proposed for handling this problem? Does the passage of the Railroad bill in any way affect this situation?

III. The Food Situation—"Wheat Prices Fixed," "The Food Enigma."

1. Why are various members of Congress in favor of raising the price of wheat? Why is the President opposed?
2. How do you account for the difference of opinion between various Government officials as to present food conditions? Which party to the controversy seems to be right?
3. If Mr. Hoover is right in predicting a further rise in food prices, can the present price of wheat be maintained?

IV. American and European Systems of Government Compared—"The Stability of the American Government."

1. Explain the "fundamental difference between the United States and all other governments."
2. "Mr. Wilson, who is prime minister as well as President, is in for three years more," etc. Show how this is both the strength and the weakness of our system of government.
3. Is the comparison given in the last paragraph of the editorial as valid in times of peace as in times of war?

V. In Russia—"A Talk With Trotzky," "The German Demands on Russia," "The German Advance in Russia," "Civil War in Finland."

1. Summarize the article under the heading—"Trotzky's Economic Program."
2. "What we aim at now is control rather than ownership." How, then, does this program differ from that now in operation in the United States?
3. Distinguish between Kropotkin's "communalism" and Trotzky's "federalism."
4. "Profit sharing is a bourgeois notion." What does this mean to you?
5. What are Trotzky's reasons for believing that his ideas will spread beyond the confines of Russia? Does the evidence given in the last paragraph of the article and in the news items bear out his belief?

VI. A Monroe Doctrine for the Pacific—"Australia's Attitude."

1. Study a map of the Pacific Ocean. Would an Australian "Monroe Doctrine" be justified by conditions which you find?
2. ". . . the appeal 'your King needs you' . . . does not have a very fetching effect on a large part of the Australian population," etc. Why not?
3. "The recruiting speeches . . . in Australia appealed to much the same motives as in America," etc. How do you explain this?
4. Why did Australia reject conscription while the United States and Canada accepted it?

# Right, to the Minute

Men and women with active and orderly minds learn to lean on The Independent (with which is incorporated Harper's Weekly) for accurate, well-balanced information about things happening *now*.

The same men and women consult The American Year Book for the events of *last year*.

For anything further back they go to the encyclopedia.

## The American Year Book

is made for busy men, editors, contributors, professional men, teachers, scientific workers, and every one who wishes to verify or confirm questions that arise in his mind.

It is a short cut to accurate knowledge of recent events, and the progress of the world. Here you will find everything worth knowing that has happened during 1917—the greatest year in history since the world began.

## The Independent Is an Illustrated History of Our Own Times

appearing in weekly installments. It consists essentially of two parts: news and comment, of what has happened and what it means.

As nowadays the old files of The Independent and Harper's Weekly are recognized everywhere as containing the best interpretation of the times that tried men's souls from '61 to '65, so today these two magazines, now united in one, are doing again a similar public service, not only for this generation, but for those to come.

## The Independent's Remarkable Offer

By special arrangement with the publishers, Messrs. D. Appleton and Company, we are able to supply the American Year Book at practically the manufacturing cost in combination with a subscription to The Independent.

### \$7.00 Value for \$5.00

The American Year Book can be obtained from no other source for less than the regular price of Three Dollars. The yearly subscription price of The Independent is Four Dollars. However, while our supply lasts, we shall accept subscriptions to The Independent for one year—new or renewal—and deliver to your address, charges prepaid, a copy of the 1918 edition of The American Year Book for only Five Dollars. The Independent may be sent to one address and the Year Book to another address in case you wish to use either as a gift to a friend. This offer also applies to new subscriptions. This offer holds good only for subscribers in the United States.

### Every Busy Man and Woman Needs The American Year Book

To get the information that is packed into this handy volume of 900 pages you would have to read hundreds of books, magazines and newspapers. No other book in your library contains this invaluable material. You need The American Year Book. 6000 subjects are indexed. You can find easily, at any time, just the ones on which you wish to be posted. To insure getting your copy at this bargain price, order at once as our supply is limited.

## Independent Corporation

Please send me post-paid a copy of The American Year Book and enter my subscription to The Independent for one full year. Enclosed please find \$5, which covers the cost of both.

## The Independent

HARPER'S WEEKLY

VICTORY AND THE ROAD TO PEACE

BY SECRETARY OF WAR BAKER

THREE DOLLARS

What just one of the 52 weekly issues of The Independent is worth to a reader

RAY S. TRENT, OF INDIANA UNIVERSITY, WRITES:

"Please continue my subscription to The Independent and send me a copy of The American Year Book. The latest issue of your magazine, which contained the editorial on government ownership, the article on Secretary Baker, and the double page by George Creel, was itself worth a year's subscription price. In fact, any one of the three articles was worth the entire year's cost."

The double page referred to above was the first "Message from the United States Government to the American People." These articles are prepared each week by George Creel, Chairman of the Committee on Public Information, appointed by President Wilson. This is the most important national service that The Independent has ever been privileged to offer. Week by week the Government will talk over with the people the work that is being done and the plans that are being made to carry on the war to a successful end. This weekly message will present first-hand information that is immediately vital to the American people.

THIS COUPON IS WORTH TWO DOLLARS

BOOK DIVISION  
119 WEST FORTIETH ST., NEW YORK

INDEPENDENT 3-9-18

# This is an Appeal for everybody to join hands to destroy the Liquor Traffic forever

When the boys marched down the street with flags flashing in the sunlight, and drums throbbing—did you get a tightening of the throat? Was there a moment when the picture blurred?

When you bought your Liberty Bond, and helped swell that great total of Seven Billion Dollars, was this picture in your mind?

You wanted to help end the War—didn't you?—to stop the tide of red ruin and outrage and killing, to end it at the least cost in young American lives.

## Will You Give One \$50 Bond?

Will you dedicate one of those Liberty Bonds which you have already paid for to help make the War still shorter, and to help bring our boys back to us as fine as when they went?

Every man who reads history knows the temptations of Army life—

Every man knows how drink weakens the physique and loosens the moral fibre of both men and women—

Every man knows how inseparable drink and the other vices are.

At this time while our whole Government beseeches and commands our boys who go to fight to leave drink alone, shall we who sit at home slacken our industry and impair our judgment with the alcohol denied to them?

The Bond that you put into this Campaign will help make even a slacker realize that drinking is mighty poor patriotism.

The time is ripe—Congress has passed a bill which will put liquor out of business if the States ratify the amendment.

## Help the Fighters Fight

There never was a time when America so needed her sober senses.

This is a War within a War. A battlefield right here at home.

If you take your share in the fight, your service will be devoted to the safety and welfare of your country just as surely as if you had been selected for the fighting line in France.

You can dig the biggest trench in the world—a trench that will stop the whole liquor traffic forever.

The most important thing is that you send your contribution now.

Do your part for victory.

## Strengthen America

THIS is the great opportunity for the man or woman with the 10c piece, the dollar bill, the \$50 Liberty Bond, the \$1,000 Liberty Bond, or the \$50,000 check.

All get together now, and the thing is done with for all time.

## Make Your Liberty Bond Work Twice

You bought it to make the best Army.

Give it to fight the worst enemy.

Lloyd George said: "We are fighting Germany, Austria, and Drink—the greatest of these deadly foes is Drink!"

The money raised will be spent to bring the necessity of prohibition home to every man, woman, and child in America, and especially in those States where it is important that the Legislatures vote for the prohibition amendment.

Advertising space will be used because that is the only space which we can absolutely control, and advertising space must be paid for.

The only way to put the liquor traffic out of business is by getting the States to vote for the ratification of the prohibition amendment.

The only motive power sufficient to induce the great mass of people to do a big thing, is a wave of collective emotion which makes them all feel the same thing at the same time.

And the only practical way in which to reach the whole population of all the States at once is by paid advertising.

While all the world is making sacrifices and trying to eliminate waste, liquor wastes capital—wastes earnings—wastes manpower—wastes foodstuffs—wastes human efficiency, and wastes human life. You cannot say one strong, unqualified word for the liquor habit or the liquor business.

The brewers are telling their story in big space, and are claiming the support of the working-man.

We are prepared to meet successfully every argument of the liquor men as a result of a world-wide study of the economic aspects of the liquor problem.

We will show why brewers should get less sugar, molasses, grain, coal, and railway service, and why you and the boys at the Front should get more.

## What Has Drink Done for You?

The brewers admit that they were weak in tying up with the saloon and the dive.

Now they don't want us to drink whiskey any more—only beer.

They think beer would do us good.

Who says any drink is good for us?

Ask the trainers of young men. Ask the heads of medical institutions and hospitals.

Ask the keepers of jails, work-houses, and almshouses what drink has done to their inmates.

## Help Awaken America

The nation-wide campaign plans are ready. Weekly and daily newspapers, posters, leaflets, and stereopticon slides will be used to convince men and women of the economic loss and social and moral wreckage wrought by the liquor traffic.

This page was paid for by private subscription. With your help the facts can be presented until every soul in America is awake.

Join the men whose names appear at the foot of this page. They are the official representatives of thirty Christian denominations having 140,000 individual churches, with a membership of 18,000,000.

Money is needed. We want to drive home the facts about liquor in plain language that everybody can understand.

Your town and your State will get the benefit. This is a nation-wide campaign.

Every \$50 Bond is a field gun—every \$10 check is a rifle—every dime is a bullet.

### Tear off this Coupon

Use it whether sending bond, check, money order, or currency. Do it now.

## MORE GERMAN HYPOCRISY

**T**HERE is little hope of peace in the Imperial German Chancellor's reply to President Wilson's latest address to Congress. It is true that there are superficial signs of promise in von Hertling's speech, but they vanish when the surface is scratched.

The Chancellor smoothly declares himself ready to accept as the basis of a general peace discussion the four principles enunciated by President Wilson, but his smoothness is too perfect to carry conviction. The four principles, it will be remembered, are briefly these:

1. The essential justice of each case to be the basis of each part of the peace settlement;
2. No bartering from sovereignty to sovereignty of peoples and provinces;
3. Every territorial adjustment to be in the interest and for the benefit of the populations concerned;
4. All well defined national aspirations to be granted most complete satisfaction compatible with future peace.

Von Hertling, with a noble gesture, sweeps all these into the grasp of his approval.

Justice? The phrase of Saint Augustine fifteen centuries ago—*justitia fundamentum regnorum*—is still valid today.

No bartering of peoples and lands? Of course not. All that sort of thing—the mixing of state territory with princely and private property—belongs to a past that is far behind us.

Interest and benefit of populations concerned to be controlling? Certainly, merely a corollary of the preceding principle.

Satisfaction of national aspirations? I can give assent in principle.

This is all very fine and noble and magnanimous. But what it does it really mean?

One glance at the eastern borders of the German Empire and its meaning—its emptiness of meaning rather—becomes apparent. The Russian people, bewildered and demoralized by events they cannot understand and new responsibilities and privileges they do not know how to use, see the German armies driving pitilessly across their land toward their capital city. Is this justice? Is this regard for the national aspirations of a great people? Is this in the interest and for the benefit of the population?

Von Hertling, with the face of a Chadband and the voice of a Pecksniff, assures them that it is.

These military operations, he unctuously declares, "have been undertaken in the name of humanity. They are measures of assistance and have no other character. It is a question of creating peace and order in the interest of peaceable populations."

The Imperial Chancellor overplays the part. He disgusts where he would deceive. He repels where he would entice. There is no hope of peace on the road Germany now treads.

## MORE FREEDOM FOR THE PRESIDENT

**T**HE directors of the Chamber of Commerce of the United States have recommended to its members, which include more than a thousand chambers of commerce and industrial organizations thruout the country, their endorsement and support of the Overman bill, which would extend the President's powers to rearrange and coordinate the executive powers of the Government. This action is peculiarly significant, in view of the former support by the central body of the chamber of the proposals for a Department of Munitions and a War Cabinet. Mr. Waddill Catchings, chairman of the chamber's war committee, has made clear the ground upon which he and his associates have decided to transfer their advocacy from the Chamberlain proposals to the Administration's plan embodied in the Overman bill. He said in this connection:

No matter whether one might have been disposed to urge the passage of the bill for a Ministry of Munitions and a War Cabinet, this hardly seems the direction for effective effort at this time. Those in charge of the administrative machinery of the Government are strongly opposing the passage of these measures. The Administration's proposal that the existing machinery should be changed to bring about central control and responsibility offers an opportunity for progress which all should support.

These representatives of the business and industrial interests of the country have shown wisdom and broad-mindedness in arriving at this decision.

It is not easy for men in quasi-public positions to renounce a stand which they have definitely taken and make open announcement of the transfer of their support from one to another of two conflicting measures. But this is not the first time that the Chamber of Commerce of the United States has shown that it is under the leadership of men of large caliber and unselfish devotion to the public interest.

The position which the chamber now takes is sound. The administrative end of America's prosecution of the war needs centralization and coordination. It is not good business practise to carry on thru separate and unrelated agencies such operations as the buying on a stupendous scale of the materials of war. It is not efficient administration to have the operations of a dozen different departments and bureaus carried on without adequate machinery for bringing them all into harmony and unity of action. It is not sound organization to have scattered responsibility and divided authority.

The conditions which demanded revision for the elimination of these grievous faults have been universally recognized. The only question was that of the method to be employed in their correction. The Department of Munitions and War Cabinet bills proposed one solution of the problem; the Overman

### FOR DEMOCRACY

Cesare's cartoon of the ship builder, drawn for the New York "Evening Post," is a stirring call to labor's patriotism. Behind the figure of the workman looms the keel of an unfinished ship

bill another. But the President did not want either a new Cabinet member entrusted with the manufacture and purchase of munitions or a super-Cabinet for the supreme control of the nation's war activities. Given his unwillingness to adopt these means for the accomplishment of the desired result, the unwisdom of urging them became apparent. The Constitution makes the President supreme in the realm of executive action. His is the authority to administer; his the responsibility for the carrying out of the policies nationally determined upon. It would be folly to impose upon an executive new administrative machinery to the setting up of which he was strongly opposed. An executive works best, so far as method is concerned, in his own way. He should be given a free hand, and held to the strictest responsibility, not for adherence to given methods, but for the achievement of desired results.

The President wants greater freedom of action in his appointed field of executive administration. He wants it in order that he may be able to achieve the greater efficiency which not only his critics but the national exigency demand of him. He should be given that augmented freedom and given it in his own way. There has been fear expressed, with how much sincerity in any given case it is not easy to say, that the increase of the President's authority over executive functions will be a step toward autocracy. The fear is unfounded. Senator Watson, of Indiana, a leader in the Republican party, has paid his respects to this apprehension in a recent address. He said:

Many are alarmed lest we drift into autocracy, but very much depends upon the President's intention in asking the power and the length of time for which it is bestowed. If we confine the term and operation of this authority to the period of the war there is no just cause for alarm. But if we confer it for periods long after the war then is there grave cause for apprehension.

This bestowal of power upon the President in war time and for war purposes is not only not dangerous, but may be, and much of it is, necessary. But to bestow this authority upon him now and expressly provide that it shall continue long after the war is over is precisely the same as if he had sought this great authority long before the war began.

There is no purpose, we are convinced, to make the grant of powers in the Overman bill for more than the period of the war. Such an emergency grant is not only not perilous, but the part of wisdom.

## AUSTRALIA'S ATTITUDE

**C**ALEB CUSHING, in *The Independent* of May 18, 1871, said:

The day is not remote when another "doctrine of Monroe" will in the name of the United States of Australia interdict to old Europe the placing of a foot on the islands of the Pacific.

This prophecy, which at the time must have seemed as imaginary as Macaulay's vision of some future New Zealander sitting on a broken pier of London Bridge and sketching the ruins of St. Paul's, has in our time been fulfilled. Thirty years after it was uttered the states of Australia united and now we see the Commonwealth taking a decided stand against allowing Germany to regain the footing on the islands of the Pacific from which the Australians have dislodged her. Thru the efforts of the four powers of the Pacific, United States, Australia, New Zealand and Japan, the Great Ocean has been freed from Spanish and German control. France and the Netherlands still hold some Pacific possessions, but these powers are not regarded with apprehension. The British islands such as Fiji will doubtless eventually be transferred to Australia or New Zealand and then the Pacific will be virtually relieved of the handicap of absentee landlordism.

We must understand the point of view of Australia if we would judge fairly her action in voting against conscription last December. Americans, at least, have no right to point the finger of shame until ten millions of them have volunteered and kept up the fight for three and a half years. For Australia, with a population of only 5,000,000

scattered over a territory as large as the United States, has produced 500,000 volunteers, of whom 313,000 have been sent to the front and 20,000 more are on the way. The Australian forces have suffered 112,000 casualties, including more than 30,000 killed.

But, it may be objected, Australia as a member of the British Empire was in duty bound to render such service. That is true. Australia is loyal to Great Britain and she has proved it by doing her bit—and a bit more. She believes in the Empire and thinks much more of it than do many Englishmen. But as a matter of fact the appeal "Your King needs you" or the waving of the Union Jack does not have a very fetching effect on a large part of the Australian population, altho ninety-five per cent of them are of British descent. Australia had no voice in the foreign policy of Great Britain that led to participation in the war and she did not feel that she is any more obligated to fight to get Belgium for the Belgians, Serbia for the Serbs, Poland for the Poles, Trieste for the Italians, Armenia for the Armenians, Palestine for the Jews and Constantinople for the Russians than the United States or any other well-meaning bystander. The recruiting speeches, posters and editorials in Australia appealed to much the same motives as in America, that is, to the fear of German autocracy and aggressiveness, to abhorrence of German brutality and ruthlessness and to sympathy for oppressed peoples. Premier Hughes, in his appeal to the soldiers at the front to vote for conscription, did not mention King George, the Union Jack or Old England. His main argument was this:

Soldiers, the time has come for plain speaking. While you have been exposed to great hardships, certain sections of those for whose safety you are risking death daily have been playing upon the credulity and apathy of the citizens of the Commonwealth. Boloist activity is doing the dirty work of Germany in Australia, as in other countries. The recent strike, the most disastrous in the history of Australia, was engineered by these sections for the deliberate purpose of destroying the Government and rendering its war policy abortive. Its object was political, not industrial. These reckless extremists prate about liberty. There is only one way by which liberty can be won or maintained, only one way by which Australia can be kept white and free—by fighting against Germany, the enemy of liberty and Australia.

Soldiers, you have taken that way. But these men will not stand by your side. They must be made to do it. Why should they live at their ease, refusing to reinforce you, and to give that much-needed rest to which you are so richly entitled?

But in spite of this appeal the soldier vote divided almost fifty-fifty on the question of conscription. The "yes" votes outnumbered the "no" votes in the army less than half of one per cent. That is, the men actually serving in Europe and Asia were less disposed to call others into the service than were the women and the stay-at-home men in Tasmania and West Australia. The other four states voted "no" emphatically, so conscription was lost by 170,000 votes out of about 2,144,000, nearly three times as big a negative majority as was given in the previous referendum on the same question in October, 1916.

The campaign was an exceedingly bitter one. The Sinn Fein figured largely. The I. W. W. were an active element of the opposition. The Roman Catholic Archbishop of Melbourne, Dr. Mannix, fought the measure, claiming the Pope favored the abolition of conscription everywhere as a step toward disarmament. The introduction of Chinese into Britain and France and alleged favors shown to Japan in the partition of the Pacific were brought up as evidence that the mother country was regardless of Australia's ideals and interests.

On the other side the Government denounced all opposition as traitorous and even went so far as to suppress the "Hansard"—what we should call the "Congressional Record"—of the Queensland Parliament on the ground that it contained seditious literature. The papers, formerly so optimistic, suddenly changed their tone and declared it "quite possible" that Germany would win the war. One of the Commonwealth ministers, Mr. Watt, said at Sydney:

The present position seems to be bad—absolutely rotten. You see much in the papers that makes things black enough but the telegrams that come to the Government are blacker still. You know that the situation is pregnant with disaster—even early disaster.

The Government declared that seven thousand new men a month were necessary to keep up the strength of the Australian forces at the front and that conscription was absolutely necessary to obtain them, for the volunteer system had broken down.

But in the face of these arguments and menaces Australia refused to take the step taken by Great Britain, Canada, New Zealand and the United States. Was it because the Australians did not fear the predicted danger of German conquest, or because they did not like Mr. Hughes, or because they wished to rebuke the London Government for its mismanagement of the Gallipoli and Somme campaigns, or because they disliked the Japanese alliance, or because they thought they needed their young men to develop and populate their empty continent, or because they were disgusted at the revelations of the secret treaties, or because they felt that they had done enough and it was now America's turn, or because of other reasons—who can say? Who can read the mind of a democracy? King Demos decides but never explains.

## THE STABILITY OF THE AMERICAN GOVERNMENT

IN opening his sensational speech at Paris on November 12 Premier Lloyd George said:

I have one advantage in speaking of this war in that I am almost the only minister in any land on either side who has been in it from the beginning to this hour.

This remark calls attention to the fundamental difference between the United States and all other governments, the irremovability of the executive. It is a feature which has been sharply criticized abroad and even at home but which has certain undeniable advantages, especially in time of war. "Don't swap horses in crossing a stream" is a maxim that democracies are too prone to forget. Whenever things go wrong the government is apt to go out even tho there is no probability that the men put in will do any better. A single adverse vote on any part of any policy of any member of the cabinet may throw out the whole government at any moment and perhaps force every member of parliament to seek reelection within a few weeks. In such an election the dominant issue is apt to be quite other than that on which the government fell, so it does not constitute a genuine referendum.

In peace times such a system, tho bothersome, risky and expensive, does not matter much, but in time of war unity of action and continuity of policy are most essential and it is extremely dangerous to have a clean sweep merely because somebody made some mistake or became temporarily unpopular in parliament. During the war, in spite of the party truce and the profest desire of the politicians to subordinate everything to patriotic unity, the governments of Great Britain, France, Italy, Germany and Austria-Hungary have suffered a complete shake-up from three to six times. The Russian Government has been shaken up so many times that it has gone all to pieces. Some of these changes have been for the better; some for the worse. Most of them might better have been avoided, for unless a change of administration is a decided improvement the loss in efficiency is greater than the gain. Bethmann-Hollweg is no Bismarck. Nobody considered him a great man. Yet by keeping him in his post of Chancellor until recently Germany has had a considerable advantage over the more vacillating Allies. The war has been prolonged for months and millions of men have suffered because of this weakness of the parliamentary governments of Europe. Putting a man into a position of authority of whose duties and policies he may know nothing with the expectation that he will be

kicked out within a few months because he or some one of his colleagues has done something that seemed wrong to those who were not acquainted with affairs—is that the best way to run a government? An American cabinet officer may know as little about his department on his appointment as a European minister, but he is more likely to do better, for he can look forward to a long term with considerable confidence.

Mr. Wilson, who is prime minister as well as President, is in for three years more unless he commits a high crime or misdemeanor. Part of the American people think, or rather thought, that some other man, say Taft, Roosevelt or Hughes, would have made a better president. But would those who voted against him want him deposed tomorrow and some one else put in his place? If so, whom would they agree upon?

People find fault with the various cabinet officers for various things. That is the privilege, if not the duty, of every American citizen. But does anybody think the country would be any better off if the whole lot of them were turned out immediately and replaced by as many Republicans? Individual members of the cabinet may at any time be removed and replaced by the President with the advice and consent of the Senate. This is done whenever there is sufficient ground of complaint. But this involves no "cabinet crisis" such as frequently upsets the government of other countries. But if a secretary does as well as may reasonably be expected with his department and is not in irreconcilable antagonism to the policy of the administration he may anticipate as long a term and as secure a tenure as the President.

But whenever we venture in a modest way to call attention to some of the practical advantages of the American system we hear from England and France and Italy and Germany that they are more democratic than we, that the President is more of an autocrat than any czar, and that if we want a real popular government we must copy their system of ministerial responsibility to parliament. But every country where this system is really effective has suffered from it in some degree, and has it gained anything in the way of democratic control? Has any one of these countries, even after changing its administration half a dozen times in the last three years, got a government that commands the sincere loyalty and coöperation of its parliament and its people any better than ours?

Is beer food? Perhaps; but to make a meal of it a man would have to absorb so much water and alcohol that he would be too waterlogged—and too drunk—to get up from the table.

If there are any pacifists, *pur sang*, left of the kind who really believe in the efficacy of non-resistance, how must they be disturbed by the relentless advance of Germany in unresisting Russia.

A white blackbird has appeared in the classic halls of Congress. Congressman Fuller, of Massachusetts, has resigned from a committee because it never met, did no work, and entailed "needless and unjustifiable expense upon the people who pay the bills." He must be a queer bird. He will be croaking next that Congressmen should earn their salaries!

Samuel Gompers, on behalf of American labor, has sent a smashing message to German labor: "You can't talk peace with us now. You can't talk international conferences with us now. Either you smash your autocracy, or by the gods we will smash it for you. Before you talk peace terms, get back from France, get back from Belgium, into Germany, and then we will talk peace." Every American workman worth his salt will agree.

Chancellor von Hertling, with grave courtesy, assures us that there does not exist in Germany "an antagonism between an autocratic government and a mass of people without rights." He declares that "with us Princes and Governments are the highest members of the nation . . . with whom the final decision lies." We are grateful for the confession. Americans do not like Princes—or even governments—who hold the final decision in their hands. That is just what we are fighting—and shall fight to the end.

# THE STORY OF THE WEEK

## Railroad Bill Passes

The Railroad Bill, providing for the details of government control during the war and for eighteen months thereafter, passed the Senate without a rollcall, after a prolonged discussion. At the last minute an amendment was inserted in the bill adding all short line competitive railroads to those under government control. As the bill stands the President may fix rates subject to review by the Interstate Commerce Commission. The provision for compensation to the roads on the basis of the average operating income for the years 1915, 1916 and 1917 stood to the end thru many stormy attacks. An attempt by Senator Lodge, with Republican backing, to reduce the period of government control after the war from eighteen months to six, failed in the final hours of debate.

The Democratic senators seemed greatly divided over the discussion of the bill. Senator Underwood, of Alabama, expressed alarm at the powers given to the President and the possibility of permanent government ownership. He warned the Senate against building up an autocracy, and voiced the hope that "the roads would be returned to their owners" as soon as peace was concluded.

Senator Lewis, of Illinois, on the other hand, hailed the bill as the forerunner of government control over various public utilities, and he predicted that the question would be the great domestic issue in the next national campaign. In this portion of his speech he said:

Let us not deceive ourselves as to the meaning of this measure. This is the be-

ginning of the Government taking the railroads as a Government agency. The roads will never be permitted to return to the former state of personal control for private benefit. At the same time this country takes over the railroads, it will take the telegraph and telephone privileges, and then the products for fuel, particularly the lands of coal and oil, and put these under Government direction.

All agencies of this nature in this republic, necessary to the public welfare of man, will be taken by the Government as a necessary protection of the republic.

While Congress was attending to its railroad duty, Director General McAdoo reported that freight was moving in much better shape, especially on the congested eastern roads, where 266,000 cars were on the rails as against 170,000 on January 1. Steps have been taken for speeding up repairs to rolling stock and getting the equipment generally in better shape.

## The Food Enigma

That patient individual the ultimate consumer, suffered this week from another general jump in food prices, and at the same time conflicting statements from several departments of the Government left him puzzled as to what the future had in store for him.

First came Food Controller Hoover with the announcement that the eastern part of the United States was facing a virtual food famine, due to inadequate transportation facilities. "The next sixty days," he declared, "will be the most critical period of our food history." The big consuming centers, he said, had been living for some time on their reserves, and these were rapidly approaching exhaustion. Soft corn and potatoes in large quanti-

L'Asino, Italy

### UNDER THE GERMAN PEACE

An Italian warning against Teuton camouflage in peace proposals

ties were spoiling in the west because they could not be shipped.

Railroad Administrator McAdoo disagreed with this diagnosis. He said there could be no food shortage due to inadequate transportation, and he offered to provide cars to carry food, for the eastern cities and for shipment to the Allies, at whatever places and in whatever quantities Mr. Hoover cared to designate. Later in the week Secretary of Agriculture Houston entered the arena with a statement to the effect that there was no reason to be alarmed over the food situation and no prospect of famine existed.

Following all this, talk has arisen in Congress in favor of an investigation to get at the real facts. Critics of Mr. Hoover point out that several weeks ago he predicted a meat famine in the East, which did not materialize, and early last fall, only a week or two before sugar began to disappear from our markets, he announced that there was no danger of a sugar shortage.

Mr. Hoover made a further announcement during the week from which it is to be deduced that we must face an era of still higher prices for foodstuffs. He stated that the Food Administration has been instrumental in fixing the prices of wheat and sugar, and, in the cases of some cities, of milk, but beyond that it "had no powers or intention to interest itself in prices." Those who had hoped that the Food Administration would extend its supervision to the other cereals besides wheat, to meat products and other foodstuffs, are doomed to disappointment.

Since the order was issued requiring

### JAPAN'S AMBASSADOR TO THE UNITED STATES

The appointment of Viscount Kikujiro Ishii as Japanese representative to this country brings back to Washington a good friend of the United States Government. Viscount Ishii headed the Japanese war mission which came here last August; he was instrumental in arranging the understanding between Japan and America concerning China. In 1912 Viscount Ishii was Japanese Ambassador to France. Three years later he was made Foreign Minister of the empire.

COMMANDING OUR TELEPHONE UNIT IN FRANCE

Mrs. Inez Ann Crittenden, of Claremont, California, sailed for France in February to take charge of the Telephone Unit of the American Expeditionary Forces overseas. In the unit are several hundred American girl telephone operators and interpreters, serving under the same rules and regulations as the men of the United States army.

20 per cent of other cereals in wheaten bread, the price of bread has risen in many cities. Corn, the principal adulterant, has jumped in price, because the demand for it has increased and there has been no attempt to regulate it. The various milk commissions have apparently not worked out to the general satisfaction. Chicago has just weathered a boycott on the part of the producers which for a time reduced the city's supply by 50 per cent. The Milk Commission for the Eastern States has increased prices for the consumer, in spite of the direct relation shown by the New York City Board of Health between milk prices and infant mortality, and has taken no single constructive step to remedy the present wasteful methods of distribution or suggest any solution for the whole milk problem.

Beyond a doubt the demand for a full investigation of the whole food situation will become imperative before spring is far advanced.

**Wheat Prices Fixed** The controversy over wheat prices was ended on February 23, when President Wilson by proclamation fixed the price for this year's crop on a basis of \$2.20 a bushel at Chicago, with differentials making a range from \$2 in the farm districts to \$2.27 and \$2.28 at Atlantic ports. There had been considerable agitation for higher prices, and several bills had been introduced in Congress by representatives from the grain belt fixing the price at \$2.50 and more.

"To increase the price of wheat above the present figure," said the President, "or to agitate any increase in price, would have the effect of very seriously hampering the large operations of the nation and of the Allies by causing the wheat of last year's crop to be withheld from the market.

It would, moreover, dislocate all the present wage levels that have been established after much anxious discussion, and would therefore create an industrial unrest which would be harmful to every industry in the country."

In refusing to raise the price, President Wilson made an appeal to the patriotism of the farmer. "Next to the soldier himself, he is serving the country and the world, and saving them in a way which is absolutely fundamental to his own safety and prosperity." He declared that the Railroad Administration, the Department of Agriculture, and the Food Administration would cooperate to assist the farmer in every possible way. Already the farm industries have contributed over 200,000 men to the national army, and there has been a further drain on farm labor thru volunteering and because of the high wages paid in industrial pursuits.

President Wilson pointed out that the new draft regulations had been drawn with a view to taking as few men as possible from the farms. The Secretary of War has asked for authority, when conditions permit, to furlough soldiers who would go back to the farm during the planting and harvesting seasons. In addition, national and local agencies are organizing to increase the supply of farm labor.

**Political Values** Senator Lewis declares that government ownership of railroads will be the great issue of the next campaign, and some Republicans insist that the issue will be government efficiency, with the inevitable tariff as a collateral, but it is apparent that the words treason, sedition and disloyalty will figure fully as heavily in the congressional contest next fall as any matters of economic and social theory. When all else fails these magic words will be invoked to smash the opposing candidate.

As the parties begin to jockey for positions in the fall campaign, the terms are being used more frequently, not always with success. Opposition newspapers in the west apply the term "seditious" to the activities of the Non-Partisan League, which seems to be gaining steadily in power. The Governor of Wisconsin explained his recent attempt to appoint a United States Senator to fill the vacancy from that state, instead of calling for a general election, on the ground that he wished to be sure of having a patriotic loyalist in the Upper House. In the approaching four-cornered contest for the toga in that state the alleged loyalty or disloyalty of the candidates promises to drown all other issues.

In New Jersey Governor Edge appointed a retired reactionary political boss, a man of nearly eighty years, to the United States Senate, and in reply to criticisms on his selection, he asserted indignantly that his appointee was a "staunch loyalist."

Before the New York State Legislature, at a hearing on the federal

"dry" amendment, William J. Bryan denounced liquor as "the arch-traitor," while the assembled liquor men hissed "pacifist." In this legislature and in the New York City Board of Aldermen the Socialist members are branded as traitors whenever their colleagues have nothing else to do.

Judging by the habits of the politicians and the press, it seems to be the rule not to apply any of these unpleasant epithets to persons of conservative habits of thought. But even under this rule great discrimination must be used. Mr. Gompers intimated in a speech on Washington's Birthday that any labor man who proposed a conference with German labor was seditious. The next day representatives of British, French, Italian, Belgian, Portuguese, Rumanian and South African labor voted unanimously to hold such a conference.

It is apparent that "traitors" and "seditionists," in a political sense, are largely Pickwickian titles. "Politically speaking," remarked a wise old politician in New York this week, "a seditionist or pro-German is any one who doesn't agree with me."

One politician who is not calling any one names these days is the agile and youthful Mr. Hays, the new Republican National Chairman. Apparently every voting man looks good to Mr. Hays. He has been leaping from city to city getting Republicans of every previous condition of servitude into harmony conferences. He describes his motto as "assimilation, not elimination," and declares he will be an impersonal chairman.

In New York a reporter asked him: "Are you impersonal as to the economic remedies that are being advocated for our national problems? In a word, have you some economic beliefs, or do you simply want the Republican party to win elections?"

Mr. Hays replied that he most emphatically had such principles, but he was in too great a hurry to talk about them, and with that he jumped on a train bound for Washington and escaped, thus demonstrating his adhesion to that time-honored precept of National Chairmen—safety first.

**National Service Congress** Several state governors and many other distinguished persons, including former President Taft, attended the three-day Congress of National Service, under the auspices of the National Security League, which concluded at Chicago on February 23.

War until victory is attained was the note of the Congress. "We condemn all efforts toward peace without victory," read the resolution adopted. "All discussion of such a peace weakens the power of the nation." A call was issued to all citizens to make every sacrifice for the sake of winning the war. The campaign of patriotic education being pushed by the National Security League was endorsed.

The adoption of a policy of universal military service in the United States, "for the future safety of the

nation," was emphasized strongly during the three days of speech-making and was made a part of the platform adopted. Governor Whitman, of New York, former Secretary of War Don M. Dickinson and others delivered speeches urging the military training idea. It was the only after-the-war recommendation made by the Congress.

**A Labor Conference** At the call of the Government, representatives of capital and labor met at Washington on February 25 to begin a series of conferences, expected to extend over several weeks, with the object of arranging a program to eliminate strikes, as far as possible, during the war, and provide a maximum of production. The representatives of capital were named by the National Industrial Conference Board and the labor men were selections of the American Federation of Labor. Two men will be named by each side as representatives of the public in the conferences, and former President Taft is the first selection of the capitalists and Frank P. Walsh of the labor men. Secretary of Labor Wilson was the originator of the conference idea.

Secretary Wilson has high hopes for the conferences as a solvent for labor problems that have been worrying the Administration since our entrance into the war. He will place at the disposal of the conferees data gathered by government agents who are now attempting to adjust fifty-nine separate labor disputes thruout the country.

On the basis of the eventual agreement expected to be reached, the Government will lay down a national labor policy for the duration of the war, and if necessary legislation will be sought to enforce that policy.

**German Chancellor Accepts President's Peace Terms** In an address to the Reichstag on February 25 the German Chancellor, Count von Hertling, declared his agreement with the four fundamental principles that President Wilson on February 11 laid down as essential to a general and durable peace. These principles will be found in The Independent of February 23, page 304. The Chancellor begins by agreeing with the opinion expressed by Mr. Runciman in the House of Commons that it would be better to discuss terms in conference than by a public diplomatic dialog across the Channel and ocean, but adopting the existing method he "readily admits" that the President's speech "represents perhaps a small step toward a mutual rapprochement." The first of the four principles of the President, that peace must be based upon the essential justice of each particular case, the Chancellor regards as self-evident. It was enunciated by St. Augustine 1500 years ago.

As to the second of Mr. Wilson's stipulations, that "peoples and provinces are not to be bartered about from sovereignty to sovereignty as tho they were mere chattels and pawns

in a game, even the great game, now forever discredited, of the balance of power," the Chancellor says:

This clause, too, can be unconditionally assented to. Indeed, one wonders that the President of the United States considered it necessary to emphasize it anew. This clause contains a polemic against conditions long vanished, views against Cabinet politics and Cabinet wars, against mixing state territory and princely and private property, which belongs to a past that is far behind us.

He "gladly applauds" the statement that "the balance of power" is discredited, for it was invented by England to apply to continental states that threatened to become too powerful for her and "was only another expression for England's domination." He objects to the insinuation that Germany is an autocratic state.

The third and fourth clauses, that questions should be settled with regard for the satisfaction of national aspirations and the benefit of the populations concerned, the Chancellor accepts in principle and agrees with the President that peace on such a basis is discussable. He objects, however, to a one-sided application and says that "when England talks of people's right of self-determination, she does not think of applying the principle to Ireland, Egypt or India."

Then the Chancellor explains the reasons and motives for the advance into Russia, as follows:

Our war aims from the beginning were

the defense of the Fatherland, the maintenance of our territorial integrity, and the freedom of our economic development. Our warfare, even where it must be aggressive in action, is defensive in aim.

After the breaking off of peace negotiations by the Russian delegation on February 10 we had a free hand as against Russia. The sole aim of the advance of our troops, which was begun seven days after the rupture, was to safeguard the fruits of our peace with Ukraine. Aims of conquest were in no way a determining factor. We were strengthened in this by the Ukrainians' appeal for support in bringing about order in their young state against the disturbances carried out by the Bolsheviki.

If further military operations in other regions have taken place, the same applies to them. They in no way aim at conquest. They are solely taking place at the urgent appeals and representations of the populations for protection against atrocities and devastation by Red Guards and other hands. They have, therefore, been undertaken in the name of humanity.

We do not intend to establish ourselves, for example, in Esthonia or Livonia. In Courland and Lithuania our chief object is to create organs of self-determination and self-administration.

In the regulation of the frontier question only what is indispensable on military grounds will be demanded on Germany's part.

**The German Demands on Russia** Trotsky, the Bolshevik Foreign Minister, broke off the peace conference at Brest-Litovsk with a threat to declare—not war, but—revolution. He asserted that the German proletariat would never consent to fight against revolutionary Russia to impose such

VOILA, SAMMY!

The friendly welcome in this poster from *Le Matin*, Paris, to the American troops in France is backed by the offer of a genuine service to the Sammies. A service has been established for the sole purpose of giving the American soldiers any information they may want. "A sketch of the geography of France," "a list of the leading events of the war," "a translation of a French love story," are some typical requests

THE DISSOLUTION OF RUSSIA

Finland, Lithuania, Livonia and Esthonia have, like Poland and Ukraina, declared their independence. The Bolsheviks hold Petrograd and the Finnish cities of Helsingfors, Tammerfors and Viborg. The White Guards, fighting for a Finnish republic, hold Vasa and Uleaborg. The Germans are aiding the White Guards by sending shiploads of soldiers and munitions to Vasa. Sweden has occupied the Aland Islands. German forces by sea and land have taken Reval, the Russian naval base protecting the entrance to the Gulf of Finland. The German expedition headed toward Petrograd has already got beyond Pskov. The arrows indicate the main lines of the German advance into Russia from their former front below Riga.

impossible terms as the Central Powers proposed.

But he obviously underestimated the subserviency of the Socialists, for just as soon as the armistice expired the German troops entered upon their advance toward Petrograd and other important places. There are rumors that some of the German soldiers refused to obey the command, and even in one regiment shot forty-two of their officers, but whatever such mutinies may have amounted to, they did not perceptibly check the German movement.

When it was perceived that the Germans were determined to occupy the western provinces the Bolshevik commissaries at Petrograd, who had hitherto supported Trotzky, shifted over to Lenine, who had all the time insisted that a bad peace was better than none. So Trotzky was compelled to inform Berlin by wireless that he would accept the terms dictated by Germany at Brest-Litovsk. But the German Government asked for personal and written confirmation of the message, and when communications were exchanged at the frontier it was found that the German demands had risen considerably in the few days since the conference at Brest-Litovsk had adjourned.

The original German demands, according to the Russian report, involved the surrender of 160,000 square miles of territory having a population of 18,000,000, the payment of an indemnity of \$1,500,000,000, the renewal

of the old commercial treaty for thirty years, and the promise on the part of Russia not to spread revolutionary propaganda in Germany.

The new terms, of which Germany demanded acceptance within forty-eight hours, required the withdrawal of the Red Guards and Russian troops from the Ukraine, Poland, Courland, Finland, Livonia and Esthonia and the complete demobilization of the army. Ores were to be exported without tariff and Germany guaranteed the same treatment in regard to commercial rights as the most favored nation at least until 1925. Russian and Entente warships must be interned and the mines cleared away from the Baltic and Black seas.

#### The German Advance Into Russia

At the Brest-Litovsk conference General Hoffman threatened Trotzky that if Russia did not accept the German peace terms he would take Reval within a week. The plan of campaign, thus frankly declared, he has almost literally carried out. An expedition from Moon Island at the mouth of the Gulf of Riga moved eastward along the coast of the Gulf of Finland to Reval and entered it without opposition. The municipality of Reval on the approach of the Germans declared Esthonia an independent and neutral state and sent word to the Germans to that effect. The Germans replied that in view of this declaration of independence they were coming as guests,

not as conquerers. Reval was a Russian naval base, one of the main defenses of Petrograd, and by taking it the Germans came into the possession of valuable naval and military stores, for these, it seems, were neither removed nor destroyed. The German fleet is now free to enter the Gulf of Finland and could doubtless bombard Petrograd.

Another German expedition starting from Riga followed up the line of the railroad to Petrograd and took Pskov, about half way to the capital. But here the Bolsheviks, who in most places had offered no opposition, rallied and drove out the small German detachment. The Germans in their present invasion of Russia are not keeping a solid formation but divide up into parties of only a few hundred men. They are welcomed by the landed and upper classes who have suffered from the depredations of the Bolsheviks and some of the Baltic troops have joined the Germans.

The German troops sent into the Ukraine made a still more rapid advance by using motor cars and trains. Within a few days they had occupied Jitomir where the Ukrainian Government is established and are now approaching Kiev, more than two hundred miles east of the old German line. Kiev is still held by the Bolsheviks, whom the Germans and Ukrainians will now endeavor to dislodge.

Lenine and Trotzky, having failed to make peace with the Germans or even to secure an armistice, have now called upon their followers to oppose the invasion by every means in their power. The Bolshevik proclamation reads:

Resistance to the German hordes thus becomes the principal task of the revolution—brave, heroic, obstinate, and pitiless resistance. Every position, every railway station, every locomotive must be defended. Every possible obstacle must be put in the way of the enemy.

#### Civil War in Finland

Finland has been in an embarrassing position in the present war. United against her will with Russia and suffering under the oppression of the late Czar, who had deprived them of the liberties he had sworn to regard, the Finns were only desirous of obtaining their independence. The Finnish army was disbanded by the Czar in 1902, and instead of army service, the Finns were obliged to contribute to the Russian military establishment. Naturally a democratic people, the Finns could hardly sympathize with either Germany or Russia in the war. Nevertheless, a large number of the Finns, believing that the only way to restore independence was to defeat Russia, crossed the Baltic and enlisted in the German army with the understanding that they were not to be compelled to fight against any except the Russians. After the overthrow of the autocracy in Russia and the declaration of independence by Finland, the Finnish volunteers wished to return to their own country in order to fight for its freedom and to put down the disorders occasioned there by the Rus-

sian Bolsheviki. Accordingly, four steamers carrying the Finnish soldiers and some German volunteers with arms and ammunition have been sent from Germany to Vasa, where the Finnish Government driven out of the capital has established itself.

Here a Finnish national army is being created under the leadership of Baron Gustaf Mannerheim, who has served in the Russian army both in the campaign against the Japanese and against the Austrians in Bukovina during the present war. He is supposed to have some sixty thousand troops, and with the aid just received from the Germans expects to be able to regain the capital and the south-eastern part of Finland, still under the control of the Red Guards. Only in February, General Mannerheim took Uleaborg from the Red Guards, but it seems they are still holding the city of Tammerfors, on the main railroad line between Helsingfors and Vasa. The Red Guard also has control of Viborg on the Finnish-Russian frontier, so they are able to get reinforcements and munitions from their comrades in Petrograd. General Mannerheim says: "Our aim is to liberate Finland from anarchy. We will erect a dam against the Bolshevik waves to save the culture of Finland and secure the freedom of the country."

On the other hand, the Bolsheviki say that "what is going on in Finland now is only a rehearsal for the European drama of which the curtain shortly is going up." But even some of the Socialists of Finland, repelled by the riot and slaughter of the revolutionists, are joining the White Guard. The animosity of the Reds is directed specially against the educated classes.

The Finnish Government has been recognized by France, Sweden, Denmark, Norway, Germany, Austria and Switzerland. Mr. Balfour, in receiving the Finnish Mission at London, stated that Great Britain approved the reasons for Finland's independence and disapproved of the former Russian

policy of oppression, and hoped soon to be able to recognize Finland's independence *de jure* as it has already *de facto*. A Finnish delegation, headed by Dr. Iulio N. Reuter, a professor in the University of Helsingfors, is now in Washington asking from America the recognition of Finnish independence. The United States Food Administration has promised to release forty thousand tons of corn and wheat for Finland, but it is impossible at present to get ships to carry it over. As Finland is largely dependent upon outside supplies for food, formerly upon the United States and more recently upon Ukraine, and both these bases are now shut off, the suffering among the people is very serious.

**Anarchy in Ireland** The convention of Irishmen called by the British Government to draw up a constitution for Ireland is said to have reached the end of its labors and to be about to report, altho it is rumored that it failed to come to an agreement. In the meantime the Government, being anxious to avoid a conflict during the conference, has avoided using strong measures to enforce order, and the Sinn Feiners, taking advantage of this laxity, have stirred up disorders in various parts of the country, especially in the west. They declare British rule at an end, and, in the name of the republic, indulge in all sorts of outlawry. Telegraph wires are cut and roads blockaded by cutting down trees. Cattle are driven off in droves in open daylight. Mobs headed by bands visit farms and declare them commandeered for the Irish Republic. Arms and funds are being seized wherever they can be discovered. A bank manager in County Clare was held up on the highway and robbed of \$30,000. The airdrome near Dublin was entered by six armed men, who carried off the military maps and papers.

The American soldiers and sailors, because they are regarded as fighting for Great Britain, are treated with

**THE BOLSHEVIKI FIGHT AGAIN**  
Ensign Krylenko, commander-in-chief of the Russian army under Bolshevik control, is leading a hastily reorganized resistance against Germany's invasion

especial animosity. At Passage, County Cork, fifteen American marines returning to their ship were attacked with stones by four times their number of Sinn Feiners and had to charge the crowd repeatedly to keep them back. One of the Americans was knocked unconscious by a big stone and others received lesser injuries. When the British police arrived they escorted the Americans thru the streets, but after they were embarked the mob continued to stone the American vessel from the shore. The Government has been forced to send additional troops to the scene of disturbances and County Clare has been declared a special area under the Defense of the Realm Act, which is equivalent to establishing martial law.

**What Russia's Withdrawal Means** The defection of Russia means that the Allies have lost about half of the area and two-fifths of the population from which they can draw recruits and that the front which the Central Powers have to defend in Europe has been shortened by half. The figures are given in the adjacent diagram. Actually the military disadvantage to the Allies is far greater than appears from these, for the German and Austrian troops withdrawn from Russia may be used on other fronts, while the Russian armies are disbanded. The territory of Russia is not only alienated from the Allies but is virtually added to the enemy, for it all may be drawn upon for grain, meat and metals. Formerly the Central Powers were open to attack from the west, south and east, but the eastern front is now free and there is little danger of an invasion from the Greek and Italian fronts on the south.

There have been many charts published during the war showing the area and population of the two belligerent groups; either on a basis of their area

WHAT THE ALLIES LOSE BY THE DEFECTION OF RUSSIA  
AREA IN SQUARE MILES

ENTENTE ALLIES 6,237,000	UNITED STATES 3,026,000	RUSSIA 8,700,000
CENTRAL POWERS 1,222,000		

POPULATION

ENTENTE ALLIES 160,000,000	UNITED STATES 103,000,000	RUSSIA 177,000,000
CENTRAL POWERS 142,744,000		

LENGTH OF FRONT IN MILES

WESTERN 580	GREEK 250	ITALIAN 200	RUSSIA 1060
CENTRAL POWERS 1010			

and population in 1914 or on the basis of territories held at the moment of publication by the contending forces. Both kinds of calculation are interesting and, for their own purposes, quite legitimate, but neither shows what are the effective areas and populations fully involved in the war. It is, for example, absurd to count Germany's overseas colonies as part of the resources of the Central Powers available for the campaign of 1918, since these colonies are all occupied by Germany's foes. But it is likewise misleading to rank the millions of belligerents in China and India as available recruits for the immediate future, altho they are aligned with the Allies. The accompanying diagrams of the effective forces of the belligerents in Europe are calculated on the following basis: 1. European areas and peoples are only considered, with the exceptions of Turkey in Asia, the United States of America, the self-governing British Dominions, Algeria and Tunis. These exceptions are made because the regions mentioned can and do furnish armies to the war zones in numbers proportionate to their population and resources. 2. Areas under military occupation are not counted for the conqueror because, generally speaking, they are not available as recruiting areas. But nations whose territory is mostly occupied by the enemy are not counted for either side, since the advantage of their "armies in being" is offset by the advantage to the enemy of the use of the greater part of their natural resources.

**Sweden Occupies the Aland Islands** The proposal of the Swedish Government to send a military expedition to the Aland Islands was passed by the Riksdag by a vote of 131 to 15 on February 23. Immediately upon securing this authorization the Government took action and sent 500 soldiers to take possession of the islands. Professor Eden, the Swedish Premier, announced that the occupation was only temporary, to be terminated on March 1, 1919, or at the conclusion of the war. His object was to protect the inhabitants, who are mostly Swedes, from the disorder that was devastating the mainland. The 600 White Guards on the islands were taken away by the Swedish steamship and transported thru Sweden to the Finnish frontier.

The Aland Islands have been in dispute for more than two hundred years. They were taken from Sweden by Peter the Great in 1714, but thru the interposition of Great Britain and France, Russia has never been allowed to fortify the islands. The Russian fortress of Bomarsund on the largest of the islands was destroyed by an Anglo-British force during the Crimean War of 1854, and has never been rebuilt. Since the Aland Islands occupy a position at the mouth of the Gulf of Bothnia, they control both the Swedish and the Finnish coast to the north, and they occupy an almost equally commanding position in regard to the Gulf of Finland, which leads to Petrograd.

THE GREAT WAR

February 22 — German sea-raider "Wolf" returns to port after fifteen month cruise. British, after taking Jericho, cross the Jordan.

February 23—Sweden occupies the Aland Islands. Americans reported in the Chemin des Dames sector, on the Aisne.

February 24—Red Cross liner "Florizel" wrecked on reef of Newfoundland. Venice bombed by Austrian airplanes.

February 25—Chancellor von Hertling announces agreement with President's peace terms. Turks retake Trebizond. Germans take Pskov and Reval.

February 26—Three Americans killed and nine gassed in Toul sector. Esthonia declares independence and neutrality.

February 27—British hospital ship "Glenart Castle" sunk in Bristol Channel. Pershing reports total American losses to date are 100, killed, wounded and missing.

February 28—Japan proposes occupation of Russian ports on Pacific. British Admiralty reports loss of fourteen vessels over 1600 tons and four smaller.

This, so far, is the only action officially taken by the Swedish Government in the struggle. Even the exportation of arms and ammunition is prohibited by the Swedish Government, altho many of the Swedish people would be glad to send such assistance over the border to the White Guard, which is trying to rescue Finland from the Bolsheviki. A number of Swedish women, including two authors well known in this country—Selma Lagerlöf and Ellen Key—

**BRITISH MEAT CARD**  
On February 25 Baron Rhondda, the British Food Controller, put the public on a ration of about a pound of meat for each grown person and a half ration for children under ten. The above card provides for twenty weeks. The holder is entitled each week to make three purchases of uncooked meat to the value of fivepence and one of five ounces of pork, poultry or game

have petitioned the Government to allow such aid to be sent to the Finnish Republic.

On the other hand, some of the Swedish Socialists sympathize with the Bolsheviki and threaten a general strike in case the Government permits arms to go thru. It is, however, impossible to prevent the raising of funds in Sweden for the national cause in Finland, or to hinder men, anxious to join the White Guard, from slipping over the border into Finland.

**The Shipwreck** The steamer "Florizel" of the British Red Cross Line, which left St. John's, Newfoundland, for New York on the night of the 23d, ran onto a reef twenty miles north of Cape Race. The "Florizel" was a staunch ice-breaker of 3000 tons and her skipper, Captain Martin, was an experienced seaman, but it appears that in the blinding snow of the blizzard the coast could not be discerned and the floating ice disabled the patent log so the vessel, instead of keeping well out to sea until the southerly angle of the island was passed, turned or drifted westward and struck the coast.

On account of the storm and the breakers between the cliffs and the reef it was impossible to undertake the rescue until the following day when lifeboats took off the forty-four survivors. Ninety-two persons were lost, including ten women of the twelve, and all the four children on board.

**The Cruise** A German sea-raider, the "Wolf," has returned safely after a voyage of destruction which for daring and success rivals that of the famous "Emden." She started out fifteen months ago and cruised the Atlantic, Indian and Pacific oceans, finally turning up at Kiel. The Mediterranean and the Strait of Gibraltar are, it appears, less closely guarded. According to the German announcement: "She brought home more than 400 members of crews of sunken ships of various nationalities, especially numerous colored and white British soldiers, besides several guns captured from armed steamships and great quantities of valuable raw materials, such as rubber, copper, brass, zinc, cocoa beans, copra, etc., to the value of many million marks."

There have been rumors during the past year of depredations in the Pacific, but no definite information was allowed to transpire. Following the Berlin announcement of the return of the "Wolf" the British Admiralty states that nine steamers and three sailing vessels were sunk by the raider.

The largest of the "Wolf's" victims were the Japanese "Hitachi Maru" and the Spanish "Igotz-Mendi." Three American vessels of five or six hundred tons hailing from San Francisco, the "Beluga," "Winslow" and "Encore," were sunk by the sea-raider in the Pacific.

# A TALK WITH TROTZKY

BY EDWARD ALSWORTH ROSS

IT was on a short Petrograd December day but a little over a month after the capture of power by the Bolsheviks that I ran the gauntlet of the soldiers that guard the long corridors of Smolni Institute and was ushered into the presence of Leon Trotsky, *nee* Bronstein, Minister of Foreign Affairs for the Bolsheviks and right hand man of Lenine, *nee* Oulianoff, the economist and strategist of Russian Socialism. I found a square-shouldered man of medium height whose advertisement of intellect in his broad wall-like forehead was balanced by a firm, square chin announcing will.

After telling him I was interested in his economic program rather than his peace program, I asked: "Is it the intention of your party to dispossess the owners of industrial plants in Russia?"

"No," he replied. "We are not ready yet to take over all industry. That will come in time, but no one can say how soon. For the present, we expect out of the earnings of a factory to pay the owner five or six per cent yearly on his actual investment. What we aim at now is *control* rather than *ownership*."

"What do you mean by 'control'?"

"I mean that we will see to it that the factory is run not from the point of view of private profit but from the point of view of the social welfare democratically conceived. For example, we will not allow the capitalist to shut up his factory in order to starve his workmen into submissiveness or because it is not yielding him a profit. If it is turning out economically a needed product it must be kept running. If the capitalist abandons it, he will lose it altogether, for a board of directors chosen by the workmen will be put in charge.

"Again, 'control' implies that the books and correspondence of the concern will be open to the public, so that henceforth there will be no industrial secrets. If this concern hits upon a better process or device it will be communicated to all other concerns in the

This personal interview with the leader of the Bolsheviki is the first of a series of articles to be presented in The Independent by Professor Edward Alsworth Ross, the eminent American sociologist and economist. "I have traveled 15,000 miles," writes Professor Ross, "since I set out from Petrograd. I bring back amazing stories. I consider my half year in Russia, in 1917, the richest experience possible to a sociologist since the summer of 1793 in France."

same branch of industry, so that the public will promptly realize the utmost possible benefit from the find. At present, it is hidden away from other concerns at the dictate of the profit-seeking motive and for years the article may be kept needlessly scarce and dear to the consuming public.

"'Control' also means that primary requisites limited in quantity such as coal, oil, iron, steel, etc., will be allotted to the different plants calling for them with an eye to their social utility. On a limited stock of materials of production, concerns that produce luxuries should have a slighter claim than those which produce necessities.

"Don't misunderstand me," he added, "we are *not* ascetics. Luxuries shall be produced, too, when there is enough of fuel and materials for all the factories."

"On what basis will you apportion a limited supply of the means of production among the claimant industries?"

"Not as now according to the bidding of capitalists against one another, but on the basis of full and carefully gathered statistics."

"Will the workmen's committee or the elected managers of a factory be free to run it according to their own lights?"

"No, they will be subject to policies laid down by the local council of workmen's deputies."

"Will this council be at liberty to adopt such policies as it pleases?"

"No, their range of discretion will be limited in turn by regulations made for each class of industry by the boards or bureaus of the central government."

"In a conversation last week with Prince Kropotkin," I said, "he urged that each center be autonomous with respect to the industries carried on within it. Let the city of Moscow, for example, be owner and mistress of all the mills in and around that city. What do you think of it?"

"Kropotkin's communalism," replied Trotsky, leaning forward a little in his earnestness, "would work in a simple society based on agriculture and household industries, but it isn't at all suited to the state of things in modern industrial society. The coal from the Donetz basin goes all over Russia and is indispensable in all sorts of industries. Now, don't you see that if the organized people of that district could do just as they pleased with the coal mines, they could hold up all the rest of Rus-

sia if they chose? Entire independence of each locality respecting its industries would result in endless friction and difficulties in a society that has reached the stage of local specialization of industry. It might even bring on civil war. Kropotkin has in mind the Russia of sixty years ago, the Russia of his youth."

"Then you are centralist rather than federalist?"

"Not at all," he answered quickly, "on economic matters the degree of centralization should correspond with the actual stage of development of industrial organization. But unitary regulation of production is very different from the centralization that characterized the old regime. There is no call for the steam roller to crush the different nationalities among us into conformity of speech, religion, education, etc."

"What should be done to meet the wishes of the diverse nationalities in Russia, Finns, Letts, Lithuanians, Little Russians, Georgians, Armenians and Tartars?"

"The only solution is a Federal Union such as you have in the United States. Let each of the states of future Russia be free to do as it will in respect to language, schools, religion, courts, laws, penal systems, etc."

"Do you propose that the profits earned by a concern shall be divided among its workers?"

"No, profit-sharing is a bourgeois notion. The workers in a mill will be paid adequate wages. All the profits not paid to the owners will belong to society."

"To the local community or to the central government?"

"They will be shared between the two according to their comparative needs."

"What will be shared—everything above running expenses? Or will you set aside something for depreciation, so that when the plant is worn out, there will be money enough to replace it?"

"Oh, of course, it is only *pure* profit that will be divided."

"By sticking to this principle you can keep up the existing industrial outfit. But in some branches—say the making of motorcycles or tractors—new factories are called for to supply the expanding needs of the public. Where will the money come from that will build these new factories?"

"We can impose on the capitalist to whom we allow | *Continued on page 423*

# THE CASE FOR MR. GARFIELD

**P**RESIDENT WILSON is of course to blame," says the editor of the *Metropolitan Magazine*. "It was he who appointed Mr. Garfield Fuel Administrator, knowing well that Mr. Garfield had no knowledge of coal mining or coal distribution, and no executive experience whatever."

What are the facts?

In 1901, Mr. Garfield became manager of a Cleveland syndicate that developed the coal mines in the Piney Fork district of Ohio, built a railroad from those mines to a Lake Erie port, and finally sold the properties to the Lake Shore and Michigan Southern Company, at whose request Mr. Garfield remained a director and vice-president of the mining company.

He was president of the Cleveland Chamber of Commerce in 1898, was a member of its executive committee for several years, and as chairman of its building committee conducted the construction of its present building.

He helped to organize the Cleveland Trust Company, which has been successful as one of the most ably managed financial institutions of Cleveland. He was one of its directors, its vice-presidents, its counsel, and a member of its executive committee from the time of its organization, until he retired from practise as a lawyer in November, 1903.

During his years of practise he had sole charge of an estate that had interests in Lake Michigan iron mines, in a shipbuilding firm, in real estate, and in various business companies.

He took part in the reorganization of the Conneaut Water Company, which he helped to save from financial shipwreck and to put in the way of its present success. He assisted in forming the Citizens' Association of Cleveland, which freed the city from the control of an ancient gang of corruptionists. He was for eleven years chairman of the national committee for the reform of our consular service—a committee composed of representatives of various chambers of commerce and boards of trade.

After sixteen years of practise as a lawyer, he became a member of the faculty of Princeton University, in 1904. A few years later he was elected president of Williams College, where he was as successful in directing its business interests as in overseeing its educational activities.

## The Fifth Message from the United States Government to the American People

Presented every week in  
The Independent by George Creel  
Chairman of Committee  
on Public Information appointed by  
President Wilson

This is the man whom the editor of the *Metropolitan Magazine* accuses of having had, "no knowledge of coal mining or coal distribution and no executive experience whatever!"

It seems incredible that the editor of a national magazine could make such a statement in innocent ignorance of the facts. It is even more incredible that he could be guiltily falsifying, for the purpose of weakening the faith of the readers of his magazine in the war measures of his Government. But, most incredible of all, other magazine editors, scores of newspaper editors, and numberless citizens have repeated the same falsehood when the feeblest inquiry into the facts would have convinced them that Mr. Garfield was a man of business experience in all sorts of commercial and financial undertakings, including the mining of coal and its transportation.

The same ill-informed critics of Mr. Garfield's personal record have been voluble in condemnation of his record as a fuel administrator. And here again the facts are easily learned.

In the week immediately preceding his appointment, the output of bituminous coal had fallen to the lowest point of the year. From that time until the beginning of December, it rose continuously, with slight recessions, until the total production for the period was considerably greater than it had been for the same period of the previous year. The coal problem had apparently been solved. But a transportation problem had developed.

Beginning with December 8, bad weather tied up the railroad lines. They had been struggling with a freight congestion. They were short of locomotives because of the demands that had been made upon them for a supply of locomotives abroad. They were overburdened with the appalling increase of goods for the seaboard—our foreign commerce having leaped from two billion dollars a year to nine billions a year. Our docking facilities were inadequate. Loaded cars were filling the seaboard terminals. They were filling the sidings on all the eastern lines, half way to Chicago. And of these cars one-half were loaded with coal.

It followed that there were not enough empty coal cars to supply the mines. The output of coal slowed down to wait for the cars. And the output

of steel and steel products slowed down for want of coal. From the first of December to the middle of January shipments of steel plates fell nearly fifty per cent. Projectile steel fell nearly forty-five per cent. "The plotted curves of weekly shipments of all steel products," Mr. Garfield says, "looked like a cubist picture of Niagara Falls." There was not enough coal to supply the ships in the harbors; therefore they could not move the goods accumulated at the wharves. There was not enough coal to supply the cities, and the poor were freezing in their homes. Mr. Garfield's order for a closing down of business and industry on Mondays was not an order designed to save coal, but to relieve the railroad congestion and clear coal for the ships and the households.

The order was successful. Within twelve days, 480 ships carrying two million tons of food, fuel, munitions and other war supplies were bunkered and sent from our ports. The flow of supplies to our army was restored. The empty coal cars were started back to the mines. And instead of allowing the congestion of traffic and the consequent shortage of coal to cripple our most necessary industries, blindly, a general closing of all industries, except the most vital ones, saved our people from killing hardships and removed the stoppage in the stream of traffic.

The critics who compute the value of the coal saved and compare it with the sum of wages and the value of manufactures lost by the closing order are

"The public is now as much part of the Government as are the army and navy themselves; the whole people in all their activities are now mobilized and in service for the accomplishment of the nation's task in this war"

making a point that is beside the issue. The factories would have closed for want of coal in any case, and the wages would have been lost. The closing order was not an order designed primarily to save coal, but to cure the freight congestion so as to free the coal already stalled in railroad sidings and return the empty cars to coal mines that were shut down for the lack of cars at their tipples.

The order was advised by the super War Council as an urgent war measure. It was supported by the Director General of the Railroads. It was issued by Mr. Garfield because, under the Lever act, he was the only official who could issue it. It was successful. And the critics who have been clamoring against it are as ingenuous and as well informed as the editors who announce that Mr. Garfield has "no knowledge of coal mining or coal distribution, and no executive experience whatever."

The problems of the Fuel Administration are not merely problems in business management. They are not merely efficiency problems that call only for executive ability. They are the same human problems that have taxed the wisdom of the governments of the whole world during the past few years of war. And the man who solves them has to have more than an experience in coal production and coal distribution.

When Mr. Garfield was appointed Fuel Administrator, the production of coal was at its lowest ebb because of strikes and lockouts at the mines. "There were," he says, "two ways to proceed. Government, under plea of war necessity, might have used force. I do not deny that, in times like these force must be used in last resort to carry out the programs of government. But there was a better way in this instance, and the Fuel Administration relied upon it. Operators and mine workers were brought together. The ideal set up by President Wilson was recalled to their minds. Our dependence upon coal for the prosecution of the war was explained. It was firmly insisted that in the present crisis there should be neither union nor non-union; that for the period of the war all controversy between operators and mine workers must cease. The appeal was heeded and production steadily rose until winter set in, in spite of the fact that, as some thought, government had

laid a blighting hand on legitimate profits. It was a practical illustration of the potency of the new idea of freedom, a demonstration of the efficiency of democracy and the consciousness of a common purpose."

It is now complained that by restricting profits the Fuel Administration discouraged production. It is argued that if the mine owner had been allowed to make greater profits, he would have been so eager to increase his tonnage that there would have been an abundant supply of coal. But the governments of other countries have found that the laborer will not work patriotically to supply a national need when his employer is taking advantage of that need in order to profiteer. Labor will be loyal and unselfish only when the employer of labor is loyal and unselfish. It is necessary to prevent the employer from profiteering before the employee can be prevented from profiteering. Without price fixing at the mines, there would have been strikes and discontent and a consequent coal shortage. The Fuel Administrator's policy discouraged the profiteering of capital and the profiteering of labor. His critics who argue that the price of coal should not have been fixed are willing to have the mine owner profiteer, but they suggest no way to make miners work loyally for such an employer. Mr. Garfield's policy has obtained an unselfish coöperation from both.

What remains of the fuel problem is almost wholly a problem of transportation. Most of the coal mines of the

country are located in what the military people might call difficult terrain. The usual mine of the great Pennsylvania and West Virginia fields is located well up on one side of a narrow mountain valley. At the bottom of the valley there is usually just room enough for a river and a railroad. There are no considerable flat spaces on which coal could be stacked up.

The nation's coal must be kept moving along the railroads as a city's water supply is kept moving thru the water mains. The best assurance of a satisfactory supply of coal for next winter lies in an adjustment of the machinery of transportation to the needs of consumers—an adjustment so foresighted and so comprehensive that the coal will flow day by day from mine to furnace with the absolute minimum of carriage and of delay.

It is to secure such an adjustment that the new zone plan for bituminous coal has been perfected and adopted. This is the plan sponsored originally by Mr. F. S. Peabody of the Coal Production Committee of the Council of National Defense, and amended somewhat to square with the ideas of the transportation experts of Mr. McAdoo's railroad administration. By this plan every considerable coal field in the country is assigned a definitely bounded district to which shipments from it, except under exceptional circumstances, will be confined. These districts occasionally overlap—a particular city may be in two or three districts instead of in one alone, and get its coal from two or three fields instead of from one. In the West the districts are arranged with reference solely to securing the shortest possible haul for all coal consumed. Districting the East has been a more complicated problem. Length of haul was a chief consideration here, as in the West. But it was also necessary to reduce traffic on roads.

This system of zoning promises to untie the knots of congestion in railroad traffic that had to be cut, last winter, with the closing order. It promises to supplement an adequate production of coal with an adequate distribution of it.

And unless the war affects the railroads and the industries of the country more adversely next winter than they were affected last winter, it would seem that the fuel problem has been solved.

# THE BATTLE CRY OF FREEDOM

A nation-wide campaign conducted weekly by The Independent as the official publication of the Committee on Patriotism Through Education, of the National Security League. To teach American ideals in the schools, colleges, homes, offices and workshops of the nation.

## THE WORLD MOVES ON

BY ROBERT McNUTT McELROY, PH.D.

HEAD OF THE DEPARTMENT OF HISTORY AND POLITICS AT PRINCETON UNIVERSITY, EDUCATIONAL DIRECTOR OF THE NATIONAL SECURITY LEAGUE

**T**HE course of history justifies the statement that revolutions never move backward, but ever forward. At times the march of civilization has seemed to one generation or another permanently stopped; but later generations have seen that it had only been checked. When Xerxes, the Persian, erected his great white throne upon the sacred soil of Greece, the progress of civilization appeared to stop; but the march of Alexander the Great followed in due course, and the once victorious Persian Empire passed like a dream, to make room for the nobler spirit of a Greek and then of a Roman civilization.

Again, when Rome had run her course, and progress demanded a change, we see the rude forms of Teutonic warriors gathering on the border. Long they hesitated, awed by the prestige of the Eternal City. Then they entered, and thoughtful men of that generation wrote "finis" upon their unfinished histories of civilization.

St. Augustine, viewing what he felt to be the ruin of this world, wrote his "Eternal City" by way of consolation to those whose dreams of the immortality of Rome had passed with them beneath the yoke of the barbarian. They could not see the results of the Teutonic invasion, but the historians of a later century saw clearly that those barbarians brought with them the germ of an idea which was necessary to progress. Greece and Rome had contributed what they had to give and had passed from the stage. The Teuton had arrived to play his part, bringing with him the idea of representation, without which world empire could be nothing higher than despotism.

For centuries after the disruption of Rome, the new idea of representation struggled against the old idea of autocracy. In one section of Europe after

another, representative government appeared to gain a foothold, and then perished, overwhelmed by the more highly developed efficiency of military autocracy. At last autocracy seemed to triumph thruout the whole continent, except in the mountain fastnesses of Switzerland and the lowlands of Holland, and the spirit of Julius Cæsar, the spirit of military autocracy, ruled again. Apparently revolution had gone backward.

But the Teutonic tribes had conquered England also. Here in the comparative isolation of the seagirt island, step by step the new idea won its way, until, in 1265, grim old Simon de Montfort established it permanently as the ideal of England, by calling together the first House of Commons, the ancestor of every modern parliament.

After this victory the cause of representative government advanced more rapidly; tho with constant reverses, reverses at times interpreted as final victories for autocracy. But autocracy is a form of minority rule, and minority rule can never win a final victory.

Then in 1688 came "the Glorious Revolution" widely heralded by the men of that generation as the apotheosis of freedom, the complete and final enthronement of the idea of government by the people's representatives. But even while the unseeing contemporary was exhausting his vocabulary of praise upon the glories of this revolution which had "made England forever free," a cunning aristocracy was devising an attack which meant restoring autocratic government in England.

For years the seats in the people's Parliament had not been redistributed. Centers like old Saram which once had been populous had lost most of their population, but had retained the right to send representatives to Parliament; and the old Whig Regency, intent upon

ruling without regard to the will of the people, purchased enough of such seats to insure their control. This was an attack upon the representative idea, and its success meant that free government by representation had ceased in England. The form of a representative parliament remained, but the substance was gone; and again revolution appeared to have moved backward.

When the young German monarch, George the Third, came to the throne of England, in 1760, he came filled with the determination to rule as an absolute sovereign, unhampered by the will of the people. He at once began bidding against the old Whig aristocracy for the "pocket boroughs" with which they controlled Parliament, and he secured them. By the skilful use of this machinery of corruption, he ruled England, the England of the Runnymede Barons, of Simon de Montfort, of Cromwell. Free government in England had ceased to function. Progress toward the ideal of majority rule appeared to have ceased. It was a perilous day in the history of human liberty; but an ally of the representative idea was at hand to whose importance the young king had given little thought. Back in the days of the Stuarts, a fringe of colonies, English, Scotch, Irish and Dutch mainly, had been planted on the coasts of North America. Neglect had been their portion at the hand of successive English sovereigns; and that neglect had left them free to develop the representative idea to a degree of perfection never possible in England, save in the Lancastrian Golden Age of Parliaments.

By the year 1760, each of these little colonies was self-governing. Its laws were made by assemblies of representatives elected by the people, and the people of each colony had learned to love their representative institutions better even than they loved their king. In their hands lay the hope of the future. Upon their willingness to defend the representative idea depended, not the ultimate fate of majority rule, which in the end is bound to triumph, but its speedy realization.

In England itself a group of leaders, headed by William Pitt, was eager to restore the representative idea by destroying the king's machinery of corruption, the Rotten Boroughs. They looked with approval upon the colonial assemblies with actual power to legislate by the voice of an uncontrolled majority. And when George the Third turned to the task of destroying the freedom of these little colonial parlia-

ments, Pitt and the great unenfranchised majority of Englishmen christened the armies of the resisting colonies "Our Armies in America." "I rejoice that America has resisted," declared Pitt in a speech before the British Parliament. "In a good cause, on a sound bottom, the force of this country can crush America to atoms. But on this ground . . . I am one who will lift up my hands against it . . . (and) America if she fall, will fall like the strong man . . . and pull down the Constitution along with her."

But America did not fall. She rose and triumphed. For seven long weary years she defended the cause which was the cause of every nation and of every race, the right of the majority to make the laws. Adventurous crusaders of liberty from many lands joined her banners. France and Holland and Spain lent their aid, not knowing that they fought for an ideal which would one day free them also from minority rule.

When we think of the French Bourbon despots, helping thirteen colonies to keep their territories "safe for democracy," we smile at the folly of kings. And yet history has repeated itself today as we know when we think of Russia's dethroned Czar.

The American Revolution made thirteen colonies "safe for democracy"; but it did more. As the gallant Frenchmen who had fought side by side with the Colonials in "the days that tried men's souls" sailed back to sunny France and their Bourbon despots, they carried with them the regenerating idea that the divine right to rule belongs not to kings but to the sovereign people. And soon the ancient Bourbon throne was rocking under the strokes of the majority, entering into an inheritance which had always been theirs, had they only had the wisdom to understand.

Upon the British autocracy, too, the effect of America's victory for the cause of all humanity was soon evident. The rise of the younger Pitt, and the destruction of Rotten Boroughs in the great reform of 1832, were results which followed from the victory of the majority over the minority ideals at Bunker Hill, Saratoga and Yorktown. Free France and free England were by-products of a joint effort to keep thirteen colonies "safe for democracy."

God grant that a free Russia, and even a free Germany, may result from the victory which some day must be heralded, when the Allied armies write "finis" under the despot's dream that the one may rule the many by the power of force and fraud.

# SOME OF OUR FOLKS, AND WAR

BY ROY DICKINSON

**I**T was wonderful just to be alive on such a morning. The sun was driving the early mist away, and as I looked the Perkins house on the high hill across the river, rose like a sleepy man, shook off the drowsy dew and stood out clear in the sunlight. The ripple of the river and the whispering of leaves was rudely interrupted by two gray squirrels on their way up stream, who seemed to feel that ordinary precaution demanded their discussing me, sitting quietly on the bank before they jumped over my head. A cheerful smoke rose lazily from the old stone chimney of the Perkins house, and I could almost smell the bacon and fried eggs which surely must be cooking. It was the only house in sight, standing alone half way up the mountainside across the river, the side where there are no snakes. I had left my camp, two miles up on Malvern Brook, just before dawn to sit for a while on an old gray rock on the bank of this most friendly of rivers. It was three miles to the Black Horse Tavern at Oakland, where I was to take breakfast, and the thought of bacon and eggs was very disturbing to the thoughts one likes to think on a river bank before breakfast about the substance of things in this topsy-turvy world of ours. Around the bend of the river I saw a little figure in high boots wading down stream with an old straw hat over one ear, a pair of blue overalls tucked inside the boots and a fish-pole waved carefully overhead, while he cast his bait in a dark pool under a giant poplar tree. As he came on nearer me I saw it was little Jimmie Perkins, and what was more to the point, that he had four speckled beauties strung skilfully on the poplar twig he carried. "They are biting like sixty this morning," said Jimmie as he walked up the landing place near me, all plashy with the tread of cows, and then he said something which I will remember to his credit the next time he leaves my canoe three miles down stream.

"How would you like to come to our house and try one of these for breakfast?"

I needed no second invitation—we started at once, crost the wooden bridge near the Johnson's, went up the long hill to the house, and that is how I came to meet Aunt Matilda Perkins. Aunt Matilda was very old, and very tall, with white hair tucked carefully under a lace cap, and she met us on the front porch between the big

pillars. The old Perkins house had been there longer than the memory of man, longer even than Grandma Sykes, the undertaker's mother, who, as everybody knows, can remember longer back than anybody else around our neighborhood.

While Jimmie went to the kitchen to give mysterious and important suggestions about the preparation of the trout, Aunt Matilda talked to me about the great war which seemed very far away, indeed, about the big fire at Wycoff which destroyed the store, several houses and the Methodist church, and various other things of importance. She showed me the formal front parlor, neat as a pin, where a branch of heather reposed in state beneath a glass case; then while we waited for Jimmie we looked at the old family album. There, in their quaint frames, were baby pictures of most of the older folks around here. George Wright, the butcher, Pete Pulles, the blacksmith, and the Rev. Mrs. Jones, all drest up in starched white baby clothes.

"How life runs on past us," said Aunt Matilda. "They're all old folks now."

**T**HEN we came to the war pictures of fifty years ago. One of Aunt Matilda's brothers who was killed at Antietam, and her cousin, George, who never came home, under each picture its description, in the angular, nervous writing of the girl who saw them all off over fifty years ago. The last picture in this group was one of a tall, square-jawed young man, in uniform, with just the suggestion of a dark mustache. His hand grasped the big sword at his side and two black eyes looked out from the old daguerreotype, flashing bravely, as they probably did on that other morning long ago when he went off with his regiment. Beneath it was written, "Amos Johnson, killed leading a charge

at Gettysburg, July 3rd, 1863." A few pages further on was the picture of Aunt Matilda's husband, and under it in his own signature, "Joshua M. Perkins." He looked like a well-fed, good-natured enough man I thought, and just then Jimmie came in to hurry us to breakfast.

If you haven't eaten a trout which has left the dark depths of a cool river two hours before, you can never appreciate how that trout tasted to a hungry man. If you have, a description would be both inadequate and unnecessary. The sun shone in at the dormer windows, the peaceful sound of a little brook back of the house came to blend with the aroma of the coffee, the fat, generous pieces of home-made bread and sweet butter did good to the soul, and finally, when not even a bone remained, we walked out on the porch and sat back of the honeysuckle vine. From far off down the road we heard the faint sound of a fife and drum. Jimmie ran down the long path to the road and I stayed with Aunt Matilda. After a while we could see them coming, a line of khaki-clad youths, marching along bravely in the sun—and suddenly into the quiet of the morning and the peaceful drone of bumble-bees there came a vision of the blood-stained fields of France and these young men, of the Fourteenth New Jersey Infantry, marching somewhere to entrain, and eventually to take their places on the battle-line in this new war for the freedom of the world.

Maria Perkins, Jimmie's older sister, ran from the kitchen door with her camera and stood waiting by the roadside. I looked over at Aunt Matilda—saw a tear go slowly down her cheek, watched her dab at it with her black-bordered handkerchief, and then saw the look of courage and pride come, and

she echoed my own hazy thoughts as she said: "There the boys go, as they went out in '61, and some will come back and some of them will give their lives up over there. And little Maria will take pictures today of her friends, and put them away in an album, just as I put them away then, and fifty years from now they'll look just as old fashioned and out of date as those you were just looking at. Somebody else will be sitting here watching them, perhaps other young men will be going away. The years go on, we leave, others come, the old house and the river stay here; they, and the

A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

## WHAT COMES FROM CORN

**T**HE discovery of America dowered mankind with a world of new flora. The early explorers in their haste to gather up gold paid little attention to the more valuable products of field and forest,

but in the course of centuries their usefulness has become universally recognized. The potato and tomato, which Europe at first considered as unfit for food or even as poisonous, have now become indispensable among all classes. New World drugs like quinine and cocaine have been adopted into every pharmacopeia. Cocoa is proving a rival of tea and coffee, and even the banana has made its appearance in European markets. Tobacco and chicle occupy the nostrils and jaws of a large part of the human race. Maize and rubber are become the common property of mankind but still may be called American. The United States alone raises four-fifths of the corn and uses over half the caoutchouc of the world.

All flesh is grass. This may be taken in a dietary as well as a metaphorical sense. The graminaceae provide the greater part of the sustenance of man and beast; hay and cereals, wheat, oats, rye, barley, rice, sugar cane, sorghum and corn. From an American viewpoint the greatest of these, physically and financially, is corn. The corn crop of the United States for 1917, amounting to 3,159,000,000 bushels, brought in more money than the wheat, cotton, potato and rye crops altogether.

When Columbus reached the West Indies he found the savages playing with rubber balls, smoking incense sticks of tobacco and eating cakes made of a new grain that they called *mahiz*. When Pizarro invaded Peru he found this same cereal used by the natives not only for food but also for making alcoholic liquor, in spite of the efforts of the Incas to enforce prohibition. When the Pilgrim Fathers penetrated into the woods back of Plymouth Harbor they discovered a cache of Indian corn. So thruout the three Americas, from Canada to Peru, corn was king and it has proved worthy to rank with the rival cereals of other continents, the wheat of Europe and the rice of Asia.

But food habits are hard to change and for the most part the people of the Old World are still ignorant of the delights of hasty pudding and Indian

*America's chief contribution to the world's dietary*

pudding, of hoe-cake and hominy, of sweet corn and popcorn. I remember thirty years ago seeing on a London stand a heap of dejected popcorn balls labeled "Novel American Confection. Please Try One." But nobody responded to this pitiful appeal but me and I was sorry that I did. Americans used to respond with a shipload of corn whenever an appeal came from famine sufferers in Armenia, Russia, Ireland, India or Austria, but their generosity was chilled when they found that their gift was resented as an insult or as an attempt to poison the impoverished population, who declared that they would rather die than eat it—and some of them did. Our Department of Agriculture sent maize missionaries to Europe with farmers and millers as educators and expert cooks to serve free flap-jacks and pones, but the propaganda made little impression and today Americans are urged to eat more of their own corn because the famished families of the war-stricken region will not touch it. Just so the beggars of Munich re-

volted at potato soup when the pioneer of American food chemists, Rumford, attempted to introduce this transatlantic dish.

But here we are not so much concerned with corn foods as we are with its manufac-

tured products. If you split a kernel in two you will find that it consists of three parts; a hard and horny hull on the outside, a small oily and nitrogenous germ at the point, and a white body consisting mostly of starch. Each of these is worked up into various products, as may be seen from the accompanying table. The hull forms bran and may be mixt with the gluten as a cattle food. The corn steeped for several days with sulfurous acid is disintegrated and on being ground the germs are floated off, the gluten or nitrogenous portion washed out, the starch grains settled down and the residue prest together as oil cake fodder. The refined oil from the germ is marketed as a table or cooking oil under the name of "Mazola" and comes into competition with olive, peanut and cottonseed oil in the making of vegetable substitutes for lard and butter. Inferior grades may be used for soaps or for glycerin and perhaps nitroglycerin. A bushel of corn yields a pound or more of oil. From the corn germ also is extracted a gum called "paragol" that forms an acceptable substitute for rubber in certain uses. The "red rubber" sponges and the eraser tips to pencils may be made of it and it can contribute some twenty per cent to the synthetic soles of shoes.

Starch, which constitutes fifty-five per cent of the corn kernel, can be converted into a variety of products for dietary and industrial uses. As found in corn, potatoes or any other vegetables starch consists of small, round, white, hard grains, tasteless, and insoluble in cold water. But hot water converts it into a soluble, sticky form which may serve for starching clothes or making cornstarch pudding. Carrying the process further with the aid of a little acid or other catalyst it takes up water and goes over into a sugar, dextrose, commonly called "glucose." Express in chemical shorthand this reaction is

This reaction is carried out on forty

*Diagrammatic section of a grain of corn. a, the horny hull; b, the oleaginous and nitrogenous germ; c, the starchy endosperm*

million bushels of corn a year in the United States. The "starch milk," that is, the starch grains washed out from the disintegrated corn kernel by water, is digested in large pressure tanks under fifty pounds of steam with a few tenths of one per cent of hydrochloric acid until the required degree of conversion is reached. Then the remaining acid is neutralized by caustic soda and thereby converted into common salt, which in this small amount does not interfere but rather enhances the taste. The product is the commercial glucose or corn syrup, which may if desired be evaporated to a white powder. It is a mixture of three derivatives of starch in about this proportion:

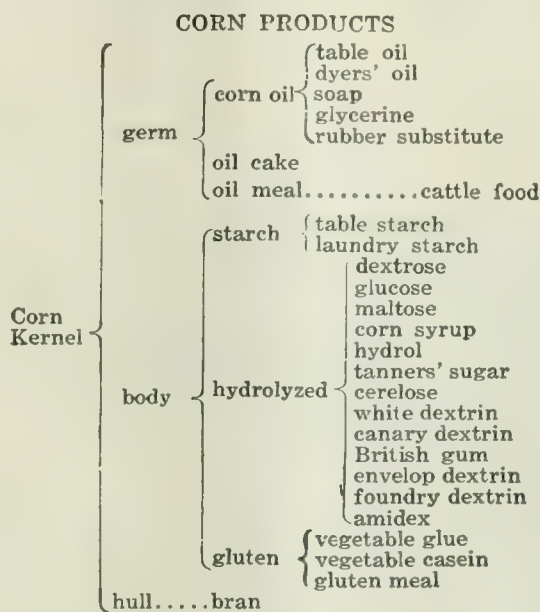

Maltose .....45 per cent  
Dextrose .....20 per cent  
Dextrin .....35 per cent

There are also present three or four tenths of one per cent salt and as much of the corn protein and a variable amount of water. It will be noticed that the glucose (dextrose), which gives name to the whole, is the least of the three ingredients.

Maltose, or malt sugar, has the same composition as cane sugar ( $C_{12}H_{22}O_{11}$ ), but is not nearly so sweet. Dextrin, or starch paste, is not sweet at all. Dextrose or glucose is otherwise known as grape sugar, for it is commonly found in grapes and other ripe fruits. It forms half of honey and it is one of the two products into which cane sugar splits up when we take it into the mouth. It is not so sweet as cane sugar and cannot be so readily crystallized, which, however, is not altogether a disadvantage.

The process of changing starch into dextrose that takes place in the great steam kettles of the glucose factory is essentially the same as that which takes place in the ripening of fruit and in the digestion of starch. A large part of our nutriment, therefore, consists of glucose either eaten as such in ripe fruits or produced in the mouth or stomach by the decomposition of the starch of unripe fruit, vegetables and cereals. Glucose may be regarded as a predigested food. In spite of this well known fact we still sometimes read "poor food" articles in which glucose is denounced as a dangerous adulterant and even classed as a poison.

The other ingredients of commercial glucose, the maltose and dextrin, have of course the same food value as the dextrose, since they are made over into dextrose in the process of digestion. Whether the glucose is fit to eat depends, like anything else, on how it is made. If, as was formerly sometimes the case, sulfuric acid was used to effect the conversion of the starch or sulfurous acid to bleach the glucose and these

acids were not altogether eliminated the product might be unwholesome or worse. Some years ago in England there was a mysterious epidemic of arsenical poisoning among beer drinkers. On tracing it back it was found that the beer had been made from glucose which had been made from sulfuric acid which had been made from sulfur which had been made from a batch of iron pyrites which contained a little arsenic. The replacement of sulfuric acid by hydrochloric has done away with that danger and the glucose now produced is pure.

The old recipe for home-made candy called for the addition of a little vinegar to the sugar syrup to prevent "graining." The purpose of the acid was of course to invert part of the cane sugar to glucose so as to keep it from crystallizing out again. The professional candy-maker now uses the corn glucose for that purpose, so if we accuse him of "adulteration" on that ground we must levy the same accusation against our grandmothers. The introduction of glucose into candy manufacture has not injured but greatly increased the sale of sugar for the same purpose. This is not an uncommon effect of scientific progress, for as we have observed, the introduction of synthetic perfumes has stimulated the production of odoriferous flowers and the price of butter has gone up with the introduction of margarin. So, too, there are more weavers employed and they get higher wages than in the days when

they smashed up the first weaving machines, and the same is true of printers and typesetting machines. The popular animosity displayed toward any new achievement of applied science is never justified, for it benefits not only the world as a whole but usually even those interests with which it seems at first to conflict.

The chemist is an economizer. It is his special business to hunt up waste products and make them useful. He was, for instance, worried over the waste of the cores and skins and scraps that were being thrown away where apples were put up. Apple pulp contains pectin, which is what makes jelly jell, and berries and fruits that are short of it will refuse to "jell." But using these for their flavor he adds apple pulp for pectin and glucose for smoothness and sugar for sweetness and, if necessary, synthetic dyes for color, he is able to put on the market a variety of jellies, jams and marmalades at very low price. The same principle applies here as in the case of all compounded food products. If they are made in cleanly fashion, contain no harmful ingredients and are truthfully labeled there is no reason for objecting to them. But if the manufacturer goes so far as to put strawberry seeds—or hayseed—into his artificial "strawberry jam" I think that might properly be called adulteration, for it is imitating the imperfections of nature, and man ought to be too proud to do that.

The old-fashioned open kettle molasses consisted mostly of glucose and other invert sugars together with such cane sugar as could not be crystallized out. But when the vacuum pan was introduced the molasses was impoverished of its sweetness and beet sugar does not yield any molasses. So we now have in its place the corn syrups consisting of about 85 per cent of glucose and 15 per cent of sugar flavored with maple or vanillin or whatever we like. It is encouraging to see the bill boards proclaiming the virtues of "Karo" syrup and "Mazola" oil when only a few years ago the products of our national cereal were without honor in their own country.

Many other products besides foods are made from corn starch. Dextrin serves in place of the old "gum arabic"

for the mucilage of our envelopes and stamps. Another form of dextrin sold as "Kordex" is used to hold together the sand of the cores of castings. After the casting has been made the scorched core can be shaken out. Glucose is used in place of sugar as a filler for cheap soaps and for leather.

Altogether more than a hundred different [Continued on page 426]

Degerminator used in extracting the germ from the corn kernel by the dry process

# EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## THE CHEERYBLE BROTHERS' BANQUET

BY CHARLES DICKENS

WHERE is the place for Good Cheer? Is it only in the home? Is it left for special people, special times, and special places? If we are busy must we be solemnly serious, nervously fretful, upsetting ourselves and every one else? Surely there is a place and a time for Good Cheer—The Place is Everywhere, and the Time is Always.

There was never a kinder hearted man than Charles Dickens, whose books echo so much Good Cheer that we all feel we should like to be part of the crowd to wait where he might come, and to hurrah for "Boz" as he turns the corner. If Dickens had been of different nature he might have been grumpy enough. His father had been put into prison for debt; he himself had had to work in miserable surroundings pasting labels on blacking boxes; he had had to make his way as a reporter, and to struggle into life without the advantages of continued school and college education.

Then, out of his experience, he wrote "Pickwick Papers," a book of rollicking fun and caricature, founded on Good Cheer. The world loves Good Cheer, and it gave the then unknown author a hearty welcome. Dickens wrote

THE City square has no enclosure, save the lamp-post in the middle, and has no grass but the weeds which spring up round its base. It is a quiet, little-frequented, retired spot, favourable to melancholy and contemplation, and appointments of long-waiting. It is so quiet that you can almost hear the ticking of your own watch when you stop to cool in its refreshing atmosphere. There is a distant hum but no other sound disturbs the stillness of the square.

But if there were not many matters immediately without the doors of Cheeryble Brothers, to engage the attention, there were not a few within to interest and amuse. There was scarcely an object in the place, animate or inanimate, which did not partake in some degree of the scrupulous method and punctuality of Mr. Timothy Linkinwater. Paper, pens, ink, ruler, sealing-wax, wafers, pounce-box, string-box, fire-box, Tim's hat, Tim's scrupulously folded gloves, Tim's other coat—looking precisely like a back view of himself as it hung against the wall—all had their accustomed inches of space.

Nor was this all. Everything gave back, besides, some reflection of the kindly spirit of the brothers. The warehousemen and porters were such sturdy jolly fellows that it was a treat to see them. Among the shipping-announcements and steam packet lists which decorated the counting-house wall, were designs for almshouses, statements of charities, and plans for new hospitals.

It was a sight to behold Tim Linkinwater slowly bring out a massive ledger and day book, and, after turning them over and over and affectionately dusting their backs and sides, open the leaves here and there, and cast his eyes half-mournfully, half-

book after book, with such exuberance of character drawing, such hearty zest in life, such sympathy for the poor, down-trodden, and friendless, the queer, and the lonely, such a demand that every one should be kind to children, and thoughtful of the happiness of others—in fact, such hearty Good Cheer—that he became loved in his own day and forever afterward.

In "Nicholas Nickleby," written when Dickens was twenty-six, and published in 1838 in serial form, a delightful passage tells of Good Cheer in the business world. Nicholas Nickleby, the hero of the story, after various hard experiences, comes into the employ of two old gentlemen, twin brothers, who are the very souls of kindness and cheer, always doing something to make the world happier. In fact, they employ Nicholas, not because they need him, but because they wish to help him. They have an aged clerk, Tim Linkinwater, in whom they are deeply interested. It is at the occasion of Nicholas' introduction to work for the Cheeryble Brothers, and of his attendance at the dinner the two good men give in honor of Tim's birthday, that this selection treats.

*The company consisted of the Brothers Cheeryble, Tim Linkinwater, a ruddy-faced, white-headed friend of Tim's, and Nicholas, who was presented to Tim Linkinwater's sister with much gravity and solemnity*

proudly, upon the fair and unblotted entries.

"Four-and-forty year, next May!" said Tim. "Many new ledgers since then. Four-and-forty year!" Tim closed the book again.

"Come, come," said Nicholas. "I am all impatience to begin."

Tim Linkinwater shook his head with an air of mild reproof. Mr. Nickleby was not sufficiently impressed with the deep and awful nature of his undertaking. Suppose there should be any mistake—any scratching out—

Young men are adventurous. It is extraordinary what they will rush upon sometimes. Without even taking the precaution of sitting himself down upon his stool, but standing leisurely at the desk, and with a smile upon his face—actually a smile (there was no mistake about it; Mr. Linkinwater often mentioned it afterward) Nicholas dipped his pen into the inkstand before him, and plunged into the books of Cheeryble Brothers!

Tim Linkinwater turned pale and tilting up his stool on the two legs nearest Nicholas, looked over his shoulder in breathless anxiety. Brother Charles and brother Ned entered the counting-house together; but Tim Linkinwater, without looking round, impatiently waved his hand as a caution that profound silence must be observed, and followed the nib of the inexperienced pen with strained and eager eyes.

The brothers looked on with smiling faces, but Tim Linkinwater smiled not, nor moved for some minutes. At length he drew a long slow breath, and still maintaining his position on the tilted stool, glanced at brother Charles, secretly pointed with the feather of his pen toward Nicholas, and nodded his head in a grave and resolute manner, plainly signifying "He'll do."

Brother Charles nodded again, and exchanged a laughing look with brother Ned; but just then Nicholas stopped to refer to some other page, and Tim Linkinwater, unable to contain his satisfaction any longer, descended from his stool and caught him rapturously by the hand.

"He has done it," said Tim, looking round at his employers and shaking his head triumphantly. "His capital B's and D's are exactly like mine; he dots all his small i's and crosses every t as he writes

it. There ain't such a young man as this in all London," said Tim, clapping Nicholas on the back; "not one. Don't tell me. The City can't produce his equal. I challenge the City to do it!"

"Well said, Tim—well said, Tim Linkinwater!" cried brother Charles, scarcely less pleased than Tim himself, and clapping his hands gently as he spoke, "I knew our young friend would take great pains, and I was quite certain he would succeed, in no time. Didn't I say so, brother Ned?"

"You did, my dear brother—certainly, my dear brother, you said so, and you were quite right," replied Ned. "Quite right. Tim Linkinwater is excited, but he is justly excited, properly excited. Tim is a fine fellow. Tim Linkinwater, Sir—you're a fine fellow."

"Here's a pleasant thing to think of," said Tim, wholly regardless of this address to himself, and raising his spectacles from the ledger to the brothers. "Here's a pleasant thing. Do you suppose I haven't often thought what would become of these books when I was gone? Do you suppose I haven't thought that things might go on irregular and untidy here, after I was taken away? But now," said Tim, extending his forefinger toward Nicholas, "now, when I've shown him a little more, I'm satisfied. The business will go on when I am dead as well as it did when I was alive—just the same; and I shall have the satisfaction of knowing that there never were such books—never were such books! No, nor never will be such books—as the books of Cheeryble Brothers."

"Tim Linkinwater, Sir," said brother Charles; "give me your hand, Sir. This is your birth-day. How dare you talk about anything else till you have been wished many happy returns of the day, Tim Linkinwater? God bless you, Tim! God bless you!"

"My dear brother," said the other, seizing Tim's disengaged fist, "Tim Linkinwater looks ten years younger than he did on his last birth-day."

"Brother Ned, my dear boy," returned the other old fellow, "I believe that Tim Linkinwater was born a hundred-and-fifty years old, and is gradually coming down to five-and-twenty; for he's younger every birth-day than he was the year before."

"So he is, brother Charles, so he is," replied brother Ned. "There's not a doubt about it."

"Remember, Tim," said brother Charles, "that we dine at half-past five today instead of two o'clock; we always depart from our usual custom on this anniversary, as you very well know, Tim Linkinwater. Mr. Nickleby, my dear sir, you will make one. Tim Linkinwater, give me your snuff-box as a remembrance to brother Charles and myself of an attached and faithful rascal, and take that in exchange as a feeble mark of our respect and esteem, and don't open it until you go to bed, and never say another word upon the subject. Now, brother Ned, my dear fellow, I'm ready. At half-past five, remember, Mr. Nickleby. Tim Linkinwater, Sir, take care of Mr. Nickleby at half-past five. Now, brother Ned."

Chattering away thus, according to custom, to prevent the possibility of any thanks or acknowledgment being expressed on the other side, the twins trotted off arm in arm, having endowed Tim Linkinwater with a costly gold snuff-box, inclosing a banknote worth more than its value ten times told.

At a quarter past five o'clock, punctual to the minute, arrived, according to annual usage, Tim Linkinwater's sister; and a great to-do there was between Tim Linkin-

## Labor saving cleaning

Look upon the purchase of an ARCO WAND Vacuum Cleaner for your home as a business-like investment. It is genuinely built and will last for years. It will give steady daily service. It will do the house cleaning in the shortest time. It can be operated by a child. It solves the servant question. The cleaning is thorough. It pipes the dust and dirt away and cleans without dust.

### ARCO WAND VACUUM CLEANER

Can be installed in old or new buildings of any kind, uses electricity or gasoline engine power. Once installed the ARCO WAND Vacuum Cleaner becomes one of the most valued features to the household. The housewife is no longer dependent upon servants or outside help to do her cleaning.

#### Buy now on easy payment plan

Dealers will be glad to figure with you for installing an ARCO WAND in your home on easy payments. Get estimate for your home

#### Arco Wand Catalog sent free

Write for copy of catalog—full of illustrations and information about the ARCO WAND machine and how it will solve the problem of the present scarcity of servants.

**AMERICAN RADIATOR COMPANY**

816-822  
S. Michigan Av.  
Chicago

Makers of the world-famous IDEAL Boilers and AMERICAN Radiators

Machine is set in basement or side-room. A suction pipe runs to each floor. ARCO WAND Vacuum Cleaners, hose and tools, are sold by all Heating and Plumbing Trade.

## Did You Order Your Copy?

It has taken three years to prepare this picture history of the Great War. Not only is this a book of fascinating reading and vivid and inspiring pictures, but a volume of permanent historic value for the library of every American home.

224 pages. Highest grade coated paper. 437 pictures. 8 $\frac{3}{4}$  x 12 $\frac{1}{4}$  inches. Richly bound—full cloth.

Read full page announcement in the March 2 issue of The Independent. Send coupon today. Just off the press.

#### INDEPENDENT CORPORATION

Address .....

water's sister and the old housekeeper respecting Tim Linkinwater's sister's cap, which had been despatched, per boy, from the house of the family where Tim Linkinwater's sister boarded, and had not yet come to hand: notwithstanding that it had been packed up in a bandbox, and the bandbox in a handkerchief, and the handkerchief tied on to the boy's arm; and notwithstanding, too, that the place of its consignment had been duly set forth at full length on the back of an old letter, and the boy enjoined, under pain of divers horrible penalties, the full extent of which the eye of man could not foresee, to deliver the same with all possible speed and not to loiter by the way. Tim Linkinwater's sister lamented; the housekeeper condoled; and both kept thrusting their heads out of the second-floor window to see if the boy was "coming"—which would have been highly satisfactory, and, upon the whole, tantamount to his being come, as the distance to the corner was not quite five yards—when all of a sudden, and when he was least expected, the messenger, carrying the bandbox with elaborate caution, appeared in an exactly opposite direction, puffing and panting for breath, and flushed with recent exercise, as well he might be: for he had taken the air, in the first instance, behind a hackney-coach that went to Camberwell, and had followed two Punches afterwards, and had seen the Stilts home to their own door. The cap was all safe, however—that was one comfort—and it was no use scolding him—that was another; so the boy went upon his way rejoicing; and Tim Linkinwater's sister presented herself to the company below stairs just five minutes after the half-hour had struck by Tim Linkinwater's own infallible clock.

The company consisted of the Brothers Cheeryble, Tim Linkinwater, a ruddy-faced white-headed friend of Tim's (who was a superannuated bank clerk), and Nicholas, who was presented to Tim Linkinwater's sister with much gravity and solemnity. The party being now complete, brother Ned rang for dinner, and, dinner being shortly afterwards announced, led Tim Linkinwater's sister into the next room where it was set forth with great preparation. Then brother Ned took the head of the table, and brother Charles the foot; and Tim Linkinwater's sister sat on the left-hand of brother Ned, and Tim Linkinwater himself on his right; and an ancient butler of apoplectic appearance, and with very short legs, took up his position at the back of brother Ned's arm-chair, and, waving his right arm preparatory to taking off the covers with a flourish, stood bolt upright and motionless.

"For these and all other blessings, brother Charles," said Ned.

"Lord, make us truly thankful, brother Ned," said Charles.

Whereupon the apoplectic butler whisked off the top of the soup-tureen, and shot all at once into a state of violent activity.

There was abundance of conversation, and little fear of its ever flagging, for the good-humor of the glorious old twins drew everybody out, and Tim Linkinwater's sister went off into a long and circumstantial account of Tim Linkinwater's infancy. This history concluded, brother Ned related how that, exactly thirty-five years ago, Tim Linkinwater was suspected to have received a love-letter, and how that vague information had been brought to the counting-house of his having been seen walking down Cheapside with an uncommonly handsome spinster; at which there was a roar of laughter, and Tim Linkinwater being charged with blushing, and called upon to explain, denied that the accusation was

true: and further, that there would have been any harm in it if it had been.

The cloth having been removed and the decanters sent round for the first time, a profound silence succeeded, and in the cheerful faces of the brothers there appeared an expression, not of absolute melancholy, but of quiet thoughtfulness very unusual at a festive table. The brothers rose together, and the one at the top of the table leaning forward toward the other, and speaking in a low voice as if he were addressing him individually, said—

"Brother Charles, my dear fellow, there is another association connected with this day which must never be forgotten, and never can be forgotten, by you and me. This day, which brought into the world a most faithful and excellent and exemplary fellow, took from it the kindest and very best of parents—the very best of parents to us both. I wish that she could have seen us in our prosperity, and shared it, and had the happiness of knowing how dearly we loved her in it, as we did when we were two poor boys—but that was not to be. My dear brother—The Memory of our Mother."

But there was no time to moralize, for the joviality again became very brisk, and the decanter of port being nearly out, brother Ned pulled the bell, which was instantly answered by the apoplectic butler.

"David," said brother Ned.

"Sir," replied the butler.

"A magnum of the double-diamond, David, to drink the health of Mr. Linkinwater." Instantly, by a feat of dexterity, which was the admiration of all the company, and had been annually for some years past, the apoplectic butler bringing his left hand from behind the small of his back, produced the bottle with the cork-screw already inserted: uncorked it at a jerk, and placed the magnum and the cork before his master with the dignity of conscious cleverness.

"Ha!" said brother Ned, first examining the cork and afterwards filling his glass, while the old butler looked complacently and amiably on, as if it were all his own property but the company were quite welcome to make free with it, "this looks well, David."

"It ought to, Sir," replied David. "You'd be troubled to find such a glass of wine as is our double-diamond, and that Mr. Linkinwater knows very well. That was laid down when Mr. Linkinwater first come, that wine was, gentlemen."

"Are the people here, David?"

"Outside the door, Sir," replied the butler.

"Show 'em in, David, show 'em in."

AT this bidding, the old butler placed before his master a small tray of clean glasses, and opening the door admitted the jolly porters and warehousemen whom Nicholas had seen below. There were four in all, and as they came in, bowing, and grinning, and blushing, the housekeeper and cook and housemaid brought up the rear.

"Seven," said brother Ned, filling a corresponding number of glasses with the double-diamond, "and David, eight—There! Now, you're all of you to drink the health of your best friend Mr. Timothy Linkinwater, and wish him health and long life and many happy returns of this day, both for his own sake and that of your old masters, who consider him an inestimable treasure. Tim Linkinwater, Sir, your health. Devil take you, Tim Linkinwater, Sir. God bless you."

With this singular contradiction of terms, brother Ned gave Tim Linkinwater a slap on the back which made him look for the moment almost as apoplectic as the butler:

and tossed off the contents of his glass in a twinkling.

The toast was scarcely drunk with all honour to Tim Linkinwater, when the sturdiest and jolliest subordinate elbowed himself a little in advance of his fellows, and exhibiting a very hot and flushed countenance, pulled a single lock of grey hair in the middle of his forehead as a respectful salute to the company, and delivered himself as follows—rubbing the palms of his hands very hard on a blue cotton handkerchief as he did so:

"We're allowed to take a liberty once a year, gen'llemen, and if you please we'll take it now; there being no time like the present, and no two birds in the hand worth one in the bush, as is well known—leastways in a contrary sense, which the meaning is the same. (A pause—the butler unconvinced.) What we mean to say is, that there never was (looking at the butler)—such—(looking at the cook) noble—excellent—(looking everywhere and seeing nobody) free, generous, spirited masters as them as has treated us so handsome this day. And here's thanking 'em for all their goodness as is so constancy a diffusing of itself over everywhere, and wishing they may live long and die happy!"

When the foregoing speech was over, and it might have been much more elegant and much less to the purpose, the whole body of subordinates under command of the apoplectic butler gave three soft cheers; which, to that gentleman's great indignation, were not very regular, inasmuch as the women persisted in giving an immense number of little shrill hurrahs among themselves, in utter disregard of the time. This done, they withdrew; shortly afterwards, Tim Linkinwater's sister withdrew; and in reasonable time after that, the sitting was broken up for tea and coffee and a round game of cards.

At half-past ten—late hours for the square—there appeared a little tray of sandwiches and a bowl of bishop, which bishop coming on the top of the double-diamond, and other excitements, had such an effect upon Tim Linkinwater, that he drew Nicholas aside, and gave him to understand confidentially that it was quite true about the uncommonly handsome spinster, and that she was to the full as good-looking as she had been described—more so, indeed—but that she was in too much of a hurry to change her condition, and consequently, while Tim was courting her and thinking of changing his, got married to somebody else. "After all, I dare say it was my fault," said Tim. "I'll show you a print I have got up-stairs, one of these days. It cost me five-and-twenty shillings. I bought it soon after we were cool to each other. Don't mention it, but it's the most extraordinary accidental likeness you ever saw—her very portrait, Sir!"

By this time it was past eleven o'clock, and Tim Linkinwater's sister declaring that she ought to have been at home a full hour ago, a coach was procured, into which she was handed with great ceremony by brother Ned, while brother Charles imparted the fullest directions to the coachman, and, besides paying the man a shilling over and above his fare in order that he might take the utmost care of the lady, all but choked him with a glass of spirits of uncommon strength, and then nearly knocked all the breath out of his body in his energetic endeavours to knock it in again.

At length the coach rumbled off, and Tim Linkinwater's sister being now fairly on her way home, Nicholas and Tim Linkinwater's friend took their leaves together, and left old Tim and the worthy brothers to their repose.

### Women in Farm Service

THE Department of Agriculture, the Woman's Committee of the Council of National Defense and the Women's Division of the United States Employment Service will coöperate in a program to supply women for farm work during the war emergency. Camps for the training of women farm helpers are being considered in the plans.

As a result of a conference held by representatives of the three departments named, the Department of Agriculture will immediately ascertain thru its 2000 agents in what states the farmers want women, and the kind of farm work for which there is a demand for woman labor, and to furnish, thru its extension service, the lists of trained women who might be available as leaders if training camps for women farm helpers were established.

The Woman's Committee of the Council of National Defense will take up the question of training camps and will have charge of whatever recruiting, educational and welfare work is done.

"It is quite evident," says the report of the conference, "that it is impossible to take a woman from the city who has never worked on a farm and send her to such work without giving her an idea or any test of her capacity for agricultural work."

"There should be some sort of try-out system," the report continues, "financed either by the states or state councils of the Council of National Defense, for the purpose of sifting women who applied for farm work and selecting those who were physically fit."

It was suggested that some of the women's colleges such as Vassar, which has 750 acres of land, might assist in training and the selective work.

It was decided at the conference that it was "unwise to stimulate interest in placing women on farms" until it is known whether there is to be a shortage of farm labor.

"In this country," says the report of the meeting, "we have not yet reached the point where farmers desire women workers in large numbers and where we recognize the great need for women on the farms. While farmers can secure men and boys, the opinion seems to be that they should be called upon, but where they are not available, women will have to be used for certain branches of farm work."

### The New Plays

Margaret Anglin is too sound an actress to be wasted on the banal English comedy *Billeted*. She does her best but the odds are against her. (Fulton Theater.)

*The Off Chance*, thoroly artificial comedy of British "high life," well acted and entertaining. Good company revolves around Ethel Barrymore's delightful personality. (Empire Theater.)

Arnold Daly revives *The Master*. Interesting, worth-while comedy, dealing with double standard of morals. Mr. Daly acts with power and discrimination, supported by excellent cast. (Hudson Theater.)

Lionel Barrymore's presentation of *The Copperhead*, by Augustus Thomas, is a masterly piece of acting, unfortunately hampered by a weak supporting cast. The Civil War theme has a martial appeal to present-day patriots. (Shubert Theater.)

This is the open season for the young idea; even the Washington Square Players have abandoned satire in favor of *Youth*. The comedy is entertaining and the presentation, bringing actors and audience together behind the footlights, is a novel one.

## Which Do Boys Like Better?

### Puffed Rice or Flour Foods?—Ask Them

You know the need for whole-grain foods, with their minerals and vitamins. But do you daily practice the ideal way to serve them?

Graham muffins and rice croquettes are nearly whole-grain foods. But note how they differ from Puffed Grains.

In Puffed Rice and Wheat every food cell is exploded. Every granule is fitted to digest. So the body gets from Puffed Grains all that Nature stored there.

Puffed Grains are like bubbles—airy, thin and flaky. Their flimsy crispness makes them most enticing. They taste like nut confections. You can serve them morning, noon and night. Children never get enough. And they never tax the stomach.

Puffed Grains supply whole-grain food all day long, and in many forms. At breakfast one eats them with sugar and cream, or mixed with any fruit. For luncheon or supper they are floated in bowls of milk. Between meals children eat them dry like peanuts. They are used in candy making, as wafers in soups, as garnish for ice cream.

So users of Puffed Grains may get whole-grain food in plenty. And in a form where every atom feeds.

Puffed  
Rice

Corn  
Puffs

Puffed  
Wheat

Each 15c Except in Far West

These are not mere tidbits. They are Prof. Anderson's scientific grain foods. The grains get an hour of fearful heat, then they are shot from guns. A hundred million steam explosions occur in every ker-

nel. Every food cell is blasted, so digestion can instantly act. No other form of wheat, rice or corn compares with Puffed Grains as hygienic food. Serve all of them in plenty.

# SHOULD INSURANCE BE TAXED?

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

**E**XPRESSING the matter in a strictly comparative sense, there are many people engaged in the business of life insurance who know little about it. Beyond the material rewards it yields them, their interest in it is purely perfunctory. I am impressed with this occasionally when, at some life insurance gathering, I sit and listen to the platitudes which are exhaled from the platform by some official dignitary who waxes eloquent in the exposition of the obvious; or who, with more courage than discretion, commits an absurdity. I am not at a loss to account for the presence of these men in the ranks. The explanation consists of two facts: the ease with which a life insurance company may be organized and the apparent mystery with which, in the minds of the public, the business is invested.

I have in mind now several companies that were put on the market by men who had failed in other lines. Life insurance seems to be a favorite enterprize with lawyers who would have achieved no distinction whatever in their profession. I know of a company which, starting on the assessment plan, was the product of a bankrupt dry goods merchant. How is it possible? one might ask. Well, the laws take care of that.

Altho it is easy to organize a company if the organizer can find enough people to furnish the necessary minimum capital, the states thru their insurance departments generally keep them under close scrutiny after they begin to issue policies. Even this protection, however, is not sufficient in some cases against the wiles of operators, as we saw last year in the case of the Pittsburgh Life and Trust Company, which was supposed to be strictly supervised by the departments of New York and Pennsylvania.

**Y**OUR lawyer, we will say, makes up his mind he will have a life insurance company. He knows all the legal requirements; secures his charter; gets the proper amount of money together; employs the services of a consulting actuary in drawing up the policy forms and the tables of rates; engages a man with organizing ability to get agents—and the company is on its way. Your lawyer is its president and perhaps his brother is counsel. Some other relative or friend who is practising medicine is medical director.

And the chances are that not one of these persons has ever had anything to do with a life insurance company—the actuary being a mathematician, perhaps a non-resident, on his own account. In the course of time all of them learn something about life insurance, but in most cases the something is of a very superficial character. Also in the course of time they appear at life insurance conventions as expounders of doctrine, and then I recognize their arrival. They act as if they had been used to it all their lives. They are the real thing in camouflage.

Having come to the conclusion years ago that life insurance is one of the things which ought not be taxed, I am always astonished when I find a man who pretends to know the nature of the thing either calmly consenting to the principle or approving it.

I understand why the legislator thinks it ought to be taxed. It is because he does not know what it is. He thinks, very naturally, that an accumula-

tion of several hundred millions in the custody of a life insurance company is wealth. An accumulation of that size in any other hands looks like wealth. And in most cases it is. But that is not true of life insurance funds. I will prove this statement in a few minutes. Before doing so, by way of illustrating the underwriting poverty of some life insurance presidents, I wish to quote what one of them said on the subject of taxation at a convention held this winter. It was significant that he introduced his subsequent remarks with the statement that the chairman had taken some chances in turning him loose on the gathering. He then proceeded with his oration, and when he concluded I agreed with what he had said in his opening. In the course of his remarks he touched on taxation.

"I know that tax burdens have been devised and imposed and yet no steps taken," he observed, "and none seem likely to be taken, to see that the insurance companies' side of the case is intelligently presented. Understand me, I am not opposed to the payment of taxes. I believe that insurance companies should pay and pay just as long as they can pay, but, as we all know, there is a limit, and it is up to us to advise the officials when that limit is reached."

**I** don't believe—I know—that life insurance should be free of taxation. A few minutes ago I asserted that the life insurance funds do not represent wealth. That is as true as any other truth that exists in this world. But they do represent loss. That money was got together for the purpose of being paid out on dead men and women. The thing behind an insurable life—a body that is in good physical condition according to an examining physician—is its productive power. When that body dies the productive power of its owner perishes with it. The world has lost that much. A part of that was insured for the benefit, in most cases, of dependents who were to be supported by the producer.

Life insurance funds are aggregations of premiums, all but a small portion of which, used for expenses, is dedicated to the payment of death losses. If you read that a certain company's paid death claims last year amounted to \$100,000,000, you may conclude that several times that sum has been lost to the commonwealth in the deaths thus represented.

When a life insurance company pays \$1000 to the widow of one of its dead policyholders, from whence does that money come? It did not grow as the result of that death. No: it was collected in small amounts from thousands of persons scattered over a continent. They lost it.

While that money was in the hands of the insurance company, every state in which that company does business took a small amount of it in the shape of taxes, and the thousands of people who furnished it had to pay that tax.

*The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service*

Turn the proposition around and look at it from another angle. Each insured person pays what is called a premium on his policy. What is a premium? How constituted? Roughly, it may be divided into three elements: the mortality portion, which is the amount to be paid out that year; the reserve element, which is to be held at interest to meet the increasing mortality due to advancing age; and the expense element, which is used to defray the cost of transacting the business. The mortality portion is disbursed during the first year; the reserve is used for death losses during some subsequent year; and the expense is a constant outgo. In a well managed company the expense runs between ten and fifteen per cent of the premium.

Since eighty-five per cent of the income of a life company is for death claims and the amount spent for service in doing the business is inevitable, why, I should like to ask, does the state tax it? The process is simply one of loss-distribution. It is not a piling-up of wealth.

In an unconscious sort of way legislators seem to recognize this truth in their treatment of fraternal orders and assessment associations. If you were to ask them why, they would tell you it is because the latter do not transact the business of life insurance for profit.

But they can't seem to see that an old line mutual company does not do business for profit. There are no stockholders. Nobody has any money, except premiums on policies, invested in a mutual life insurance company. But those premiums are taxed, while the money paid in by fraternal and assessment associations is not.

I can discover but one taxable value anywhere in the life insurance business, and that is the capital stock and dividends of the proprietary companies.

The principle I have enunciated applies with equal force thruout the whole domain of insurance. It is incontrovertible that all that portion of the aggregated insurance fund which is utilized in paying losses and expenses, that is to say, in carrying to completion the processes of distributing the misfortunes of the few over the entire insured mass, not only is not a value but the subtraction from the common stock of what was formerly a taxable value.

**T**HE injustice of this species of taxation is more obvious when applied to life insurance, for the burden is there laid directly on helpless women and children who have been bereft of their breadwinners; but it is none the less wrong as applied to any form of insurance. To illustrate: the insurance paid on a house destroyed by fire is made up of taxed premiums collected from the policyholders of the paying company and the money thus paid represents a piece of property which has been annihilated.

The term insurance aids in defeating a proper conception and comprehension of the functions which the system performs—that of simply distributing losses. If we are honest in our reasoning, we must admit, since insurance possesses no values of a taxable nature, that the tribute taken in this country every year, approximating \$20,000,000, is nothing better than a price exacted for the privilege of operating a system of loss distribution—a work which is plainly a public beneficence.

A TALK WITH TROTZKY

(Continued from page 407)

a dividend of five or six per cent on his capital the obligation to reinvest in some industry—a part, say twenty-five per cent—of what he receives.”

“If in Russia you hold the capitalists down to five or six per cent while in other countries they can hope for twice or thrice as much return, won't Russia be stripped of capital?”

“They won't be allowed to remove their capital from Russia at will,” said Trotsky significantly.

“Besides, he went on, do you imagine that capitalist control is going to survive everywhere save in Russia? In all the European belligerent countries I expect to see social revolution after the war. So long as they remain in the trenches the soldiers think of little but their immediate problem—to kill your opponent before he kills you. But when they go home and find their family scattered, perhaps their home desolate, their industry ruined and their taxes five times as high as before, they will begin to consider how this appalling calamity was brought upon them. They will be open to the demonstration that the scramble of capitalists and groups of capitalists for foreign markets and exploitable ‘colonial’ areas, imperialism, secret diplomacy and armament rivalry promoted by munition makers, brought on the war. Once they perceive that the capitalist class is responsible for this terrible disaster to humanity they will arise and wrest the control from its hands. To be sure, a proletarian Russia cannot get very far in realizing its aims, if all the rest of the world remains under the capitalist régime. But that will not happen.”

“Everywhere in Russia I go I find a slump of forty or fifty per cent in the productivity of the workmen in the factories. Is there not danger of an insufficiency of manufactured goods if the workmen of each factory follow pretty much their own gait?”

“The current low productivity is a natural reaction from the labor-driving characteristic of the old régime. In time that will be overcome by standards of efficiency being adopted by each craft union and the denial of the advantages of membership to such workmen as will not or cannot come up to these standards. Besides, collectivist production will make great use of the Taylor system of scientific management. It has not been popular among the proletariat because as now applied it chiefly swells the profits of the capitalist with little benefit to the working man or the consuming public. When all the economy of effort it achieves accrues to society as a whole, it will be cheerfully and generally adopted, and premature labor, prolonged labor and overwork will be abandoned because needless.”

Such are the ideas of the leader. I submitted them to various Russian economists and all agreed that the Russian workmen are too ignorant and short-sighted to submit themselves to the sound economic principles which may be held by their leaders. Conscious of being masters of the industrial properties, they will not submit themselves to indispensable discipline, they will not follow the counsel of technical men and they will “eat up the capital,” so that before the factories have been long in their hands it will be impossible to keep them going.

“Foh de life o' me,” said Uncle Eben. “I can't see no hardship in food regulations dat puts it up to folks to eat mostly corn bread an' chicken.”—*Washington Star*.

The Miracle of the Marne

The battle of the Marne halted the rush of the Germans towards Paris. It aroused the French to superhuman bravery. They fought as if led by the spirit of the Maid of Orleans herself.

The Marne was a demonstration of the power of patriotism with its back against the wall. The same sacrifice of self, the same love of country and unity of purpose that inspired the French people must inspire us, and we must win the war.

We are sending our best manhood to fight for us. They must be armed, fed and clothed, cared for through sickness and wounds. This is the work of every individual as well as the Government.

It is the proud duty of the Bell System to coordinate its purpose and equipment to the other factors in our national industrial fabric, so that the manufacture and movement of supplies to our boys abroad be given right of way.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 25th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on a 13 weeks trial. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

## College and the Boy

DEAN FREDERICK P. KEPPEL, of Columbia College, has bottled up years of experience and shrewd observation of *The Undergraduate and His College* for the benefit of the general reader who wishes an unprejudiced view of the contemporary college and perhaps for the edification of the student who may here see how he looks to the eye of Authority. Authority in the person of the author is rather disconcertingly clear-sighted. For instance, Dean Keppel appears to be aware that the possession of a Doctor's degree by a young instructor "furnishes a tip as to the specialty of the teacher, to be played up judiciously as opportunity offers" and he remembers "the party of Harvard sophomores joyously playing poker in the middle of a room, while four Freshmen, commandeered for the purpose, were placed at its corners, simultaneously reading aloud the four books which constituted the prescribed reading in some course of which the poker-players were members."

The most marked characteristic of the book, however, is its kindliness. The author can sympathize with the athlete and the society butterfly, but he can also say a good word for the "grind" and he very chivalrously champions the boys who by reason of race, upbringing or personal temperament find no welcome place in campus life. He upholds academic freedom in the faculty but he justly concedes to the much-criticized trustees that recent cases of conflict reflect "the overstrained nerves of war times rather than any permanent change for the worse in their relations."

Those who receive their impressions of college life from the newspapers or their memories of a generation ago, will learn much from this book. The college boy is no longer a uniform type:

In the undergraduate body at Columbia, for example, it is easier to make a list of the nations which are not represented than of those who are. The two most extraordinary cases in my experience were a young Zulu nobleman, one of a group of four who went for training to France, Germany, England and America respectively, as a preparation for serving their own people; and a member of the Hova tribe in Madagascar who proposed to become a professor of Scandinavian languages! Of the foreign students the most able just now are the Chinese. . . . Today any Columbia graduation list would contain from one hundred and fifty to two hundred Italian names. The Portuguese, Bohemians and Greeks are beginning to make their mark. There are enough of the latter, by the way, to organize their own intercollegiate Helicon.

An analysis of a recent Freshman class at Princeton showed that the fathers of the students represent fifty-six different occupations. . . . Of the total of four hundred and thirty, two hundred and thirty-eight come from families in which neither parent is a college graduate.

The faculty is no longer the grave body of elderly clergymen and secluded scholars that many remember it:

As science and modern literature forced their way into the college curriculum, men from government bureaus, journalists, and men of letters were drawn into the calling. . . . Today instead of isolation, it is really becoming hard to secure from the successful professor enough of his time to make sure of efficient teaching. Even in a supposedly theoretical subject like the dismal science, our economists are spending more and more time upon state and federal commissions of various kinds.

On the whole Dean Keppel considers the American college the most successful ex-

periment in training for leadership that our democracy has ever evolved, and we believe that he has proved his case. Yet he is conscious of every defect and is prepared for the most drastic reforms which the future may conceivably have in store:

There are five or six hundred different American colleges, and the majority of them do not deserve to be permanent. Perhaps half of this group might profitably become junior colleges. Of the stronger institutions there is not a single one which could not consider to advantage how its vigor and usefulness might not be strengthened by pruning here and developing there—by constant watchfulness against waste of time and effort, and by a clearer realization of the difference between its aims and those of the university and the vocational school. . . . The public must be educated to regard the support of a bad college in money or in sons as an antisocial act, and the public at large must prepare its sons more thoroly than is the case today to recognize the seriousness of the investment which is involved in giving over these priceless years of youth.

*The Undergraduate and His College*, by Frederick P. Keppel. Boston: Houghton, Mifflin Company. \$1.60.

## When England Fought for Turkey

IN *Marmaduke*, Flora Annie Steel goes back to a long-ago campaign in Gallipoli, not the one whose tragedy is too fresh. The author paints the Crimea in 1854, the assembling of the British troops at Varna, the battle of Alma and the siege of Sebastopol, when England fought Russia in favor of the Turk. There has been a shifting of alliances since the Crimean War, but the effect of the struggle upon the individual soldier has not changed essentially. The story begins in Scotland and except for the character of a very ogreish baron, the father of the hero, the people win our interest and affection, altho their terror of the tyrant seems overdrawn he is so "gey ill to live wi'" that even a man brave enough to face the cannon may be pardoned for fearing his redoubtable father. The old social standards seem so futile as we read, it may well be that the world has grown a little wiser, and a union between a Scotch Baron and an Edinbro' dressmaker is not quite so unthinkable as it was in the fifties. *Marmaduke* has not the power of Mrs. Steel's stories of India, but it is an engaging romance.

*Marmaduke*, by Flora A. Steel. Frederick A. Stokes. \$1.40.

## National Prosperity

PROFESSOR RICHARD ELY discovered that four excellent papers on conservation prepared for the Second Pan-American Scientific Congress in 1915 so supplemented each other that, as editor, he has put them into book form. The authors have expanded their materials considerably and the result is a comprehensive, authentic treatment of the subject.

In the preface of *The Foundations of National Prosperity*, Professor Ely writes:

The title page of this work emphasizes the thought that conservation is to be regarded as a treatment of the foundations of national prosperity. It deals with the permanent causes of the wealth of nations. The titanic war struggle in which we are engaged makes it important to emphasize the fact that in the treatment of conservation we are dealing with national preparedness both for war and peace. There is danger that in dealing with measures of preparedness we may direct our attention so exclusively to the needs of today and tomorrow, whereas nothing stands out more clearly as a result of

our world war than the fact that preparedness must be a permanent all-around condition; for otherwise our preparedness may be in vain. While it is true that this book deals mainly with permanent conditions of prosperity and preparedness, it also has lessons for the immediate present.

The four parts are: I. Conservation and Economic Theory, by Richard T. Ely, professor of political economy in the University of Wisconsin; II. Conservation and Economic Evolution, by Ralph H. Hess, associate professor of political economy in the University of Wisconsin; III, Conservation of Certain Mineral Resources, by Charles K. Leith, professor of geology in the University of Wisconsin; IV, Conservation of Human Resources, by Thomas Nixon Carver, David A. Wells's professor of political economy in Harvard University.

*The Foundations of National Prosperity.* The Macmillan Company. \$2.

## A Novel of Liberia

IN these times a volume bearing the title *An American Cavalryman* would lead one to anticipate something professional regarding the training and tactics of the mounted branch of the American service. At the outset, therefore, one confesses to a trifle of bewilderment when the author, Henry F. Downing, proceeds straightway to drop his American cavalryman into Monrovia, the capital of Liberia.

A few pages reading, however, suffice to forecast that one is not in for a treatise on cavalry tactics, but a Liberian novel of love and adventure. Having made a mental realignment accordingly, Liberia as the setting for a novel entices interest, since Liberian books of any kind are infrequent, and the author proves himself to be on the sure ground of experience.

Of the story itself, winding a devious path thru Monrovia politics and jungle fighting, the American cavalryman, Captain Paul Dale, acquits himself to the reader's entire satisfaction, in the last chapter putting the villain out of business and marrying—but to disclose that would be unfair to the author. But upon this plan the author presents a strong, realistic picture of conditions in Liberia. If his vein is frequently satirical, there would appear to be warrant for it in the total lack of official rectitude, the prevalence of witchcraft, and the almost unbelievable backwardness of the whole Liberian state. Lest any one might suggest there is an element of race prejudice in this decidedly unfavorable view of the negro republic, the author is of the African race, having previously produced work of literary distinction.

*An American Cavalryman*, by Henry F. Downing. The Neale Publishing Company. \$1.50.

## A War Picture

MY HOME IN THE FIELD OF MERCY is Frances Wilson Houard's continuation of her vigorous and not-to-be-forgotten narrative of personal experiences which were begun in her previous book, "My Home in the Field of Honour," and in which she told of the retreat of the civil population at the battle of the Marne.

In the present account, which is no less picturesque and which shows the writer no less the considerate friend of all in need, with no thought of self, we learn of the return to her chateau of its owner and her few attendants, with the rapid preparation from seemingly no resources of a hospital ultimately caring for from three to four score wounded French soldiers at a time.

*My Home in the Field of Mercy*, by Frances W. Houard. Geo. H. Doran Company. \$1.35.

## WHAT COMES FROM CORN

(Continued from page 417)

commercial products are now made from corn, not counting cob pipes. Every year the factories of the United States work up over 50,000,000 bushels of corn into 800,000,000 pounds of corn syrup, 600,000,000 pounds of starch, 230,000,000 pounds of corn sugar, 625,000,000 pounds of gluten feed, 90,000,000 pounds of oil and 90,000,000 pounds of oil cake.

In the last article we saw how dextrose or glucose could be converted by fermentation into alcohol. Since corn starch, as we have here seen, can be converted into dextrose, it can serve as a source of alcohol. This was, in fact, one of the earliest misuses to which corn was put, and before the war put a stop to it 34,000,000 bushels went to the making of whisky in the United States every year, not counting the moonshiners' output. But even if we should all leave off drinking whisky the distillers might still thrive. Mars is more thirsty than Bacchus. The output of alcohol, denatured for industrial purposes, is more than three times what it was before the war, and the price has risen from 30 cents a gallon to 67 cents. This may make it profitable to utilize sugars, starches and cellulose that formerly were out of the question. According to the calculations of the Forest Products Laboratory of Madison it costs from 37 to 44 cents a gallon to make alcohol from corn, but it may be made from sawdust at a cost of from 14 to 20 cents. This is not "wood alcohol" (that is, methyl alcohol,  $\text{CH}_3\text{O}$ ) such as is made by the destructive distillation of wood, but genuine "grain alcohol" (ethyl alcohol,  $\text{C}_2\text{H}_5\text{O}$ ), such as is made by the fermentation of glucose or other sugar. The first step in the process is to digest the sawdust or chips with dilute sulfuric acid under heat and pressure. This converts the cellulose (wood fiber) in large part into glucose ("corn sugar") which may be extracted by hot water in a diffusion battery as in extracting the sugar from beet chips. This glucose solution may then be fermented by yeast and the resulting alcohol distilled off. The process is perfectly practicable but has yet to be proved profitable.

The rapidly approaching exhaustion of our oil fields which the war has accelerated leads us to look around to see what we can get to take the place of gasoline. One of the most promising of the suggested substitutes is alcohol. The United States is exceptionally rich in mineral oil, but some countries, for instance England, Germany, France and Australia, have little or none. The Australian Advisory Council of Science, called to consider the problem, recommends alcohol for stationary engines and motor cars. Alcohol has the disadvantage of being less volatile than gasoline so it is hard to start up the engine from the cold. But the lower volatility and ignition point of alcohol has the advantage in that it can be put under a pressure of 150 pounds to the square inch. A pound of gasoline contains fifty per cent more potential energy than a pound of alcohol, but since the alcohol vapor can be put under twice the compression of the gasoline and requires only one-third the amount of air the thermal efficiency of an alcohol engine may be fifty per cent higher than that of a gasoline engine. Alcohol also has several other conveniences that can count in its favor. In the case of incomplete combustion the cylinders are less likely to be clogged with carbon and the escaping gases do not have the offensive odor of the gasoline smoke. Alcohol does not ignite so easily as gasoline and the fire is more readily put out, for water thrown upon blazing alco-

hol dilutes it and puts out the flame while gasoline floats on water and the fire is spread by it. It is possible to increase the inflammability of alcohol by mixing with it some hydrocarbon such as gasoline, benzene or acetylene. In the Taylor-White process the vapor from low grade alcohol containing 17 per cent water is past over calcium carbide. This takes out the water and adds acetylene gas, making a suitable mixture for an internal combustion engine.

Alcohol can be made, as we have seen, from anything of a starchy, sugary or woody nature, that is from the main substance of all vegetation. If we start with wood (cellulose) we convert it first into sugar (glucose) and, of course, we could stop here and use it for food instead of carrying it on into alcohol. This provides one, carbohydrate, factor of our food, but by growing the yeast plants on glucose and feeding them with nitrates made from the air we can get the protein and fat. So it is quite possible to live on sawdust altho it would be too expensive a diet for anybody but a millionaire, and he would not enjoy it. Glucose has been made from formaldehyde and this in turn made from carbon, hydrogen and oxygen so the synthetic production of food from the elements is not such an absurdity as it was thought when Berthelot suggested it half a century ago.

Food serves substantially the same purpose in the body as fuel in the engine. It provides the energy for work. The carbohydrates, that is the sugars, starches and celluloses, can all be used as fuels and can all — even as we have seen the cellulose — be used as foods. The final products, water and carbon dioxide, are in both cases the same and necessarily therefore the amount of energy produced is the same in the body as in the engine. Corn is a good example of the equivalence of the two sources of energy. There are few better foods and no better fuels. I can remember the good old days in Kansas when we had corn to burn. It was both an economy and a luxury, for — at ten cents a bushel — it was cheaper than coal or wood and preferable to either at any price. The long yellow ears, each wrapt in its own kindling, could be handled without crocking the fingers. Each kernel as it crackled sent out a blazing jet of oil and the cobs left a fine bed of coals for the corn popper to be shaken over. Drift-wood and the pyrotechnic fuel they make now by soaking sticks in strontium and copper salts cannot compare with the old-fashioned corn-fed fire in beauty and the power of evoking visions. Doubtless such luxury would be condemned as wicked nowadays, but those who have known the calorific value of corn would find it hard to abandon it altogether and I fancy that the Western farmer's wife, when she has an extra batch of baking to do, will still steal a few ears from the crib.

### QUESTIONS AND READING REFERENCES

What is the meaning of the words "glucose," "dextrose" and "levulose"?

For what foods and other vegetable products besides those mentioned is the world indebted to America? What domestic animals and birds are of American origin?

"Maize," by Edward Alber (Bulletin of the Pan-American Union, January, 1915).

"Glucose," by Geo. W. Rolfe (Scientific American Supplement, May 15 or November 6, 1915, and in Roger's Industrial Chemistry).

On making ethyl alcohol from wood, see Bulletin No. 110, Special Agents Series, Department of Commerce (10 cents), and an article by F. W. Kressmann in *Metallurgical and Chemical Engineering*, July 15, 1916. On the manufacture and uses of industrial alcohol the Department of Agriculture has issued for free distribution Farmer's Bulletin 269 and 424, and Department Bulletin 182.

# SOME OF OUR FOLKS AND WAR

(Continued from page 412)

things men fight for are the only ones that really last after all, the others are all transient."

The sound of the drums came nearer. The head of the column came up, and several of the young men waved their hats as they passed the house. Aunt Matilda and I waved back at them until they were out of sight around the bend in the dusty road. "I envy every one of them," said Aunt Matilda. "It isn't facing death that matters, it's harder to face life after you're fifty years old, and it's harder still to stay home sometimes. The only men who really are lost are the ones who can't feel the stir inside them and the call for the great sacrifice when it comes clear and straight to them."

The soldiers going away and Aunt Matilda's words dominated my thoughts, and the pictures in the old album puzzled me somehow, so when Grandma Sykes came into the store I chatted with her.

Just before the war broke out, back in the spring of 1859, Aunt Matilda, who in those days was "purtier than a picture," was driving out with two young men, and the whole village was interested in the outcome. Amos Johnson, son of Squire Johnson of Johnson's Hill, seemed to have the inside track and Grandma Sykes thinks to this day Matilda always loved him better, but young Josh Perkins' suit was urged by all Matilda's folks. The Perkins, you see, had lived in the big mansion since the Indians used to come down from the mountains on raids, and Josh's grandfather had founded the Methodist church. Then, too, Josh seemed to be a steadier, more placid kind of a boy, who sang bass in the choir, always helped arrange the Methodist strawberry festivals, and had money in the bank. Aunt Matilda finally capitulated to village opinion and married him, and folks came from all the villages near to the wedding. Grandma Sykes remembers it well. Then the war came. Amos Johnson left among the first, but Josh Perkins' father hired a substitute for his precious son. Amos was killed at Gettysburg in the big charge, as everybody knows. Joshua stayed home and let his substitute die of fever at Libby Prison, but had always been a good husband to Matilda until he died, full of honors and in the esteem of the village, eighteen years ago.

All this Grandma Sykes told me in no time at all, as we walked back from the store, and I listened carefully and thought again of the album and its pictures.

I had always been told that folks got over all their youthful ideas and ideals as the deadening years crept on, but Aunt Matilda's words came back to me and I wondered, as later on in the day I sat on the big gray crag which overlooks the valley a mile to the north of my little camp.

And all these thoughts come back to me today because last night Aunt Matilda Perkins died in the white house on the hill. The doctor was already there when I arrived, and all the household spoke in low, hushed tones.

It was quiet and still there among the trees; the end of God's great mystery of Life had come peacefully. Aunt Matilda died in the old rocker in the front parlor as a tired child turns quietly to sleep, and on the floor beside her there lay a faded old daguerreotype of a tall, square-jawed young man in uniform, with a sword at his side.

OUT of her life forever—disillusioned.

One more home wrecked! And all because he and she missed the true meaning of the marriage relation.

Could she have held him? What *is* the real *secret* of married happiness?

No nobler, more enlightening answer to that question—no surer clew to happiness—no loftier discussion of the sex relationship was ever published than

## PERSONAL HELP FOR THE MARRIED

By PROF. THOS. W. SHANNON, A. M.  
and other eminent specialists

The ethics of marriage, the rules of conduct (often learned too late) and the laws of sex are discussed in a frank, straight-forward manner that will be of inestimable value to every married or marriageable man and woman.

Personal Help for the Married has meant the turning point to happiness—the fulfillment of wedded life—for hundreds of thousands of wives—and husbands. It has cheated the divorce courts innumerable times and brought complete harmony out of unbearable misery—it is the book *you* should

have. There is no other book like it in the world. *Special Price*—as long as the present edition lasts, "Personal Help for the Married" will be furnished—cloth bound, \$1.35 net—Morocco grain, \$1.90 net. Ten cents additional for postage.

Write for Table of Contents—free on request. If you have a husband, brother, son, relation or friend in the army or navy, send him "Personal Help For Men"—the same price. It will help to keep him well and happy.

Any of these books are returnable within five days at full price if not satisfactory to you

# THE DESK DRAWER

BY ETHEL OWEN

**H**OUSED with a cold, I might have been alone today upon a desert island. I had the house quite to myself, my bed piled high with drawers from out my desk, a spacious basket by my side. Long years I have waited to weed out these drawers instead of leaving them to burden some less lenient, less understanding heart. As soon as the mad rush of another day was past, as soon as the last wild patter of little feet and slamming of the doors had ceased, I started on my task.

I had not realized it would take me hour upon hour to count the milestones of my life! Today I have reviewed the roadway but to find the dreaded, painful parts each held a certain, blest beauty. Tenderly along the way an unseen hand has guided me!

First come the pin-pricked "Perforation Cards"! That tiny schoolroom chair! That little much scratched desk! Plainly I see myself, a sturdy, fat-faced, freckled girl of seven, pricking those dreadful ducks, those pussy cats and dogs; designs which seemed to have no end! Pricking, too, my untrained, clumsy fingers! My father asked, "What lessons have you done this week?" I hear the sigh 'way down the line of years, from out my honest, childish breast. I told him, "I'm up, 'way up to perforations!" Today that duck upon his prickly pond looks singularly simple! Almost I wish I had to prick him once again, fingers and all.

A letter from Betty, my best friend! One she wrote after an operation asking for me. None of us dared hope that she would live. Our minister had come into my house, had taken my twitching hand in his, so kind and calm. My voice defiantly had threatened, "If my Betty does not get well, if my Betty—dies—then I will never pray to God again!" Oh, wise and understanding man! He did not preach. He patted my hand.

At last, quite dumb, I stood before my own Betty. I longed to rush to her, to hug her close! Yet now that God had heard my threat, I found no speech!

After that came letters, in my own handwriting, written to my mother. Dates tell me that I was just eighteen and visiting in a far-away Legation. The keen, young joys in them, the happy thrills, the uniforms, the buttons and the Sailor Boys! Partial confessions of love's first surprizes. Partial because of their mystery to me.

Letters written after my engagement, letters to congratulate my future, "Fortunate Husband." How the writers of those letters hoped thus to inspire my ardent, pliable young soul into making my husband, "Fortunate." I find I do the same myself, now, as I write to fresh young things just starting with Life's problems; feeling so sure that life is mastered, conquered for all Time.

A letter from my mother. One of encouragement and cheer. A letter hard for a mother to write! *Knowing*, as

Mansfield says his mother knew, "The months of wretched days, ere Birth's releasing Hell is reached," *knowing* what bended dignity a mother hath and how the glad wild ways would soon be things of long ago! With it I found an envelope in boldly flourishing capitals (the way my father always does on occasions of importance. 'Tis to him like the waving of our nation's flag, thus to enlarge his capitals. Such an envelope, tho it contains no letter, would gladden tired eyes—always. This letter was written when our little one was half of one day old. 'Twas written to my husband)—"You have passed today thru the greatest anguish which ever enters the life of man"—My father said and felt all that! Is this the reason why his words are few, because he understands so much?

A pitifully shaky scrawl, "I am happy. Oh, so happy, Mother. Safe in my arms at last! My Baby Girl! And four days old!"

The next comes from my maid of honor; from it dropt a bit of Scottish heather. She said, "You fancied I'd forget my Bride on her tenth wedding day. I haven't! It does my old heart good way off in chilly Scotland, to think about you two. Keep on! I need it and the world does, too."

I saved her letter, that in the press of life I shall not be found wanting. She'd be quite sure to find me out!

**A**LMOST the end. Just two more envelopes. A fat and softish one; inside thick chunks (they would not curl) of tiny daughter's golden hair. Almost I see the cherub, aproned like a choir boy, sitting in that barber's chair! That oily, black-haired barber, briskly snapping, clinking shears too near my baby's eyes! I hated so to have it done! Yet summer's heat had come. My baby would be cooler.

As the first bit fell upon his—floor—I called out, "Stop!" In my unfolded handkerchief I caught each falling lock. Her hair has turned quite dark. I kiss the shining softness! Time cannot dim my golden treasury!

I've reached the last, in sprawling ups and downs—

"Dear Santa Clause—I want to see which of these thins you would have if you was a child an auto that you dud ride up an down the stret in or a thin you sit in an push forwould an bake-would in. Wich of these thins would you have if you was a child an wich of these thins do you think is wise. Pleze will you anser me tonight."

The evening light is fading from my room. The basket is but poorly filled, the desk drawer strangely full! Softly I'll close away my treasures until more milestones are passed by. I may press down my drawer until it overflows!

Then in some twenty years, when hairs have whitened and when eyes have dimmed, I'll take again to weeding out my garden.

# How I Improved My Memory In One Evening

The Amazing Experience of Victor Jones

"Of course I place you! Mr. Addison Sims of Seattle.

"If I remember correctly—and I do remember correctly—Mr. Burroughs, the lumberman, introduced me to you at the luncheon of the Seattle Rotary Club three years ago in May. This is a pleasure indeed! I haven't laid eyes on you since that day. How is the grain business? And how did that amalgamation work out?"

The assurance of this speaker—in the crowded corridor of the Hotel McAlpin—compelled me to turn and look at him, though I must say it is not my usual habit to "listen in" even in a hotel lobby.

"He is David M. Roth, the most famous memory expert in the United States," said my friend Kennedy, answering my question before I could get it out. "He will show you a lot more wonderful things than that, before the evening is over."

And he did.

As we went into the banquet room the toastmaster was introducing a long line of the guests to Mr. Roth. I got in line and when it came my turn, Mr. Roth asked, "What are your initials, Mr. Jones, and your business connection and telephone number?" Why he asked this, I learned later, when he picked out from the crowd the 60 men he had met two hours before and called each by name without a mistake. What is more, he named each man's business and telephone number, for good measure.

I won't tell you all the other amazing things this man did except to tell how he called back, without a minute's hesitation, long lists of numbers, bank clearings, prices, lot numbers, parcel post rates and anything else the guests gave him in rapid order.

\*\*\*\*\*

When I met Mr. Roth again—which you may be sure I did the first chance I got—he rather bowled me over by saying, in his quiet, modest way:

"There is nothing miraculous about my remembering anything I want to remember, whether it be names, faces, figures, facts or something I have read in a magazine.

"You can do this just as easily as I do. Anyone with an average mind can learn quickly to do exactly the same things which seem so miraculous when I do them.

"My own memory," continued Mr. Roth "was originally very faulty. Yes it was—

a really poor memory. On meeting a man I would lose his name in thirty seconds, while now there are probably 10,000 men and women in the United States, many of whom I have met but once, whose names I can call instantly on meeting them.

"That is all right for you, Mr. Roth," I interrupted, "you have given years to it. But how about me?"

"Mr. Jones," he replied, "I can teach you the secret of a good memory in one evening. This is not a guess, because I have done it with thousands of pupils. In the first of seven simple lessons which I have prepared for home study, I show you the basic principle of my whole system and you will find it—not hard work as you might fear—but just like playing a fascinating game. I will prove it to you."

He didn't have to prove it. His Course did; I got it the very next day from his publishers the Independent Corporation.

When I tackled the first lesson, I suppose I was the most surprised man in forty-eight states to find that I had learned in about one hour—how to remember a list of one hundred words so that I could call them off forward and back without a single mistake.

That first lesson stuck. And so did the other six.

Read this letter from C. Louis Allen, who at 32 years is president of a million dollar corporation, the Pyrene Manufacturing Company of New York, makers of the famous fire extinguisher:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been nothing but pure pleasure all the way through. I have derived much benefit from taking the course of instruction and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

Mr. Allen didn't put it a bit too strong.

The Roth Course is priceless! I can absolutely count on my memory now. I can call the name of most any man I have met before—and I am getting better all the time. I can remember any figures I wish to remember. Telephone numbers come to mind instantly, once I have filed them by Mr. Roth's easy method. Street addresses are just as easy.

The old fear of forgetting (you know what that is) has vanished. I used to be "scared stiff" on my feet—because I wasn't sure. I couldn't remember what I wanted to say.

Now I am sure of myself, and confident, and "easy as an old shoe" when I get on my feet at the club, or at a banquet, or in a business meeting, or in any social gathering.

Perhaps the most enjoyable part of it all is that I have become a good conversationalist—and I used to be as silent as a sphinx when I got into a crowd of people who knew things.

Now I can call up like a flash of lightning most any fact I want right at the instant I need it most. I used to think a "hair trigger" memory belonged only to the prodigy and genius. Now I see that every

man of us has that kind of a memory if he only knows how to make it work right.

I tell you it is a wonderful thing, after groping around in the dark for so many years to be able to switch the big searchlight on your mind and see instantly everything you want to remember.

This Roth Course will do wonders in your office.

Since we took it up you never hear anyone in our office say "I guess" or "I think it was about so much" or "I forget that right now" or "I can't remember" or "I must look up his name." Now they are right there with the answer—like a shot.

Have you ever heard of "Multigraph" Smith? Real name H. Q. Smith, Division Manager of the Multigraph Sales Company, Ltd., in Montreal. Here is just a bit from a letter of his that I saw last week:

"Here is the whole thing in a nutshell: Mr. Roth has a most remarkable Memory Course. It is simple, and easy as falling off a log. Yet with one hour a day of practice, anyone—I don't care who he is—can improve his Memory 100% in a week and 1,000% in six months."

My advice to you is don't wait another minute. Send to Independent Corporation for Mr. Roth's amazing course and see what a wonderful memory you have got. Your dividends in increased earning power will be enormous.

VICTOR JONES

## Send No Money

So confident is the Independent Corporation, the publisher of the Roth Memory Course, that once you have an opportunity to see in your own home how easy it is to double, yes, triple your memory power in a few short hours, that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

### FREE EXAMINATION COUPON

## Independent Corporation

Division of Business Education, 119 West 40th St., New York  
Publishers of The Independent (and Harper's Weekly)

Please send me the Roth Memory Course of seven lessons. I will either remail the course to you within five days after its receipt or send you \$5.

Address .....

## This Concrete Road

Makes possible efficient, economical operation of motor trucks between Dundee, Illinois, and Chicago. And continuous, successful motor truck operation requires concrete roads—that will stand up under heavily loaded trucks traveling at high speed.

There would be less likelihood of food or fuel shortages if concrete roads were everywhere, so that motor trucks could operate uninterruptedly between farm and town, town and city, transporting promptly as wanted the things needed by homes and industries.

Hard roads vitally affect the wage earner, the business man, the farmer—YOU. They are a prime factor in fighting the high cost of living. They are essential to an early winning of the war.

*Let us tell you where concrete roads are standing up under the heaviest traffic, how little the burden of their cost, how insignificant their maintenance.*

## CONCRETE FOR PERMANENCE

## Words of the Week

*In this column we are trying to explain as briefly and clearly as possible the meaning of the unfamiliar names, words and phrases which creep into the news from time to time to perplex the American public. Should you come across any puzzling phrase or obscure reference in reading "The Story of the Week," or any other department of The Independent, you will do us a service by calling our attention to the matter and asking the "Words of the Week" editor to explain things in his column.*

**FUSELAGE** (Fū' si läge)—The body of an aeroplane.

**PILL BOXES**—A nickname applied to the concrete shelters or dugouts constructed by the Germans in the rear of their trenches on the Western Front.

**RED GUARD**—The revolutionary militia organized by the Bolsheviks for the purpose of suppressing counter revolutions in Russia, in Ukraina and in Finland.

**SHOCK TROOPS**—Specially selected detachments which are held in readiness for attack during a bombardment and are sent into battle, when the barrage is lifted, for the purpose of capturing the enemy's positions.

**PROFITEERS**—Those who thru the necessities of the Government and the needs of the people are enabled to charge excessive profits on goods. They are also frequently spoken of as men who are "making 100 per cent."

**NON-ESSENTIAL INDUSTRIES**—All industries which do not directly or indirectly contribute toward "winning the war." The non-essentials have not, as yet, been defined; but the Government is discriminating against them indirectly by giving preference in its freight regulations and its fuel orders to essential industries.

**NATIONAL NON-PARTIZAN LEAGUE**—A political organization composed largely of farmers organized in North Dakota in 1916. The League controls the legislature of North Dakota and has elected Linn Frazier, Governor of the state. A. C. Townley, of North Dakota, is president of the League, which is extending its influence into the agricultural states of the West and Northwest.

**RADA**—A contraction of a Russian word meaning table; hence, a council table, a council. The Rada is the Ukrainian National Council made up of representatives of the various social and political elements in the newly created republic. If the republic continues to be a separate, independent state, the Rada will ultimately give way to a Constituent Assembly which will draw up a constitution for Ukraina.

**KIEV, "MOTHER OF CITIES"**—A city in southern Russia, on the Dnieper River, capital of the new Ukrainian Republic. It is said to be the oldest city in Russia. In the early Middle Ages it was the chief religious center of Russia. It was captured successively by Mongols, Lithuanians and Poles and reannexed to Russia in 1668. It was recently "liberated" by the Germans in their "pacific" invasion of Ukraina.

**BALTIC PROVINCES** (Courland, Livonia, Esthonia)—The three provinces on the shores of the Baltic recently overrun by the Germans. In these provinces the land-owning class and the tradesmen are of German descent, but these classes form a very small percentage of the population. The provinces were Christianized by the Teutonic Knights in the Middle Ages. They were held by Sweden during the seventeenth century and were annexed to Russia by Peter the Great.

# How J.D. Hooper disproved the age-old theory of success

*He found the road to success lies thru preparation for bigger responsibilities—not thru merely doing one's best in a present position*

For nine years this man was bookkeeper and cashier for the American Writing Machine Company in their Atlanta branch.

Shortly after entering their employ he made this resolution: "I want to give these people a better day's work as bookkeeper than any man they ever had."

He worked faithfully, day in and day out until late at night, and often on Sundays and holidays. He was living up to his resolution, by giving his employers his very best in his job—but that was all.

He was making the mistake that thousands of other men have made and are making now—he had not looked beyond his own work.

Mr. Hooper says: "The fault was with me. But it took me a long time to find it out. I began to analyze the situation. I talked to other bookkeepers. I talked to civil engineers. I talked to men in every line of trade. I woke up. I found that all these different lines of work were simply a means to an end, and that was not financial independence itself, but merely the stepping-stone to positions where one could expect to make more than a living wage.

## ***He looked beyond his job***

"I then set out to be more than a good bookkeeper. I saw the importance of creating something—having a hand in the building of the business, rather than taking care of the records only.

"When I came across the Modern Business Course and Service of the Alexander Hamilton Institute, I knew that I had at last found the information I wanted

and that would help me along the route I had started."

## ***The first move toward success***

That was a little over two years ago.

Soon after, he was sent to Pittsburgh, where he opened a new branch and put it on a paying basis in shorter time than had ever been done with a new branch in the history of the company.

He is now Auditor in New York, where he is constantly consulted as to modern methods and practices in the general conduct of this business.

Mr. Hooper says:

"All I have, all I am and all I hope to be, I owe to the Alexander Hamilton Institute."

## ***A logical step for business growth***

You men who are looking for the opportunity that will lift you out of your present position to one of greater responsibility and bigger returns—do what Mr. Hooper did.

Make the opportunity by educating yourselves along business

lines that will equip you with a broader grasp of business.

The Modern Business Course and Service prepares you with a thoro, sound knowledge of the fundamental principles underlying all departments of business.

Today, more than ever before in the history of business, opportunities abound for the man who is prepared. In every field of commercial endeavor there is a great and growing demand for trained men.

Stories of success are not a thing of the past. Success stories of today appear in the pages of magazines and newspapers—stories of men who make good because they know business fundamentals.

## ***The kind of men enrolled***

Among the 70,000 subscribers are such men as George M. Verity, President of the American Rolling Mills; E. R. Behrend, President of the Hammermill Paper Co.; N. A. Hawkins, Manager of Sales, Ford Motor Co.; William C. D'Arcy, President of the Associated Advertising Clubs of the World; Melville W. Mix, President of the Dodge Mfg. Co.—and scores of others equally prominent.

In the Standard Oil Co., 291 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the Pennsylvania Railroad Co., 122; in the General Electric Co., 399—and so on down the list of the biggest concerns in America.

## ***Get further information***

70,000 live-wire business men are preparing their success stories—some adding to success already won.

If you, like Mr. Hooper, are determined to forge ahead, take the first step in your success story by sending today for a copy of our interesting 112-page book, "Forging Ahead In Business," which we will be glad to send you free. Just fill out and send the coupon below.

## NATIONAL EFFICIENCY

A monthly section devoted to business, personal and national efficiency. Official organ of the National Efficiency Society. Published in the third issue of The Independent each month.

## THE COUNTRYSIDE

Incorporating The Countryside Magazine and Suburban Life. A monthly section devoted to sensible and efficient countryside living: better houses, better rooms, better gardens, better roads and better towns. Published in the first issue of The Independent each month.

## JUST A WORD

THE ARMY and the navy—that's no doubt the way you place the emphasis in your consideration of the two sides of America's fighting force. For when we think of war we usually think of soldiers; aside from their superiority in numbers the men in olive drab can frequently remind us of their work by marching past. The navy hasn't that advantage—instead of parading, it is camouflaged; and yet the work our sailor boys are doing is just as important, just as vital to winning the war as that of the men in the trenches. Incidentally, don't forget that without our navy our men in the trenches couldn't be there!

In a Navy Number of The Independent, to be published shortly, we shall present a graphic story of the power that lies in our battleships and cruisers, a story based on a voyage with the United States fleet in wartime. The author of it is Burnell Poole, artist and photographer. He has illustrated his observations while "Shanghaied with the Fleet" with some remarkable pictures of our ships in action and with a painting of a battleship full speed ahead which will be reproduced on the cover of The Independent.

\* \*

Spring has come! And spring in the ante-bellum days used to mean fashions to most women folks. In fact the habit of thinking about new clothes along this time of year is still with us, but reordered by the omnipresent thought of war. Fashions in clothes may help to win this war. Do you realize that? Charlotte Perkins Gilman will wake you up to the fact if you don't in her article "Concerning Clothes," soon to be published in The Independent. Mrs. Gilman is the editor of *The Forerunner* and the author of "Women and Economics," "The Crux" and "What Diantha Did."

\* \*

The popularity of Edward Earl Purinton's articles in The Independent was established years ago. But we are glad to be reminded all the same that our readers like them and keep coming back for more. Here is a particularly pleasant bit of evidence:

MY DEAR MR. PURINTON:

For years I have been reading your articles in The Independent with deep interest. They have helped me in my busy life and work.

Two Sunday p. m. I read the best in the February sixteenth issue—"Winning the War." I would like to say my "Thank You" face to face for it, but instead will take one minute of your time while you read my thanks. Of all the strong, fine things you have given the public, it seems to me this is the spiciest and finest.

I am glad I knew the boy who was "the father of the man" who could write (and think) that.

God bless you alive to say much more.

Very sincerely,

STENOGRAPHIC MARSHALL D. BARKER.

Public Culture, Marshall, Texas.

## REMARKABLE REMARKS

SENATOR HARDING—I am no respecter of admirals.

RABBI JUDAH MAGNES—I claim to be a real Bolshevik.

ARTHUR HENDERSON—Don't organize revolutions or coup d'etats.

ALEXANDER BUBLIKOFF—There is not a healthy fiber left in Russia as a nation.

VICE-PRESIDENT MARSHALL—Men here and there are asking "Is there a God?"

DAVID LLOYD GEORGE—There is nothing so fatal to character as half-finished tasks.

JAMES P. SINNOTT—Rock and rye will cure a cold, but what will cure rock and rye.

PRIMA DONNA GALLI-CURCI—My most painstaking teacher was the talking-machine.

G. K. CHESTERTON—We must learn to let things "shake the world" without being rattled ourselves.

SIR EDWARD CARSON—The real issue is: Can a democracy, when attacked, defend itself successfully.

HERR SCHEIDEMANN—Suppose our army should capture Calais and Paris, would that mean peace? I say "No."

WOODROW WILSON—The farmers of this country are as efficient as those of any other nation in the world.

LEON TROTZKY—Either we shall be destroyed or the power of the bourgeoisie thruout Europe will be destroyed.

ROBERT LYND—The problem for the pacifist, as for the Socialist, is to construct some other than a glass-case Utopia.

GENERAL PERSHING—There has never been a similar body of men to lead as clean lives as our American soldiers in France.

PROF. GEORGE W. CARVER—The humble peanut can easily be prepared in one hundred and five ways for human consumption.

WILHELM HUPPE-SCHLEIGEN—It is the duty of every one who loves languages to see that the future language spoken in America shall be German.

AUSTRALIAN PREMIER HUGHES—I bid you strip the veil from those hypocrites who would sacrifice Australia to their implacable hate of Britain.

SENATOR REED—It is getting to be too much of a habit of men to increase their line of argument by saying their opponents are friends of the Kaiser.

REV. CHARLES M. AKED—Lloyd George's voice combines the crooning of the mother, the wail of the winds, the storm of the tempests and the march of armed men.

COLONEL REPINGTON—The truth is not popular in Downing Street, and a whiff of breezy American public opinion brought to bear would do our War Council a world of good.

RUDYARD KIPLING—Under Hun dispensation man will once more become the natural prey, body and soul, of his better armed neighbor, women will be mere instruments for continuing the breed, and labor will be a thing to be knocked on the head if it dares to give trouble and worked to death if it does not.

*What town will be next?*

JUST think back. How often has your newspaper, fresh from the press, cried out the news of another fire and for days after, fed you piecemeal the whole tragic story of death, loss, privation and distress? Fate seems to time these shocks by some weird schedule so that ere one horror dulls in memory, it strikes again.

What town will be next? Who knows? It may be a quiet hamlet, or a busy factory town helping to build America. It may be a great city.

But the day is coming when we shall not consider what town will be the next, because roofs will be fire-safe. Buildings will no longer be topped with tinder, and when that day comes, fire's path will be blocked. You can see this working out in your town.

Up the street there's a cottage shingled with Johns-Manville Asbestos. Through the trees you see a stately mansion, with its beautiful roof of these same shingles in specially blended colors. Here's a garage — over there a great factory with a roof of the same material. All Johns-Manville Asbestos — all roofed for safety.

The demand for the fire-safe roof is growing fast, and with your own interest at heart you can help it by using any of the roofings listed below.

Johns-Manville Asbestos Roofings: Asbestos Built-Up Roofing; Asbestos Ready Roofing; Corrugated Asbestos Roofing; Colorblende Shingles; Transite Asbestos Shingles.

## CARS *of* CHARACTER *In War Time*

¶ In war time our output of motor cars is reduced, because the Government relies upon the Packard factory for motors and other important war material.

¶ *But the need for dependable transportation was never so great.*

¶ Whatever the number of Twin Six cars we can produce, they reflect unswerving devotion to an ideal—to build the best we know and always better than before.

¶ Their quality is guarded and upheld by the same organization which for 19 years has never lost sight of those essential elements which are the foundation stones of Packard character.

¶ This season enclosed carriages are all strikingly new designs. The lines, finish and appointments set a higher standard for motor vehicles. The verdict of competent critics is that these latest Twin Six carriages mark an important step in that advancement and leadership which have been and will continue to be consistently Packard.

## THE EYE OF AMERICAN INDUSTRIES

"To act as the general eye of all supply departments in the field of production" is President Wilson's recommendation in appointing Bernard N. Baruch chairman of the War Industries Board, which is to supervise the production and transportation of war supplies.

# THE PRESIDENT'S NEXT STATEMENT OF WAR AIMS— AS IT MIGHT WELL BE

*The President of the United States speaks:*

"The Imperial German Chancellor has expressed qualified approval—in principle—of the four bases of any possible peace discussion set forth in my recent address to the Congress. The Chancellor uses fair words. But deeds are a surer index of spirit and purpose than words. There is, unfortunately, to be found in the present activities of the Imperial German Government in relation to the disturbed and distressed peoples on the eastern border of its domains no indication of any change in the spirit and the purpose with which it forced its neighbors into the Great War. It is evident that there is nothing to be gained, and much to be jeopardized, by further discussion of abstract principles with the present rulers of Germany. We cannot bandy phrases or chop logic with the imperialistic master of the

German nation. We shall decline further discussion with them of possible terms of peace, even at long range, except on a basis of concrete proposals of restitution and guarantees for the future.

"When the Imperial German Government will say, without qualification or equivocation, on behalf of itself and its allies, We will get out of Belgium; we will get out of France; we will get out of Serbia; we will get out of Rumania; we will get out of Russia; we will get out of Italy; then the United States will meet the representatives of the German nation at the council table to discuss the further terms of peace.

"Until that time we shall not talk, but fight. We shall seek a peace thru victory. We shall attain it, or perish in the attempt."

## THE PROSPECTS OF THE OPENING CAMPAIGN

FOR five years in succession the question has been asked. "Where will the Germans strike?" That is to say, in all five campaigns Germany, altho outnumbered, has somehow managed to keep the initiative in her own hands and to choose her own battlefield, so compelling her opponents to scatter their forces along all the fronts to meet a possible attack at any point.

The initiative does not necessarily mean the offensive. Germany kept mainly on the defensive all last year. She began the spring campaign by a spontaneous and unexpected retreat. The German forces in France fell back to the Hindenburg line. The Hindenburg line still holds. We have read many times that the line had been "penetrated," "broken," "crushed," "smashed" and "demolished," but when we compare the map of this spring with the map of last spring it is difficult to see any difference. Even Lens, which is outside the line and which the Germans expected to evacuate a year ago, is yet in their possession.

The Allies agreed at a general council held at the French army headquarters in November, 1916, to make a joint and simultaneous attack on all fronts in the following spring. But this carefully considered program could not be carried out. The Russian and Italian offensives failed to materialize. The German withdrawal to the Hindenburg line disconcerted the French and British plan of campaign. Haig did not receive the recruits he expected and had to attack twice his number of Germans. Consequently he made little headway and the French were still less successful. It was not until November that Haig was ready to try it again. This time he made a drive at Cambrai that really did get thru the line. The British here gained more than four miles, but thru some mismanagement—the responsibility for which is now being investigated—no adequate preparations were made for the counter-attack, so a few days later the German advance guard penetrated the old British front and surprised the soldiers bathing and shaving, three miles in the rear. The net gain of the British at Cambrai was therefore slight. The French spring offensive was recognized as a failure an hour and a half after it started.

But altho the campaign of 1917 in the west did not make much change in the geographical situation it was terribly costly to both sides. Colonel Repington estimates that the Germans suffered from 1,800,000 to 2,200,000 casualties altogether in 1917 and the British 700,000 to 800,000 and the French about the same. But there are various other figures afloat. It was recently charged in Parliament that the British losses thru fault of the higher command were half a million more than the French.

Will the Germans this year remain on the defensive as they did in 1917 or take the offensive as they did at Verdun

in 1916? All signs point to the latter. We have heard much of the concentration of troops on the western front, so much in fact has been allowed to leak out from Germany that we inevitably suspect that it may be all a bluff and that the real objectives of the Germans lies elsewhere. Colonel Repington puts the possibilities succinctly:

An over-sea attack upon England: a renewal of the German Flanders offensive: an attack on the British front in France: an attack upon the French or Belgians, or upon the Americans when they come into the line: an operation thru Switzerland: a decisive campaign in Italy: a thrust at Salonika: or, finally, the recovery of the Turkish losses farther east.

Colonel Repington's opinions are of special interest because he recently threw up the position of military correspondent of the *London Times*, where he complained of being muzzled, and went over to the *Morning Post* in order to be able to say what he thought. But his first experience of the new freedom was discouraging, for he and the editor of the *Post* were speedily arrested for violating the censorship and fined five hundred dollars apiece. His conclusion was that a series of great attacks were soon to be delivered on the western front and that the British were not sufficiently prepared for them. According to his figures the Germans have now about 2,600,000 troops available for an offensive in France and Belgium and may raise this during the spring to over 3,000,000 by drawing on the Russian front, where the Germans have had some 1,200,000 men.

How many of these will be necessary for the expeditions to Petrograd and Kiev or for policing the border provinces remains to be seen. Sir Auckland Geddes, the British Minister of National Service, stated in Parliament that "the secession of Russia from the Allies has added to the potential enemy strength on the western front, including Italy, possibly as many as 1,600,000 men without taking into consideration the reserves which would otherwise have been required for service on the Russian front." Premier Lloyd George, on his return from the Versailles War Council, said that "Up to the present the Allies have had an overwhelming majority of troops on the western front." Probably that will continue true, for France, according to official statements, had 4,725,000 men under arms at the beginning of this year and Great Britain, which has raised from all her dominions 7,500,000 men, ought to be able to match the French at the front.

We will have in America a new army of 1,500,000, but it will obviously be difficult to find enough ships to transport them across the Atlantic as rapidly as the German and Austrian troops can be brought by rail from Russia.

Besides the enemy troops released by the defection of Russia there are some 1,500,000 prisoners in Russia who will now be allowed to return. But many of them will not

want to. Some will naturally prefer to remain in safety rather than to serve again in the trenches. Some have been so infected with the revolutionary spirit as to be dangerous. Some will not be in a condition for further fighting. Some, like the Czech and Croat regiments that surrendered by preference, would be certainly shot if they returned.

On the other hand some of the Esthonians, Ukrainians, Poles and Finns who formerly fought against the Germans are now fighting with them since they hope thereby to secure their national independence. We must also recognize the possibility that some of the Russians proper may be induced or forced to enter the German service in the interior if not at the front. But worse than any possible accretion of man power to the Germans is their gain of munitions, food and rolling stock. In the first years of the war guns were taken from the hands of British and French soldiers to send to Russia. This is why the Allied offensive in the spring of 1915 was so weak. Japan and America have been pouring arms and engines into Russia for three years. Much of this material has fallen into the hands of the Germans, altho the seizure of Archangel by the British and of Vladivostok by the Japanese may save such as has not yet left these ports.

But, on the other hand, the Allies on the western front are much more abundantly supplied with arms and ammunition than ever before. Their positions are stronger and they still have the advantage in numbers and should be able at least to stand off any attack the Germans can deliver. What is most important, the Allies have the advantage in spirit, for they are determined to drive the invader from France and Belgium while the Germans, having renounced annexations in this direction and having gained more than they hoped on the Russian side, have no interest in further fighting in the west unless they can thereby force an immediate peace.

## A WOMAN AT THE SENATE'S DOORS

THE statement with which Miss Anne Martin, of Nevada, announces her candidacy for the United States Senate is a strong one. She says:

I believe that the time has come when the nation should attest its faith in democracy and the power of self-government of all its people by the election of a woman to its highest legislative body.

I believe that the crucial problems which this nation now faces are problems which women can help solve and which justice demands they should have a voice in solving. The war we are waging is one in which social and industrial readjustment is the first essential to success.

The peace which will follow this war will bring with it the social and industrial reorganization of the world. This readjustment for war, this reorganization for peace cannot be made successfully without the constructive coöperation of women. The welfare of women demands their presence in both houses of Congress and the welfare of the nation demands it.

Miss Martin is right. The time has come for women to be represented in both Houses of Congress.

We shall look forward with eager interest to what Miss Martin will do to the inflexible and case-hardened Senate—for we have a premonition that she will be elected. We hope she will wake it up. It will do the Senate good.

## THE DRIFT AWAY FROM DRINK

THE prohibition amendment to the Federal Constitution is making good progress thru the state legislatures. It has already been ratified by seven: Mississippi, Virginia, Kentucky, South Carolina, North Dakota, Maryland and Montana. This is slightly less than one-fifth of the number necessary to make the amendment part of the Constitution. Twenty-nine ratifications remain to be secured. No state legislature has yet refused to approve the amendment, but the struggle in New York and New Jersey to prevent ratification is being carried on bitterly.

Five of the seven states which have ratified the amend-

ment already have state prohibition; two have not. As there are twenty-seven prohibition states in the Union, it will need, if all of them fall into line behind the amendment, nine "wet" states to make up the three-fourths necessary for adoption. Kentucky and Maryland are the first of the nine to arrive in the "dry" camp. Five new states are to vote on state prohibition this year. If they vote affirmatively it is fair to presume that they will also approve the Federal amendment. There would be required, then, the ratifications of only two other "wet" states to carry the amendment.

Not the least significant thing about the ratifications already accomplished is the vote in the various legislatures. In the first seven states 754 legislators voted for ratification, and 145 against—a preponderance of more than five to one on the prohibition side. The drift toward the complete elimination of alcoholic liquors gathers momentum every day.

## A SAD SPECTACLE

THE Legislature of Wisconsin has administered a stern rebuke to Senator Robert M. La Follette for his attitude toward America's participation in the Great War. The words of the resolution adopted in the Senate by a vote of 26 to 3, and in the Assembly by a vote of 53 to 32, are scathing:

We condemn Senator La Follette and all others who have failed to see the righteousness of our nation's cause, who have failed to support our Government in matters vital to the winning of the war. We denounce any utterance of theirs which has tended to incite sedition among the people of our country and to injure Wisconsin's fair name before the free peoples of the world.

It is a deserved rebuke. But the necessity for its administering must be a source of regret to every one who realizes, and is grateful for, the splendid fight on behalf of enlightenment and progress made by Mr. La Follette in Wisconsin in the early years of the twentieth century. The La Follette of today is not the La Follette of that earlier time. He has taken the wrong turning somewhere.

It is a sad spectacle to see the man who fought so courageously and effectively for democracy in his own state and nation now taking a course which puts him on the side of those who are fighting for autocracy and imperialism in the world.

## HALF THE GERMAN PROGRAM ACCOMPLISHED

BY the occupation or alienation of the frontier provinces of Russia Germany has virtually accomplished what she set out to do in this direction. There has never been any doubt of her intentions, tho probably the outcome—the complete collapse of Russia—has exceeded her expectations.

It is a curious characteristic of the Germans that they combine underhand methods with aboveboard ambitions. Their diplomacy is secret, but their aims are overt. The chief error of their enemies has been in refusing to believe them when they told what they were going to do. The agitation for the "recovery" of Alsace-Lorraine began sixty-five years before it was accomplished in 1871. Thirty years ago they began a systematic search for colonial possessions in all parts of the world. Innumerable books and a special serial (*Deutsche Erde*) were devoted to the extension of *Kultur* in all countries. The plans of campaign for the conquest of Belgium, France, Russia, Balkans, England—and the United States—were openly discussed long before the war. The plans for ruthless submarine warfare were publicly proclaimed and even advertised in advance in the American papers. The Pan-German program and the Central Europe scheme have produced a voluminous literature. The surprising thing about all this is that such announced

# CARTOON COMMENT

WHAT THE ALLIES THINK OF RUSSIA

**THE GERMAN-BOLSHEVIK DUEL**  
*"L'Asino," Rome, pities and scorns the poor little Bolsheviki instead of rebuking them for turning Russia over to the Teutons and failing miserably to defend the government they had seized. This cartoon presents the situation graphically. What chance has Trotsky, the theorist, fencing with a button on his foil, against the brute force of fighting Germany, rushing ruthlessly ahead, tempted by the chance of seizing Russian territory and her supplies. The big stick of armed invasion is Germany's main argument and treaties carry no weight in resistance to it*

## RESULTS

*"They Make a Solitude and Call It Peace," is Rollin Kirby's caption in the New York "Evening World" of his sketch of desolate Russia, her resources laid waste and German militarism in possession of her soil*

## HOLDING THE SWAG

*The "Manchester Dispatch," England, satirizes the Russo-German peace in the cartoon at the left. "Hi, Mr. Burglar, let's shake and be friends," says the Cheerful Idiot at the window. "Certainly," answers Burglar Bill. "Excuse my left hand please, the right one's engaged"*

designs have been in many cases carried out with great literalness.

At the beginning of the war we asked Professor Wilhelm Ostwald of Leipzig University to write on "What the War Will Bring Forth," and from this article, appearing in *The Independent* of February 22, 1915, we quote the passage relating to Russia:

As regards the Russian question, its solution can already be foreseen. With incomprehensible lack of vision and self-deception, the Russian Government has made bitter enemies of all the nations that inhabit the western portion of her vast empire by suppressing their national character, by persecutions, and by the disregard of their civic rights. Take a glance at the map. From Finland on the north down thru the Russian east provinces and Poland to Little Russia stretching south to the Black Sea, you find one continuous chain of nations all embittered against Russia. In establishing peace, it shall be our aim to free all these oppressed nations, to secure political independence for them, and to do all we can to unite them into a confederation similar to that of the German Empire, so that, while each state in the confederation will enjoy greater independence, it will constitute a united power strong enough to guarantee its military security against further Russian attacks.

To secure our eastern frontiers in this manner seems to us Germans so great a political advantage that we shall consider ourselves well repaid for the sacrifice we are making in the eastern field of war. As the liberated nations will owe their freedom to Germany, and as their developing culture can find encouragement and fertilization only in the west and not in the east, we feel assured against any possibility of their ever making common cause against Europe with the barbarous eastern state.

What was there foretold the war has brought forth. Doubtless Professor Ostwald was specially interested in the Baltic Provinces since he was born there, but these paragraphs simply sum up the essence of the propaganda that has been carried on with increasing fervor for the last forty years. This movement for the independence of the Finns, Poles, Letts, Lithuanians, Ukrainians and Rumanians has received in the past a great deal of sympathy and aid from America, for we have been horrified at the ruthless process of Russification to which the border provinces have been subjected. But the process of Germanization, as exemplified in Poland, Bohemia and Alsace-Lorraine, is quite as severe and much more systematic, so it is likely to be out of the frying pan into the fire for these nationalities. It would be wrong for the Allies to force them to return to Russia against their will, but it is to be hoped that the Allies will be able to insure that the chain of border states gain a real liberation and do not fall under German tyranny.

## A BROKEN-HEARTED MAN

JOHN REDMOND died of a broken heart. So says the physician who treated him. So says the priest who received his last confession. If he had died in 1914 he might have died happy, for he would have believed that the cause to which he had devoted his life for more than thirty years had triumphed. Home Rule had been taken up by the dominant party in Great Britain. The opposition of the Lords had been overpowered. The Home Rule bill had been thrice passed by Parliament and had been signed by the King.

But Redmond was not destined to die happy. He had to live thru three of the most terrible years of history. He had to live to see Home Rule set aside by those who had obtained it and flouted by those who had asked for it. The Irish question has been for the first time put into the hands of Irishmen to settle for themselves—and they have failed to settle it. In 1914 Ulster was boasting of the support of the Kaiser and drilling with arms made in Germany to oppose Parliament. In 1918 the rest of Ireland is boasting of the support of the Kaiser and drilling with arms made in Germany to oppose Parliament.

But tho John Redmond dies at the moment when the prospect seems blackest, yet we cannot call his life a failure. He did not win his cause, but he won the respect of his

bitterest opponents. His courage was equal to any obstacle. His tact was unfailing in any crisis. It may be that his death may do more to bring liberty and union to his unhappy land than his longer life could have done. If he could have foreseen this he would have died happy.

## BACK TO THE BARBARIANS

EASTERN Armenia, including the ceded provinces of Kars, Batum and Erivan, has been for thousands of years the borderline of civilization. To the west the mighty civilizations of Rome and of Byzantium flourished and decayed while the Armenians held the gate against the Turanian nomads of central Asia, the Parthians, the Tartars and the Turks. At length the Desert conquered. The Turks poured over the decadent and war-worn Armenian states, overthrew the relics of the Byzantine empire and flung themselves upon Europe to devour the nations as a locust swarm might settle on a farmer's field. The barbarians were turned aside from the walls of Vienna by the Polish sword, but from the Caspian to the Adriatic they kept unbroken sway.

In the early dawn of the nineteenth century the Russian bear began to paw cautiously around to the south of the Caucasus. Thrice he grasped the fortress of Kars, but twice he was compelled to return it to the Turk. In 1878 he was allowed to keep his hold. He was allowed Batum also as a free commercial port, which soon became a naval base at the cost of a broken treaty. Europe and civilization were reconquering Armenia from Asia and barbarism. By a curious reversal of history civilization was now advancing from the east and barbarism slowly retreating to the west. For Russian rule, however oppressive, was not a mere blast of death and stench of decay like the blighting power of the Ottoman.

In the year of our Lord nineteen hundred and eighteen two of the worst events in human history took place. The new-born Russian republic surrendered its liberating mission to a Christian and Protestant Power in Central Europe, and that most civilized of nations, accepting the legacy of dying Russia, immediately gave back the Armenian borderland to the Turk. Once again the Desert is victorious; once again Armenia is trampled by the hordes that destroy but cannot build; Timur the Lame, Attila and Genghis Khan enter triumphantly the gate flung open by Germany, traitor to humanity, Christianity and civilization.

We wonder how the Kaiser is going to explain Armenia to his faithful ally, the good old German Gott.

Whenever you feel tempted to find fault with the President remember that you, too, may be President some day.

Russia is in the position of the imperfect master of English grammar who cried, while struggling in the water: "I *will* drown! Nobody *shall* help me!"

Has it occurred to the Swedes that when the Germans have completed their occupation of the Russian Baltic provinces, Finland and the Aland Islands their commendable sense of thoroughness may lead them to take an interest in the only unconquered shore of the Baltic?

France begins her daylight saving for the third year this week; England and Germany and most of the other countries of Europe will come along soon. When will the United States get around to save that hour of daylight thruout the summer? Congress will please answer—and promptly.

A most monstrous, terrible tragedy awaiting this continent. Never in history will the memory of this February be effaced.

So said the *Vossische Zeitung* last month to prepare our minds for the great German offensive in France. But February passed and nothing unusual happened. In fact the western front was as quiet as it has been in any month of the last forty-two. What was the matter? Was there a lull somewhere? Don't keep us in suspense, Mr. Kaiser. Punctuality is the politeness of princes.

# THE STORY OF THE WEEK

## Trying Out the Line

In 1916 the Germans began their attack at Verdun on February 19, and it seems to have been expected on both sides that they would start their long-heralded drive this year at least as early. On that date the Associated Press correspondent at the British Headquarters wrote:

The German attack cannot be delayed. All information points to the fact that both German civilians and soldiers are keyed up to such a high pitch of expectancy that the strain cannot endure for long. The coming battles will perhaps be the most sanguinary of the war and the most intense yet seen.

On the German side the same thing was heard. Major von Olberg, of the General Staff, said in a public lecture: "Today our back is free and we have the resources which we lacked in 1914 when we had to defend East Prussia against the Russians. The great offensive can now start, and then God help Albion."

But the German offensive still hangs fire and the only indications of it so far are the increased activity of the artillery and airplanes and the raids on the trenches at various points along the line between the sea and Switzerland. During the first few days of March the sectors held by the French, Belgians, English, Austrians, Portuguese and Americans were subjected to such attacks. The raids were carefully planned and repeatedly rehearsed for weeks in advance, but the Germans were in all cases repelled with considerable losses and very few prisoners. The Portuguese, who now hold the famous Neuve Chapelle sector, suffered most, but they, too, counterattacked with success.

Rheims, which the Germans have been trying to regain ever since the fall of 1914, seems likely to become the center of the operations of 1918. The Germans hold Fort Brimont, north of the city, and Fort Nogent l'Abbesse, to the east of it, but the French hold Fort Pompelle, to the southeast. Against this last fort the Germans directed five attacks last week and took some entrenchments, but they were later expelled.

In the air the Allies seem to have the supremacy. The British War Office reports that during January the Germans dropt 1482 bombs on the area held by British troops in France, while the British dropt 7653 on the German side of the line.

## On the American Front

The American line north of Toul was one of the points chosen by the Germans for their raids of Friday, March 1, and this date may therefore be taken as the beginning of the actual participation of the Americans in the European war. The attack, like the others, was thoroly worked out in advance and four re-

hearsals had been held. On the body of the German captain leading the attack a map was found which showed every trench and depression and every machine gun emplacement in the ground within the American lines. The attacking troops were placed in four "nests" in the German front trenches, each party consisting of forty infantrymen under a lieutenant, with five pioneers to clear away the wire in advance and five to follow carrying explosives for clearing out the dugouts. The latter were not needed, for the enemy no more than got into the first line of American trenches before they were driven back and had to pass thru the American barrage fire. One group of Germans looked down into a dugout containing four Americans and shouted in good English, "Come out, you Americans," but instead of coming out they opened fire with their automatics and killed their assailants.

The enemy left nineteen dead in the American trenches and on the barbed wire entanglements, and it is supposed that many more were lost. Three wounded prisoners were taken. The German bombardment preceding the attack was brief, but heavy. They trained 19-centimeter naval guns upon the village back of the American line. The American artillery replied without waiting for orders within forty

seconds after the German guns began and 8000 shells were thrown into the German lines within the first hour.

The official German report states that their storm troops "gained a complete success against the Americans," penetrating to a depth of 600 yards and returning with twelve prisoners and two machine guns.

It is given out from Washington that the Americans are now holding a frontage of about four and a half miles in the sector north of Toul, but on account of the irregularities of the line the trenches extend eight miles. It is understood to be occupied by three divisions of 28,000 men each. The American sector is expected to be extended as more troops arrive to hold it.

The Americans who are getting their training along with the French on the Chemin des Dames or Ladies' Road just north of the Aisne River also had to meet the Friday night attack. The German shock troops brought from Laon in motor cars for the purpose advanced behind a heavy barrage, but soon retired, leaving four prisoners. The Germans are making use of a new and more deadly form of gas bomb. Up to the end of February six of the Americans had died and more than eighty had suffered from the effects of gas.

## The Occupation of Russia

The Germans are penetrating with astonishing speed into the heart of Russia. At some points they covered a distance of two or three hundred miles east of the old line within a week or ten days. A Berlin dispatch of March 1 announced that "Kiev, the capital of Ukraine, has been liberated by Ukrainian and Saxon troops." It will be remembered that the Rada or National Council of the Ukrainian Republic tried to set up their government here, but they were expelled by the local Bolsheviks aided by reinforcements from Petrograd. Such support from the Bolsheviks of the north will henceforth be impossible, since another German army under General von Linsengen has cut the railroad leading to Petrograd at Gomel, 150 miles north of Kiev.

In Podolia, the province of the new Ukrainian republic bordering on Austrian Galicia, the Austrian Government has felt impelled to intervene, tho, as Premier von Seydler explained, this was not to be regarded as an act of war but friendly assistance in administration sent at the urgent request of the Rada. The Austrian troops under General von Boehm-Ermolli have taken possession of the railroads of Podolia and incidentally gathered in considerable booty, including more than 770 guns and 1100 machine guns.

The German expeditions have also

### THE FLAPPER IN THE TRENCHES

Another answer to German gas attacks, designed to clear the trenches of the poison vapors, is this "flapper" fan, an American invention. The handle is two feet long and the fan part two feet square, made of stiff canvas reinforced with braces. By rhythmic beating of the bottom of the trench, throwing the fan well up after each blow, air currents soon displace the gas.

### "THAT'S THE WAY TO DO IT"

"The Tiger" of France, Premier Clemenceau, visiting the front line trenches, praised the American soldiers' fighting with the phrase "That's the way to do it!" as he decorated six Americans for bravery under fire. The six are: Lieut. Joseph Canby, of Brooklyn; Lieut. William Coleman, of Charleston, South Carolina; Sergt. Patrick Walsh, formerly of Chicago, Illinois; Sergt. William Norton, Arkansas; Private "Buddy" Pittman, of Brooklyn; Private Alvin Smiley, of St. Louis. Lieutenants Canby and Coleman went out into No Man's Land in daylight and each took a German prisoner. Sergeant Norton killed a German lieutenant and two soldiers. He was challenged by the lieutenant to leave his dugout and led out his men fighting. Sergeant Walsh took command of a detachment in front of the wire when the captain was killed, and continued the fight.

reaped a rich reward. By March 2 they reported:

The booty taken from the enemy cannot as yet be even approximately estimated. According to reports at hand there are in our possession 6800 officers and 57,000 men. In booty we have taken 2400 guns, more than 5000 machine guns, thousands of vehicles, including 5000 motor cars, eleven armored automobiles, 200,000 boxes of artillery ammunition, 12,800 rifles, 800 locomotives and 8000 railway trucks. The booty taken at Reval included 220 guns, twenty-two airplanes and a lot of rolling stock.

The German expeditions into Russia are receiving voluntary reinforcements. The Esthonian troops have joined them as well as the Ukrainians and some of the Poles. It is rumored that the ancient state of Lithuania will be reestablished with a Saxon prince on the throne. In 1697 Lithuania as well as Poland was under the rule of a Saxon king, Augustus the Strong.

The foreign embassies left Petrograd the last of February, for the immediate occupation of the capital by the Germans was expected. The British, French and Italian went home by way of Finland. The British embassy building was promptly plundered by Russian soldiers in command of a colonel. Some of the official documents were burned, others confiscated. The American, Chinese, Japanese and Siamese representatives went in the opposite direction and were last reported at Vologda, 300 miles east of Petrograd.

The Russian Peace Treaty The second of the peace treaties was signed at Brest-Litovsk, March 3, thus eliminating all Russia, the largest of the European belligerents. When the Bolsheviki delegation from Petrograd reached Brest-Litovsk, Minister von Rosenberg, assistant to the German Foreign Secretary, presented to them a document containing the terms of peace imposed by the four Central Powers. These terms were much more onerous than those which the Russians had refused at the former conference and even than those laid down in the German ultimatum of February 21, which Lenine had tried to accept by wireless. But the Bolsheviki could see no other way than to comply, so they telegraphed to Petrograd:

As we anticipated, deliberations on a treaty of peace are absolutely useless and could only make things worse in comparison with the ultimatum of February 21. In view of this fact and in consequence of the Germans' refusal to cease military action until peace is signed we have resolved to sign the treaty without discussing its contents and leave after we have attached our signatures.

In this treaty the Bolsheviki even renounced the most cherished of their rights, their own reason for existence and their hope of the future, for they agreed to refrain from all agitation or provocation against the governments and among the population of the regions occupied by the Central Powers. All regions west of a certain line, approximately the boundary of Great Russia, are to be evacuated by Russian troops and left to Austria and Germany to determine their fate in agreement with the population. The Russian army is to be demobilized and all Russian and Allied warships interned until a general peace.

The most serious of the new provisions is one in favor of Turkey, by which Russia agrees to evacuate not

only the Turkish territory she had occupied during the war, but also the Transcaucasian provinces of Kars, Batum and Erivan, which Russia had annexed thru the wars of 1828 and 1878. The clause reads:

Russia will do everything in her power to complete as soon as possible the evacuation of the Anatolian provinces and their orderly return to Turkey. The districts of Erivan, Kars and Batum will likewise, without delay, be evacuated by the Russian troops. Russia will not interfere in the reorganization of the constitutional or international conditions of these districts, but leave it to the populations of the districts to carry out the reorganization, in agreement with the neighboring states, particularly Turkey.

This virtually restores to Turkey all the region between Mount Ararat and the Black Sea. Batum is the chief Russian port on the eastern end of the Black Sea and the outlet for the petroleum of the Baku fields on the Caspian. Into these border provinces have fled such Armenians as were able to escape the Turkish massacres of 1915, and it is to be feared that their fate will be hard. Already it is reported that all the Armenians of the territory about Erzerum and Trebizond are being slaughtered by the Turks as they reoccupy this region.

The treaty also obligates the Russian troops and the Red Guards to evacuate Livonia, Esthonia, Ukrainia and Finland. No indemnities for military expenses or damages are to be claimed on either side.

Finland A treaty of peace between Russia and Finland was signed on March 1 at the Smolny Institute, the Bolshevik headquarters at Petrograd. According to this Russia renounces all claims to railroads, telegraphs, fortresses and all other property in the territory bordering on the Arctic Ocean. Finland renounces all claims

### ARMENIA GIVEN TO THE TURKS

By the treaty of peace which the Quadruple Alliance has imposed upon Russia the Russian Government has consented to withdraw its troops not merely from the territory within the line marked "Limit of Russian Advance" but also from the provinces of Kars, Batum and Erivan, shaded in the above map, where Russia has held for forty and in part for ninety years. At Baku are the oil fields which for years produced half the world's output of petroleum. Since the Caspian is a closed sea the oil has been piped to Batum, but Russia now loses this outlet. Most of the Armenians in Turkish territory were massacred or deported as the Russians advanced, and those living in the ceded provinces may now suffer the same fate.

THE WOUNDED POILUS ARE KNITTING, TOO

Under the direction of the American Fund for French Wounded knitting machines have been installed in many of the hospitals for convalescent soldiers. The men who face the tedious, sometimes hopeless, task of getting well find something like happiness in this chance at work that is well worth doing and within their powers

to the railroad from the frontier to Petrograd. The treaty carries the novel stipulation that in case of dispute the question shall be referred to a court of arbitration, the president of which shall be chosen from the Swedish Social Democratic Left part.

The Russian troops are to be withdrawn from Finland and the Aland Islands, and no revolutionary disturbances are to be encouraged by the Russians. This doubtless means the collapse of the Bolshevik rebellion in Finland, since the government forces have received military and naval support from Germany. The German expedition has been disembarked on the Aland Islands, which will be used as a base of operations. This conflicts with the intentions and ambitions of Sweden, which last week occupied the islands with a view to keeping them out of the war, if not of ultimately annexing them, on the ground that they formerly belonged to Sweden and are chiefly inhabited by Swedes. But the Germans disclaim any territorial interest in the islands, so Sweden has acquiesced, under protest, to their occupation.

**Makes Peace Rumania** By the secession of Ukrainia and its occupation by German and Austrian troops the unconquered half of Rumania was left without hope of aid from the Entente Allies. She was therefore obliged to accept the terms dictated by the Quadruple Alliance, which threatened, if she did not comply, to divide the country between Austria and Bulgaria. Accordingly a preliminary treaty of peace was signed on March 5 at Bucharest, the former capital of Rumania, now in the possession of the Central Powers.

By this treaty Rumania cedes the

Dobrudja as far as the Danube to the Central Allies. This means, doubtless, that it will go ultimately to Bulgaria, which has always claimed the region both because there were more Bulgars than Rumanians living in it and because it forms a continuation of Bulgarian territory while it is separated from Rumania by the Danube. The northern part of the Dobrudja was given by Russia to Rumania in 1878 as a sort of compensation for the Rumanian territory in Bessarabia which Russia had seized. The southern part of the Dobrudja was seized by Rumania in 1912, when Bulgaria was engaged in fighting Serbia and Greece. It is about the size of Connecticut and Rhode Island together. It is a fertile region, but it is of even more importance from its position, since it shuts off Rumania from the Black Sea except by the Danube. The cession of the Dobrudja to Bulgaria will bring Bulgaria adjacent to Russia, or rather to the newly formed state of Ukrainia on the other side of the Danube. It is possible, however, that the Ukraine may be willing to cede to Rumania those sections of Bessarabia that are inhabited by Rumanians and have recently been occupied by Rumanian troops.

By the cession of Dobrudja Rumania loses Constanza, her chief port on the Black Sea, but the second clause of the treaty aims to rectify this by stipulating that "the powers of the Quadruple Alliance will provide and maintain a trade route for Rumania" to Constanza.

In the third clause "Rumania accepts in principle the frontier rectifications demanded by Austria-Hungary on the frontier between Austria-Hungary and Rumania." What this may mean can only be surmised.

The treaty provides for the gradual demobilization of the Rumanian army under the control of Field Marshal von Mackensen and the Rumanian commanders. The Central Powers not only gain by the elimination of the Rumanian army and the release of their own troops on this frontier, but they get direct access to the Black Sea and southern Russia by the following clause:

VII. The Rumanian Government undertakes to support with all its strength the transport of troops of the Central Powers thru Moldavia and Bessarabia to Odessa.

**Proposed Japanese Intervention in Siberia** About a year ago, when it was first feared that Russia might make a separate peace, it was rumored that plans had been made in such a contingency for Japan to take over control of the Siberian railroad as far west as Lake Baikal. As the danger of the defection of Russia became more imminent the intimations of Japan's policy became more explicit. On January 22, Premier Terauchi in his opening address to the House of Peers said:

The situation in Russia causes me the greatest measure of anxiety. As the true friend of Russia, Japan earnestly hopes that that country may successfully settle its difficulties without much further loss of time and establish a stable government. Unfortunately, however, I am deeply concerned to observe that, according to the latest information, the internal disorder in Russia is gradually spreading to her possessions in Eastern Asia, to the possible menace of the peace of the Far East, the preservation of which is the leading feature of our national policy. Japan holds herself responsible for the maintenance of peace in this part of the world; consequently, in the event of that peace being endangered, to the inestimable detriment of our interests, the Government of Japan would not hesitate a moment to take the proper measures.

Again on February 24 the Japanese Foreign Minister, Viscount Motono, said: "Should peace be actually concluded it goes without saying that Japan will take steps of the most de-

#### THE GREAT WAR

March 1—Finland establishes independence by treaty with Russia. British mercantile cruiser "Calgarian" torpedoed off Ireland with loss of forty-eight. Germans raid American line.

March 2—Germans occupy Aland Islands. Germans attack Fort Pompelle near Rheims.

March 3—Treaty of peace between Russia and Central Powers signed at Brest-Litovsk. German and Ukrainian force take Kiev.

March 4—French raid fourth German line at Verdun. Turks massacre Armenians in reoccupied territory.

March 5—England, France and Italy approve of Japan's proposed occupation of eastern Siberia.

March 6—Rumania signs preliminary treaty of peace. John Redmond, Irish leader, dies.

March 7—Russian Government moves from Petrograd to Moscow. British Admiralty reports twelve vessels over 1600 tons and six under sunk during week; total losses in January, 70,000 tons; in February, 80,000.

cided, the most adequate character, to meet the occasion. . . . Regarding the question of Russia's separate peace, the fullest understanding exists with Great Britain, America and the other Allies."

It was therefore no surprise to the public when, immediately upon the announcement of the signing of the peace treaty between Russia and the Quadruple Alliance, the news came that Japan was preparing to send an expedition into Siberia from Vladivostok to protect the munitions and stores at that port and along the line from seizure by the Bolsheviks and perhaps by the Germans. Japan consulted with her ally, England, and England brought the matter to the attention of France and the United States. It is understood that France heartily approved of the proposed action and that England, with some reluctance, gave her consent. The American Government, on the other hand, expressed the fear lest intervention by Japan at this time might be misunderstood by the Russian people and shake their confidence in the unselfishness of the motives of the Allies.

It has been suggested in the public discussion that if the proposed expedition should be composed of contingents from several of the powers it might remove Russia's apprehensions. Such a joint expedition was sent to Peking to rescue the foreign residents from the Boxers. But Japan has not asked for such assistance, and none of the belligerents has troops to spare for such a purpose except, perhaps, the United States and China. There are some 20,000 American troops in the Philippines and two battalions in China which could be promptly despatched to Siberia if American participation were decided upon.

Irkutsk and other Siberian cities are in the hands of the Bolsheviks, who would doubtless blow up the bridges and destroy the railroad if Japan attempt to enter Siberia. On the other hand, the Cossack General Semenov has gathered a force of Russians, Chinese and Japanese in Manchuria for the purpose of opposing the Bolsheviks and protecting the railroad. The stores at Vladivostok include 4,000,000 pounds of TNT and 4,000,000 pounds of picric acid, besides many American locomotives. The whole is valued at \$150,000,000.

**The Japanese Decision** After a long Cabinet meeting on March 5 the Administration let it be known that it had given no assent to a Japanese armed occupation of Siberia and no assent would be forthcoming for such a move. No formal statement was given out in the matter, but the Washington correspondents reported that the principles heretofore expressed by President Wilson as to our war aims were not in accord with the presence of uninvited foreign forces within Russian possessions under the conditions of necessity that Japan advanced as reasons for her venture further into the continent of Asia.

In Administration circles there is said to be a feeling that if Japanese troops enter Siberia the impression will be created among the Russians that Japan's purpose has to do with material advantage, even ultimate retention of Russian territory. Such an impression, however unjustified, might prove most unfortunate to the Allies. There is a fear that in the minds of the Russian people an invasion by Japan would be looked upon as analogous to the German invasion of Belgium, and it would give the German Government the opportunity for plausible propaganda among the restive people of the Central powers to the effect that the pretensions of the Allies about the rights of weak nations were insincere.

The proposed invasion had roused bitter opposition among all liberal and radical elements in the United States. They point out that it is asserted that Japanese armies are to enter Siberia "to preserve order," and that was precisely the excuse the Germans gave for their annexationist invasion. They profess the fear that Japan's entrance into Russia will eventually result in the partitioning of Russia, or a movement in favor of the old régime, or both. They protest that while the Allied Governments have been consulted about the proposed step by the Imperial Japanese Government, no attempt has been made to consult the Russian Government or the Russian people. According to the liberal and radical interpretation, an invasion by Japan would imperil President Wilson's whole scheme of making the war a war for democracy.

Representative Meyer London, Socialist, of New York, introduced in Congress on March 4 a resolution protesting against the proposed move by Japan. "Such a step," declares the

resolution, "would be looked upon by all liberal and liberty-loving elements throughout the world as an invasion of the rights of the Russian people; it would be on a par with the infamous attacks on Belgium and Serbia and the supposed peace inflicted on the Russian people by brutal physical force."

**Preparing the Jewish State** Announcement was made during the week that a commission composed of representative American, British and Russian Jews will leave for Palestine in a short time to plan the foundations of the new Jewish state in the old homeland of the race, in accordance with the promise of the British Government, backed by its allies. Jewish reestablishment in Palestine, after a lapse of 2000 years, is perhaps the most dramatic event of the world war.

For the past few months the Jews of the United States have been raising a great fund for the restoration of the forty-eight Jewish agricultural colonies in Palestine, which have been blighted by the war, and for the groundwork necessary for the inauguration of a Jewish administration. The first million dollars of the fund, for immediate needs in Palestine, is now about completed. Contributions have been received from nearly 300 cities in forty-two states. They represent over 150,000 individual donations.

The new Jewish state will be situated in a strategic position at the junction of three continents, Europe, Asia and Africa. It is expected to be a great factor for peace and stability in the Near East. The Zionist leaders purpose to make it not only a center for the development of Hebrew religion and culture, and a refuge from oppression, but a model state devel-

#### AN AMERICAN SENTRY ON THE FIRING LINE

This is one of the first photographs to come over here of the soldiers who have been in active fighting on the American front.

oped on the most practical coöperative lines, a home for freedom, democracy and social justice. The new Zion, according to the deliberately laid plans, will be essentially a country for the people.

Third Secretary McAdoo has announced that the Liberty Loan campaign for the third Liberty Loan will begin on April 6, the anniversary of our declaration of war against Germany. No details as to the exact amount of the loan or the interest it will bear were stated. The Secretary said that these features were dependent on further legislation by Congress which he would ask for at an early date.

In some financial circles there has been considerable agitation to make the issue free from all taxation. Proponents of this plan declare that to place successfully a third bond issue in such large volume some such inducement should be made. On the other hand it is argued that a tax-free issue would be of particular value to the rich, and such a loan would lose its popular character. Mr. McAdoo has stated merely that he would endeavor to make the forthcoming issue, like the preceding ones, acceptable to the people generally, avoiding any appeal to a special class of investors.

In his statement on the new loan Mr. McAdoo says:

April 6 will forever be a consecrated day in American history, and it seems peculiarly appropriate that the opening of the second year of our participation in this war for the honor and rights of America and the freedom of the world should be cele-

THE NEW PREMIER OF CHINA  
Chin Nun-hsun, former Minister of the Interior, has been appointed acting Premier in place of Wang Chin-chen, who has been granted an indefinite leave of absence. The Cabinet under Premier Nun-hsun voted on March 5 to send an army of 20,000 Manchuli simultaneously with the Japanese expedition to Siberia

brated with a nation-wide drive for another Liberty Loan.

The campaign should begin with great demonstrations of patriotism in every city, town and hamlet in the country that will truly express the spirit of aroused America. On this date every American should pledge anew to his Government the full measure of his resources and resolve to make every required sacrifice in the same fervent spirit that impels our gallant sons in the trenches of France and on the waters of the Atlantic to shed their blood in America's sacred cause.

A Sugar Prediction Facts About Sugar, the official organ of the American sugar producers, has issued an estimate of the world's sugar crop for the year 1917-18. The total sugar production is placed at 18,637,700 tons, a decrease of 763,800 tons from last year. Despite this falling off the figure is slightly higher than that for 1913-14, the year before the war. Indications are for a bumper crop of 3,775,000 tons in Cuba, about 400,000 tons over last year's great output, while our domestic and colonial beet and cane are expected to show a decrease of about 200,000 tons, due to adverse weather conditions. The big break in the sugar output is indicated in the Central Powers, which are expected to turn out a million tons less than last year. Before the war these countries were producing 4,500,000 tons; this year they will probably show a yield of less than 2,000,000 tons. Russia has also fallen off tremendously. Outside of Europe there has been a remarkable increase in production.

The figures indicate an abundant supply of sugar for the Allied nations this year. In addition to the new production a million and a half tons from last year's crop have been held over in the Far East because of lack of transportation to Occidental markets. How much of this stored-up product, or of the great new Far Eastern crop of 6,500,000 tons will be available for general use this year is problematical. The answer lies in ship production. In any event, there should be no lack of sugar in this country. Only the most flagrant

READING THE KAISER'S THOUGHTS

Two dark spots show the face of the Kaiser are presented in these Italian cartoons. On the left War is reminding him that he has passed his chance of peace and the end has not to travel before it comes around again. At the right a grim portrayal of Germany's selfish domination of Austria

disorganization could bring about a repetition of the famine conditions of last fall and winter.

**Letters of the Packers** Some curious and startling facts linking officers of the Food Administration with the big packing house firms are being brought out in the investigation of the packing industry being conducted by the Federal Trade Commission at Chicago. Letters from the confidential files of the packers, read into the record by Francis J. Heney, special counsel for the commission, show that one paid agent of the packers secured a place in the food administration at a dollar a year and his "best friend" secured another.

Four days before the appointment of A. J. Cotton as head of the meat and livestock division of the Food Administration, an agent of Swift & Co., according to the correspondence, was instructed by Louis F. Swift to bring Mr. Cotton to the directors' room of the company for a private conference. A later letter, dated December 11 last, from the Omaha files of the Cudahy Company, stated that Mr. Cotton, then in his official position, told the packers "in confidence" that industrial conditions were upset in Argentina and "that freight handlers and packing house workers were on strike, and that the Allies would buy large amounts in the United States." "This," said Attorney Heney, "enabled the big packers to buy beef in open market and hold it for a higher price."

Another letter, written by G. C. Shepard, vice-president of the Cudahy Company, told of a conference between the packers and E. Dana Durand, of the Food Administration, at which the Food Administration representative requested the packers not to let the price of hogs go below 15½ cents a pound when hogs declined last December, "as it would be very embarrassing to them in view of all they have put out in the papers." "The conference Mr. Durand requested be considered as secret," wrote Mr. Shepard, "as they did not want anything to get into the papers in regard to it."

While these interesting epistles were being brought to light in Chicago, Food Controller Hoover issued a statement in Washington reducing the meatless days to one a week and abolishing the meatless meals on other days, because of improved conditions in the food supply. On the previous week a bulletin of the Food Administration described the food conditions as "critical" and a sixty-day famine period was predicted for the eastern half of the country.

**The New York Election** A special election to fill four vacant seats in Congress was held in New York City on March 5 and resulted in substantial pluralities for all the Democratic candidates, who polled a total of nearly 43,000 votes as against less than 27,000 for their Republican opponents. The Republicans had been confident of winning in at least one district, where a recent gerrymander was supposed to have

given them the advantage. The general vote was light.

Democratic leaders point to the result as a victory for President Wilson, and apparently there is some ground for that claim. The falling off in the Socialist vote from the big showing made last fall indicates that the President's system of open diplomacy met with a sympathetic response from the radical element generally. In the municipal election last fall the Socialist candidate for mayor polled nearly a quarter of the vote cast. On March 5 the Socialists mustered less than an eighth of the votes, tho in one district the Socialist candidate ran ahead of the Republican.

As a result of the election the Democrats regain their control in the lower house in Washington. With six vacancies in the House and six independent members equally divided between Democratic and Republican leanings, the Republicans had a nominal control by one vote. There are still two vacancies, one from Illinois and one from Ohio.

THE FIRST WOMAN CANDIDATE FOR THE UNITED STATES SENATE

Miss Anne Martin, of Nevada, vice-chairman of the National Woman's Party, has announced her candidacy for the United States Senate to complete the unexpired term of the late Senator Newlands. Miss Martin has been for several years a leader in the fight for woman suffrage. She was graduated from the University of Nevada and Leland Stanford, Junior, studied in Cambridge and London and Leipzig, was professor of history in the University of Nevada and, incidentally, state tennis champion. Miss Martin in announcing her campaign for Senator said: "I believe that the crucial problems which this nation now faces are problems which women can help to solve and which justice demands they should have a voice in solving. The peace which will follow this war will bring with it the social and industrial reorganization of the world. This readjustment too, this reorganization for peace, cannot be made successfully without the constructive cooperation of woman. The welfare of women and their presence in both houses of Congress and the welfare of the nation demand it."

At the New York election women voted for the first time in that state, and made an excellent showing. They cast about 32,000 ballots in a total of 78,000, in spite of the fact that they were compelled to register while the men were not. Over 90 per cent of the women who registered went to the polls, a remarkably high proportion.

**Academic Freedom Upheld** The American Association of University Professors has made public a report on academic freedom in war time which adopts the liberal view of President Lowell of Harvard. The report states explicitly that professors who violate the letter or the spirit of the law should be suspended or dismissed without waiting for the Government to act. On the other hand the report upholds the right of free discussion of the objects of a war and the methods of conducting it, and maintains that the salutary effect of such discussion outweighs any disadvantages attendant on it. Repression of opinion, the report points out, "has been repeatedly urged in all the countries at war as a reason for taking away from minorities virtually all freedom of speech. Nowhere has this argument been more persistently put forward than in Germany."

The report condemns the dismissal of Professor Cattell of Columbia, tho it does not mention him by name. About the time it was issued Dr. Ellery C. Stowell, associate professor of international law at Columbia, announced his resignation from that institution. He stated as his reason interference on the part of the university authorities with his liberty of action, especially with regard to the expression of his views on international affairs. Professor Stowell had been one of the leaders in war activities at the university. He was one of the organizers of the Patriotic Service League.

Professor Stowell is the third prominent member of the faculty to resign from Columbia, because of alleged repression of academic freedom, within the present college year.

**The Neutral Steamships** An agreement was recently reached between the United States and Holland concerning the Dutch steamships which have long been held in port here because of the unwillingness of our Government to let them continue in trade which would be helpful to Germany. A charter is to be given to eighty-two vessels for one round trip each. They will not enter the war zone, but five of them will carry cargoes bound for Switzerland, via a French port, two will carry cargoes of grain to Holland, others will carry relief supplies to Belgium, and yet others will make trips to Argentina and Australia for wheat and to Java for sugar. Of the other two of the eighty-four vessels which were held here, one went some time ago to South America, while the other is now at Rotterdam, detained because Germany demands a pledge from the Dutch Government that she will return to Holland.

# AID AND COMFORT TO THE ENEMY

**A**N article by Clarence True Wilson, upon "Drunkenness Among American Troops Abroad," has been circulating in the religious press. "Drink and the devil of syphilis," he writes, "are whipping American soldiers who have reached France, into the guard house and hospitals by the thousands." For that reason, he says, "thruout this country a feeling of bitterness dangerous in the extreme is arising and gazing with menacing eyes toward France. The mothers who have reared sons strong and clean, and who have given them with glad, aching hearts—women who have loved France and glorified her—are now muttering that our boys are wanted for the profits of their debauchery and not to take their deaths in strength and cleanliness. And this feeling (against France) is not justified. France is not to

blame. The conditions now prevailing must be blamed upon the agents of the American Government who have made themselves the catspaws of the pro-German brewers, who are intent only upon protecting their prestige and debauching the influence of America's future leadership."

This is a shocking charge. It would seem impossible that Clarence True Wilson could make it without some proof to support him. Yet here are the facts:

Last September, when the recruits for the National Army were being assembled in the cantonments, as many as 400 out of every thousand men were admitted to the hospitals with venereal diseases. The admission rate for the men in those camps is now, not 400 per thousand, but 69.8. And the admission rate for the men in our expeditionary forces is not even 69.8, but as low as 51.7. In other words, instead of debauching our youth, military service is improving the very condition among them which Clarence True Wilson denounces. And the men in France, instead of being "whipped into the hospitals" by drink and the devil have a lower admission rate than the American soldiers at home.

The admission rate for the United States regulars in 1909 was 196.99 per thousand for venereal diseases. In 1910 it was 174. It had fallen by 1916 to 91.23. It is now as low as 69.2. The rate for the National Guard is 67.4.

That improvement is the result of a campaign of education and of strict

## The Sixth Message from the United States Government to the American People

Presented every week in

on Public Information appointed by  
President Wilson

medical supervision. It is the result of such orders as this from General Pershing: "Impress strongly upon commanders of our troops coming thru England the utmost importance of moral and disciplinary training at home, and particularly the constant vigilance needed on their arrival in England and France." And the policy of General Pershing and the War Department is the very opposite of that which Clarence True Wilson charges against "the agents of the American Government."

In the course of his article he accuses Mr. Raymond D. Fosdick of having said "that hard liquors should be kept from soldiers, but that anything up to twenty-three per cent is harmless." He protests that "twenty-three per cent wine is just about as harmless as rough on rats." No doubt it is. But he might have had sense enough to know that Mr. Fosdick could never have made such a statement. He might have investigated. He would have learned that Mr. Fosdick never said that or anything like it. It is the invention of some pro-German slanderer who desired to gull just such credulous critics of the Government as Mr. Clarence True Wilson has proved himself to be.

He concludes: "The present attitude of the Government toward drinking abroad flouts the exprest opinion of the American Medical Association, flouts the medical section of the Council of National Defense, flouts," etc., etc., "and spits contumely upon the fierce mother-love of millions of watching women."

And here again he is wholly misinformed and wholly ridiculous. There is no liquor ration served to our soldiers either at home or abroad, despite all the persistent rumors to the contrary. No intoxicants can be bought in the canteens connected with the American forces anywhere. By General Pershing's orders soldiers in France "are forbidden either to buy or accept as gifts from the inhabitants whisky, brandy, champagne, liquor or alcoholic beverages other than light wine or beer." As there is little beer sold in France, General Pershing reports, "men who drink are thus limited to the light native wine used by all French people. Even this is discouraged among our troops in every possible way. I hope to secure the coöperation of the French Government to prevent the sale of all liquors and wines to our troops. The question

is under discussion. Personally I favor prohibition in the army, but it is impracticable and inadvisable to issue orders that cannot be enforced without the coöperation of the French Government." (Cable from General Pershing to Washington, December 26, 1917.)

General Pershing's policy is the policy of the American Government. Clarence True Wilson's attack is without the faintest justification in fact. His appeal to ministers "to write a letter to President Wilson, asking him to protect our soldiers from alcoholic drink in England and France" is unnecessary. The person who needs protection is Clarence True Wilson. He needs to be protected from intoxicating slanders poured into him by the pro-German moonshiners who are illicitly distilling these lies.

After Clarence True Wilson, the editor of *Collier's Weekly*.

Under the heading "Mr. Baker's Humanity," *Collier's* says of the sinking of the "Tuscania": "After many days and nights nobody, least of all Mr. Baker's department, knew which were saved and which were lost. In the first place, nobody knew who sailed on the 'Tuscania.' Our soldiers are not permitted to tell their friends and relatives when they are sailing, or on what ship, or from what port. The War Department apparently made no record of the fact; indeed the War Department publicly announced that it did not precisely know what units had sailed aboard the 'Tuscania,' to say nothing of what individuals. The ship carried

"The public is now as much part of the Government as are the army and navy themselves; the whole people in all their activities are now mobilized and in service for the accomplishment of the nation's task in this war"

a roster of those aboard, but the roster sank with the ship," etc.

Now it is not true that "nobody knew who sailed on the 'Tuscania.'" There was a complete passenger list on file in the War Department. That list gave the name and designation of every one on board, soldier or civilian, excepting the crew, whose names were on file in the Cunard offices.

The War Department did not publicly announce that "it did not know precisely what units had sailed aboard the 'Tuscania.'" The War Department knew and told the press what units were aboard.

It is true that the ship carried a roster and, so far as is known, the roster sank with the ship; but duplicates of this roster were on file in the War Department.

It is not true that "after many days and nights nobody, least of all Mr. Baker's department, knew which were saved and which were lost." The survivors were landed at many points on the coasts of Ireland and Scotland. As fast as they could be gathered together, their names were cabled to the War Department. In giving their names to the newspapers there was no more delay than was necessary to insure that the information should be accurate.

It is not true, as the editor of *Collier's Weekly* writes further: "Each man wore a metal tag on his wrist, but by a dispensation of Mr. Baker's humanitarianism, the tag was blank." The regulations of the War Department require the captain of each company to see that his men wear metal identification disks on a cord around the neck—not on the wrist. If these disks were missing or blank it was by no "dispensation of Mr. Baker's humanitarianism." It was in contravention of his orders. In brief, the editor of *Collier's Weekly* has written a series of unmitigated misstatements about the sinking of the "Tuscania" and the work of the War Department. The Government has no power of censorship to suppress such falsehoods. It has no power to punish the editor who writes them or the publisher who issues them. It can only, by making known the truth, attempt to counteract the work which *Collier's* apparently desires to do toward weakening the faith of the American people in the Government and its war measures. Why *Collier's* should wish to do this, the editor and publisher know best. Why they should use such bald false-

hoods in order to attain their end, is also their secret. But the readers of *Collier's* should understand that the periodical is abusing their confidence as grossly as if it were a paid German organ circulating pro-German slanders.

On February 16, Heywood Broun, correspondent of the New York *Tribune*, published an account of how the War Department had assigned eighteen major-generals to one ship sailing for France. A readjustment was made, he said, so that only five went on the boat. He continued: "'But,' said the man who told the story, 'that wasn't the funniest part of it. Code messages were sent to each of the major-generals ordering him to be ready to start for overseas service on a specified date, and twelve of the eighteen replied over the open wire, in unadorned English, 'I will be ready to sail for France on—' and added the date mentioned in the code message.'"

This was not a very serious slander. It merely convicted the War Department of ridiculous inefficiency and made twelve major-generals look like anonymous idiots. But the fact is that the War Department does not transport its forces overseas. That is done by the Navy. The War Department does not assign officers to the ships on which they sail. That is done by the commander of the port from which the ship leaves. The War Department merely notifies the officer to report for duty at the port; he may not sail for weeks after arriving there. Consequently, the department would not wire him in code and he would not need to answer in

code. In fact, Heywood Broun's story was a complete falsehood.

After he had printed it, he was notified that it was impossible. He now replies, in the *Tribune*: "I am sorry to have written an anecdote which was untrue, but the condition which it was meant to attack exists. There is not enough secrecy about important matters of military information, and too much about things which would be tremendously useful in America and of no use in Germany."

How does an accusation that the War Department assigned eighteen major-generals to one ship prove that there is "not enough secrecy about important matters of military information" or too much about other things? How is the lack of secrecy or the superabundance of it proved against the War Department either by the code

wire to the major-generals or by their answers? Would it be unnecessary caution for the department to wire a sailing date in code? Or do the uncoded replies prove the War Department guilty of a lack of secrecy? Not at all. Heywood Broun's explanation is merely as false as the story for which he apologizes.

He and the *Tribune* have been busy for some time with a campaign to make the War Department ridiculous in the eyes of the American people, and to that end he and the *Tribune* have not hesitated to publish any story that came to hand, whether it was true or not. This is a patriotic contribution toward winning the war for which America should be grateful.

It is not within the province of the Committee on Public Information to reply to criticisms of the administration. It is within the province of the committee to reply to and expose falsehoods about the Government and its war measures, whether these falsehoods are circulated by paid German propagandists or by those whose aims are other than German tho their weapons are not. Such publicists in Germany would probably be quickly called before a firing squad. Here they must be left to face the reproof of popular indignation. The committee, accordingly, has cited the editors and publishers and writers named above, before the moral firing squad of patriotic reprobation, for the purpose of discouraging an abuse of public confidence which has become a work in aid and comfort of the enemy.

Revolutionary soldiers with red flag bearing the inscription "Down with monarchy and long live democracy; long live the republic"

# WHY RUSSIA'S ARMY FELL TO PIECES

BY EDWARD ALSWORTH ROSS

This article is the second of the series that Professor Ross is writing for The Independent on the Russian revolution and its consequences. In "A Talk with Trotzky," published last week he reported verbatim the economic and administrative program of the leader of the Bolsheviki. "I have traveled 15,000 miles since I set out from Petrograd," writes Professor Ross, "I bring back amazing stories. I consider my half year in Russia, in 1917, the richest experience possible to a sociologist since the summer of 1793 in France"

**A** long autumn afternoon in Kakhetia of the Caucasus, our train lay alongside a troop train from the Armenian front and we could observe the results of the breakdown of Russian military discipline. The floor of the box cars the soldiers lived in was thick with dirt and their clothing was in an indescribably filthy condition. Often their uniforms were torn and ragged and some went barefoot, having traded off their boots for liquor.

Most of them seemed to have become mere "bums" without standards of self-respect. They whiled away the hours dancing and stamping about their cars to the music of a harmonica. At the last station back a wine shop had been raided and not a few showed marked exhilaration. According to the mood of the moment they embraced one another or quarreled. One soldier pursued another up the station terrace with drawn sword, but a crowd of his comrades caught him and he was escorted back to his car, reeling and singing. When the first rush occurred an officer ran out of the station buffet and disappeared into the railway administration building. Nobody blamed him, for when trouble occurs the officers are quite impotent and would be the first victims did they interfere.

The smooth-faced lads were not so bestial as the older soldiers. The ring-leaders in demoralization were men in the thirties. Those who made the most noise and took the initiative in misconduct were the less prepossessing—low-browed, snub-nosed, heavy-jowled and big-mouthed. The decent looking seemed to be without influence on the behavior of the troop. The dignified Georgian peasants on our train stared in silent amazement at the looks and behavior of these flushed, tousled, un-

shaven defenders of the flag. The language of the maudlin merrymakers was so filthy that the ladies in the cars opposite theirs were hastily conducted elsewhere. Some of them took to bel-lowing that the Georgian soldiers on our train were runaways, but took great umbrage when Prince T., an old Revolutionist, replied that probably many of them were deserters. It looked for a while as if the uniformed men of the two trains might come to blows, but a tactful allusion to the Prince's half century of exile saved the situation.

At this time the Georgians were shuddering at what might occur when the demoralized soldiers of the Caucasian front should be demobilized and returned to Russia thru Georgia. Only three days before a regiment passing thru Kutais had looted shops, got drunk and terrorized the town until they were taken in hand by two battalions of Cossacks and two of cadet officers from Tiflis. About the same time at the Tiflis railway station two hundred of these soldiers took it into their heads they wanted to go to Yelizavetpol "where the fruit comes from," and demanded a car for their use from the commandant of the station. On his refusal they beat him to death.

Under the old régime there was a truly Prussian distance between officers and men. The latter were punished in guard house for failure to salute or remaining seated in the former's presence. Common soldiers were not allowed inside tram cars, in the better restaurants, or in a theater save in the gallery. If a superior officer entered a playhouse all other officers stood and remained standing so long as the lights were on. But in Vladivostok in July I never saw a military salute. Off-duty officers and privates called one another "Comrade" and mingled on a footing

of equality. Following the order of Gutzkow, first Revolutionary Minister of War, the superior was no longer addressed as "Your this" or "Your that" but as "Mr. Colonel" or "Mr. General." Petrograd had ordered that the handsome residence of the Admiral be made a naval officers' club, but the sailors thought it unfair, so it was opened for naval men, whether officers or sailors. I was assured that the election of officers by men was common and that those thus singled out sometimes declined the honor, deeming officering too difficult under the existing conditions. The men assumed that an officer set over them without their consent must be a tyrant. Russian sailors visiting the "Buffalo" during her stay in Vladivostok were astonished to hear the American sailors speak well of their officers.

It is quite unjust to lay all the blame for the growth of insubordination in the Russian army on certain errors of Gutzkow. Under the old régime, discipline in the sense of obedience prompted by respect for the worth and rank of one's officer, did not exist. Things were so bad that the Grand Duke Nicholas authorized an officer to shoot down at once a man who failed to obey his first order. The terroristic system employed against the men is illustrated by an incident told me by an army surgeon who witnessed it. A man of the sanitary squad while getting his pay remarked to the company secretary that it was queer that sanitaries and orderlies had not been included in the Easter distribution of presents among the soldiers. The secretary tattled the remark to the commandant, who thereupon beat the sanitary with his fists and when the prostrate man protested, threatened to shoot him if he uttered another word. # THE HOSTESS HOUSES

## Oases in the Desert of Army Discipline

BY MARY ALDEN HOPKINS

**W**HAT shall I do with this wet umbrella?"

"How long is the war going to last?"

"Do I need heavy underwear?"

"Can I get a marriage license here?"

These are some of the casual questions which an emergency worker must be prepared to meet if she is put on duty in one of the Hostess Houses erected in our camps and cantonments by the War Work Council of the Young Women's Christian Association.

"Can you tell me my husband's name?" inquires a foreign woman, who has forgotten the American name chosen by her husband for enlistment purposes to replace the sneeze-like one he inherited.

Being the director of a Hostess House is an all-round job. The worker is much like a housewife with a very large family and constant unexpected company. She feels unofficially responsible for the welfare of the soldiers in their concerns which are not strictly military, and she feels very responsible indeed for the comfort of their visiting women folk.

No Hostess House worker knows in the morning for what she may be called upon before night. A timid old lady is put on a bus. A visiting baby is rescued

A home-like room to read and talk in at Camp Devens, Ayer, Massachusetts

from sour milk. A mother is told of her son's death. A girl is held back from suicide. Big and little events, important and significant matters, absurd and tragic happenings—all the varied aspects of life go hurrying thru the Hostess House.

In order to protect America so far as possible from the ghastly by-products of war, the War Work Council was formed last June as a department of the National Board. Mrs. James Stewart Cushman is the chairman. Mrs. John R. Mott is one of the vice-chairmen. Some of the hundred members have long been association members, while others are called in by this special emergency. The direct object of the council is to safeguard women whose lives are altered by the war. Thousands of them already need this assistance.

The Hostess Houses are one feature of this policy. They are houses near the entrances of the huge camps where a wife or mother or friend can meet her soldier and talk to him in quiet and comfort.

The Government sanctions the erection of these houses. They come under

the supervision of the Commission on Training Camp Activities and they work in harmony with the Young Men's Christian Association. None is erected except at the direct request of the commanding officer of the camp, and there are already forty-six either in operation or in process of construction. Houses for colored people are being erected wherever colored troops are stationed.

The first idea of keeping women out of cantonments might have been possible if the men themselves hadn't wanted them there. But they do. A woman doesn't wait to be invited by the commanding officer when her man says come. A mother who has never been ten miles from home will tie on her old-fashioned hood and push her trembling way thru the confusion of strange cities and the weariness of slow trains to the great camp where her boy is stationed. The Hostess House is built for her.

**P**RETTY little war brides with very pink cheeks and very bright eyes hang about a camp for hours every day waiting for "Him" to get time off. The Hostess House is their unsuspected chaperon. Worried wives with protesting babies in their arms and fretful toddlers hanging to their skirts come for domestic consultations with their husbands. The reception rooms, the rest rooms, the cafeteria and the nursery are at their disposal. Naughty little school girls go whooping across the parade ground right under the angry noses of helpless commandants. The Hostess House acts as a wise policeman toward them.

In the bitter, piercing cold, in the blinding heat, in rainstorms and in blizzards, the women come to the cantonments. One stormy day when telephone poles were crashing down and the rain was a sheet of wind-swept water, the hostess at Camp Upton, Yaphank, New York, struggled to the railroad station to meet the train on the chance that some women might have come.

Sure enough, there on the platform was a woman, umbrella gone, hat like a wet mop, and skirts dripping water. Safely clutched in her handbag she had her husband's exemption papers. She stood alone in the storm, figuring how she could find her man in all

Tea time on the Hostess House veranda at Camp Upton, Yaphank, Long Island

that great strange crowded camp.

Every kind of women comes to these houses, from the weary, frightened wife who faints on hearing that her husband has been transferred the day before, to the plucky one who shuts her trembling lips so tight that not a word can squeeze thru. Many of the passing guests are the gentle, helpless type that is so appealing in a short story which ends at the altar. We've taught them that clinging dependence is a virtue. Well, if we take the husband away from the wife, we must assume his responsibilities toward her and her children.

Of this variety was the tubercular wife arriving at Camp Lewis, Wash-

The Hostess House runs a gift shop at Camp Gordon, Atlanta, Georgia

ington State, the day after her husband was sent to another camp; and the thinly-clad, dazed girl, turning up before daybreak at Camp Pike, Arkansas, to find her husband quarantined. In another camp a wife who couldn't speak two English words arrived at nightfall.

These women had one trait in common—each had spent her last dollar on train fare, thinking her troubles would be over as soon as she reached her husband's protection. When such cases occur the commandant has learned to turn to the Hostess House for help. Somehow the workers scratched up money to send the sick wife to her father, warmed and fed the dazed child-wife and found work for the foreign-tongued woman.

**W**HEN a job's at hand, the Hostess House worker sets to it. The county authorities are likely to think a case is the town's responsibility, while the town officials promptly hand it back to the county. As the two divisions argue, the Young Women's Christian Association attends to the matter and goes on to the next case.

The work of the Hostess Houses is effective because it is one activity among many conducted by a long established, highly developed organization. These Hostess Houses cooperate with all other phases of the Young Women's Christian Association. They work in close cooperation with the girls' club work, the Patriotic League, the Bureau of Social Morality, the American Foreign Language Service Bureau, special work in negro communities, and the industrial activities of the association. Moreover, they have as their background the experience and accomplishments of the association's fifty years of peace work.

# THE BATTLE CRY OF FREEDOM

A nation-wide campaign conducted weekly by The Independent as the official publication of the Committee on Patriotism Through Education of the National Security League. To teach American ideals in the schools, colleges, homes, offices and workshops of the nation

## E PLURIBUS UNUM

BY ALBERT BUSHNELL HART

PROFESSOR OF GOVERNMENT AT HARVARD UNIVERSITY

**W**HEN the fathers of the Constitution had carried into effect their splendid principles of personal liberty and free representative government, suddenly they discovered that there was still something lacking. Freedom and popular government could only be carried out under some kind of formal organization. That was an easy matter in the former colonies, which transformed themselves into self-governing states so quickly as to suggest that they had enjoyed a remarkable degree of self-government before the Revolution. These state governments, however, had their troubles—landgrabbers, unwilling taxpayers, rioters. Good old Massachusetts had to practise preparedness to prevent being thrown into chaos by the Shays' rebellion of 1786. Vermont, Connecticut, Pennsylvania, other states, were disturbed and uncomfortable.

The lesson was plain enough that thirteen small neighboring communities could not live comfortably or safely each for itself, and ought to unite in some kind of union. Four New England colonies thought of that as far back as 1643, when they formed the New England Confederation of 1643, "for mutual help and strength in all our future concerns: That, as in nation and religion, so in other respects, we be and continue one." There were slants at the same idea in the Albany Congress of 1754, and the Stamp Act Congress of 1765, and the First Continental Congress of 1774. Benjamin Franklin drew up a federal constitution in 1775 which was too good for that crisis, and was afterward worked over into the Articles of Confederation, which despite its many defects was the best-knit and most sensible federal constitution that the world had ever seen. Indeed, when the new Federal Convention assembled in 1787 there was three federal constitutions at work in Europe—Switzerland, the Dutch Confederation, and the Holy Roman Empire. Nevertheless, the machinery was fast running down in all of them, and the main lesson that the fathers of the Constitution learned was to steer clear of their weaknesses.

Everybody knows the dramatic tale of the Federal Convention, sitting in secret state in Independence Hall, Philadelphia, presided over by that tried soldier and statesman, that undisputed First Citizen of the United States, George Washington. His virtues affected even that hardened imperial sinner, Napoleon, who later in life recorded that "Had I been in America, I

would willingly have been a Washington and I should have had little merit in so being; for I do not see how I could reasonably have acted otherwise." We can see the benign Franklin, nodding in his delegate's chair, but rousing from time to time to drop one of the droll illustrations for which he was famous, and ending his participation with the famous prophecy, "Now I know that it is a rising and not a setting sun." Madison bustles about, crystallizing the wisdom and eloquence of his colleagues into those immortal "Notes" which have so much contributed to his own immortality. Who would not have liked to have seen in session these finely-drest, powdered gentlemen who metaphorically took off their coats to build "the New Roof of the Constitution?"

**E**VEN these men, whose membership was a patent of American untitled nobility, saw only dimly the splendid result of their five months' work. They doubtless felt a sense of relief at the close of debates which sometimes rose to a threat of what would happen to the Union if certain states withdrew from it; they did not realize that nations yet unborn, Canada, Australia, South Africa, Switzerland, Germany, would adopt or imitate the federal principles which they embodied in a formal constitution. They little guessed the vast expanse which the constitution tree was to overshadow, the multitudes who would find refuge beneath its branches.

There were some critics then as now: Samuel Adams of Massachusetts at once took alarm. "I confess, that as I enter the Building, I stumble at the Threshold, I meet with a National Government, instead of a Federal Union of Sovereign States." A farmer member foresaw that "lawyers, and men of learning, and moneyed men—will swallow up all us little folks, like the great Leviathan."

Others, and fortunately a majority of the others in the state conventions, realized what the Constitution was—a means of reconciling the power of a nation with the local sentiment of a town meeting or a county court. They correctly judged the hearts of their countrymen and believed that the free man with his people's government would have taxes and loyalty and support and public service to give both for the nation and for his state. They were

entering on the momentous experiment, never tried before in the history of mankind, of a vast republic. Patrick Henry at the

outbreak of the Revolution had caught this magnificent idea in his bold assertion that "The distinctions between Virginians, Pennsylvanians, New Yorkers and New Englanders, are no more. I am not a Virginian, but an American."

We are accustomed to speak of the Federal Constitution and the thirteen state constitutions of that period; it would be more correct to speak of a national constitution, woven into a network in which the new Federal Constitution became an indispensable part of every state institution; thus the ratification convention of Massachusetts helped to shape the convention of Virginia, and the Virginians took part in the molding of the Massachusetts constitution: thus all the people of all the states had a share in remolding the whole system of government; assigning certain authority to the central organism such as foreign relations for example, and leaving other fields of government, such as the descent of property and the keeping of local order, to state organizations. Neither national governments nor state governments were sovereign in themselves, both of them are the expressions of the sole sovereign, and that is the people at large, who agreed by these solemn acts to restrain themselves from pushing the possible powers of government beyond the bounds drawn by this network of constitutions, except in so far as that whole system might be changed by federal constitutional amendments.

This majestic conception had been tried before in Greece and Etruria and Italy and Germany, Switzerland, Scotland and the Low Countries, in New England and during the Revolution; but this was the first time that a national machine had been devised that would stand the shocks of long usage.

The Constitution pointed out the means of performing the great national task which the Constitution imposed. For instance—and it is an especially apt example in this year 1918—to the federal government was entrusted the sole defense of every state and every individual against external enemies. As a means to that end, Congress had authority to raise armies and navies, to declare war, to govern the land and naval forces, to organize the militia and call it forth when needed. To make those armies available they must be moved: Congress had [Continued on page 471]

# NATIONAL EFFICIENCY

A MONTHLY SECTION DEVOTED TO BUSINESS, PERSONAL AND NATIONAL EFFICIENCY, CONDUCTED IN ASSOCIATION WITH THE NATIONAL INSTITUTE OF EFFICIENCY AND THE EFFICIENCY SOCIETY

## THE FOOD FIGHT

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**Y**OU don't need a gun to be a fighter in this war. A knife and fork are weapons enough.

Every meal that an American eats from now till the close of the war is a victory, or a defeat, for Germany. The keenest weapons at hand with which to fight the Kaiser are the knife and fork we use three times a day. Yet the great majority of us do not seem to have grasped this fact, or these weapons. We use the weapons with sufficient regularity and zeal—but against our Allies, against our soldiers, against ourselves.

The food pledge-card campaign recently conducted in American households by the Food Administration has brought to light an astonishing and appalling state of things. I have before me a typical war food report on the household canvass, from which I will quote.

This community stands among the first twenty of its size in America for intellectuality and prosperity. It has a famous university, a group of flourishing factories, dozens of women's clubs, the most and best-rated banks of any city of equal size in the state. You would expect people here to be of a high patriotic order, of superior conscience and intelligence. Read the facts.

The pledge cards required nothing difficult, only asked that each family do its best in avoiding waste, and conserving meat and wheat, during the war. Out of 2500 families in this highly favored community, the heads of only 800 families responded to the Government appeal, the other 1700 positively refused, or conveniently forgot, to sign and return cards. Only 32 per cent of the families of this representative American city are patriotic as far down as their palate.

When the official agents of the Government called with pledge cards at the homes of these 1700 householders, they were met with answers like these:

"Our food is our own and we don't want anybody to meddle."

"We work hard. Why shouldn't we eat what we want?"

"I tried to send a chicken to my son in France and the Government wouldn't take it. I'll never do anything for the Government again."

"My husband doesn't like corn bread."

The human beings who made the assortment of remarks quoted above are not the poor, illiterate foreigners you would naturally consider them. No, they are the choice inhabitants of a place that proudly calls itself the intellectual Athens of the state.

Among those who refused to consider meatless, wheatless or sugarless meals, the largest number stated positively they saw no reason for such a war measure, and they would not subscribe to it unless they were shown the necessity for it.

Meat, wheat and sugar are the food staples of war. They are absolutely necessary

to the soldier. He has no substitutes, no equivalents for them, while the civilian has many. Our substitutes for meat are eggs, fish, fowl, game, sea food, nuts, milk and cheese. Our substitutes for wheat are oats, corn, barley, rye, hominy. Our substitutes for sugar are honey, maple syrup, corn syrup, molasses, preserves and jellies and the sweet fruits like raisins, dates, figs, prunes. There is not a single one of these substitutes that can be produced here, then shipped abroad, in sufficient quantities to provide the Allies and our soldiers at the front; or if they could be so produced and shipped, they would spoil in transit, or would be unadapted to wartime use abroad. Hence the imperative need for national conservation of meat, wheat and sugar.

Another reason, perhaps more insistent, for rushing meat, wheat and sugar to our soldiers—Americans or Allies, is the fact that the soldier needs physiologically the exact forms of nutrition furnished by the meat, wheat and sugar.

**O**THER nations at war have met food shortages by governmental apportionment of supplies, and a rationing system, allowing each family and individual a certain amount of certain foodstuffs, and no more. How should we like to be forbidden to buy a single article of food unless we could show first a food card properly signed and punched? Would it not be better to limit ourselves by voluntary agreement than to allow personal extravagance and indifference to make Federal food restrictions a war necessity? We are the only great civilized country that has lagged behind in this matter. *We shall have to regulate our in-*

*Darling in New York Tribune*

*It's up to mother to tend to 'em*

*dividual food supply, or let the Government do it, or lose the war.*

The people of France and England, tho exhausted and impoverished by three years of war sacrifices that we know nothing about, have agreed to voluntary rationing, and will go hungry many days this year of their own accord, that their soldiers and our soldiers may be fed. Yet millions of Americans, fat and smug and prosperous, ask why we should eat occasionally a generous and wholesome equivalent for meat, wheat or sugar!

What are we asked to do as individuals? Merely to save one ounce of meat a day, one pound of wheat flour a week, one pound of sugar every two weeks; to use only vegetable fats in cooking; and to prevent food waste of all kinds. We are not asked to eat less; tho every one of the other Allied nations is forced by famine to do so. We are not asked to substitute inadequate or unwholesome articles of diet, tho a majority of the other nations at war have been forced to do this. We are asked only to eat with moderation, consideration, regularity, sobriety and decency.

A notable experiment and conclusion of scientists like Chittenden, Miles, Fletcher, Dewey, Kellogg, Fisher and others go to prove that if we would lessen our food supply a fourth to a third, we should be better physically, mentally and morally.

I have made a long and careful study of the relation of American food to American efficiency. The relation is very close, but very little understood and very feebly applied. Most men shorten their lives ten years, lose twenty per cent or more of their working capacity, and cruelly rob their amiability and their bank book, all because they have never learned how to feed themselves.

The advice on efficient eating offered by the Government would be worth at least \$100 to us if we had received it from a group of private specialists. From the standpoint of personal efficiency, we may well note the wisdom of the rules made for Americans by the Food Administration. Some of these rules, condensed, we print below in italics; our efficiency explanation follows each.

*Use less refined sugar.* The natural sweets, such as maple sugar and syrup, dark molasses, corn syrup and honey are much more wholesome than cane sugar, the excessive use of which tends to upset the stomach, derange digestion, vitiate the blood. Of all the sweetening substances in popular use, cane sugar is about the least desirable—and this alone we are asked to diminish.

*Eat more soup.* A large plate of soup, rightly prepared, furnishes about the same nutriment as a portion of meat, but is digested in half the time, therefore saves the nervous energy of the brain worker and permits the blood after the meal to flow back sooner from the stomach to the head.

*Double the use of vegetables and fruit.* We Americans. [Continued on page 457]

# The Handy Man about the House

A well-stocked tool cabinet like this one on the right is a source of genuine content to the handy man about the house. It will save many a bill for repairing

Have you a good dependable vise on which you can really pound? This one fastens on your bench

A handy practical grinder like this is a household blessing. With it you can always have sharp knives and scissors and keep an efficient cutting edge on your own tools

The high speed drill is new. It makes seven revolutions to each turn of the crank

What a boon is the automatic drill! Simply push it—and the hole is made

You can't always hold things you are working on in your fingers. This hand-vise will save the situation often in a fussy job

When a leak needs first aid this washer cutter is indispensable

It's hard to hold big things in ordinary pincers. The extension pliers on the left are especially devised to enable you to get a firm grip on large work

One of the most important tools is an adjustable iron bench plane. The one at the left is a good one

Three screw drivers in one—by a quick change of one part

If you do a bit of machine or carpenter work you know the value of a combination square like this one at the right

Why guess when you want to saw wood use a rule like this to get your lines straight

Here is an automatic screw driver which has three interchangeable steel blades

An efficient combination bench and cabinet—top 50x22 inches. It is made of maple

An all-steel mitre-bar with fitted back saw is "mighty handy" to have in your workroom

# SERVICE IN "CITS"

With the purpose of helping to extend knowledge of what the Administration is doing to enable the civilian population—both men and women—to enroll for war service, the Efficiency Society lists here the principal sources of information for those who are asking, "What can I do?" Those wishing to know the names and addresses of official representatives in various cities are invited to write to the Plan and Purchase Department of The Independent, official organ of the Efficiency Society

**United States Employment Service** By order of Secretary of Labor Wilson the United States Employment Service has been organized recently as the nation's war-labor mobilizing and distributing machine. It is estimated that by August between 3,000,000 and 4,000,000 workers will be needed in agriculture, shipbuilding, munitions making, motor mechanical work and other essential industries. Official representatives have been appointed in leading cities. Further information may be had from them. This controlling body will work thru the three reserves named below, and thru other committees and agencies.

**Public Service Reserve** This branch of the Employment Service is the recruiting station for the volunteer army of industrial workers. It has already enrolled 30,000 skilled workers. The main office is at 1712 Eye Street, Washington, D. C. Official representatives have been appointed in each state. Application blanks are provided on request. On these a long list of occupations is printed, that all applicants may indicate easily the special training which fits them for war service. The list includes ammunition, weapons, aviation, chemicals, iron and steel, light and power, machinery and tools, nonferrous metals, alloys, etc., production and manufacture, railroads, roads and structures, shipbuilding, tele-communication, administrative, and works department, with many subdivisions under each of these heads. Opportunity is given for listing special abilities not included in the lists. All departments of the Government call upon the Public Service Reserve for the names of those fitted for the particular field in which workers are needed. All applications are analyzed, classified, and indexed, so that at once upon receiving a call for registered workers, every application from men having the qualifications then needed, is at once located; such demands are constant; for certain types of men the demand is for an indefinite number, for an indefinite time, which means that there is no limit to the demand for some lines of experienced workers. There is need of technical men, engineers and specialists: this need is likely to continue to the end of the war; very careful consideration is given to such applicants: such service is usually commissioned. Clerks familiar with various lines of work are wanted; the Civil Service Commission furnishes very large numbers of these, but the demand often exceeds their supply; clerks supplied by the Reserve are later placed in the classified service if they wish it. Mechanics are much wanted, and of certain kinds it is not easy to find all that could be used. There is practically no limit to this demand. Mechanical draftsmen are also much wanted. While the Reserve is not an employment agency, it finds places for qualified men in various departments of government service. This point is made by Secretary Wilson; it is necessary to register a very large reserve, that the men of requisite skill may be obtained without

placing an unfair burden on any employer or industry; qualifications must be considered carefully, and those who register may not be called at once, but they should be content to register and await the call: whether it will come early or late cannot be predetermined.

**Farm Service Division** It is estimated that 1,000,000 workers will be required to produce and harvest the bumper crops that are expected. Farm Service Sections are being organized in the chief agricultural districts; there will be about thirty such offices. In the lighter forms of field work and in fruit picking, the work of women and girls will be accepted, as the demand comes. They are urged to form Farm Help Clubs or to join already existing organizations in all farming communities.

**United States Boys' Working Reserve** Last year this important branch of the service made a splendid record. Enrollment and placement of 2,000,000 boys in non-military war service is the goal set by those in charge of the work this year. The famous "Red Triangle" of the Y. M. C. A. now in every military camp in this country and France, is to be carried this year to the farms on which members of the Boys' Working Reserve are "doing their utmost."

**Woman's Division** The chief of this division is Mrs. Hilda Mulhauser Richards, of Cleveland and New York. Branch offices have been established in thirteen cities. More will follow. When it is remembered that in 1910 over 8,000,000 women were listed in this country as breadwinners, it will be seen that this division can be relied upon to furnish a great working force when the call comes. Working with this division will be the Woman's Committee of the National Council of Defense, of which Dr. Anna Howard Shaw is chairman, the Committee of Women in Industry, of which Mrs. Borden Harriman is chairman, and the Woman's National Trades Union League, represented by Miss Alice Nestor. The Department of Agriculture, the Women's Committee of the National Council of Defense and the Women's Division are to investigate the need of women's work on farms, the possibility of training camps and the proper placement of such workers for effective results.

**War Emergency Section of the Department of Labor** This office in Washington, D. C., under the charge of Miss Marie Obenauer, is active in placing women who desire to enter war service and who can meet the requirements of the positions open to them.

**American Red Cross** To carry on efficiently the many and varied activities of this great national organization the whole country has been districted and managers appointed for each district. There is work for both men and women in the manifold services the Red Cross performs. A Junior Membership has been or-

ganized with well-considered plans outlining suitable work for both boys and girls.

**War Department Committee on Training Camp Activities** This hard working committee under the leadership of Mr. Raymond B. Fosdick, is doing a service of incalculable value to the young men who constitute our armies. The man who is fitted for any of the various phases of effort this committee controls, may be assured of the satisfaction of knowing that he has contributed to a lasting effect for good, which the country will be benefited by for years to come. Offices are in Washington, D. C.

\* \* In addition to the above distinctly governmental activities, we wish to mention the work of a few other organizations whose work is sanctioned by the Government; this list is necessarily small owing to our limited space.

**Y. M. C. A. International Committee** In this work there are opportunities for both men and women, in this country and abroad. The Y. M. C. A. tent or hut represents home and a respite from hard experiences for thousands of young men, who, separated from the home ways, the home people and the home things, are heartily glad of the services given by this organization. For the present, women applicants are limited to those who, among other necessary qualifications, are able to support themselves at an estimated cost of \$2000 a year during their time of service in canteen work abroad. Applicants must be between the ages of twenty-eight and forty-five, must be able to endure hardships smilingly, to keep up a good courage under hard conditions and difficulties, and must have an exhaustless fund of good cheer, as well as good judgment, that their ministrations may always be up to standard. Offices are at 124 West Twenty-eighth Street, New York City.

**War Nurse Training Camp** On June 24, 1918, Vassar College will open its great training school for Red Cross nurses. An attendance of 5000 is expected, a rush of applications having been received already. All college women who have graduated within the last ten years from approved colleges and universities of standard grade, are eligible. This enterprise is under the auspices of the Red Cross and the Council for National Defense. Prof. Herbert E. Mills, Vassar College, Poughkeepsie, New York, will give full details of the course, upon application. The New York offices of the Vassar Alumnae Recruiting Committee are at 106 East Fifty-second Street.

**Intercollegiate Bureau of Occupations** This bureau, located at 19 West Forty-fourth Street, New York City, is giving good service to college trained women who wish to enter some of the various branches of Government service.

# PERSONAL

A Confidential Question Box  
Conducted by Edward Earle  
Purinton, Director of The  
Independent Efficiency Service, 119  
West Fortieth Street, New York

# EFFICIENCY

For Men, Women and the Young  
Folks, Who Are Invited to Consult  
Mr. Purinton Personally by Mail on  
Their Problems of Health, Work,  
Self Culture and Personal Efficiency

Miss M. M., Wisconsin. "I am interested in advertising, but am at a loss to find a school which offers a good course. Can you recommend one? I am interested in both residence and correspondence work."

Write for prospectus of their course in advertising to the International Correspondence Schools, Scranton, Pennsylvania; also to Bryant & Stratton Business College, 80 Randolph street, Chicago; also to American Correspondence Schools, Chicago; also to La Salle Extension University, Chicago. A few of the state universities teach advertising by residence courses; obtain particulars from your own, also from others in states near yours. We suggest that you purchase two or three modern books on advertising, which would be a wise expenditure of money, and the careful study of them a wise expenditure of time. For names of books write Editor *Advertising and Selling Magazine*, 95 Madison avenue, New York; also Editor *System*, Wabash avenue and Madison street, Chicago.

Mr. L. S. G., Pennsylvania. "I am proprietor and mahager of a business yielding a good living, but uncongenial to me personally, and lacking a future in this place. Unsettled war time conditions force me to make a change. I would rather take up a new line of work. Is it possible for a man of thirty-five to do that successfully when he has a family to support? Can you advise me?"

We do not believe you could take up a new work entirely different from that in which you have gained your experience. But the knowledge and training you possess can doubtless be utilized in some related business or profession that allows you to express your tastes and employ your talents without losing the benefit of your previous training. What do you know, and what can you do, in a general business way, outside the purely technical limits of your work? Put the answer on paper, itemized. Then procure Holmes W. Merton's "How to Choose a Vocation," published by Funk & Wagnalls Company, Fourth avenue, New York.

A number of metropolitan dailies run special columns advertising positions for high-grade men. Thus in New York the *Mail* features a department of this kind, also the *Globe*; in Pittsburgh the *Sunday Press* has such a column. Investigate these. You might find an opening thru the "Employment Department" of *System Magazine*, or thru the advertising pages of your own trade journals. There are a few concerns that specialize in placing first-class business and professional men; write for particulars to National Employment Exchange, 30 Church street, New York; also to Business Service Company, Park Building, Pittsburgh; also to R. W. Bixby, South Niagara Square, Buffalo, New York.

Mr. A. H., Wyoming. "I always read with great interest your Independent articles and Question Box. They seem helpful toward greater efficiency in both individual and national life. But in your answer to number 422 you say: 'Away inquire first of your local dealers—encourage home trade and solve your own problem at the same time.' I am unable to see why one should do this. Why encourage this most inefficient and wasteful system of goods distribution, as in this town for instance, where the needs of five or six thousand people are supplied by two or more retail stores? Possibly I have overlooked some phase of the problem, but expect you to advise a greater concentration of goods in one place, as is accomplished by the retail stores of the big city. Is my point well taken?"

Yes—and no. We were advising a housekeeper who wanted to know where to buy most cheaply and satisfactorily. It is better to buy at home when you can, for these reasons; your purchasing money is kept in your home town where it was earned and should be spent if possible; you can examine goods before buying, thus avoid error and dissatisfaction liable to occur in mail orders; you can buy more

cheaply on cash-and-carry basis, now recommended by the Council of National Defense; and home products usually need a short haul, with transportation and fuel saved.

But you are right in condemning the wasteful distribution system that allows three stores in every town for every one that ought to be there. If a storekeeper and not a customer had written us, we should have dwelt on the folly of the system, and the need and method of cure.

A Reader from Iowa. "A young girl who frequently comes to me for advice is ambitious to become a fine conversationalist, just as a friend of hers wants to become a fine pianist. The girl has ability and I want to help her develop it. Is there any book on the art of conversation?"

G. P. Putnam's Sons, 2 West Forty-fifth street, New York, publish a Word Book; the Egerton Press, North Eleventh street, Philadelphia, publish a book entitled "Good English"; Sturgis-Walton Company, 31 East Twenty-seventh street, New York, publish "Good English in Good Form," by Dora K. Ranous; Funk & Wagnalls Company, Fourth avenue, New York, publish a number of books on Business English and Polite Conversation—get a catalog. Your friend should find good suggestions in a periodical such as *Correct English*, edited by Josephine Turek Baker at Evanston, Illinois.

Your friend must remember, however, that the purpose of language is to express thought and feeling—not to sound pretty.

Prof. E. C. W., Texas. "Many of the young people of our city, from primary grade children to college students, have become interested in War Savings Stamps, Liberty Bonds, and other forms of patriotic investment. As a teacher who realizes the value of education in money matters, I should like to use the interest now prevailing and teach our boys and girls how to handle money properly all thru life. There has never been so good an opportunity as now. Can you suggest a few books that our pupils may read, later writing compositions on them, or conducting debates?"

Your plan is a mighty good one. The beginning of solid self-respect is a bank book filled with the records of your own labor and sacrifice. Every boy and girl twelve years or over should possess one.

Books for your purpose: MacGregor's "Book of Thrift," published by Funk & Wagnalls, Fourth avenue, New York; Kirkpatrick's "Use of Money," published by Bobbs Merrill, Indianapolis. A special thrift campaign for use in the public schools of America is under way, engineered by the American Society for Thrift, aided by the National Education Association. For particulars write Henry R. Daniel, secretary American Society for Thrift, 6 North Clark street, Chicago. Ask Milton W. Harrison, War Savings Association Department, National War Savings Committee, Washington, D. C., for directions on founding a War Savings Association in your school or city.

A Mother from Virginia. "How can we prevent the marriage of our daughter to a young man whom we think unsuited to her and unworthy of her? Both are of age. Our daughter is young for her years, never was engaged before, she is romantic but headstrong. We do not want to make a mistake ourselves, in trying to prevent her mistake. What can we do?"

Don't antagonize her. Make your daughter feel your desire to cooperate with her in every way possible. Try to get her to wait a year; show her exactly how a little postponement will be to the advantage of both young people; offer inducements for delay, without seeming to be anxious for it. Then fill the girl's life with other interests. Arrange to have her meet as many young men as possible, without making the endeavor apparent. Have her read with her young man books on music, poetry, or on other topics that

will show how far he is lacking in appreciation of the things she loves. Let her see him at his worst. But don't overdo all this—maybe you are wrong and the young people right.

Miss A. B. W., California. "Am between thirty-five and forty years old, Y. W. C. A. secretary, formerly high school teacher. My ultimate purpose is to be a director or supervisor of religious education in the church. Don't know how or where to begin. Want to be more thoroly efficient, to earn more and manage better so as to give more to mother and sister dependent on me. Can you help me?"

One of the noted specialists in religious education is Prof. Walter S. Athearn, Malden, Mass.; obtain his advice. You need special training. Possibilities may develop thru correspondence with these institutions: Religious Education Association, 332 South Michigan avenue, Chicago; Community School of Religious Education, Des Moines, Iowa; School of Religious Education, Boston University, Boston, Massachusetts; Dwight L. Moody School, Northfield, Massachusetts; Religious Training School, Lake Geneva, Wisconsin; Missionary Training Institute, Nyack, New York; Missionary Education Movement, 156 Fifth avenue, New York; Church and School Social Service Bureau, 80 Fifth avenue, New York; Social Service Commission, Federal Council of Churches in America, 105 East Twenty-second street, New York.

Prof. H. E. S., Pennsylvania. "Am high school principal forty-seven years old, free from regular duties from July 1 to September 1. Want to serve my country during the summer in mechanical, clerical or other capacity. Like wood-work, have had mechanical training. Could I be useful in helping to build wooden ships?"

During the next year the United States must raise a shipbuilding army of nearly 500,000 men. From Philadelphia to the sea, quite near you, more than a score of shipbuilding yards now are located. You might well plan to serve in one of these. Application service blanks should be obtainable from your county chairman of the Council of National Defense. Or, apply to Secretary Wilson of the U. S. Department of Labor, Washington, D. C., or to Chairman Hurley of the United States Shipping Board, Washington, D. C. A broad view of the different kinds of patriotic civilian service, with application blank, may be had from the director of the United States Public Service Reserve, Washington, D. C.

Miss A. F., Connecticut. "Please tell me where I may secure information in regard to position as secretary to a writer, a publisher, or a manufacturer. What course of procedure should I undertake to secure the desired position?"

You say nothing about your training or experience; but as your short letter discloses three mistakes in punctuation, we assume that you need knowledge and skill more than you need a position.

Go over the back files of *The Independent*, and particularly note lists of secretarial schools in New York, whose literature you should obtain. Find where the private secretaries in your home town procured their training.

Your technical library and personal equipment should be based on books like the following: "Modern Filing Systems," from Yawman & Erbe, Rochester, New York; "Cutting Stenographic Costs," from Remington Typewriter Company, 327 Broadway, New York; "The Ambitious Woman in Business," from Funk & Wagnalls Company, 354 Fourth avenue, New York; books on secretarial work and office management from A. W. Shaw Company, Wabash avenue and Madison street, Chicago; "The Secret of Typewriting Speed," by Margaret C. Owen, world's champion typist, from Forbes & Company, 527 Fifth avenue, New York.

# THE TRUCKS ARE COMING

## What the Motor Industry Has Done and Is Doing to Meet the Need for Efficient Transportation

**T**HE year 1917 has been the greatest in the history of the motor truck industry," says *The Commercial Vehicle* in its issue of January 1, 1918, from which we reprint the data given on this page.

"Approximately 190,000 trucks, exclusive of converted passenger car attachments, were manufactured during the twelve months of 1917. This tremendous production is an increase of almost 100 per cent as compared with the production of 1916. In actual figures it is an increase of 94 per cent.

"During the eight-year period between 1910 and 1917, the motor truck production has increased from 9,500 to 190,000, a net gain of 180,500. Thus in one short eight-year period, the production of trucks in the United States has increased exactly twenty times.

"The great growth of the motor truck industry as expressed by the 1917 production indicates that the industry is a most virile one, with an extremely rosy future for the years to come.

"It is no longer a baby among industries, but has grown into one which may be likened to a full-grown man.

"The present war has been a blessing in disguise to the motor truck industry. The war has been the cause of the rapid growth during 1916 and 1917, which under normal conditions would have required from five to ten years. The work of our trucks abroad opened the eyes of the world in general to the great value and advantages of motor truck transportation. While our own Government was slow to heed the lessons taught abroad, it is now committed to the most auspicious program of motor truck construction and standardization of any of the nations of the world. It is a fact that the United States Army in one short year has laid plans which will turn it from the least-motorized army into the best-motorized army in the world.

"Of the 1917 production of trucks approximately 12,000 were exported; 25,000 put into Government service of all kinds and 153,000 into commercial service. The concise figures on motor truck exports during the first ten months of 1917 show that 11,696 commercial vehicles, valued at \$30,488,315, were shipped abroad. This was a loss of 4224 trucks valued at \$10,554,570, as compared with the corresponding period of 1916. The approximate number of 25,000 trucks taken by our various Government departments during 1917 is a clear gain, as very few trucks were put into Government service during 1916.

"The 153,000 of our trucks which went into service in this country in 1917 marked the greatest stride which has ever been made in the history of vehicular transportation in America. In 1916 the domestic consumption of trucks was 78,000 so that the 1917 consumption was 75,000 greater or an increase of almost 100 per cent.

"These trucks were put into a great many businesses, some of which had never used trucks before. They included contractors, coal merchants, ice dealers, the public utilities corporations, oil refiners and wholesalers and retailers in almost every conceivable line of trade.

"It is this great diversified distribution of trucks which has made possible last year's greatly increased production. It is also a good indication that the estimated produc-

THE RECORD OF 1917	
Total production .....	190,000
Sale value of trucks produced .....	\$382,916,500
Total exports .....	11,696
Export valuation .....	\$30,488,315
1917 domestic consumption .....	153,000
1916 domestic consumption .....	78,000
Increase of 1917 in domestic consumption .....	75,000
Trucks in domestic use...	351,000
Planned production for 1918 .....	310,000

tion of 310,000 trucks for this year will be reached and with perhaps some to spare.

### THE TRUCK'S FUTURE

"The future of the motor truck industry is assured. Notwithstanding the tremendous increase in the production of commercial vehicles during 1917, the year 1918 promises even a greater production. Of the 190,000 trucks manufactured in 1917, approximately 153,000 went into commercial service in this country. The purchasers of these trucks have been firmly convinced and sold on the idea of motor vehicle transportation. They are bound to buy more trucks in 1918.

"One of the most pleasing features of the sale of the 153,000 trucks in the United States during 1917 is the fact that they have gone into almost every conceivable line of business. No one particular industry stands out above all the others. Contractors, handlers of the necessities of life, including all kinds of food products, and coal, wood and ice, have been large buyers of trucks during the past year. All kinds of retail merchants have been forced, more or less, to motorize on account of the high price and great scarcity of the horseflesh upon which they formerly depended for the delivery of their goods.

"The greater demand for animals of all kinds by our Government, notwithstanding its great purchases of motor vehicles, will make it still more difficult to buy horses for commercial uses in 1918. Taking all in all, the year 1918 holds forth the greatest promises for expansion of any year in the entire annals in the motor truck industry.

### OVERLAND HAULS WILL INCREASE

"Overland haulage in the United States is bound to increase during 1918 as compared with 1917. Overland haulage really came into its own for the first time during the past year. The establishment of lines between Akron, Ohio, and Boston, Massachusetts, and between New York and Philadelphia, will be the stepping stones upon which the great overland haulage organizations of the future will be built.

"Of perhaps the greatest importance in this work is the decision of several states to keep the country roads open all the year round. The work of the Highways Transport Committee of the Council of National Defense to obtain priority rulings for road-building material to keep the main routes in needed repair will also be of great value to the commercial truck user during 1918. Motor trucks without suitable roads are of little avail as economical handlers of goods, altho this does not mean they cannot be used except where the roads are above par. It does mean that the better the roads the cheaper the cost of hauling one ton one mile. We must have better roads. The vital overland routes must be kept up.

### FARMERS MUST MOTORIZE

"Farmers must motorize. The great shortage of labor, the great railroad congestion and the great necessity of producing more food than ever before will force the farmers of the United States to buy more trucks than in any previous year.

"So far, the market for farming motor trucks has only been scratched. While the motor truck transportation idea has been sold permanently in the great industrial centers of our country, it has not been so sold to the farmers.

"Many farmers still hesitate to buy trucks. This undoubtedly has been due to their great familiarity with horse haulage of all kinds in farming pursuits and a lack of knowledge as to how and in what manner trucks may be successfully employed in farm work. The great scarcity of horses at the present time is forcing the farmer to motorize for all of his work.

"There are about 34,000 farm tractor users in the United States. With the present unusual demand for food, it is estimated that the total number of farm tractors in use by 1928 will be close to 700,000. This seems a marvelous growth, yet it is but a drop in the bucket as compared with the potential market for motor trucks. Government statistics tell us that there are approximately 6,500,000 farms, on 4,500,000 of which motor trucks should be performing work which is now being done less economically and more laboriously by horses. The positive necessity of increasing our food production during 1918 makes this year the entering wedge of the motor truck manufacturer into this great farm market.

"The sales of trucks in this field will be augmented by reason of the railroad congestion which is bound to increase as our war preparation goes forward. The farmer in 1918 will have no time to spend days at a time on one or two trips to market with horses when motor trucks can haul the same amount of goods in hours instead of days. The motor farm tractor offers the only means for increased production and the motor truck the only means for increased and wider distribution of that greater production.

### WAR TRUCK STANDARDIZATION

"The standardization of the United States war trucks promises to have the greatest effect on the commercial vehicle industry of any development during the year 1917. While admittedly designed for conditions more strenuous than usually encountered in commercial service, many of the ideas incorporated into our war trucks undoubtedly will be seen in our 1918 commercial trucks. The getting together of the best brains of the motor truck industry to design war trucks for a special purpose has been one of the leading high lights of the year, especially when it is considered that these same men have been heretofore in the most severe competition with one another.

"Perhaps the biggest thing done in our war truck standardization has been the design of the Class AA truck, since that vehicle is adapted not only to the uses of the Quartermaster Corps, by which it was designed but also to the work of the Navy, Marine Corps, Bureau of Docks, Signal Corps, Medical Corps, Post Office, and even as an army officers' car with a passenger car body."

## EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## THE PARTY AT THE RED HOUSE

HOW altogether delightful it is when friends and neighbors join in a happy, care-free social evening, with Good Cheer on every side, with smiling faces, laughter, music, happy talk, and joyful dancing! A great reception where most are strangers, where individuals feel lost, and look eagerly for friendly faces—however grand the place, however lavish the cost, however beautiful the costumes—is insignificant in contributing to happiness, as compared with an old-fashioned country “party,” where neighbors greet and are happy, drawing on the friendship of the years.

George Eliot, the pen name of Mary Ann Evans (1819-1880), the greatest woman novelist England has produced, was born on a farm, and spent much of her life in country surroundings. Altho she is a psychological novelist, closely analyzing the minds of her characters, she is also a country novelist, for in “*Silas Marner*,” “*Adam Bede*,” “*The Mill on the Floss*,” “*Middlemarch*” and other works, she tells intimately of country life.

THERE was a buzz of voices through the house, as Miss Nancy entered, mingled with the scrape of a fiddle preluding in the kitchen.

There was hardly a bedroom where feminine compliments were not passing and feminine toilets going forward, in various stages, in space made scanty by extra beds spread upon the floor; and Miss Nancy, as she entered the Blue Room, had to make her little formal courtesy to a group of six. On the one hand, there were ladies no less important than the two Miss Gunns, the wine-merchant's daughters from Lytherly, dressed in the height of fashion, with the tightest skirts and the shortest waists, and gazed at by Miss Ladbrook (of the Old Pastures) with a shyness not unsustained by inward criticism. On the other hand, Mrs. Ladbrook was standing in skull-cap and front, with her turban in her hand, courtesying and smiling blandly and saying, “After you, ma'am,” to another lady in similar circumstances, who had politely offered the precedence at the looking-glass.

Nancy was formally introduced to her aunt's visitors, the Miss Gunns, as being the daughters of a mother known to their mother, though now for the first time induced to make a journey into these parts; and these ladies were so taken by surprise at finding such a lovely face and figure in an out-of-the-way country place, that they began to feel some curiosity about the dress she would put on when she took off her joseph.

Three of the ladies quickly retired, but the Miss Gunns were quite content that Mrs. Osgood's inclination to remain with her niece gave them also a reason for staying to see the rustic beauty's toilet. And it was really a pleasure from the first opening of the handbox, where everything smelt of lavender and rose-leaves, to the clasping of the small coral necklace that fitted closely round her little white

neck. Everything belonging to Miss Nancy was of delicate purity and nattiness: not a crease was where it had no business to be, not a bit of her linen professed whiteness without fulfilling its profession; the very pins on her pincushion were stuck in after a pattern from which she was careful to allow no aberration; and as for her own person, it gave the same idea of perfect unvarying neatness as the body of a little bird. It is true that her light-brown hair was cropped behind like a boy's, and was dressed in front in a number of flat rings, that lay quite away from her face; but there was no sort of coiffure that could make Miss Nancy's cheek and neck look otherwise than pretty; and when at last she stood complete in her silvery twilled silk, her lace tucker, her coral necklace, and coral ear-drops, the Miss Gunns could see nothing to criticise except her hands, which bore the traces of butter-making, cheese-crushing, and even still coarser work.

The anxiety about sister Priscilla, which had grown rather active by the time the coral necklace was clasped, was happily ended by the entrance of that cheerful-looking lady herself, with a face made blowsy by cold and damp. After the first

In “*Silas Marner*” George Eliot tells so vividly of a country party that we know her work is based on reality. Squire Cass, “the greatest man in Raveloe,” opens “*The Red House*” to all his friends. The New Year party brings together a group of neighbors of long standing.

In the wainscoted parlor hung with holly and yew and laurel, we see the hospitable, noisily-jovial Squire, the merry-eyed Rector, blinking Mrs. Crackenthorp, the agile busybody, Dr. Kimble, and the Squire's son, Godfrey, who is in love with one of the guests, beautiful Nancy Lam-meter, daughter of a prosperous landowner. We see stately curtsies, coral necklaces and coral ear-drops. We catch the odor of rose-leaves and lavender. We hear old Solomon Macey, the white-haired fiddler, play long-forgotten tunes—“*The Flaxen-haired Cowboy*” and “*Over the Hills and Far Away*.” The dance begins, and the old vie with the young. Happiness reigns supreme in this evening long ago in Merry England.

questions and greetings, she turned to Nancy, and surveyed her from head to foot—then wheeled her round, to ascertain that the back view was equally faultless.

“What do you think o' these gowns, aunt Osgood?” said Priscilla, while Nancy helped her to unrobe.

“Very handsome indeed, niece,” said Mrs. Osgood, with a slight increase of formality. She always thought niece Priscilla too rough.

“I'm obliged to have the same as Nancy, you know, for all I'm five years older, and it makes me look yellow; for she never *will* have anything without I have mine just like it, because she wants us to look like sisters. And I tell her, folks 'ull think it's my weakness makes me fancy as I shall look pretty in what she looks pretty in. For I *am* ugly—there's no denying that. But, law! I don't mind, do you?” Priscilla here turned to the Miss Gunns, rattling on in too much preoccupation with the delight of talking, to notice that her candor was not appreciated. “The pretty uns do for fly-catchers—they keep the men off us. I've no opinion o' the men. Miss Gunn—I don't know what you have. And as for fretting and stewing about what *they'll* think of you from morning till night, and making your life uneasy about what they're doing when they're out o' your sight—as I tell Nancy, it's a folly no woman need be guilty of, if she's got a good father and a good home: let her leave it to them as have got no fortin, and can't help themselves. As I say, Mr. Have-your-own-way is the best husband, and the only one I'd ever promise to obey.”

The delicate process of getting her narrow gown over her head without injury to her smooth curls, obliged Miss Priscilla to pause in this rapid survey of life, and Mrs. Osgood seized the opportunity of rising and saying:—

“Well, niece, you'll follow

It was in the little village Raveloe where Squire Cass, its “greatest man,” opened “*The Red House*” on New Year's Eve to all his friends

*"How did we do it—before we had the Mimeograph?"* queries her boss. "It has cut down our operating staff and our office expense. But better still, it has saved great chunks of *precious time*—and that's what counts now." The Mimeograph prints *better* letters, forms, blanks, etc.—with diagrams and illustrations if you wish—*quicker* than ever before. Let us show you. *A word of caution:* The Edison-Dick Mimeograph and the supplies which we manufacture for it are made *to work together*. Upset this relationship, the work suffers, and our responsibility for its quality and output ceases. Substitute inferior supplies and the result is the sure waste of both valuable time and materials. You do not know what splendid work the Mimeograph can do unless you have seen the new Mimeograph operating under proper conditions. Write for booklet "E"—today. A. B. Dick Company, Chicago—and New York.

us. The Miss Gunns will like to go down."

As the two Miss Lammeters walked into the large parlor together, any one who did not know the character of both, might certainly have supposed that the reason why the square-shouldered, clumsy, high-featured Priscilla wore a dress the fac-simile of her pretty sister's, was either the mistaken vanity of the one, or the malicious contrivance of the other in order to set off her own rare beauty. But the good-natured self-forgotten cheeriness and common-sense of Priscilla would soon have dissipated the one suspicion; and the modest calm of Nancy's speech and manners told clearly of a mind free from all disavowed devices.

Places of honor had been kept for the Miss Lammeters near the head of the principal tea-table in the wainscoted parlor, now looking fresh and pleasant with handsome branches of holly, yew, and laurel, from the abundant growths of the old garden; and Nancy felt an inward flutter, when she saw Mr. Godfrey Cass advancing to lead her to a seat between himself and Mr. Crackenthorp, while Priscilla was called to the opposite side between her father and the Squire. Nothing but a becoming blush betrayed the moving thoughts that urged themselves upon her as she accepted the seat next to Mr. Crackenthorp; for she was so instinctively neat and adroit in all her actions, and her pretty lips met each other with such quiet firmness, that it would have been difficult for her to appear agitated.

It was not the Rector's practice to let a charming blush pass without an appropriate compliment. He was not in the least lofty or aristocratic, but simply a merry-eyed, small-featured, grey-haired man, with his chin propped by an ample many-creased white neckcloth which seemed to predominate over every other point in his person, and somehow to impress its peculiar character on his remarks; so that to have considered his amenities apart from his cravat would have been a severe, and perhaps a dangerous, effort of abstraction.

"Ha, Miss Nancy," he said, turning his head within his cravat, and smiling down pleasantly upon her, "when anybody pretends this has been a severe winter, I shall tell them I saw the roses blooming on New Year's Eve—eh, Godfrey, what do you say?"

Godfrey made no reply, and avoided looking at Nancy very markedly; for though these complimentary personalities were held to be in excellent taste in old-fashioned Raveloe society, reverent love has a politeness of its own which it teaches to men otherwise of small schooling. But the Squire was rather impatient at Godfrey's showing himself a dull spark in this way. By this advanced hour of the day, the Squire was always in higher spirits than we have seen him in at the breakfast-table, and felt it quite pleasant to fulfil the hereditary duty of being noisily jovial and patronizing: the large silver snuff-box was in active service, and was offered without fail to all neighbors from time to time, however often they might have declined the favor. At present the Squire had only given an express welcome to the heads of families as they appeared; but always as the evening deepened, his hospitality rayed out more widely, till he had tapped the youngest guests on the back, and shown a peculiar fondness for their presence, in the full belief that they must feel their lives made happy by their belonging to a parish where there was such a hearty man as Squire Cass to invite them and wish them well. Even in this early stage of the jovial mood, it was natural that he should wish to supply his son's

deficiencies by looking and speaking for him.

"Ay, ay," he began, offering his snuff-box to Mr. Lammeter, who for the second time bowed his head and waved his hand in stiff rejection of the offer. "us old fellows may wish ourselves young to-night, when we see the mistletoe-bough in the White Parlor. It's true, most things are gone back'ard in these last thirty years—the country's going down since the old king fell ill. But when I look at Miss Nancy here, I begin to think the lasses keep up their quality;—ding me if I remember a sample to match her, not when I was a fine young fellow, and thought a deal about my pigtail. No offence to you, madam," he added, bending to Mrs. Crackenthorp, who sat by him, "I didn't know you when you were as young as Miss Nancy here."

Mrs. Crackenthorp—a small blinking woman, who fidgeted incessantly with her lace, ribbons, and gold chain, turning her head about and making subdued noises, very much like a guinea-pig that twitches its nose and soliloquizes in all company indiscriminately—now blinked and fidgeted towards the Squire, and said, "Oh, no—no offence."

THIS emphatic compliment of the Squire's to Nancy was felt by others beside Godfrey to have a diplomatic significance; and her father gave a slight additional erectness to his back, as he looked across the table at her with complacent gravity. That grave and orderly senior was not going to bate a jot of his dignity by seeming elated at the notion of a match between his family and the Squire's: he was gratified by any honour paid to his daughter. His spare but healthy person, and high-featured firm face, that looked as if it had never been flushed by excess, was in strong contrast, not only with the Squire's, but with the appearance of the Raveloe farmers generally—in accordance with a favorite saying of his own, that "breed was stronger than pasture."

"Miss Nancy's wonderful like what her mother was, though; isn't she, Kimble?" said the stout lady of that name, looking round for her husband.

But Dr. Kimble (country apothecaries in old days enjoyed that title without authority of diploma), being a thin and agile man, was flitting about the room with his hands in his pockets, making himself agreeable to his feminine patients, with medical impartiality, and being welcomed everywhere as a doctor by hereditary right. Time out of mind the Raveloe doctor had been a Kimble; Kimble was inherently a doctor's name; and it was difficult to contemplate firmly the melancholy fact that the actual Kimble had no son, so that his practice might one day be handed over to a successor with the incongruous name of Taylor or Johnson.

"Did you speak to me, my dear?" said the authentic doctor, coming quickly to his wife's side; but, as if foreseeing that she would be too much out of breath to repeat her remark, he went on immediately—"Ha, Miss Priscilla, the sight of you revives the taste of that super-excellent pork-pie. I hope the batch isn't near an end."

"Yes, indeed, it is, doctor," said Priscilla; "but I'll answer for it the next shall be as good. My pork-pies don't turn out well by chance."

"Not as your doctoring does, eh, Kimble?—because folks forget to take your physic, eh?" said the Squire, who regarded physic and doctors as many loyal churchmen regard the church and the clergy—tasting a joke against them when he was in health, but impatiently eager for their aid when

anything was the matter with him. He tapped his box, and looked round with a triumphant laugh.

"Ah, she has a quick wit, my friend Priscilla has," said the doctor, choosing to attribute the epigram to a lady rather than allow a brother-in-law that advantage over him. "She saves a little pepper to sprinkle over her talk—that's the reason why she never puts too much into her pies. There's my wife, now, she never has an answer at her tongue's end; but if I offend her, she's sure to scarify my throat with black pepper the next day, or else give me the colic with watery greens. That's an awful tit-for-tat." Here the vivacious doctor made a pathetic grimace.

"Did you ever hear the like?" said Mrs. Kimble, laughing above her double chin with much good-humour, aside to Mrs. Crackenthorp, who blinked and nodded, and amiably intended to smile, but the intention lost itself in small twitchings and noises.

"I suppose that's the sort of tit-for-tat adopted in your profession, Kimble, if you've a grudge against a patient," said the Rector.

"Never do have a grudge against our patients," said Mr. Kimble, "except when they leave us; and then, you see, we haven't the chance of prescribing for 'em. Ha, Miss Nancy," he continued, suddenly skipping to Nancy's side, "You won't forget our promise? You're to save a dance for me, you know."

"Come, come, Kimble, don't you be too for'ard," said the Squire. "Give the young uns fair-play. There's my son Godfrey 'll be wanting to have a round with you if you run off with Miss Nancy. He's bespoke her for the first dance. I'll be bound. Er, sir! what do you say?" he continued, throwing himself backward, and looking at Godfrey. "Haven't you asked Miss Nancy to open the dance with you?"

"No; I've not asked her yet, but I hope she'll consent—if somebody else hasn't been before me."

"No, I've not engaged myself," said Nancy, quietly, though blushing.

"Ah, well, you're a lucky fellow, Godfrey," said uncle Kimble; "but you're my godson, so I won't stand in your way. Else I'm not so very old, eh, my dear?" he went on, skipping to his wife's side again. "You wouldn't mind my having a second after you were gone—not if I cried a good deal first."

"Come, come, take a cup o' tea and stop your tongue, do," said good-humored Mrs. Kimble, feeling some pride in a husband who must be regarded as so clever and amusing by the company generally.

WHILE safe, well-tested personalities were enlivening the tea in this way, the sound of the fiddle approaching within a distance at which it could be heard distinctly, made the young people look at each other with sympathetic impatience for the end of the meal.

"Why, there's Solomon in the hall," said the Squire, "and playing my fa'vrite tune. I believe—'The flaxen-headed ploughboy'—he's for giving us a hint as we aren't enough in a hurry to hear him play. Bob," he called out to his third long-legged son, who was at the other end of the room, "open the door and tell Solomon to come in. He shall give us a tune here."

Bob obeyed, and Solomon walked in, fiddling as he walked, for he would on no account break off in the middle of a tune.

"Here, Solomon," said the Squire with loud patronage, "Round here, my man. Ah, I knew it was 'The flaxen-headed ploughboy': there's no finer tune."

Solomon Macey. [Continued on page 467]

## Pebbles

"Ask the waiter what's good today."  
"You're living in the past. Ask him what's allowed."—*Louisville Courier-Journal*.

Traveler—How much is my bill?  
Clerk—What room?  
Traveler—I slept on the billiard-table.  
Clerk—Fifty cents an hour. *Purple Cow*.

Tim—Are you going to Alice's birthday party?  
Tom—What birthday is it?  
Tim—Her twentieth.  
Tom—No, I went last year —*Froth*.

In a hamlet near Ashford, boasting only nine inhabitants, the following notice has been posted up by the authorities: "In the event of an air-raid do not collect in a crowd."—*New York Sun*.

Norah—The lady next door wants to borrow a scuttle of coal, mum.  
Mistress—Tell her, Norah, that we are already borrowing our coal from the people on the other side of us.—*Boston Transcript*.

One of the girl ushers in a Flatbush theater had a problem offered her the other evening. She was showing two women to their seats.  
"Is the show this evening fit for church women to see?" asked one of the pillaresses of a Flatbush congregation.  
"I—I don't know," responded the girl. Then she brightened. "You see," she said. "I don't have no time to go to church."—*New York Mail*.

Mr. Younghusband reached home late for dinner.  
"I got caught for speeding on the way home," he explained rather sheepishly. "Have to appear tomorrow morning and get 'ten dollars or fifteen days.'"  
Mrs. Younghusband fervently clapped two blistered little hands.  
"What a providence!" she cried devoutly. "Take the fifteen days, John! The cook has just left!"—*Harper's Magazine*.

The Pessimistic Half (to hubby at breakfast)—. . . and it looks as tho it's going to rain for a week (*breath*). There's no letter from France again, dear; only a few bills (*breath*). I'm so sorry but I couldn't get any bacon for breakfast, or sugar, or even margarine (*breath*). The war news looks frightfully black. Would you like to see the paper? (*breath*). Ellen gave notice this morning. Fido was sick in the kitchen last night and . . . Haven't you had a good night, dear? You don't look very bright this morning!—*Passing Show*.

The librarian at a certain museum was engaged in cataloging and arranging some ancient books that had just arrived from Egypt, when he noticed a perplexed look on the face of his assistant.  
"What's the matter, Brown?" he asked. "Is there anything that you don't understand?"  
"Yes," answered Brown. "Here is a small papyrus on which the characters are not decipherable. How shall I class it?"  
"Nm," thoughtfully returned the librarian, examining the papyrus. "Suppose you call it doctor's prescription in time of Pharaoh!"—*Arguan*.

A New York lawyer tells of a conversation that occurred in his presence between a bank president and his son who was about to leave for the West, there to engage in business on his own account.  
"Son," said the father, "on this, the threshold of your business life, I desire to impress one thought upon your mind: Honesty, ever and always, is the policy that is best."  
"Yes, father," said the young man.  
"And, by the way," added the gray-beard, "I would advise you to read up a little on corporation law. It will amaze you to discover how many things you can do in a business way and still be honest."—*Harper's Magazine*.

# Quaker Oats Paid for the Gown

Quaker Oats this year will save housewives, we figure, some \$25,000,000. And this is how it happens:

Pound for pound Quaker Oats yields twice the nutrition of round steak. And it is ideal nutrition, with every needed element in just the right proportion.

Other foods, for the same food units, cost about as follows:

**Eggs Cost 10 Times as Much**  
**Meat—on the Average—Costs 8 Times as Much**  
**Average Mixed Diet Costs 4 Times as Much**

A whole week's breakfasts on Quaker Oats cost the same as one bacon-and-egg breakfast. Yet the oat, with its wealth of flavor, is Nature's most delightful grain.

Make Quaker Oats your basic food. Make it the entire breakfast. Mix it with your flour foods—for added flavor and to save the wheat. Every package of Quaker Oats saves many times its cost.

# Quaker Oats

## The Superlative Flakes

In Quaker Oats you get the extra flavor without any extra cost. All this exquisite bran flakes are made from just the choicest, lusci-  
ous oats. All the husks and grain

are discarded. A bushel of choice oats yields ten pounds of Quaker Oats. When such oats are sold at the Quaker Oats price, you should make sure to get them.

12c and 30c per package in the United States, except in Far West and South where high freights may prohibit.

## THE FOOD FIGHT

(Continued from page 455)

are inclined to nervous weakness and disorder. Fruits and vegetables contain most largely the two classes of food elements that are life-giving and nerve-restoring: namely, vitamins and mineral salts. Moreover, the mild and refreshing acids of fruits and vegetables are a powerful aid in neutralizing the excess of meat and starch that most of us consume. As a form of preventive medicine, the fruit or vegetable is valuable.

**Cook with vegetable fats.** These are always purer than animal fats, more nutritious and more digestible. Lard, cooking butter and pork drippings can be digested and are needed by the soldier, living a tremendously active life. But they retard digestion, lower vitality, tend to cause or aggravate disease, in brain workers. The regular home use of approved cooking oils, olive oil, cottonseed oil, coconut butter, vegetable butter and lard for cooking, is to be highly commended, both now and after the war.

**Use more fowl, fish, game and sea food in place of beef, mutton and pork; do not use either beef, mutton or pork more than once daily.** A large proportion of industrial fatigue is directly caused by surplus meat in the diet.

**Eliminate sweet drinks.** The ice cream soda habit has grown to be a curse to young Americans. If you don't believe it, ask your dentist or physician. Carbonated drinks are mostly bad.

We are not only patriotic in heeding and helping Mr. Hoover. We are sensible, economical, shrewd, far-seeing, capable, resourceful and alert, for ourselves.

Patriotic eating is the one thing every family in the United States can do, should resolve to do, learn to do, remember to do, every day of the week until the war is won. How can your family work out, then carry out, a system of patriotic, beneficial and enjoyable food conservation? To enable you to do this at a minimum of labor and expense, we have prepared a few simple rules, given below. We suggest that you call your family together some evening soon, have this whole article read, with opinion asked from each member of the family. Then go over with a pencil the list of items below, have them all assigned, by lot or choice, to one or more members of the family, check off each item as apportioned: set another evening, perhaps a week ahead, for another conference and report of committees, varying or improving these suggestions according to your environment and judgment.

### FAMILY WAR FOOD PLAN

1. Write the United States Food Administration, Washington, D. C., requesting all available literature on food conservation. Read carefully, follow instructions closely as possible.

2. Write your State College of Agriculture, or Domestic Science or Agricultural Extension Department of your State University, requesting literature and other helps prepared for local distribution throughout your state, in line with war food campaign of the Government. Each state has food problems and conditions peculiar to itself, and the highest nutrition experts of your state should be consulted, in addition to national authorities.

3. Write the Independent War Service Bureau, 119 West Fortieth Street, New York City, requesting sources of information on War Foods.

4. Stop at your grocer's and obtain all the free conservation literature, especially

war food recipe books, that he has for distribution to customers. The wholesale dealers in package cereals, meat substitutes, vegetable fats, household syrups, and other war foods now furnish a number of recipe books to buyers of the foods.

5. Examine the home periodicals and women's journals for special departments of food conservation and war cookery.

6. Hunt thru local newspapers, daily or weekly, for advertisements of grocers, bakers, butchers, confectioners and other food purveyors, who are somehow co-operating with the Government, in featuring war substitutes, or lessening number of deliveries and reducing prices accordingly, or giving other special war service to customers. Buy some of your provisions from these patriotic dealers. If your dealer is not a member of the Food Administration, find one who is.

7. Coöperate with your County Food Committee. If you don't know any of the members, or who the chairman is, ask your mayor, banker, physician, agricultural agent, or newspaper editor.

8. Use the calendar to help you remember to observe wheatless and meatless days.

9. See that your family apportionment of wheat flour is measured and recorded every day of every week or month, and that your baking and cooking amount does not exceed this. The allotment for the individual is four pounds of wheat flour a week. Multiply this by the number in your family, then provide a receptacle for keeping the flour after it is weighed, then have the weighing done for the week or the month on the first day of the week or month. If you buy baker's bread, buns or cakes, or wheat food in cereal packages, or use cooked wheat in any other form, estimate the amount consumed thus, and for each member of the family, pro rata, deduct this amount from the specified allotment of four pounds of wheat flour per capita each week.

10. Weigh out your family sugar likewise, on the first day of the week or month. Every loyal American is asked to confine his sugar allowance in the home to three pounds a month during the war. This does not include candy, or the sugar used in preserved fruits bought from the grocer. But for table and kitchen use, three pounds of sugar a month is ample, even for a large man, doing ordinary work.

11. Systematize your candy money. During the war everybody should keep himself down to a penny a day for candy. A small portion to complete a good dinner twice a week or so is enough candy for a grown person, and thirty cents a month will buy this.

12. Prevent food waste by thoro mastication. Food half chewed is half digested. The remainder, besides being lost, frequently changes to poison in the body, thus producing actual injury. You will need twenty per cent less food when you learn to masticate properly, and do it regularly.

13. Remember that the adoption of the American war diet will produce a gain for you and your family, in health, economy, productivity, mentality, solidarity. Each class of war food substitutes yields a pronounced benefit.

14. Start the fashion of being kind to the stomachs of your visitors. Serve nothing to callers between meals, excepting a hot drink in winter, and in summer a sherbet or an ice, or a glass of lemonade, orange juice or grape juice.

## WHY RUSSIA'S ARMY FELL TO PIECES

(Continued from page 448)

The man was then stood up for two hours in front of the trench for the Germans to shoot at and a squad of fifty men were ordered to defile him. When they refused they were punished by being made to stand at attention for two hours under enemy fire.

Among the officers themselves there was little discipline. They drank heavily, gambled with cards, had loose women in their quarters and disregarded many general orders aiming to regulate their conduct in the interest of the service. Sometimes the men were sent into an unauthorized and utterly hopeless attack by their drunken officers. Scandalous, too, was the neglect of the sick and wounded by those in places of authority. As a result the men hated their officers.

What the soldiers had been thru tended to break down their morale. The lack of weapons was chronic. Before Riga in 1915 there were but half as many rifles as men. In the trenches were a multitude of utterly unarmed men who gained a weapon only when a comrade fell. They were fed well enough and had plenty of cartridges but lacked rifles. On the other hand they had artillery in abundance but lacked ammunition for it. Besides these maddening conditions the soldiers had no idea what they were fighting for. Prussia, Serbia, the Dardanelles were as much beyond their ken as the geography of Mars. Little meaning could the war have for those west-bound Siberian troops who on reaching Omsk supposed they were at the front and at every big town from there on poured out of their box cars ready to repel Germans!

It is clear, then, that the Revolution did not destroy discipline, but made apparent the absence of it.

The makers of the March Revolution knowing that the older and higher officers, while they might despise Nicholas, had no love for a truly democratic social order, hastened to forestall any attempt at an army counter-revolution by telling the soldiers that they were now free citizens and that they must scrutinize every order carefully and obey none which seemed to betray them to the Romanoffs or the Germans. But thus was raised up a Frankenstein. Free citizens! How could the soldiers take this but as meaning they were free of the most oppressive thing in their lives—their military service and obedience? If not that what could the Revolution mean to them?

Gutzkow's famous Order No. 1 to the effect that the rights of the soldiers and those of the officer are the same wiped out all those obligatory distinctions and attentions by which the private was made to feel the superiority of his officer. Then the soldiers were ordered to hold meetings and elect a committee, the chairman of which should be *ex-officio* the commanding officer. To these committees Gutzkow assigned specific functions relating to food, furlough and discipline. All complaints by officers of insubordination on the part of a soldier were referred to this committee and it fixed the punishment. Unfortunately the officers were not democratic in their feelings and manners and in these committees failed to work harmoniously with the men. They lacked skill in carrying their men with them, so that the men formed the habit of outvoting them—which was bad.

The soldiers wanted the higher command purged of certain evil or unworthy officers who had belonged to the secret police or been notorious for brutality to their men

# The History of The Internal Bath

By Charles A. Tyrrell, M.D.

INASMUCH as I have the best of reasons for the statement that Internal Bathing is at the present time being regularly practiced by upward of at least half a million Americans, it may be of somewhat general interest to examine into what is known of its origin, its reason and the recent stages by which it arrived at its present popularity and resultfulness.

Though popularly supposed to be a comparatively modern practice, its usage, in a crude form, is traceable many centuries back, for Pliny in his *Naturalis Historia*, A. D. 79, mentions it as being prescribed by the Ancient Egyptian Physicians to whom its investigation was suggested by the health habits of the Ibis, a bird of the Nile.

These Egyptian Physicians, by the way, were the first medical practitioners known to history, not excepting the Chinese.

And the ancient Egyptians, measured by their accomplishments, seem to have been a pretty healthy, husky people.

Although history does not give much light on the subject in more recent periods, it does mention a widespread use of this treatment throughout Europe in the early part of the Eighteenth Century, especially in France.

The recent resuscitation of this ancient remedial practice dates back to the early forties, when Dr. A. Wilford Hall of New York, after years of public speaking and the authorship of many religious and scientific works, failed in health, rapidly declined and was given by his physicians but a few months to live.

Dr. Hall was not a Doctor of Medicine, but of Philosophy and Laws, and a man of the highest knowledge and attainments. I knew him very well in later years, and he frequently said: "Having had considerable trouble in that way, the idea came to me like an inspiration that if I could keep the colon cleansed of waste matter, I would have at least a better chance of recovery."

Dr. Hall persisted in this treatment, using the crude and laborious method of a bulb syringe, and from that time until his death at the generous age of eighty-two, forty odd years after he had been given up, did his utmost to give the world the benefit of his personal experience.

I arrived in New York City in 1887 after an extended trip through India, China and Japan, and unwisely invested my entire capital in a commercial venture which failed.

More or less indifferent attention to my physical condition and the shock of this experience brought on a second stroke of paralysis in the left side (the first having occurred previously in Hong Kong).

Being helpless I became an inmate of a hospital for a time; was then refused admission to another and fortunately knowing of some of the results of Internal Bathing I resorted to it regularly with such success that in 90 days I was walking about the city.

Impressed by the fact, however, that the method of taking these baths was then crude and imperfect I decided to study, practice and improve on it.

To do this properly and legally I quickly found that I would have to become a Doctor of Medicine.

Entering immediately a medical college, I took a four years' course and graduated with honors.

Not at all a bad commentary on the results of Internal Bathing, considering my condition before entering.

After graduating, I found my experience exactly akin to all those who must educate the public, especially in a matter where most of us are so notoriously careless—Irrregularity.

But I knew from the experience of myself and others that the foundation of a great and revolutionary, though perfectly natural remedy was there.

And that once its results were generally known no power could stop its rapid and universal appreciation.

And so I persevered.

From the smallest of beginnings I found that every "J. B. L. Cascade" which I distributed brought me demand for others—that once the proper administering of the Internal Bath accomplished its result with one patient, he was generously eager to pass his experience along.

And so it grew, and has grown so astoundingly in the past twenty years that I heartily agree with Physicians generally when they claim that "the vast majority of human illnesses are directly or indirectly caused by accumulated waste in the colon."

That also is the direct cause of our frequent loss of spirits and lack of confidence; in other words, our fifty per cent of efficiency.

You will never appreciate this properly except in the clear, eager, confident way you will always feel the morning after an Internal Bath.

In the twenty-five years of my specializing on this Nature's remedy there have developed, as you may imagine, many informing and interesting phases of this treatment. The result of these years of research and practical experience has been summed up in a little book, "The What, The Why, The Way of Internal Bathing," which I will gladly send to any interested person free on request.

Just address Chas. A. Tyrrell, M.D., 134 West 65th St., New York, mentioning that you read this in *The Independent*, and the book will go forward by return mail.

Of course we all want to be well and efficient and stay so without calling upon Drugs to help, if that be possible. There are, as I have said, hundreds of thousands who are already doing this by this purely natural preventive, and the numbers are steadily growing. So it may be that in your own interest it would be well to send for this little book to-day while it is still on your mind.

—Adv.

# Victor WASTE BASKET

ALL VICTOR waste baskets are made of steel, attractively finished in either oak, mahogany or olive green. They have molded rubber cushion corners at the top and all seams are welded together by a patented process.

## A Victor Basket for Every Desk

The Victor basket eliminates all danger of fire if a lighted match, cigarette or cigar, is accidentally thrown into the basket. It will withstand the knocks and hard usage a waste basket usually receives at the hands of a janitor. It is practically indestructible and its long life makes it the cheapest in the long run.

## Ask for the Victor

When you buy a waste basket from your dealer, insist upon getting a "Victor". It is your guarantee that you are getting a basket that cannot be surpassed.

We manufacture a complete line of metal office furniture and suggest that you write for our complete catalog.

**Metal Office Furniture Co.**  
Grand Rapids, Michigan

## TYPEWRITERS

\$10 and Up. All Makes. Save \$25 to \$50 on rental at the factory in the new "Young Process." Good for new cash—replacement or rental. Rental service to purchase price. Write for full details. **YOUNG TYPEWRITER CO. Dept. 665 Chicago**

of hostility to the Revolution. But the generals hung together, as they always had under the Tsar, and the anxious officers remained. The war ministry meant well, but high cabals made its decisions of no effect.

Then the soldiers themselves undertook to delete the bad officers. For example, the Tver garrison demanded that the action of the men in the meeting or by committee should have the effect of suspending an officer until the truth or falsity of the charges had been established in an open trial. The war ministry never recognized such a right in the men, but the Petrograd Soviet did so and even created a committee to consider charges brought by soldiers against their officers. On the other hand, not even the Soviet countenanced the demand voiced from some quarters that the soldiers be given the right to dismiss and elect their officers.

It was the Bolshevist propaganda beginning among the soldiers early in May which gave the finishing blow to the discipline of the army. The Socialist leaders thought it clever policy to take Russia out of the war by softening the soldiers rather than changing the nation's will to fight. They did indeed defeat the intention of their political opponents to carry on the war, but in so doing they fostered the spirit of insubordination until the army was utterly worthless as a fighting force and Russia was left defenseless before the advance of the Germans. By their unscrupulous short-cut to the realization of their pacifist aims, they ruined their country and with it the working class they thought to advance. Not while that horrible instance of misapplied democracy survives in the memory of men will a nation tolerate such a propaganda of disobedience and anarchy among the troops as went on unhindered among the Russian soldiers in the summer and autumn of 1917.

## Capital Copy

Schools, colleges and universities not conducted by the United States or by some state or political subdivision and which are not charitable institutions will be granted baking licenses if they use as much as three barrels of flour and meal a month.

The Fuel Administrators for Maine, Rhode Island, New Hampshire, Vermont, Connecticut and Massachusetts have decided to suspend the operation of "heatless Mondays" under the United States Fuel Administration order of January 17.

The National Society of the Colonial Dames of America has raised \$50,000 for the purpose of equipping the operating rooms of the two hospital ships, "Comfort" and "Mercy," now being fitted out for the use of the navy. The fund was presented thru the Red Cross.

All city, county, state and municipal institutions must make their purchases according to the wheat substitute regulations, the United States Food Administration announces. Purchases of flour for baking bread or rolls must be in the ratio of 4 to 1; for other purposes 50-50.

More than 20,000 binoculars, spy glasses, telescopes, sextants and chronometers have been received by the navy as a result of the appeal sent out by Assistant Secretary Roosevelt for these necessary articles as "needs" for the watch officers serving on vessels in the war zone. Many more are needed.

The United States Food Administration announces that for the present manufacturers and distributors of salted peanuts, roasted or blanched peanuts, and all confections containing peanuts will not be required to obtain licenses. With this exception the handling of peanuts is now subject to license.

THE PARTY AT THE RED HOUSE

(Continued from page 462)

a small, hale old man with an abundant crop of long white hair reaching nearly to his shoulders, advanced to the indicated spot, bowing reverently while he fiddled, as much as to say that he respected the company though he respected the keynote more. As soon as he had repeated the tune and lowered his fiddle, he bowed again to the Squire and the Rector, and said, "I hope I see your honour and your reverence well, and wishing you health and long life and a happy New Year. And wishing the same to you, Mr. Lammeter, sir; and to the other gentlemen, and the madams, and the young lasses."

As Solomon uttered the last words, he bowed in all directions solicitously, lest he should be wanting in due respect. But thereupon he immediately began to prelude, and fell into the tune which he knew would be taken as a special compliment by Mr. Lammeter.

"Thank ye, Solomon, thank ye," said Mr. Lammeter when the fiddle paused again. "That's 'Over the hills and far away,' that is. My father used to say to me, whenever we heard that tune, 'Ah, lad, I come from over the hills and far away.' There's a many tunes I don't made head or tail of; but that speaks to me like the blackbird's whistle. I suppose it's the name: there's a deal in the name of a tune."

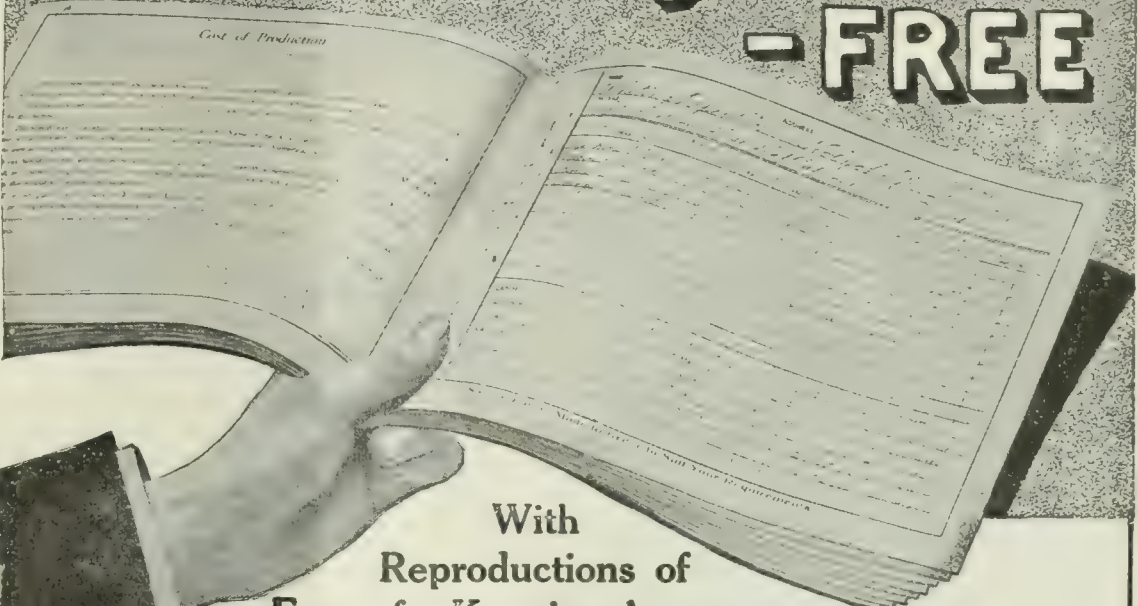

But Solomon was already impatient to prelude again, and presently broke with much spirit into "Sir Roger de Coverley," at which there was a sound of chairs pushed back, and laughing voices.

"Ay, ay, Solomon, we know what that means," said the Squire, rising. "It's time to begin the dance, eh? Lead the way, then, and we'll all follow you."

So Solomon, holding his white head on one side, and playing vigorously, marched forward at the head of the gay procession into the White Parlour, where the mistle-toe-bough was hung, and multitudinous tallow candles made rather a brilliant effect, gleaming from among the berried holly-boughs, and reflected in the old-fashioned oval mirrors fastened in the panels of the white wainscot. A quaint procession! Old Solomon, in his seedy clothes and long white locks, seemed to be luring that decent company by the magic scream of his fiddle—luring the discreet matrons in turban-shaped caps, nay, Mrs. Crackenthorp herself, the summit of whose perpendicular feather was on a level with the Squire's shoulder—luring fair lasses complacently conscious of very short waists and skirts blameless of front folds—luring burly fathers in large variegated waistcoats, and ruddy sons, for the most part shy and sheepish, in short nether garments and very long coat-tails.

Already Mr. Macey and a few other privileged villagers, who were allowed to be spectators on these great occasions, were seated on benches placed for them near the door: and great was the admiration and satisfaction in that quarter when the couples had formed themselves for the dance, and the Squire led off with Mrs. Crackenthorp, joining hands with the rector and Mrs. Osgood. That was as it should be—that was what everybody had been used to—and the charter of Raveloe seemed to be renewed by the ceremony. It was not thought of as an unbecoming levity for the old and middle-aged people to dance a little before sitting down to cards, but rather as part of their social duties. For what were these if not to be merry at appropriate times, interchanging visits and poultry with

# What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 25th year. This paper tells the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what's going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, when once the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

due frequency, paying each other old-established compliments in sound traditional phrases, passing well-trying personal jokes, urging your guests to eat and drink too much out of hospitality, and eating and drinking too much in your neighbor's house to show that you liked your cheer? And the parson naturally set an example in these social duties.

"The Squire's pretty springe, considering his weight," said Mr. Macey, "and he stamps uncommon well. But Mr. Lammeter beats 'em all for shapes: you see he holds his head like a sodger, and he isn't so cushiony as most o' the oldish gentlefolks—they run fat in general; and he's got a fine leg. The parson's nimble enough, but he hasn't got much of a leg: it's a bit too thick down'ard, and his knees might be a bit nearer wi'out damage; but he might do worse, he might do worse. Though he hasn't that grand way o' waving his hand as the Squire has."

"Talk o' nimbleness, look at Mrs. Osgood," said Ben Winthrop, who was holding his son Aaron between his knees. "She trips along with her little steps, so as nobody can see how she goes—it's like as if she had little wheels to her feet. She doesn't look a day older nor last year: she's the finest-made woman as is, let the next be where she will."

"I don't heed how the women are made," said Mr. Macey, with some contempt. "They wear nayther coat nor breeches: you can't make much out o' their shapes."

"Fayder," said Aaron, whose feet were busy beating out the tune, "how does that big cock's feather stick in Mrs. Crackenthorp's head? Is there a little hole for it, like in my shuttlecock?"

"Hush, lad, hush; that's the way the ladies dress theirselves, that is," said the father, adding, however, in an undertone to Mr. Macey, "It does make her look funny, though—partly like a short-necked bottle wi' a long quill in it. Hey, by jingo, there's the young Squire leading off now, wi' Miss Nancy for partners! There's a lass for you!—like a pink-and-white posy—there's nobody 'ud think as anybody could be so pritty. I shouldn't wonder if she's Madam Cass some day, arter all—and nobody more rightfuller, for they'd make a fine match. You can find nothing against Master Godfrey's shapes, Macey, I'll bet a penny. I should like you to pick me out a finer-limbed young fellow nor Master Godfrey—one as 'ud knock you down easier, or's more pleasanter looksed when he's piert and merry."

"Tchuh!" said Mr. Macey. "One while he was allays after Miss Nancy, and then it all went off again, like a smell o' hot porridge, as I may say. That wasn't my way when I went a-coorting."

"Ah, but mayhap Miss Nancy hung off like, and your lass didn't," said Ben.

"I should say she didn't," said Mr. Macey, significantly. "Before I said 'sniff', I took care to know as she'd say 'snaff', and pretty quick too. I wasn't agoin' to open my mouth like a dog at a fly, and snap it to again, wi' nothing to swaller."

"Well, I think Miss Nancy's a-coming round again," said Ben, "for Master Godfrey doesn't look so downhearted to-night. And I see he's for taking her away to sit down, now they're at the end o' the dance: that looks like sweethearting, that does."

A new story of Mark Twain connects him with golf. He was being shown round the links by a friend who was rather an expert at digging up the turf. Sometimes he would get a mouthful. During the course of the game, the friend inquired, "What do you think of our golf links?" "The finest I ever tasted," replied Mark Twain.

## THE NEW BOOKS

### Pound Poetry

Will people accept them?  
(i. e., these songs).  
As a timorous wench from a centaur  
(or a centurion).  
Already they flee, howling in terror.

THAT is the question Ezra Pound asks at the opening of *Lustra*, the only book of poems this London-dwelling American has published in this country since 1912. We answer that people will treat his songs as they treat the work of every author, i. e., they will pick out what is good and reject what is bad. And what is good in Pound's work is quite unusually good and what is bad is very bad indeed. We do not "flee, howling in terror," but we do hold our nose as we pick over the muck to find the jewels.

The author shows himself a somewhat stern critic of his own work:

Come, my songs, let us express our baser passions,  
Let us express our envy of the man with a steady job and no worry about the future.  
You are very idle, my songs.  
I fear you will come to a bad end. . . .

And I?  
I have gone half cracked.

We confess to some sympathy when he says:

Come, my friend, and remember  
That the rich have butlers and no friends,  
And we have friends and no butlers.

But we are puzzled when he asks the poetic question:

Why does the horse-faced lady of just the unmentionable age  
Walk down Longacre reciting Swinburne to herself, inaudibly?

But the author could be a much finer poet if he tried. We wonder that one who writes so much that is banal should also write such a vigorous poem as this on spring:

Cydonian Spring with her attendant train,  
Meliads and water-girls,  
Stepping beneath a boisterous wind from Thrace,  
Thruout this sylvan place  
Spreads the bright tips,  
And every vine-stock is  
Clad in new brilliancies.

And wild desire  
Falls like black lightning.  
O bewildered heart,  
Tho every branch have back what last year lost,  
She, who moved here amid the cyclamen,  
Moves only now a clinging tenuous ghost.

And there is real and passionate charm in the richly oriental "Dance Figure for the Marriage in Cana of Galilee":

Dark eyed,  
O woman of my dreams,  
Ivory sandaled,  
There is none like thee among the dancers,  
None with swift feet.

I have not found thee in the tents,  
In the broken darkness.  
I have not found thee at the well-head  
Among the women with pitchers.

Thine arms are as a young sapling under the bark;  
Thy face as a river with lights.

White as an almond are thy shoulders;  
As new almonds stripped from the husk.

They guard thee not with eunuchs;  
Not with bars of copper.

Gilt turquoise and silver are in the place of thy rest.

A brown robe, with threads of gold woven in patterns.

Hast thou gathered about thee,  
O Nathat-Ikanaie, "Tree-at-the-river,"

As a rillet among the sedge are thy hands upon me;

Thy maidens are white like pebbles;

Thy fingers a frosted stream.  
Their music about thee!

There is none like thee among the dancers;  
None with swift feet.

The book contains a number of so-called translations "from the famous Fenollosa Chinese manuscripts." Whatever the source of these poems, some of them have exquisite color, as, for example, "The River Song" "by Rihaku, 8th century, A. D.," one section of which reads as follows:

The eastern wind brings the green color into  
the island grasses at Yei-shu,  
The purple house and the crimson are full of  
spring softness.  
South of the pond the willow-tips are half-blue  
and bluer,  
Their cords tangle in mist, against the brocade-  
like palace.

Vine-strings a hundred feet long hang down  
from carved railings,  
And high over the willows, the fine birds sing  
to each other, and listen,  
Crying—"Kwan, Kuan," for the early wind, and  
the feel of it.  
The wind bundles itself into a bluish cloud and  
wanders off. . . .

Over a thousand gates, over a thousand doors  
are the sounds of spring singing,  
And the Emperor is at Ko.

It is a real pity that one who can feel so keenly, and write so beautifully—as can Ezra Pound at his best—should much of the time produce material that is unworthy his pen, and once, at least, say:

O Mercury, patron of thieves,  
Lend me a little tobacco-shop,  
or install me in any profession  
Save this damm'd profession of writing,  
where one needs one's brains all the time.  
*Lustra of Ezra Pound with Earlier Poems.*  
Alfred A. Knopf, New York, \$1.50.

### Artist and American

IN these troublous days, to live and see and think for a time with William Merritt Chase, sound and sane workman, honest and direct, yet subtle artist, generous teacher and very fine and simple American gentleman, is like being set down in the sun and air and space of one of his own Shinnecock landscapes.

He found American art in what the New York *Tribune*, in its appreciation of him at the time of his death last year, called "the dry bones . . . of that transitional period." He saw it pass thru dreadful prettiness to futurism and yet kept his faith in his teacher Piloty's prophecy that the next great art development would take place in America.

The book is as much the layman's as the artist's. Perhaps the layman will get more from its humanity than the artist from its portrayal of technic and the secrets of style—and that is well, for the layman's need is the greater as his number is the larger.

Miss Roof tells us that "Chase had the painter's belief that only people who paint are qualified to write about it." In the introduction Mrs. Chase says that her husband wished Miss Roof might write his biography because he "felt that she had the real and right appreciation of art . . . and an equally sympathetic understanding of his own work"; so that in her two chapters on "Chase the Artist," one feels on sure ground.

In "Chase the Man," the author says:

Chase was perhaps more individualized as an artist than as a man. On the human side he was a simple person.

That, she makes us receive, but thru anecdote and quotation we get, too, the

## Faces Made Young

The secret of a youthful face will be sent to any woman whose appearance shows that time or illness or any other cause is stealing from her the charm of girlhood beauty. It will show how

without cosmetics, creams, massage, masks, plasters, straps, vibrators, "beauty" treatments or other artificial means, she can remove the traces of age from her countenance. Every woman, young or middle aged, who has a single facial defect should know about the remarkable

### Beauty Exercises

which remove lines and "crow's feet" and wrinkles; fill up hollows; give roundness to scrawny necks; lift up sagging corners of the mouth; and clear up muddy or sallow skins. It will show how five minutes daily with Kathryn Murray's simple facial exercises will work wonders. This information is free to all who ask for it.

### Results Guaranteed

spicy tang of the man—the Lorenzo de'Medici-like love of sumptuous beauty in his background of life; his passion for collecting rings; his feeling for his own appearance,—

in careful consideration of hair and beard, immaculate linen, white spats, black-ribboned glasses, rings and garments of the latest fashion, it was primarily, one felt, a part of his concern with the thing of the eye rather than personal vanity.

One day as Chase was walking along Broad street in Philadelphia a little urchin camped in the gutter caught sight of the painter as he passed. The child rose, ran up to him, and after looking earnestly at him a moment, inquired: "Say, mister, ain't you somebody?"—a tribute to his outer man that greatly amused Chase.

His personal life with wife and children is rich and satisfying and wholesome and merry—the artistic temperament asked for no license except for the unconscious demands upon the maternal side of his wife's love, by the eternal child in the artist. His attitude toward his eight children is delightful:

One daughter was the object of particular interest to him from her earliest childhood. Mrs. Chase tells of overhearing him tête-à-tête with the baby, a small dark object too young to voice articulate wants, inquiring with helpless but elaborate courtesy: "Is there anything I can do for you?"

As for the style of the book itself, Low's Chronicle of Friendships spoiled us. Why should we expect a painter to be equally an artist in two mediums, paint and words, because W. H. Low happens to be a favorite of the gods in this respect?

*The Life and Art of William Merritt Chase*, by Katharine Metcalf Roof. Scribner. \$4.

## Man's Inheritance

PROFESSOR JOHN DEWEY writes in the introductory word of *Man's Supreme Inheritance*, by F. Matthias Alexander:

Mr. Alexander has developed a definite procedure, based upon a scientific knowledge of the organism. Popular fear of anything sounding like materialism has put a heavy burden upon humanity. Men are afraid, without even being aware of their fear, to recognize the most wonderful of all structures of the vast universe—the human body. They have been led to think that a serious notice and regard would somehow involve disloyalty to man's higher life. The discussions of Mr. Alexander breathe reverence for this wonderful instrument of our life, life mental and moral as well as that life which somewhat meaninglessly we call bodily. When such a religious attitude toward the body becomes more general, we shall have an atmosphere favorable to securing the conscious control which is urged.

The book is concerned with all the problems of life and of evolution and the fundamentals of a new and advancing civilization—the demands which can be successfully met by the principles of conscious guidance and control of the human organism and of human conduct.

The author makes an interesting observation in the chapter, *Evolutionary Standards and Their Influence on the Crisis of 1914*:

When reason is so far held in check that it loses its power of denial, it must have lost its power of control. The original idea formulated in the conscious mind has sunk so deep into the subconscious that it cannot be changed except under the influence of some stronger outside power. For nearly fifty years Germany, in her schools, her gymnasiums, her universities, her civic and her political life, has been inculcating a rigid and mentally demoralizing system, and she is suffering now—as the monomaniac in private life must suffer—for her particular form of insanity.

Even in the conduct of her great campaign, this weakness of hers has begun to defeat her. She has lost the power of adaptability in military matters.

The chapters, *Evolutionary Standards and Race Culture and The Training of Children* are especially illuminating.

*Man's Supreme Inheritance*, by F. Matthias Alexander. E. P. Dutton & Co. \$2.

### E PLURIBUS UNUM

(Continued from page 454)

power to establish post roads and to regulate commerce with foreign nations and among the states, and that involved the right to build roads and vessels and to regulate lines of transit by land or water. To support armies and to carry on war, requires money, and Congress received power to lay taxes and to borrow money. Borrowing money required the creation of agencies thruout the land, and, without any separate authority on that point, Congress created an interlacing system of national banks, self interest bearing bonds, and short time notes, and issues paper money. The authority of the United States may be resisted within our own country, hence its Union has power to protect the laws and treaties of the United States by military force, and the national courts may try for treason any person who shall levy war upon the United States or "adhere to their enemies, giving them aid and comfort." Well may we bless, in this time of stress and danger, the foresight of those who framed the Constitution, the wisdom of those who have applied it during a century and a quarter to the national needs, and the steadfastness of our President and Congress who are now giving effect to these mighty powers of self-defense and of the maintenance thruout the world of the principles of free government.

The Fathers of the Constitution invented almost nothing; but they applied what they knew in novel combinations. The courts, for instance, in the colonies and states were the weakest part of the governmental system, being almost without physical force to carry out their just decisions. The convention acted as a skilled clock-maker might do who noticed the advantage of the balance wheel of watches and therefore put a big balance wheel into the town clock. The Supreme Court of the United States has been the balance wheel of both federal and state governments, thru the authority, which is nowhere stated in words in the Constitution, but has been exercised scores of times, the authority to declare statutes invalid which passed by state legislatures or even by Congress. Thus the forty-eight state watches are compelled to keep time with the big federal clock.

For three-quarters of a century some of the states struggled against this supreme national power in national matters: Virginia and Kentucky protested in 1798; Massachusetts and Connecticut in 1814; South Carolina in 1833; the eleven seceding states in 1861. In every case the Federal Government came out of the controversy stronger than it went in. We love our states; we have an intense belief in local self-government; but we have learned now, if we never knew it before, that the safety of the states is to be found only in the safety of the nation. And in this hour of trial, personal rights, the ordinary freedom of business and the usual authority of states, must give way to the national welfare. "E pluribus" begins the nation's motto; it finishes with "Unum"—we are one. We cannot be one without the many; but we shall cease to be anything unless the one outranks the many.

E pluribus unum!

"And now, children, we come to that important country, Germany, that is governed by a man called a Kaiser," said the teacher. "Can any one tell me what a Kaiser is? Yes, Willie!"

"Please, ma'am, a Kaiser is a stream of hot water springin' up in the air and disturbin' the earth."—Life.

**LISTEN!!!** Provided we can lay before you a plan that will increase your salary or your earnings, perhaps to double or treble what you now make, will you pay us 10% only on your increased salary or earnings, after you have received this increase—not before?

You will readily understand that in offering our \$100 year course of training on such terms as stated above, that we have a very large number of applications to select from, so that it is necessary to enroll at once to save disappointment.

Our teaching, advice and guidance in personal and in business affairs is, to a large degree, based upon the student's own particular private needs and business necessities, as told to us by himself, and as expressed in the "SELF-ANALYSIS CHART," which he must completely fill in before we accept him as a student. In every instance a "SELF-ANALYSIS CHART" is mailed free.

The Health and Body-Building Section is most thorough and complete. It is well to keep in mind that, as costly as doctors' bills are, a weakly, sickly body hampers progress and is far more costly even than doctors' fees.

The American Institute of Business Psychology, Inc.  
175 Fifth Avenue  
New York City

If the words "ENROLL ME" are not filled in below we cannot accept this coupon as an enrollment and will treat it simply as an application for our Booklet and Analysis Chart.

As explained above, other than the 10% of your INCREASED EARNINGS which you pay us AFTER you have RECEIVED THAT INCREASE, there is no cost whatever for the year's training. For housewives and women where opportunities arise for increased SAVINGS through economy and creative thought, it is INCREASED SAVINGS instead of EARNINGS.

Name .....

Address .....

**NOTICE** This advertisement tells the FULL STORY how you can rise from the mediocre rut to Wealth, Success, Health and Happiness and you only pay us 10 per cent on your INCREASED EARNINGS for one year for the full Course and service we render you. If you wish to Enroll at Once so as to Save Delay Write the words "ENROLL ME" There, on that line

## ATTENTION!!!

The Business Houses of America are facing a Real Crisis. Their trained men are being drafted.

A man with years' EXPERIENCE behind him, providing he takes up a short Course of Training in Personal Efficiency, is a tremendous asset to his firm, for he then possesses both EXPERIENCE and TRAINING—a very young man naturally can only possess Training.

Are you sluggish in your deportment? Are you old-fashioned in your dress, round-shouldered, commonplace? Is your complexion bad? Are your cheeks sunken? Mind you, ALL these are points that tell against you.

Can you Concentrate, Remember and draw realistic mental pictures?

Are your powers of Imagination quick and creative? Can you Think methodically, and are your Thoughts organized?

We develop the ENERGY, AMBITION and POWER which makes you clever and rich, forceful, helpful and great. This Course starts you right away and occupies little of your time.

Everyone who is ambitious enough to train for a Big and Substantial Increase in their Salary or Earnings, MUST be possessed of three things, that is:—

**ENERGY** That uplifting mental and physical Energy that pulsates living-fire through the person's being—Energy Abounding.

**HEALTH** That Reliable Health, Overflowing and Buoyant, that swings life's pendulum pleasantly and successfully 365 days each year.

**BUSINESS POWER** That overwhelming Business Power that brushes aside difficulties and prejudices—the Business Power that is limitless because it operates according to the hidden laws of Mind Science and attracts business people to you.

TO SAVE DELAY—This "Coupon Enrollment" entitles you to IMMEDIATE enrollment (WITHOUT OBLIGATION) The Grass Looks Greener Ahead but when You Get There It's Just the Same. Enroll NOW

Learn what your Character, Abilities, Talents and Powers are. This SELF-ANALYSIS sent FREE.

### Directions for Enrollment

To avoid delay, I wish you to enroll me at once for your one year's Course of Training as sold at \$100 which includes 20 Mental, Business, Health and Energy Lessons—12 Individual Monthly Lecture References—18 Sections of six lessons on Body, Brain and Energy Building—Self-Analysis Chart—Review Letters and Progress Reports. For the full and complete year's training I am to pay you ONLY 10 per cent on my INCREASED SALARY or EARNINGS for one year, and will order my Encyclopedia Text Book direct from the publisher and arrange to pay them \$1 down and \$2 monthly immediately upon receipt of your reply, giving me their address.

This Enrollment Places You Under No Obligation

We reserve the right to refuse any Enrollment

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

**ENGLISH: LITERATURE AND COMPOSITION**

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**SECTION I. ORAL AND WRITTEN COMPOSITION.**
**The Story of the Week.**

1. You are at a meeting attended by many people who have relatives living in Russia. Give a clear account of the entire Russian situation as revealed in the news of the week.

2. You are the teacher of a class in current events. Explain to your class the present situation on the Western Front. Use a map in order to make your meaning clear.

3. You are a "Four Minute Speaker" at a moving picture show. Tell your audience about the work of the American soldiers on the battle front, making your account such that it will awaken a spirit of pride and of patriotism.

**Editorial Articles.**

1. Select from the editorial articles all that is said concerning the Teutonic allies, and weave it into a single unified article.

2. Select from the editorial articles all that is said concerning the past and the future of the Great War, and make a new article that will emphasize the prospects for the future.

**The Sixth Message from the United States Government.**

1. Give a spirited speech in which you show that any person may aid and comfort the enemy by spreading falsehoods concerning the United States forces. Add to clearness and emphasis by the use of details.

2. Write a short, emphatic editorial article for your school paper, telling what is the duty of any person who hears malicious statements concerning the United States.

**The Battle Cry of Freedom. By Albert Bushnell Hart.**

1. Write a clear résumé of the entire article.

2. Give a patriotic speech in which you show how "E Pluribus" properly ends with "Unum."

**Why Russia's Army Fell to Pieces. By Edward A. Ross.**

1. You are at a neighborhood meeting. Explain orally the reasons for the decline of Russia's fighting power. Give all the principal points that are given in the article.

2. Write a patriotic composition of contrast, in which you show the difference between Russia's army, past and present, and the army of the United States.

**The Hostess Houses. By Mary Alden Hopkins.**

1. You are an attendant at a Hostess House. Write an imaginary diary, giving the details of a single day's work.

2. Write an argument in which you support the following proposition: The work of the Hostess Houses is a great patriotic service.

**The Food Fight. By Edward Earle Purinton.**

1. Write a short, emphatic circular for distribution in your neighborhood, telling how all may aid in the good fight.

2. Point out the various ways in which the writer made the article interesting, clear and emphatic.

**Service in "Cits."**

1. Some one has written to you saying: "I wish I could do something for my country, but I don't know how." Write a letter explaining what different types of service are open to all people. Urge your friend to select some one of these for which you think he is fitted.

**SECTION II. LITERATURE.**
**The Party at the Red House. By George Eliot.**

1. You are introducing a person who will read the selection. Without using notes, explain the situation.

2. What makes the work of George Eliot so interesting to different types of readers?

3. Make a list of the characters named in the selection, and give a character sketch of every one.

4. Show how the account of the party rises in interest.

5. Show that the selection has the following characteristics: humor, satire, sympathetic description, realism, romance.

**The New Books.**

1. What quality is necessary for permanent success in poetry?

**HISTORY, CIVICS AND ECONOMICS**

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

**I. A Campaign for Intelligent Patriotism—"E Pluribus Unum."**

1. Quiz your classmates upon their knowledge of the history of the United States summarized in Professor Hart's article: *e. g.*, (a) efforts at federation before the adoption of the Constitution; (b) the story of the Constitutional Convention; (c) attempts at nullification and secession; etc.

2. What is the central thought in this article? Quote a sentence which summarizes this thought.

3. "... they did not realize that nations yet unborn . . . would adopt or imitate the federal principles which they embodied in a formal constitution." What is the significance of this statement?

4. Show how the Constitution was "a means of reconciling the power of a nation with the local scrutiny of a town meeting or a county court."

5. "The Constitution pointed out the means of performing the great national task which the Constitution imposed." What is this task?

6. What does the sentence in the last paragraph beginning, "We love our states," mean to you?

**II. The War "Peters Out" in the East—"Half the German Program Accomplished," "Back to the Barbarians," "Why Russia's Army Fell to Pieces," "The Occupation of Russia," "The Russian Peace Treaty," "Finland Makes Peace," "Rumania Makes Peace."**

1. Summarize the facts given in the above references which prove that half of the German program is accomplished. What is the other half of the program?

2. How far is the disruption of the Russian army a result of its military failures? How far is it a cause?

3. Is the judgment rendered in the last paragraph of Mr. Ross's article justified by the facts?

4. Indicate on a map the provinces which have been separated from Russia (a) by military occupation, (b) by peace negotiations, (c) the regions which the revolutionary government still controls.

5. Give details of one or more of the historical incidents referred to in the second editorial.

**III. On the Western Front—"The Prospects of the Opening Campaign," "Trying Out the Line," "On the American Front."**

1. Draw a map showing the regions in which the western armies are pitted against each other; include the Italian front. Indicate, as far as you can, the territory held by each of the belligerents.

2. Read "The Great War Year by Year" in "From the First Shot," published by the Independent Corporation, or some other similar account of the war. Summarize the military campaigns of the West.

3. What parts of the Line are most likely to be the scene of active fighting this spring?

**IV. Will Japan Occupy Eastern Siberia?—"Proposed Japanese Intervention in Siberia," "The Japanese Decision."**

1. Can you discover in these news items evidence of a Japanese "Monroe Doctrine"?

2. By what right and for what purpose does Japan propose to send an expedition into Siberia?

3. What is the attitude of the European Allies toward the proposed action? The attitude of the people of the United States?

**V. The Problem of Food—"The Food Fight."**

1. "You don't need a gun to be a fighter in this war." Prove that this statement is true.

2. "Meat, wheat and sugar are the food staples of war." Collect all the data you can in support of this statement.

3. "How have the other nations at war met the international food shortage?" Answer the question.

4. What are we asked to do as individuals? Check each of the ways in which your family has helped. Describe in detail some of the things you personally have done.

5. Follow out one or more of the suggestions given under "FAMILY WAR FOOD PLAN" and report the results to the class.

# Saving the Money That Slipped Through Their Fingers

How an Investment of \$2.00 Grew to \$7,000 in Seven Years Without Speculation

BY ARTHUR H. PATTERSON

MR. AND MRS. B. live in Connecticut. He is a clerk in the office of a manufacturing plant. They have been married ten years and for the first three years of their married life they not only failed to save but actually went in debt over \$400. They now have two children, own a comfortable cottage home which is appraised at \$3,500 and is clear and free. They have savings-bank accounts of \$1,800 and \$1,700 invested in 7% preferred securities. And every dollar of this money has been saved from salary during the past seven years, an average of \$1,000 per year.

I am going to tell you their story, or rather let Mr. B. tell it as he related it to me. If you are facing the crisis in your affairs which the B.'s faced in those early days of married life, it may help you to meet it and come off victorious.

Listen to what Mr. B. says:

I am now 37 years of age; married and the Daddy of two children. When I was married I had exactly \$750 on hand in cash, inherited from my father's estate. Up to that time I never saved a nickel and if this money hadn't come as a windfall, we could not have been married. I held a good position and was earning \$2,000 a year. That was in 1907. For the next three years Jane and I just let things run along, living comfortably on my salary. The \$750 which I inherited went for furniture and home needs and we did manage to buy—on the spur of early married ambition, perhaps—\$300 more of furniture which we paid for out of my salary. But all the rest of it went for clothing, rent, food, amusement, books, cigars, etc. We spent it as it came and it was always a race between our cash and our bills to see which would be on top at the end of the month. Usually the cash lost. But the bills didn't press or worry me. I ran accounts with tradesmen who knew me and knew I was good for it. But gradually the bills distanced the cash and at the end of three years I was in a hole just \$400; and then the situation grew serious because we had a baby and in order to pay the emergency bills of the occasion, I had to let my other creditors wait and they became restless.

Jane and I had tried time and time again to live within my salary and save a few dollars, but it wasn't any use. We lacked the backbone somehow and didn't have the necessary system to help us see it through. One day I came across a remark made by James Hill, the railroad builder, and it set me thinking. It burned itself into my brain. It was this:

*"If you want to know whether you are going to be a success or failure in life, you can easily find out. The test is simple and infallible. Are you able to save money? If not, drop out. You will fail as sure as you live. You may not think so, but you will. The seed of success is not in you."*

I went home and that evening Jane and I had a long heart-to-heart talk. We sat up until one o'clock, studying, planning, debating, wondering how we could change our shiftless, easy-going habits so that we could feel that we were going to be classified with the successful ones and not the failures.

We made up our minds that from that night on not a penny would be spent for other than bare necessities until every debt had been paid. We resolved to live on half my salary, reasoning that if other people whom we knew could live respectably on \$1,000, there was no reason why we shouldn't. Then Jane said: "We ought to keep a cash account and put down just where the money goes. We can't go by guesswork any longer. We've been living that way for three years. We'll begin now to keep a record of our money."

What Jane said brought to my mind an advertisement which I had seen only a few days before, about an Expense Book for family accounts. So I got the magazine and found the ad. It told about the Economy Expense Book for personal and household accounting. The description told me that it was exactly the thing we needed and before going to bed I wrote a letter ordering a copy. In a few days it came, and Jane and I had an interesting session studying it and entering the Cash and Expenditure Items which we had been keeping tab of since the midnight resolution.

That book taught us something about the science of home economics. We learned, for instance, that in a properly arranged budget a man earning the salary I did could save, without stinting, at least 30% of his salary. But we were beating that figure. We had raised the ante to 50%, and that without suffering for a single need. Of course, we had cut out the theatre, the cigars, the expensive lunches and we'd begun to get acquainted with some of our discarded clothes all over again. And I learned that rent consumed in the balanced budget 17½% (which was about our cost); food was 25% and we cut it to 21%; clothes 17% we chopped to 5% that first year, and it never rose over 10% the first four years.

We started on the new system in April, 1910. The following April when we balanced the books for the first year we found this result: Every single bill paid and \$653 in the savings bank! Glorious! We were out of the woods and for the first time in my entire business career I had visions of success on which I could actually stand without breaking through into the quicksands of despair. We celebrated that night in good style with a dinner and the theatre and that's become part of the program ever since—the annual dinner of the board of directors, Jane calls it.

The rest is easy. We were on the right track and once started nothing could turn us back.

We stuck right to the original program for three years, living on half my salary and saving the other half. Then I got a raise of \$250 and that made it quite a bit easier. A year ago I got another raise, bringing my salary up to \$2,500, where it now stands.

I've never had the least trouble, since starting on the first page of my first copy of Woolson's Economy Expense Book, in living within my income and saving money.

That book brought us, not only independence, but it changed me from a worried, half-baked existence into a self-respecting, successful man. I am in a position, as the result of our joint efforts, where I need look to no man for favors; and further than that, my success has brought us into a circle of friends, both business and social, who value us because we are looked upon in our town as "worth while" and "the sort who are getting ahead."

\*\*\*\*\*

Woolson's Economy Expense Book is designed to keep track of the income and expenses of the average family in a systematic manner. Each book is made to contain the records of four consecutive years.

No knowledge of bookkeeping or accounting is necessary to properly keep a Woolson Book. The lifetime experience of an expert accountant is in the book. He devised it for his own household and planned it so his wife could keep it.

Two minutes daily is sufficient to keep it written up to date. At the end of each week and month and year you not only know where every penny went, but you will have an analysis and comparative table of all the various expenditures, showing just what it went for. Every detail of money management is provided for by a simple, easy-system that a 12-year-old child could handle.

This book has proved truly a godsend to thousands because it has taught them a sure way to manage their finances. With it you know every minute just where you are money-wise. It automatically shows every penny of income and outgo; just how much for groceries, dress, rent, medicine, amusement, car-fare, etc.—and all this instantly and plainly. It is not complicated or tiresome. In fact, once you have started keeping a Woolson Book you will find it fascinating as a game and a miser for saving money.

The publishers are desirous while the interest of the American public is fastened on the problem of high-cost-of-living, to distribute several hundred thousand copies of the new greatly improved edition and are doing it in this way:

Merely write to them and ask that a copy be sent you without cost for a five days' examination. If at the end of the time you decide to keep it, you send \$2.00 in payment, or if you wish to return it, you can do so without further obligation. Send no cash. Merely fill in the coupon, supply business reference, mail, and the book will be sent you immediately.

Frederic E. Dickinson, Treasurer

**NATIONAL EFFICIENCY**  
A monthly section devoted to business, personal and national efficiency. Official organ of the National Efficiency Society. Published in the third issue of The Independent each month

**THE COUNTRYSIDE**  
Incorporating The Countryside Magazine and Suburban Life. A monthly section devoted to sensible and efficient countryside living: better houses, better rooms, better gardens, better roads and better towns. Published in the first issue of The Independent each month

## WORDS OF THE WEEK

**"DRYS" AND "WETS"**—Nicknames applied respectively to the advocates and opponents of prohibition.

**WHITE GUARD**—The revolutionary militia organized in Finland for the purpose of maintaining the republic which has recently been proclaimed by the Finns.

**GROUND SCHOOLS**—Schools which give courses—usually about eight weeks long—in the theory of aerodynamics and kindred subjects of importance to an aviator, map-making, photography, bomb-dropping, gun-sighting, etc. These schools prepare the students for actual flying.

**SMILEAGE BOOKS**—\$1 and \$5 books of five cent coupons published for distribution among the soldiers in training camps. The coupons are to be used by men in uniform as tickets of admission to the temporary theaters which have been erected and are being managed by the Committee on Training Camp Activities.

**NATIONAL PARTY**—A combination of leaders who represent the dissenters of the Socialist party, the remnants of the Progressive party, a rump of the Prohibition party and the National Nonpartisan League. These leaders met recently in Chicago and adopted a platform on which they expect to make a fight in the coming Congressional campaign.

**BRITISH LABOR PARTY**—A combination of trade unions and coöperative societies under the leadership of men like Arthur Henderson, Ramsey McDonald and Philip Snowden, which is formulating plans for political action in the next general election. It was at a conference of leaders of this party that Lloyd George delivered his speech on Britain's war aims on January 5, 1918.

**ARCHBISHOP OF YORK, PRIMATE OF ENGLAND**—The title primate is bestowed upon the archbishops whom the Pope designates as his vicars in each country. In England the honor was divided between the two archbishops, the Archbishop of Canterbury, who was known as Primate of All England, and the Archbishop of York, who was known as Primate of England. These titles are still retained, tho. of course, neither archbishop recognizes the authority of the Pope.

**SMOLNY INSTITUTE**—A group of buildings in the eastern section of Petrograd, situated on a hill overlooking the Neva. The buildings were erected in the second half of the eighteenth century and the first half of the nineteenth. They were occupied until the outbreak of the revolution by a school for the education of the daughters of military officers and civil servants. Last autumn the Petrograd workingmen's councils held meetings in these buildings and there took the steps which led to the over-

throw of Kerensky. The buildings are now occupied by the offices of the revolutionary government.

**KARS AND BATUM** (Bah toom')—The provinces at the eastern end of the Black Sea. Batum is the port and terminal of the overland route into central and southern Asia. It is also the port of outlet for the great oil fields at Baku on the Caspian Sea. These provinces were wrested from the Turks in the Russo-Turkish wars of the nineteenth century. They are now returned to Turkey by the terms of the recent peace.

**SINN FEIN** (Shinn Fain)—The party which desires complete independence for Ireland. Some of its leaders inaugurated the insurrection of April, 1916. The founders and leaders attempted a revival of the Gaelic language and literature. The words Sinn Fein are Gaelic and mean "for Ourselves." They sum up the attitude of the party toward all programs for Irish reform.

## J U S T A W O R D

The next issue of The Independent will be a special War Number to commemorate the first anniversary of America's entrance into the Great War and to present a survey of the progress we have made. The Government of the United States will tell the American people what has been accomplished and what is being done to win the war, in a message written by George Creel, chairman of Committee on Public Information, appointed by President Wilson.

A birdseye view of the battlefields and a summary of world events during the past year will be written by Edwin E. Slosson, Literary Editor of The Independent.

The News-Pictorial section will be devoted to photographs of the American troops at the front. Numerous other illustrations will show the various phases of our war work over here. On the cover of this issue will be reproduced a poster by Raleigh of America's answer to Teuton brutality.

\* \*

"What Are We Fighting For?" is the title of a series of articles to be begun in The Independent next week, which will present a broad and authoritative discussion of the motives and ideals that underlie America's participation in this war. President Lowell, of Harvard University; Prof. John Dewey, of the philosophy department in the University of Chicago; Corra Harris, author of "In the Valley," "A Circuit Rider's Wife," "Co-Citizens" and many other stories interpreting the philosophy of common folks, will begin the series. Other authors will be announced later.

## T H E N E W P L A Y S

*Mrs. Warren's Profession*, by George Bernard Shaw, is presented by the Washington Square Players. A remarkably fresh production for a revival, due chiefly to the dominating force of Mary Shaw's interpretation of the title role. Diantha Pattison plays the part of Vivian with clarity and conviction. (Comedy Theater.)

*A Cure for Curables* is a delightful light comedy founded on one of Corra Harris' short stories. What happens in the fashionable Southern sanitarium when a common sense young doctor takes charge and compels the pampered inmates to dig in the garden and eat bread and milk is told with a delicious Southern humor and charm. (39th Street Theater.)

*Success* strikes the happy medium of human appeal between sentiment and tragedy, in its story of a great actor who drinks himself to degradation and finally comes back. Brandon Tynan plays the leading part excellently; Jess Dandy as Mike Lewis, the progressive play producer who sees a chance for Shakespeare in musical comedy yet, provides the laughs. (Harris Theater.)

# CHANDLER SIX

*Famous For Its Marvelous Motor*

*Chandler  
Sedan*

## The Chandler Sedan Affords You Four-Season Service

**H**ANDSOME in design and economical in operation, this Chandler seven-passenger convertible sedan affords full four-season usefulness that is keenly appreciated by those who demand the maximum of efficiency and comfort in their motor cars.

This sedan body is instantly convertible from an entirely enclosed car to one fully as open as a touring car with top up. Windows may be lowered away or entirely removed and the window posts are removable. The body is most substantially constructed—built by Fisher—and stands the stress even of rough country roads. The upholstery is of a serviceable grey cloth material.

Mounted upon the famous Chandler chassis, distinguished particularly for its great motor, this sedan offers motor car value only approached by other cars selling for hundreds of dollars more.

### SIX SPLENDID BODY TYPES

*Seven-Passenger Touring Car, \$1595      Four-Passenger Roadster, \$1595*  
*Four-Passenger Sport Model, \$1675*  
*Convertible Sedan, \$2295      Convertible Coupe, \$2195      Limousine, \$2895*

*(All prices f. o. b. Cleveland)*

Let the Chandler Sedan Be Your Choice Now

# The Tooth Destroyer

## Is That Germ-Breeding Film

*All Statements Approved by High Dental Authorities*

### Facts That Everyone Should Know

Dental practice in late years has made enormous progress. Many old theories have been abandoned. Many new methods have been adopted, after long clinical tests.

This is one which refers to teeth cleaning. And dental authorities feel that everyone should know it.

An evident fact is that old tooth-brushing methods have failed. Statistics show that tooth decay and pyorrhea have constantly increased. Tartar forms and teeth discolor—all despite the daily brushing. And dentists now know why.

The reason lies in a film—that slimy film. You can feel it. It constantly accumulates. It gets into crevices and hardens and stays. Even on smooth surfaces it accumulates.

That film absorbs stains and discolors. It hardens into tartar. It holds food particles which ferment and form acid. It holds the acid in contact with the teeth—the cause of decay.

It harbors germs and breeds them—millions of them. They, with tartar, are the chief cause of pyorrhea. In various cases they enter the tissues and enter the stomach, causing many serious troubles. Nearly all tooth troubles and many others are now traced to that film on teeth.

Much of that film escapes the tooth brush. The ordinary dentifrice cannot dissolve it. Many kinds make it more difficult to remove. That is why tooth cleaning has been so ineffective.

But now a new-day dentifrice—called Pepsodent—acts directly on that film. It solves the problem of clean, safe teeth as nothing else has done. And now, having been accepted by able authorities, we urge you to prove it by a one-week test.

### A One-Week Test Will Be a Revelation

Pepsodent is based on the fact that the film is albuminous matter. The basis of Pepsodent is pepsin, the digestant of albumin.

The object is to dissolve the film. Then to daily combat the film, preventing its accumulation.

Pepsin long seemed forbidden. It is useless unless activated. And the usual activating agent is an acid, harmful to the teeth.

But science has now solved that problem. It has discovered an activating method which is absolutely harmless. Five governments have already granted patents. That activating method is now used in Pepsodent.

Dental authorities have now submitted this dentifrice to three years of clinical tests. They have applied it in thousands of cases, carefully watching results.

Now that they have accepted it, we offer the product to everyone for home tests. And we urge its universal use.

Send the coupon for a One-Week Tube. Use it like any tooth paste—it is delightful. Then watch the results.

Note how clean your teeth feel after using. Mark the absence of the slimy film. Note how the teeth whiten as the fixed film disappears. Note how it polishes the teeth.

That 7-day test will be a revelation. You will know what clean teeth mean. You will know that your teeth's chief enemy—film—can be defeated daily. And we do not believe that you will ever again return to old teeth-cleaning methods.

As a reminder, cut out the coupon now.

## THE RESURRECTION OF LITHUANIA

**A**NOTHER of the new nations that have sprung into life from the disintegrating body of Russia is Lithuania. As in the case of Finland, Poland and Ukraina, it was largely thru American influence and aid that Lithuania has found its freedom, but unfortunately Germany gets the credit of the act of liberation. There are some 750,000 Lithuanians in America, driven here by the frightful persecutions of the Autocrat of All the Russias. But tho they have here found liberty and prosperity they have not forgotten their motherland in chains. The Pennsylvania coal miner and the New England factory hand have contributed of their earnings to help those who were left behind and to print and smuggle over the Lithuanian literature which was prohibited in Russia. A Scranton physician, John Szlupas, was president of the convention of Lithuanian delegates which, meeting at Stockholm, declared the independence of Lithuania on January 8, 1918. This is but repeating the action taken during the abortive Russian revolution of 1905, when a convention of 2000 Lithuanians declared for a Diet of their own "to be chosen without distinction of sex, race or creed." Let us hope that this time the declaration holds, altho one cannot hope much for a nation inaugurated under Teutonic auspices.

Lithuania has been one of the most unfortunate of the unfortunate class of buffer states. Being neither Teuton nor Slav, but lying between these eternal enemies, the Lithuanians have been harried in turn by the one and the other and oftentimes oppressed by both. All the power of court, church, market and school has been exercised in the germanization of those on one side the boundary and the russification of those on the other. Yet neither Kaiser nor Czar has been able to extinguish the language nor the consciousness of the common race. The Lithuanian language is the most ancient of living languages. It is nearer to the original Indo-European stock than any other European language. Words and even sentences spoken in ancient Sanskrit may be understood by a Lithuanian peasant. The philosopher Kant, who wrote a Lithuanian grammar and was himself of Lithuanian origin, declared that "Lithuania must be preserved, for her tongue possesses the key which opens all enigmas not only of philology but also of history." A kindred language and people, Old Prussian or Bo-russian, were extinguished three hundred years ago, altho the name and somewhat of the blood have passed down to those who now bear the name.

The American reader is apt to have got his knowledge of Lithuanian history from the fiery pages of Sienkiewicz, who was of Lithuanian descent altho his name has been polan-

ized and he wrote from the Polish standpoint. "The Deluge," in which that irresistible hero, Kmita, banneret of Orsha, fights thru a thousand pages for his lady-love, Olenka, is laid mostly in Lithuania. In "The Knights of the Cross" Sienkiewicz tells the story of the defeat of the Teutons by the Lithuanians at the battle of Tannenberg in 1410.

But in 1914 a second battle was fought at Tannenberg, when fortune favored the other side and Hindenburg inflicted such a blow upon the Russians that they were never able to recover from it. This brought the German hordes into the heart of Lithuania and the story of their brutality, as it has been told to American ears by eye-witnesses, is more horrible than anything we have heard from Belgium.

The Prussian power which now dominates Central Europe and endangers the whole world had its origin in these Teutonic Knights of the Cross, who were commissioned by the Pope in 1234 to defend Christendom against the heathen Lithuanians. But the sort of Christianity carried over the border by the Teutonic knights bore little resemblance to the religion of him whose symbol they wore on their breasts, so we need not wonder that the Lithuanians were the last of European peoples to abandon paganism. Roger Bacon in the thirteenth century saw clearly that the Germans were preventing the spread of Christianity while pretending to promote it:

There is no doubt that all the heathen nations beyond Germany would long ago have been converted but for the brutality of the German House, because the Pagan race has again and again been ready to receive the faith in peace thru preaching. But they of the German House will not allow it, because they want to subjugate them and reduce them to slavery, and by subtle persuasions they have for years deceived the Roman Church. This is notorious, otherwise I would not make the charge.

For 1386 years after the birth of Christ the perpetual fire burned on the altar before the wooden image of Perkunas, the Thunder God, in the midst of the sacred oak grove on the hill overlooking Vilna. But on that date the fire was quenched and the grove was cut down, for the Prince of Lithuania accepted the Catholic faith for himself and his people that he might marry the Princess Yadvida of Poland, and the pagan Prince Yagyello became the Christian King Vladislav II, of united Poland and Lithuania. The marriage of the rulers was not a fortunate one and the union of the realms was most unhappy. Never was a people, it seems, so disliked by all its neighbors as the Poles. The Lithuanians of the United States are divided into three groups: the Socialists, who are or have been inclined to look to Germany for help; the Clericals, who favor the Russian connection; and the Nationalists, who declare for complete independence. But

all three agree on one point; that never again will they consent to union with Poland.

They do, however, hope for union with the Letts, lying to the north of Lithuania, and of kindred race altho of another language and religion. They also desire, tho under the circumstances they can hardly hope, that East Prussia, comprizing the Lithuanians under German rule, should be reunited to Lithuania. If so, the new republic would start out in life with a population of some seven million and with Riga and Königsberg as its ports on the Baltic.

## NO COMPOUNDED PEACE

THE dictionary has it that to compound a felony is "to agree, for a consideration, not to prosecute or punish a wrong-doer." The compounding of a felony is itself a crime.

There are some indications—and there is a strong probability—that the "Potsdam gang," to use Dr. van Dyke's vigorous phrase, would be very glad indeed to induce Germany's enemies to compound the felonies it has committed during three years and a half. A vagrant rumor from Switzerland suggests the imminence of another "peace drive" from Berlin. Why not? Germany is busily engaged in raking in and storing away the rich stores of plunder that luck—and the Bolsheviki—have opened up for her in the East. Why should she not be willing to pay a high price for quick relief from that relentless, torturing, menacing pressure in the West? Why should she not make smooth proposals, glittering offers, smilingly treacherous suggestions? We can expect nothing else. We must guard against nothing else with half so much vigilance.

There must be no compounding of the Teutonic felonies. There must be no bargain and compromise peace, which will leave the criminal spirit and the criminal strength of the German felons unbroken. We must seek peace thru victory. Only such a peace will bring security and justice and righteousness back to the earth.

## GOOD COUNSEL

GENERAL PERSHING has issued an order to the members of the American Expeditionary Force which it would be well for every American at home to read, mark, learn and inwardly digest. It reads thus:

Never trust any one who asks questions of a military character or who seems to be much interested in questions of such a nature, even tho such a person appears to be an American officer.

Any man, woman, or child, or even a man wearing the uniform of an American, or in the uniform of a soldier of the allied armies, can be a spy.

In fact, say nothing that you would not wish to reach the ears of the enemy. And for this same reason never enter into any correspondence with an unknown person, for this is one of the chief means used by the enemy to procure information.

In the streets and in public places do not fail to remember that the very walls have ears. Therefore do not express your opinion upon any military question or even on the war in general.

Don't give the impression of a pessimistic view of the situation either by word or action, and always have confidence in the success of our army and of our cause.

The last paragraph in particular should be taken to heart by every loyal citizen. Pessimism accomplishes nothing. Confidence in a righteous cause, exprest in action, will move the earth.

## THE AUSTRIAN PARADOX

WHEN a French politician who had been thru the Great Revolution was asked what he had accomplished during those stirring years he replied: "I lived." Bolder men had made history and been rewarded by the guillotine; for him it was enough to have outwitted the executioner. Such is the Hapsburg monarchy among the states of Europe. Austria has been defeated by all her neighbors, by the Swiss, the Prussians, the French, the Russians and the Italians. Until Russia came to her help

in 1849 she was helpless before her own subjects, the Hungarians; until Germany came to her help in 1915 she was driven back by the Russians and held in check by the Serbians. In an age of intense nationalism Austria alone has attempted to govern without help from the national principle; to rule not alien minorities, as did Germany and the late Russian Empire, but alien majorities. Considering the extent of her realms and the numbers of her people, the greatness of her resources and the high capacity of the races under her rule, the contribution of Austria to political, industrial and intellectual progress has been discreditably small. But the Austrian state can boast, and it is no small boast, "I lived." In spite of every external defeat and endless internal misery and discontent, the Austrian realms have been but little diminished by the centuries and bid fair to stand almost undiminished for years to come.

There were three paths which the Austrian Government might have chosen had it desired more than survival; three solutions to the problem of welding a score of nationalities into a united nation. The Austrian Government chose none of these; it dared not. Any logical course of policy might have been fatal to the state, whose very existence was a defiance of logic. The greatest Prussian statesman was Bismarck, whose ruthless policy was directed toward the re-making of Europe. The greatest Austrian statesman was Metternich, whose policy, equally unscrupulous, was wholly devoted to preventing any political change whatever from taking place in Europe. The contrast between these two men gives the full measure of the contrast between the vigorous aggressiveness of Prussia and the tortuous compromises of Austria.

One logical solution for the Austrian problem would have been the abandonment of the national idea; the erection of the Hapsburg realms into a cosmopolitan commonwealth wherein no national group was favored or repressed. This solution now seems Utopian because Czech and German, Magyar and Croat, Pole and Ruthenian have come to hate each other more than they love their Emperor. But the fires of nationality burned very low in the eighteenth century, and had the Government thenceforth striven to create an "Austria" which could be a common Fatherland to all the peoples of the realm, a new nation might have emerged from the melting pot as strong and prosperous as the United States, which is made up of elements quite as diverse. But this solution did not commend itself to the rulers of the state because it meant the abandonment of cherished historic privileges which placed some provinces in subjection to others and all of them in subjection to the German court. Besides, the creation of a common nationality might mean the creation of a common public opinion which would be fatal to autocratic rule. If the peoples of the empire were not kept fighting each other they might all join to fight the Government.

Another possibility lay in the opposite direction. Instead of welding the many peoples of the empire into one the Government might have recognized their diversity and permitted each national group to enjoy fullest autonomy. Thus Austria-Hungary might have become a stable federal state, a larger Switzerland, in which the lion and the lamb could dwell together in peace because they were not locked into the same cage. This solution, however, demanded a greater stock of insight and good will than Austrian statecraft has ever possessed. Until it was too late, the rulers of the state underestimated the rising passions of national pride and made no consistent attempt to placate them. Also the love of bullying, repression and interference in local affairs was too deeply rooted in the heart of officialdom to be so easily abandoned.

A third possibility was German nationalism. Austria, whose ruling court and capital city were almost as purely German as Munich or Berlin, might have regarded the empire as the Prussians have regarded their dominions, as German land from which all alien elements were to be expunged.

This solution, tho morally indefensible, might have had the practical advantage of turning a chaos of peoples into another Germany. But it was a far harder task to convert an overwhelming majority of Slavs, Latins and Magyars into patriotic Germans than to repress a few Poles, Danes and Alsatians; the Austrian Government wisely declined the task. Moreover, while the Hapsburgs hated all nationalism they dread German nationalism most of all, since the movement for German unity involved the expulsion of polyglot Austria from the new empire. When Bismarck united all the other German states into one nation he had to leave out Austria because of the mass of "indigestible" non-Germans she would have brought in with her. This meant that German destinies were thenceforth directed not by Hapsburgs, as in the days of Metternich, but by Hohenzollerns.

The Austrian Government has thrice made "the great refusal" to become a strong, prosperous and united nation. It declined to create a new cosmopolitan nation like our own. It declined to create a federal nation of many tongues like Switzerland. It declined to become a German state like the empire of the north. But it is still the Austrian Government; pursuing the motto of "divide and rule," fomenting national spirit here and repressing it there, rousing Croatia against Hungary and Ruthenian peasants against Polish nobles in 1848, subjecting Croatia to Hungary and Ruthenians to Poles in 1866, alternately persecuting Italian and Slovene, sometimes an obedient servant of German policy, sometimes a diplomatic counterweight to Germany, supporting Serbia against Bulgaria in 1886 and Bulgaria against Serbia in 1913, everywhere a mischief maker and marplot, but still in existence. If dancing on the tightrope be greater than plodding forward on the highway of progress, Austria's statesmen deserve the admiration of the world.

## THE NEW ROUTE TO INDIA

SOME thirty years ago the British were aroused by the cry "Russians at the gate of Herat!" Now a similar but more serious danger confronts the British Empire, for the Germans are at the gate of Herat, and the way to India opens before them. By the collapse of Russia and the surrender of Rumania the Black Sea becomes a German lake, and the railroad system which was constructed by Russia, largely with French funds, for the purpose of penetrating Persia and reaching India, now comes under the control of Germany.

The missing links in the chain of communication between the West and the East were supplied by two clauses in the recent treaties with Russia and Rumania. In the first Russia agrees to surrender the port of Batum on the Black Sea. By the second Rumania agrees to facilitate the transportation of troops across her territory to the port of Odessa. Now the news comes that Odessa has been occupied by the Germans. This means that troops from Berlin and Vienna may be sent directly overland to Odessa. From here they may be shipped across to the eastern end of the Black Sea and land at Batum. From Batum the railroad leads straight across to the petroleum port of Baku on the Caspian. Ferrying troops across the Caspian from Baku, one hundred and fifty miles, puts them upon the railroad leading to Merv. Here the Russian strategic railroad branches, one branch running south to Kushk, which is less than one hundred miles from Herat, and the other leading to Andijan in the heart of the Pamir.

Between these rail heads and India lies the buffer state of Afghanistan. The Emir of Afghanistan is in the pay of the British, but the Afghans, being Mohammedans, were formerly fierce enemies of the British, and it might be possible to rouse their former fanaticism by an appeal or a proclamation of a Jihad, or Holy War.

This is the appalling prospect which the German political and military maneuvers have opened up. It is, of course,

not in the least probable that the Germans, exhausted as they are and hard prest in the West, will attempt at the present time any such gigantic enterprize as an invasion of India, but such a possibility will remain for the future unless the German domination of southern Russia is overthrown.

Besides the route outlined, involving two transshipments, an overland route to India is opened now, for the Russian railroad runs down on both sides of the Caspian Sea, leading in the one case thru over the Caucasus and in the other leading thru to Samarkand. These railroads in their present state of demoralization would doubtless be of little value for the transportation of troops and munitions, but eventually they could be put in shape for this purpose, since for this purpose they were originally laid out. The recent rumors of German and Mohammedan agitation in Turkestan show clearly that the Germans have designs in this quarter. From Samarkand to Peshawer, the terminal of the British and Indian railroad, is only five hundred miles, and this is then the only gap in the way of an all-rail route from Berlin to Calcutta.

The German plan for the Berlin-Bagdad railroad extending to the Persian Gulf has been frustrated by the occupation of Bagdad by the British, but the route which the Germans have now acquired is more useful for their purpose and more dangerous to Great Britain than the one which they were prevented from consummating. Besides this it threatens the Bagdad route, since it could transport enemy armies down thru the Caucasus on to the right flank of the British forces on the Tigris. It is rumored that British officers have been for some time in the various Caucasian provinces trying to organize the Armenians and Georgians to hold, these mountain fastnesses against invasions of the Turks from the south or the Teutons from the north, but it will be difficult to make an effective stand here because there are no lines of transportation by which the necessary munitions may be sent from the Persian Gulf into the Caucasian region. On the map the situation looks very serious, but we may well doubt whether Germany has the man power to avail herself of the opportunities now opening to her in the East.

The way to make a short war is to prepare for a long war.—Lord Reading.

And the way to prepare for a long war is to determine to make it a short war.

A torpedo aimed at a steamer in a British harbor missed its mark and exploded against a rock. The fishing boats that hastened to the spot found the water filled with stunned fish and were able to ship an unprecedented consignment to London where the market price is high. We do not blame the lucky fishermen but we must call the attention of the Kaiser to the fact that fishing by dynamite is unsportsmanlike and illegal and any U-boat practising it in American waters will be liable to arrest by the game warden.

Roberto Piccinini was debarred from citizenship by a Supreme Court justice of New York because in the literary test he spelled "cat" with a *k*. It was natural that an Italian accustomed to a language where letters stand for definite sounds should make the mistake of assuming that English orthography was equally rational but he will have to learn that American liberty does not include liberty of spelling and that he will make himself more unpopular if he attempts to introduce this foreign custom than he would by eating garlic or belonging to the Mafia.

The Rev. Dr. Sheldon's arraignment of the British liquor traffic in our issue of March 2 is confirmed by cold figures which show that the people have spent more money for beer during the war than ever before. The average profits of eighty-six brewing companies during the last three years are nearly fifty per cent greater than during the three years preceding. Allsopp's, which made \$340,500 in 1913, made \$1,198,500 in 1917. The profits of Salt & Co. were \$151,500 in 1911 and \$490,500 in 1917. Brunner Mond have just added \$23,000,000 to their capital as "part of the accumulated profits." War and drink have always been associated in history and literature. It remains for America to prove that they are separable.

# THE STORY OF THE WEEK

## Air Raids

Nowadays people know when spring has come by the flights of airplanes. The policy of reprisals is now frankly adopted on both sides and the bombing of interior towns is a constant occurrence.

Last year the Germans directed their aerial attacks mostly against London, but now they are turning their attention toward Paris in retaliation, as they claim, for the recent French and British raids on German cities. On the night of March 11, when the city was covered by a thick fog, some sixty airplanes in nine squadrons crost the line and flew over the city, dropping numerous bombs. In the city twenty-nine persons were killed and fifty injured. Elsewhere five were killed and twenty-nine injured. The raid on Paris of the Friday before resulted in the death of thirteen and the wounding of fifty. But more fell victim to crushing and suffocation in the subway (Metropolitain), into which the people crowded for protection. In this subterranean jam sixty-six persons, mostly women and children, were killed. A bomb was dropt thru the roof of a maternity hospital at Nancy but failed to explode. Secretary Baker was in conference with General Bliss, the American Chief of Staff, in a Paris hotel when the raid came and upon the insistence of the proprietor the conference was adjourned to the wine cellar. Three of the German machines were brought down.

London is no longer immune on moonless nights. Lighted only by the stars and the aurora borealis seven or eight machines crost the Essex coast and two of them reached London. The first bomb hit a three-story dwelling of brick and concrete in the northwestern part of the city. The bomb crashed thru the roof and two floors before it exploded. While the police and volunteer rescuers were trying to clear away the wreckage three more bombs fell in the immediate vicinity. The losses include eleven killed and forty-six wounded.

Three Zeppelins passed over Yorkshire Wednesday night, but did little damage.

Naples has hitherto been supposed to be outside the war zone, since it is at the opposite end of the peninsula from the Austrian front, 300 miles away, but at one o'clock on the morning of March 11, a dirigible passed over the city, dropping twenty bombs. Most of them struck private houses, but one exploded in the Hospital of the Little Sisters, killing seven. Altogether sixteen people were killed and forty wounded. Venice has been several times bombarded.

On the other hand, the Allies have been equally active. Successful air raids on Coblenz, Mainz, Stuttgart and many other German cities are reported. On Coblenz a ton of explosives were

### PERSHING'S RIGHT HAND MAN

Major General Robert L. Bullard has been chosen by General Pershing to be the first of the lieutenant generals in command of an army of American soldiers in France. General Bullard has been promoted rapidly—he was a colonel in 1916—and he has proved his ability under fire in two wars. He served under General Pershing in the Philippines during the war with Spain, and commanded the militia in the Brownsville district during the Mexican trouble in 1916

dropt, causing widespread damage. The raid on Mainz was made by daylight and, according to the German report, caused the death of three soldiers, four women and one child and injuring many others. The British report having during the week dropt ten tons of bombs on Freiburg, three tons on the docks of Bruges, thirteen and a half tons on railway sidings and depots about Mons, Lens and St. Quentin, and seven tons between Lille and Cambrai.

On the Italian front the Allied

Chapin in St. Louis Republic

THE OPERATION WAS SUCCESSFUL, BUT—  
The patient was Russia; the doctors are Lenine and Trotzky

aviators have made daring raids far behind the Austrian lines. Bozen in the Tyrol was attacked repeatedly by night and here in bombing the barracks eight war prisoners were killed and many wounded. Five airmen on March 2 succeeded in flying over the Julian Alps and reaching Innsbruck, the capital of Tyrol. Finding the city was not protected by anti-aircraft guns they swooped down to within 300 yards of the streets, bombarding station, barracks and munition factories and killing many soldiers and civilians.

## First American Raid

At 5:15 on the morning of March 11 the first independent American raid was launched in the Toul sector. After a lively barrage fire of six minutes a large party went forward and penetrated to the second German line a distance of 300 yards. Twelve minutes later the Americans were back in their own trenches without the loss of a man. The enemy artillery was so thoroly silenced that it did not get into action for twenty minutes.

Southeast of the Toul sector Americans are participating with the French in a series of raids on the Lorraine front. The point of attack has hitherto been concealed, but is now stated to be Badonviller, eighteen miles east of Luneville. Here, after shelling the enemy lines for four hours, the Americans charged over No Man's Land. Finding the first trenches deserted they went on to the second line 800 yards further, but still could find no foe. So they carried off papers and supplies and blew up the dugouts. The Americans remained within the enemy lines for three-quarters of an hour.

A photograph taken by an airplane showed that the Germans had massed two hundred gas projectors at a certain point ready for the next attack. The American artillery was accordingly concentrated on that point and the whole gas battery wiped out. The new gases, especially the so-called "mustard," are more virulent and harder to eradicate than the chlorine and bromine used earlier in the war.

Secretary of War Baker, with a staff of seven, arrived at a French port on an American armored cruiser on March 10. He went immediately to Paris for consultation with the American officers and French officials.

## Rumanian-Russian Peace

The treaty of peace concluded last week between Rumania and the Quadruple Alliance was followed this week by a treaty with Russia. Its text has not been cabled, but apparently Rumanian troops are to be withdrawn from the southeastern part of Bessarabia, tho they are allowed to hold the parts of that province inhabited by Rumanians for the protection of people

and property. Points in dispute will be referred to an international commission including two Rumanian and two Russian representatives. Until a permanent partition and administration is provided for, authority will be vested in local self-governing bodies supported by local militia. Russian and political prisoners held by the Rumanians will be released.

It is understood that the Quadruple Alliance favors the annexation of Bessarabia to Rumania but leaves to Rumania the task of obtaining the desired territory either by force of arms or by agreement with its Russian claimants. Bessarabia was in 1878 seized by Russia very unjustly and very ungratefully after Rumania had aided her most effectively in her war against Turkey. The question, it would seem, concerns Rumania rather than Russia if the country is to remain divided on these lines, for what is left of Great Russia does not now touch upon Bessarabia. The Ukrainians are said to be willing to divide the country amicably on the basis of nationality.

The new Rumanian Premier, General Averescu, is evidently doing the best he can to secure fair terms, but the country is completely at the mercy of the enemy and the chauvinist press of Germany demands that the Government take full advantage of its position both for revenge and profit. The vague phrase "rectification of the frontier" in the treaty may mean that Austria-Hungary is to hold all the passes of the Transylvanian Alps as well as the Iron Gates controlling the Danube. The commercial concessions, not yet made public, may mean that the petroleum and agricultural products of Rumania will be at the disposal of the conquerors. By the possession of this rich supply of oil, formerly in large part controlled by British capitalists, the Central Powers hope to become independ-

ent of America. The stipulation of the treaty that Rumania shall give right of way across Rumanian territory to Odessa enables the Central Powers to throw their troops as far as the Indian frontier and also to draw upon the grain fields of the famous "black earth" region of Russia which is tributary to Odessa. The Ukrainian Government as one of the terms of the recent treaty agreed to furnish provisions to the Central Powers and engaged by the middle of March to deliver 30,000 carloads of grain, 1200 carloads of sugar, 2000 carloads of frozen meat and 1000 carloads of dried fruit. But the Ukraine is itself destitute because of the war and the depredations of the Bolsheviki and it will be

difficult to get the food which the half-starved people of Germany and Austria have been led to expect from their forcible opening of "the granary of Europe." Even money will not always buy provisions now, for the Russian peasant finds the rubles turned out in such abundance by the Bolsheviki press are mere scraps of paper. He will not give up his grain unless he can get the goods he needs, especially shoes and clothing, in exchange, but these are just the things that Germany herself lacks. The prospect for next summer is not much better, for little wheat was sown last fall.

Moscow the Capital of Russia After a residence of two hundred years in the city

that Peter the Great founded on the Baltic for the purpose, the Government of Russia has returned to Holy Moscow. Altho the German advance toward Petrograd seems to have halted or been checked about seventy miles away, the city has been deserted by all who can get out by train, sledge or foot. It is almost impossible to get food or fuel and the typhus epidemic is spreading. Shooting and looting continue unhindered. To add to the terror and confusion German airplanes have flown over the city dropping bombs.

The Bolsheviki triumvirate which has ruled Russia ever since the fall of Kerensky is now broken up. First Krylenko, the ensign who was raised to the head of the army, resigned this position and now Trotzky, who as Foreign Minister conducted the peace negotiations at Brest-Litovsk, is out of the Government. He refused to accept the terms dictated by the Germans, believing it better to continue guerrilla warfare, but his colleague, Lenine, insisted that a bad peace was better than none, for it would give opportunity for working out the revolution. Lenine had his

#### THE FIRST AMERICAN "BLESSÉS"

These convalescent soldiers at a Paris hospital were wounded in the early fighting of American troops at the front. From left to right the American soldiers are Private Haley of New York, Private Geiger of Kansas City, Private O'Neil of New York, Private Geiger of Chicago, and Private Darland of Petersburg, Illinois. Darland's leg was shattered and he was captured by the Germans in the fighting at Cambrai. In a counter attack he was rescued by the British

way and Trotzky broke with him in consequence. Lenine has transferred the administrative departments to Moscow, where he hopes to secure a ratification of the treaty from the congress of the Soviets (the local councils of workmen's and soldiers' delegates). Meantime Trotzky remains in Petrograd at the head of the newly formed Military Revolutionary Committee of Seven.

The action of the Bolsheviki in seizing church property has outraged the feelings of the devout and brought down upon them the anathema of the Orthodox Church. The anathema pronounced by Doctor Tichon, Patriarch of all Russia and Metropolitan of Moscow, was read in all the churches on Sunday, March 10.

The report of a few weeks ago that a joint force of Saxon and Ukrainian troops had taken possession of Kiev, the capital of Ukraina, is denied from Petrograd, which claims that the city is still held by the Bolsheviki. According to American consular reports thousands of lives were lost and millions of property destroyed in the fighting that occurred in that city between the Bolsheviki and the Ukrainians between January 29 and February 8.

**The Protection of Siberia** Last week we reported that the Russian General Semenov was organizing a force in Manchuria for the protection of the Trans-Siberian railroad. This movement, it appears, has now developed into an organized government for Siberia to serve as a center of opposition to the Bolsheviki and the Germans. Admiral Kolchak, commander of the Black Sea fleet until it mutinied, and the head of the Russian Naval Commission visiting America last year, is said to be the leader of the movement, altho. a Bolshevik rumor ascribes the leadership to Prince Lvov, who was president of the provisional government founded after the revolution but later displaced by the more radical elements under Kerensky.

The new government has its headquarters at Pekin and is sending forward artillery and recruits by the Manchurian railroad to General Semenov, who is on the frontier ready to pass into Siberia and join the Japanese forces when they start westward from Vladivostok. The Chinese Government is to supply food and furnish a contingent of two divisions to the expedition.

Japan has agreed to pay the expenses of Chinese participation until the Chinese Government can secure a loan from the United States.

It is impossible to ascertain how far the proposed intervention in Siberia has gone, for reports are conflicting. A Petrograd paper says that the Japanese cruiser "Mikado" arrived in Vladivostok on January 12 and two more on the 14th; that four thousand Japanese troops were landed and that a Red Guard was organized to resist them. The Japanese on January 20 denied that any troops had been landed. The presence of Japanese and British cruisers in the harbor is admitted. The Red Guards or Bolsheviki troops at Irkutsk and on the Manchurian frontier are said to be under German officers and better supplied with artillery than General Semenov's forces.

In England opinion is divided as to the advisability of Japanese intervention. Lord Robert Cecil, Minister of Blockade, defends the action of the British Government in approving of Japanese action by saying:

In fact, I cannot conceive any patriotic Russian who would not prefer the assistance of a friendly power, aiming at the restoration of order, to conquest by a ruthless and unprincipled enemy.

The Japanese alone can act effectively in the present crisis. If they are intrusted by the Allies with the duty of going to the assistance of Russia against Germany, I am sure they will carry out the task with perfect loyalty and great efficiency.

It would be in the highest degree foolish, if not criminal, if the Entente failed to take every step possible to frustrate this German scheme.

On the other hand, the liberal and radical press of England views the project with suspicion. *The Nation*, for instance, says:

We are committed to political intervention in Russia with an Asiatic army as our mandatory agent and with ultimate tragic political consequences to ourselves in India and Australia.

**Finland Under German Control** A treaty of peace between Finland and Germany was signed on March 7. According to its first article Germany engages to exert herself to secure recognition of Finland's autonomy and independence from all the powers. On the other hand, Finland agrees to cede no portion of her territory or to grant any territorial rights to any foreign power without a previous understanding with Germany.

Both parties agree to renounce all claims to indemnities or compensations for damages. State treaties and private rights are to be immediately restored. Prisoners are to be exchanged. Trade relations are to be resumed. Any questions in dispute about civic damages will be settled by an arbitral board, a third of the members to be appointed by each party and the other third of neutrals appointed by the President of Switzerland. The fortifications of the Aland Islands are to be removed as speedily as possible and never re-erected.

German troops have displaced the Swedish garrison that had occupied the Aland Islands and from this base they are being transported to the mainland at Vasa to reinforce the Finnish White Guard fighting the Bolsheviki. The Bolsheviki still hold Helsingfors and their reign of terror extends over southeastern Finland. They are said to be carrying out a deliberate policy of exterminating the intellectual and propertied classes. Professors, students, officials, clergymen and landed proprietors are systematically assassinated.

Senator Svinhufvud, the Premier of Finland, has escaped from the capital and taken refuge in Berlin. He has been spoken of as probable president of the future republic of Finland, but now it is said that the Finnish Government has asked the German Emperor to appoint Prince Oscar of Hohenzollern, his fifth son, to be King of Finland. Prince Oscar is thirty years old and was reported in 1916 to have been slightly wounded on the head and thigh in the Russian campaign. On the eve of the war before departing for the front he contracted against his father's wishes a morganatic marriage with Countess Ina Bassewitz, former lady-in-waiting to the Empress.

The independence of Finland has been recognized by Germany, Austria-Hungary, Sweden, Norway, Denmark, France and Switzerland, but not yet formally by England and America.

**President's Message** The Soviet councils of workmen's and soldiers' delegates, which has, almost from the beginning of the revolution, been the ruling power in Russia, has transferred its seat from Petrograd to Moscow for fear of the German occupation of the Baltic capital. To the congress

THE JAPS ARE READY

These are some of the men who may go into Siberia to prevent the German seizure of Russian war supplies. Japan has proposed to make an expedition from Vladivostok for this purpose; it is understood that France approves, but that England and the United States are still considering the advisability of such action.

of the Soviets on its opening in Moscow March 11, President Wilson sent the following message of greeting and encouragement thru the American Consul General:

May I not take advantage of the meeting of the Congress of the Soviets to express the sincere sympathy which the people of the United States feel for the Russian people at this moment when the German power has been thrust in to interrupt and turn back the whole struggle for freedom and substitute the wishes of Germany for the purpose of the people of Russia?

Altho the Government of the United States is, unhappily, not now in a position to render the direct and effective aid it would wish to render I beg to assure the people of Russia thru the Congress that it will avail itself of every opportunity to secure for Russia once more complete sovereignty and independence in her own affairs and full restoration to her great role in the life of Europe and the modern world.

The whole heart of the people of the United States is with the people of Russia in the attempt to free themselves forever from autocratic government and become the masters of their own life.

**Speeding-up War Work** A number of announcements were made during the week that indicate further progress in governmental coördination and in the speeding up of war activities.

The March Bulletin of the Federal Reserve Board appeared with the announcement that rail congestion had been relieved and fuel shipments were coming thru to the East in a satisfactory manner. The war industries have shown a quick recovery under better conditions and many are now operating at maximum capacity.

General Wheeler, Acting Chief of Ordnance in the War Department, announced that ten munitions districts had been established in the country, each under the charge of a skilled business man, to speed up production. Under the new plan the War Department is brought into direct contact with the munitions industries and can watch more closely the progress of the work.

Secretary Baker announced that the newly created War Council of the War Department had been strengthened by the addition of three members. The new men are Major General George W. Goethals, Quartermaster General; Edward R. Stettinius, Surveyor General of Supplies; and Major General Peyton C. March, who has recently returned from France with a fresh knowledge of conditions in the field. Secretary Baker has stated that the Council will be made the main reliance of the War Department for the planning and initiative necessary for the effective support of our armies in France.

Ninety plants, it was stated, are now busy turning out Liberty Trucks for the army, and 7500 will have been delivered by the end of June. Shipbuilding is progressing well at last. The February deliveries of twenty-seven vessels of 120,700 tons were nearly double the January total, and the March schedule is expected to add to our fleets fourteen cargo vessels, seven tankers and two colliers, with a total tonnage of near 190,000. Officials now hope to build at least 4,500,000 tons by the end of the year.

Press Illustrating

#### TO BE GOVERNOR OF ALASKA

The nomination of Thomas Riggs, Jr., as Governor of Alaska to succeed Governor Strong, is the logical climax to Mr. Riggs' twenty or more years' service in building up Alaska's industries and government. Mr. Riggs has been lately a member of the Alaskan Engineering Commission, concerned with the building of a Government railroad from Seward to Fairbanks.

#### American Losses in France

Altho the American troops are now for the first time actively taking part in the Great War their losses are already greater than in the Spanish-American war. The total number killed in action during the war with Spain was 280, of whom 260 fell in Cuba, 3 in Porto Rico and 17 in the Philippines. During the present war we have lost 348, of whom 139 were killed in France and 209 drowned when the "Tuscania" was torpedoed.

The daily casualty lists given out from Washington now give merely the name of the victim and no information as to his home residence or the conflict in which he fell. This change in the form of announcement is made by request of General Pershing in accordance with the express desire of the French military authorities, who fear that the old form will give information to the enemy as to the forces in front of them and the results of each raid.

#### THE GREAT WAR

March 8—Airplane raid on London. Finland makes peace with Germany.

March 9—Airplane raid on Paris. Russian government moves to Moscow.

March 10—Secretary Baker arrives in France. British take Hit in Mesopotamia.

March 11—Airplane raid on Naples. Trotzky ceases to be Foreign Secretary of Russia. Americans raid German trenches in Toul sector.

March 12—President sends message of encouragement to Russian Soviet at Moscow. John Dillon succeeds the late John Redmond as leader of the Irish Nationalists.

March 13—Zeppelins raid England. Germans occupy Oostende.

March 14—British Admiralty reports loss of fifteen vessels over 1600 tons and four smaller.

It would be like signaling the hits from the target in a rifle match. The French publish no casualty lists at all and the German casualty lists are so belated as to be of little aid to an enemy.

The new ruling has caused great disappointment and not a little resentment thruout the United States. It is questioned whether knowledge of the fact that a certain soldier hails from Maine or Georgia would be of any advantage to the Germans, since our army is not divided on a local basis. Since several men may have the same name the publication of the name alone will cause unnecessary anxiety and distress to those who may read the notice and mistake the person intended. The next of kin or person designated by the soldier on enlistment is of course notified of any casualty by telegraph, but the relatives and friends may be left in uncertainty.

Captain Archibald Roosevelt, son of ex-President Roosevelt, was wounded slightly in the leg and his arm broken in a recent raiding party. He has received from a French general the decoration of the Croix de Guerre for gallantry in action.

#### An Attack Upon the Direct Primary

There is a possibility that New York may be the first state to discard the direct primary when it had once been adopted. An impressive movement is under way for the repeal of the direct primary law. At a hearing last week before a special committee of the State Senate arguments in favor of a return to the convention system of nominating candidates for office were made on behalf of the Bar Association of New York City. Mr. William D. Guthrie, representing the association, made the principal argument. There was nothing novel in his appeal, which merely reiterated the asseverations which have been made whenever the direct primary has been proposed as a substitute for the convention. Mr. Guthrie argued thus:

I am profoundly convinced that the people were never confronted with a more difficult or more sacred duty than the selection of candidates for public office. We hear a lot of talk of this being a government of laws not of men, but we all know that the highest desideratum, after all, is the selection of men of intellect, integrity and capability to administer our laws. The direct primaries are violative of every principle of representative government, and do great mischief in that they destroy moral responsibility.

The convention gave us party principles, better men, and opportunities for allaying factional strife and promoting the enthusiasm that is vital to healthy party life. A few years of experimenting with our election law has produced a hodge-podge from which intelligent electors turn in irritation and disgust. The direct primary craze is a mental disease. If we permit it to continue longer to eat away at our representative form of party government you will soon see government in this country by groups, each bickering with each other, a condition that brought the French parliamentary system into such disrepute.

Mr. Job Hedges referred to the fact that no state has ever repealed a direct primary law; and asserted "that they are merely waiting for a chance to do it." He did not state in what such a "chance" would consist.

THE GERMAN RAIDS ON PARIS

A sidelight on the French philosophy of "C'est la Guerre"—the people at home are forced to be constantly on their guard against death peering in. Cartoon from *La Victoire*, Paris

There was a time when some of the western states which introduced novel pieces of political machinery were looked upon as curious aberrations from the normal. But now, with more than three-quarters of the states of the Union using the direct primary and contented in its use, New York is likely to be looked upon as "the fool of the family" of states if it returns to the arms of the political convention. But Governor Whitman has declared that he will veto any bill repealing the direct primary law. So perhaps it will not happen.

**War Risk Insurance** More than twelve billion dollars of war risk insurance have been written on the lives of American soldiers, sailors and nurses by the Government. On March 6, 1,392,324 applications had been received from men and women in the national service at home and abroad. It is estimated that, when the reports are all in from Europe as well as this country, the number of policies already written will amount to more than a million and a half. The time during which application can be made has been extended to April 12, so that there will be a further increase in the number of those seeking insurance, and a corresponding increase in the total amount of insurance written. Insurance is still being written at almost a billion dollar a week rate. Over ninety per cent of the personnel of the United States Army, here and abroad, is insured. In many camps the proportion of those who have availed themselves of the opportunity is ninety-nine per cent. The insurance now on the books of the War Risk Bureau is more than three times as great as the ordinary insurance held by the largest commercial company in the world.

The average amount of insurance applied for by individual soldiers, sailors and nurses is \$8,085. The maximum which is permitted is \$10,000 and the minimum is \$1,000.

The splendid response to the opportunity provided by the Government for the protection of families and de-

pendents of members of the nation's fighting forces should destroy any possible excuse for a return after the war to the scandalous old-time system of pensions, with all its accompaniments of political favoritism, graft and waste.

#### National Party Convenes

The new National Party, originally formed last summer as an amalgamation of several progressive and radical groups, with an infusion of Prohibitions, concluded its first national convention in Chicago on March 8. About 200 delegates attended the convention, including former Progressives, former Socialists and single taxers. David Coates, former Socialist Lieutenant Governor of Colorado and a founder of the Non-Partizan League, was elected chairman of the party, and J. A. H. Hopkins, former state chairman of the Progressive Party in New Jersey, was chosen chairman of the executive committee.

A progressive platform was adopted for which John Spargo, one of the leaders, borrowed many of the Socialist Party ideas. Prohibition and equal suffrage are particularly emphasized. Other planks call for the short ballot, initiative, referendum and recall, government ownership of railroads and of other public utilities and industries dependent on public franchises or requiring large-scale non-competitive operation, proportional representation, the limitation of immigration to the needs of industry, old age and maternity benefits, freedom of press and speech, the abolition of secret diplomacy and the formation of a league of nations to preserve the peace.

Whether a party formed of such diverse elements and basing its appeal on a program rather than on striking individual leadership will attract a considerable following remains to be seen. The old-line politicians are naturally skeptical. But there are also many men of progressive views and liberal convictions who see in this attempt to create another party out of small

groups a futile and unwise undertaking.

The Non-Partizan League has formally refused to join the National Party alignment, probably thru a natural skepticism of any political movement born in the East. The Prohibitionists have also refused to merge their identity in the new party, but have promised their coöperation. That small portion of the Progressive party organization which did not follow Colonel Roosevelt back into the Republican fold forms the backbone of the new organization.

**Political Indictments** Five leaders of the Socialist party have been indicted by a Federal grand jury in Chicago, under the Espionage law. The charges include the making of speeches and publication of articles tending to obstruct recruiting, encourage disloyalty and interfere with the prosecution of the war. The indictments were returned on February 2, but were withheld until March 9.

The chief figure among the indicted men is Victor L. Berger, of Milwaukee, Socialist candidate for Senator from Wisconsin. He has twice been elected to Congress and for many years has been the editor of the Milwaukee Leader, a daily newspaper that was barred from the second class mail last fall by Postmaster General Burleson. Others indicted are Adolph Germer, national secretary of the Socialist party; J. Louis Engdahl, editor of the Eye Opener, a Socialist paper of Chicago; Irwin St. John Tucker, head of the Intercollegiate Socialist Society; and William F. Kruse, head of the Young People's Socialist League.

Seymour Stedman, counsel for the Socialist party, has issued a statement on behalf of the indicted men in which he says:

The books, papers and documents of our national office have always been open to party members and public officials. For six months the Federal authorities have been watching to find something of a criminal nature to be used against officials of the party. Apparently it is considered necessary to place the American Socialist party on trial. If the truth comes forth as a result of this case, I believe the public will realize that the war profiteers and monster capitalists are the most interested in this prosecution.

Socialists the world over have opposed war and the system that makes war inevitable. We do not consider opposition to a condition or policy as equivalent to breaking or violating the laws of the country.

On the day after the Socialist indictments were announced in Chicago, A. C. Townley, president of the Non-Partizan League, was indicted by a county grand jury in Minnesota, charged with "issuing and circulating a seditious pamphlet tending to discourage enlistments."

**The Second Red Cross Drive** During the week of May 20 the American Red Cross will appeal to the people of the country for a second contribution to its work here and abroad of one hundred million dollars. It will be eleven months since the

first Red Cross drive, which brought in \$105,000,000. Of this amount \$17,000,000 was returned to local chapters for the support of local activities, almost entirely in the making of hospital supplies, knitted garments and comforts; \$77,000,000 has been appropriated for general relief work here and abroad; and a little more than \$10,000,000 remains to be appropriated.

During the great Red Cross membership drive in the week before Christmas about 22,000,000 new members were secured. Last month a junior membership campaign enrolled virtually all the school children in America.

In Congress Three pieces of important legislation made good progress during the past week in Congress. The war finance corporation bill was passed by the Senate by a vote of 74 to 3. The three negative votes were cast by two Republicans and one Democrat, Senators Harding, Sherman and Hardwick. The bill as adopted creates a war finance corporation to be composed of five, appointed by the President and confirmed by the Senate. The capital stock of the corporation is fixed at \$500,000,000 and the corporation is authorized to issue bonds up to \$4,000,000,000 for the purpose of aiding business and industries essential to the conduct of the war where such industries are unable to market their own securities because of the monopolization of the money market by the Federal Government. The original proposal to authorize the board of directors or capital issues committee to control private security issues was rejected. A substitute was agreed to giving the capital issues committee, a voluntary organization now attached to the Treasury Department, a legal status, but with power to act only in an advisory capacity. The bill is still before the House for action.

The railroad bill, which had been passed by both houses, finally reached complete agreement in the conference committee, and was reported back to the Senate and the House for final action. The rate-making power was accepted practically as passed by the Senate. This gives the President power to initiate rates and put them into effect, but grants the right of review by the Interstate Commerce Commission. Agreements reached earlier provide that the period of Federal control shall cease twenty-one months after the close of the war; that all short-line roads shall come under the act, and that the amount of taxes on railroad property to be levied in the various states shall not exceed the ratio on such property for the year prior to the Government control of the roads. The conference must first be considered by the House.

The third measure was in the form of two amendments to the urgent deficiency bill. Under the first the Alien Property Custodian is given complete authority to sell alien property in the United States held by enemies who are not resident here; under the second the Government is authorized to

assume ownership of the North German Lloyd and Hamburg-American steamship companies' piers on the North River at Hoboken. Both amendments were adopted by the Senate without opposition.

The Overman bill, giving the President greater freedom in the coordination and reorganization of executive departments and other agencies for the prosecution of the war, continued to receive consideration in the Senate Judiciary Committee. No conclusion was reached as to its being reported to the Senate. During the week the President had a conference with Senator Overman about the bill, and it is understood that Mr. Wilson is very anxious that the powers contemplated by the bill shall be granted to him. The opposition to it arises naturally from the indisposition, ever present in Congress, to extend the authority of the coordinate branch of the Government.

**"Dry Zones" at Naval Centers** The Secretary of the Navy last week issued an order creating a "dry zone" about the Naval Academy at Annapolis, the naval training stations and camps at Newport, R. I.; Norfolk, Va.; Great Lakes, Ill.; Hampton Roads, Va., and Mare Island, Cal., and the Marine Barracks at Paris Island, S. C., and Quantico, Va. The order forbids the sale, gift or serving of alcoholic liquors to any one within five miles of these centers of naval activity, except in private houses to bona fide guests other than officers and men of the naval forces. Outside those zones the sale or the service of liquor to any officer or member of the naval forces is forbidden, except in a private house to members of the family or bona fide guests. The shipment of liquor into the dry zones is prohibited, unless it is going into a

home or to a pharmacist or physician. This is the same plan that has been in force in the army, except that the War Department modifies the width of the five mile circle where a city or town lies within the prescribed distance.

In making the order, the Secretary sets forth the conditions about the Newport Naval Training Station as an illustration of the need for the restrictions now laid down. He says:

Representations have been made by the authorities at the training station that, in spite of every effort on their part, and in spite of the detail of numerous naval patrols thruout the city, the liquor menace continues unabated and is constantly undermining the physical and moral welfare of the naval personnel. Practically all of the personnel at the training station are young lads, very recently enlisted, who are receiving their first training in the navy, and who are of that impressionable age which makes it most necessary that under these new conditions for them, they should not be exposed to insidious temptations.

Under date of March 1, 1918, the commandant of the second naval district, with headquarters at Newport, stated in a letter to the department as follows:

"I hope you will permit me to urge, with all the emphasis of which I am capable, that the sale of intoxicating liquor be immediately prohibited, not only in Newport, but in every place within five miles of any part of the naval station, Newport, Rhode Island, or the repair plant of the second naval district at Newport.

"At one time, last summer, there were almost nine thousand men at the training station. In addition there were about two thousand Naval Reserves in Newport. There were also several thousand men employed at the torpedo station, not including enlisted men.

"Warm weather is again approaching, and the number of recruits at the training station will again be greatly increased.

"We owe it to these young men to surround them with the best possible conditions, moral, mental, physical and spiritual. If we can prevent them from being led into temptation, it is our obvious duty to do so.

"More than one terrible temptation would be removed if Newport and vicinity were 'dry.'"

# SHIPS WILL WIN

BY HAMILTON HOLT

The editor of The Independent has just returned from a two weeks' trip to fourteen of the principal shipyards of the Atlantic Coast and the Gulf. He presents here his first-hand observations of the most critical problem now confronting the American people

**I**T is instantly evident to any one visiting Washington these fateful days that one and only one great issue now confronts those who are responsible for the conduct of the war. This issue is not the efficiency of the Army or Navy, the conservation of food, the production and distribution of coal, the transportation of freight by rail, or the floating of the next great loan—vitally important as these are. Mr. Baker, Mr. Daniels, Mr. Hoover, Mr. Garfield and Mr. McAdoo have all "hit their stride" and they are bound to win out if the American people loyally support them. But the supreme issue before the American people—perhaps the decisive factor in the winning of the war—is the immediate production of "ships, ships and still more ships." And what is the United States going to do about it?

Within the next few weeks—possibly before these words reach the reader—it is expected that Germany will have launched her great spring offensive. This she must do—so say the military authorities—to preserve the morale of her troops at the front and to keep her people quiet at home. Secretary Baker was probably not speaking from surmise when he predicted on January 27 that "the most powerful offensive hitherto undertaken may be expected." It is almost inconceivable that Germany will not take the offensive on sea as well as on land. For at all hazards she must blow up the bridge of ships that the United States is building across the Atlantic, if she is to win any final victory on European soil.

So far Germany has been sinking more than two tons of ships for every ton of ships built by the Allies. As Germany for the past year has been building on the average thirty-eight submarines a month as against twenty-three a month that the Allies are able to capture or destroy, it is not she that has to worry. Hence as Germany is building more submarines than she is losing and the Allies are losing more ships than they are building, it does not require a supermathematician to predict that disaster and perhaps defeat awaits the Allies unless something is done and done quickly either to destroy more submarines or to build more ships or both.

To cope with this emergency both England and America are building destroyers in vast quantities. At present they have only about enough to convoy ships, but very soon we are promised several hundred more and then we shall have ample of these maritime bird-dogs to scour the seas for the ocean pests.

Both England and America will also strain their shipyards to the maximum to turn out all the merchant ships pos-

sible. England will scarcely do much better in 1918 than she did in 1917 when she built 2,000,000 tons. The United States, however, has laid down a program which will increase our tonnage from 1,400,000, which we built in 1917, to 6,000,000 in 1918. This program, if carried out, will produce more ships than the shipyards of the entire world have produced in any one year prior to the war and is 1500 per cent greater than the yearly average shipping program of the United States for the past fifteen years. Yet, altho this 6,000,000 tonnage is fully one-eighth of the entire world's shipping afloat, it is nevertheless hardly sufficient to replace the boats already destroyed by submarines in 1917. Hence, if the United States really expects decisively to turn the tide of war she must aim to produce as nearly as possible 20,000,000 tons of shipping a year, the figure that Mr. Ferguson, the head of the Newport News Shipbuilding Company and generally considered the leading shipbuilder of the United States, says is the limit of our present capacity.

**W**HAT, then, is our present stock of vessels? In addition to the 458 ships of more than 1500 tonnage with a total tonnage of 2,871,359 tons which we had at the beginning of the war, we have taken over 117 German and Austrian ships of 700,285 tonnage and up to November 23, 1917, have given contracts for 375 wooden vessels of 1,330,900 tonnage, 844 steel vessels of 5,958,333 tonnage, 58 composite vessels of 207,000 tonnage and have requisitioned 317 vessels under construction for private concerns or foreign governments. Most of these vessels are supposed to be completed and delivered in 1918 and all within 1919.

After Congress declared war on April 6, a titanic task confronted the newly created Emergency Fleet Corporation which was established to build, man, and operate all the new ships produced in America. There were then only a few shipyards in existence capable of turning out ocean-worthy boats, for, as everybody knows, American shipping has never recovered the prosperity that it enjoyed before the Civil War. But of the yards then operating, seventy per cent of their capacity was already conscripted by Secretary Daniels for the Navy, leaving thirty per cent for the building of merchant vessels for us and foreign governments. Accordingly thirty-six of the old yards had to be enlarged and seventy-four new yards had to be constructed for the building of the new merchant fleet.

By the first of the year keels had been laid down for twenty per cent of

the composite ships, forty-three per cent of the wooden ships and four per cent of the steel ships. During the first three months of the shipping program things were at a standstill owing to the miserable controversy between Mr. Denman and General Goethals over the respective merits of wooden and steel ships. It is not necessary to go into that squabble here. Suffice it to say that the wooden ships are all of what is known as the Ferris type and each has a capacity of 3500 tons. As these wooden boats have to carry enough coal while the war lasts to take them to Europe and back, many people think there will not be enough space left over for much of a cargo. On the other hand, most of the wooden shipowners say that the wooden ships will be good for at least twenty years, and as they will pay for themselves in two or three voyages, they will be most profitable after-the-war investments, even if they are finally relegated to the coast-wise trade.

Many of the present officials of the Emergency Fleet Corporation, however, look askance at the wooden ships. They regard them as at best necessary evils. They place our chief reliance on steel ships. These are either to be made entirely at the yards or else "fabricated" at the mills, and brought to the yards in freight cars and there assembled on the ways. These ships are to be usually of 8500 tons each with a speed of from ten to fifteen knots an hour, and, except for accident, they will last practically forever.

It is the steel ships that must eventually save the day, so the experts declare. But the steel ships take much longer to build than the wooden ships. It is therefore evident that many months must elapse before they can be completed.

**O**N my recent tour of the shipyards from Philadelphia to New Orleans inclusive, I inspected fourteen typical yards that had contracts for 260 ships, some steel, some wooden and some composite. Yet these yards had only some fifty boats on the ways. From all I could learn by talking with shipbuilders, government inspectors, and workers, I do not believe there will be a single ship delivered from any one of them to the Government and ready for service in the next six months, obviously the most critical period of the war.

Better results are reported from the Pacific shipyards, but the situation is said to be worse in New England owing to the severe winter.

Thus we are likely to have very, very few new boats on the high seas

before August, and not very many before 1919, except the requisitioned boats that had already started before the war began. Of the 260 ships contracted for in the yards from Texas to Pennsylvania which I personally visited, I doubt if there will be over fifty out before 1919.

Now the United States has two great jobs to do in this war. First, to send our men to the fighting line, and, second, to supply our stricken allies out of the abundance of our wealth.

Secretary Baker has announced that early in 1918 we shall have half a million men in France. If now it takes five tons of shipping to supply a man at the front—and that is Washington's estimate—it will take some 2,500,000 tons of shipping to keep them there. Mr. Ferguson, of the Newport News Shipbuilding Company, says we are not likely to produce 3,000,000 tons of shipping this year, and if that is the case we shall not have nearly enough in addition to supply the Allies with the munitions, raw material and food they require. If we attempt to put over a million men in the field this year, we shall apparently fall down completely.

When the American people realize this—especially if the submarines should at the same time become more active—are we not likely to have a panic that will shake the Administration from center to circumference?

There is no use crying over spilt milk. The Denman-Goethals row lost us the first three precious months of our shipbuilding program. The members of the Shipping Board who succeeded to the job were not practicable shipbuilders, and it no doubt took them several months to learn what a seasoned shipbuilder would have known to begin with. Even now they are just beginning to take concrete steps toward getting the timber for the wooden ships and the labor for the steel ships—the two elements up to the present time that have chiefly caused the delay. The shipbuilders who have got the contracts are men who have been in the past necessarily confined to a limited and not very

profitable business. They have not as a class had the business experience or vision to grasp at once the magnitude of the new conditions and to act accordingly. The new builders who have entered the business since the war began are naturally green. From the standpoint of the workers, shipbuilding in America was almost entirely an extinct trade when the Great War began. The wooden ship carpenters are usually men beyond middle age and most of the skilled steel ship workers were already employed in the naval yards. Ship carpenters had to be recruited from the house and bridge carpenters—an almost separate trade—and the steel riveters either had to be educated from the bottom up or taken over from the structural steel workers, which raised a very acute labor union issue, because the wages of the two kinds of riveters differed considerably.

Aside from the Government, the shipbuilders and the workers, the local community is the only other factor in ship production, and as yet scarcely any attempt has been made by anybody except the Chamber of Commerce of the United States, acting thru Mr. E. A. Filene, the public-spirited merchant of Boston, to get the community back of the shipyards.

**T**HESE are a bare outline of the facts.

Now what can and must be done if we are to maintain our line to Europe unbroken and unimpaired? The first and most important thing for the American people to realize is that shipping is "the neck of the bottle," that everything that goes from America to Europe goes in ships and ships are the weakest link in the chain that is to bring us victory. If this is the case, then it is evident that shipping is not a mere economic question of the production of ships thru the joint efforts of capital and labor, but the greatest military, political and patriotic issue now confronting the people.

I therefore offer, tho with some diffidence, the following suggestions, for I believe they will help in solving this

vital problem that must somehow, some way, be solved. First, the President should insist that the officers of the Emergency Fleet Corporation make good just as generals on the field make good, or else give way to abler men. Next, some of the greatest business statesmen of the country should be invited to coöperate in the effort to build the ships. The new district heads of the various shipping zones should be given the greatest authority possible to make instant decisions, even with the right to change contracts, etc.

I heard much complaint from the shipbuilders of the narrowness of vision on the part of subordinate Washington officials with whom they had to deal. Mr. Hurley might well have his entire force examined by an efficiency engineer in order to weed out those addicted to formalism, fussiness and red tape.

Steps should be taken at once to get, at whatever cost of time and money, all the raw materials to the yards so that the shipbuilders' only problem will be to build ships. This is especially important in regard to lumber. As the Government has virtually commandeered the lumber supply of the South, the Government has undertaken thru the Southern Pine Association to furnish all the necessary lumber. This association was supposed to be in a position to furnish the lumber to the shipyards as fast as needed. In order to cut lumber economically it is the custom to clear off all the timber in a given area, the large and small timber alike. The expense of cutting only the large timber and making a special path to it has prevented hitherto the production of a sufficient supply to furnish the wooden ships with their enormous logs for the flooring and stem and stern posts. The Emergency Fleet Corporation tried to remedy this default by importing timber from the Pacific coast, but the shipbuilders there needed all that was available, especially as the I. W. W. strikes were curtailing the output. Moreover, the Western timber was considerably delayed by the railroad congestion. Had the Emergency Fleet Corpora- [Continued on page 498]

# SHANGHAIED WITH THE FLEET

BY BURNELL POOLE

**T**O make a visit to the fleet and to be "shanghaied" at sea for a week on a superdreadnought is something of an experience even in the days before the war, but at this time with the navy "cleared for action" it is quite an unusual event. Recently I had that good fortune and I have had the opportunity of seeing what the navy is doing and to observe the spirit which animates the service under war conditions.

Armed with special credentials from the Secretary of the Navy at Washington, I got my first glimpse of the big fighting ships about sunset of a certain day not very long ago as they lay at anchor in one of the great fleet bases situated at a strategic point on the Atlantic seaboard.

As I stood on the dock in the midst of a hustling throng of officers and men with the patrol officer shouting orders thru a megaphone at steamers, gigs, motor sailers, and all kinds of auxiliary craft anxiously waiting to make landings, it was evident that the times were extraordinary. The air seemed filled with a feeling of intense activity and of things being accomplished.

I had visited the fleet before, but never had I seen or felt anything like this.

In the outer harbor, anchored in long

*"The whole fleet was outward bound for nobody knew how long. The atmosphere of war was unmistakable." And the only civilian on board was Burnell Poole, sent out by special permission of the Navy Department to photograph and paint our fighting fleet. Mr. Poole presents here for the first time the story in words and pictures of his voyage on a superdreadnought in wartime*

*The Jackies enjoying a band concert on the spacious quarterdeck far out at sea*

lines, lay the great superdreadnoughts of the most powerful fleet America has ever known silhouetted against the setting sun. As the lights began to appear on the big black hulls in the fast approaching darkness it became a wonder scene, with the myriads of signal lights twinkling and the sky filled with countless flashing beams from the signal searchlights.

It was a sight to thrill any spectator and bring to him a sense of realization that the mighty power of the American navy was worked up to fighting pitch and that both men and ships were ready to answer the call of the nation whenever it might come and wherever it might lead them.

The trip out in the darkness on one of the fast steamers thru the long lines of lighted ships was all too short.

Once aboard-ship it was pleasant to be greeted by officers with whom I had been shipmates before and to note that the traditional navy hospitality was just as sincere under trying war-time conditions as in a time of peace.

After dinner that evening I attended the "movies" held on the spacious quarterdeck for the benefit of the crew, and here let me say that "movies" ashore are one thing and "movies" aboard a battleship are altogether another. The jackies enter into the spirit of the films to such an extent that no

effort is made to stifle outbursts of enthusiastic approval when the heavy villain gets what is coming to him or when the hero takes the girl in his arms in the typical "movie" way, and some of the remarks made in tones bearing no resemblance whatever to a whisper show that the jackies have a mighty keen sense of humor and nobody on the screen gets away with a thing as far as they are concerned, for they do not miss a trick.

Next morning I was up at the crack of dawn in order to make the most of my time with the fleet. I was very anxious to see the big ships by daylight and I wasted no time in getting out on deck.

I saw at a glance and noted with keen interest that the full strength of the navy was mobilized. I had never

*Exercises, drills, hours of study and leisure, all went to make up the life of a jack-tar during a very busy week on the water*

*The guns were manned night and day and the submarine watches were relieved at frequent intervals to insure efficiency*

before seen such a powerful fleet. All ships were in full commission and ready instantly to meet whatever emergency might arise.

The events of the day started with the captain's inspection and from then on drills came thick and fast and all kinds of courses of instruction were held in each of the almost endless number of different duties in the life of the modern sailor aboard a monster fighting machine.

I learned that the ship was taking care of forty per cent more men than its normal complement. This large increase in personnel consisted of both newly enlisted men and men from the naval reserve who were being trained aboard ship, among other things, into crews to man anti-sub-

marine guns for the merchant ships now rapidly approaching completion and still under construction. This particular dreadnought was not by any means a single exception in having such a large addition to the crew, for the same condition is general thruout the fleet.

The spirit of the men impressed me tremendously. They went at their work in a way which showed that "Fritz" is going to run up against the real arti-

cle whenever he meets up with any part of Uncle Sam's navy. I watched several different crews working on a dummy loading machine for a five-inch gun with an officer holding a stop-watch over them, taking the time for "getting away" a certain number of rounds. They were brand new men and altho they gummed things now and then the way in which they made the old machine hum told me that they would all soon be able to spell "efficiency" and spell it correctly.

In the afternoon I witnessed a rowing race between crews from two vessels of the fleet. As I watched the race-boats coming down the course between the long lines of battleships, with rails crowded by shouting jackies, I was informed by a group of sailors [Continued on page 500]

A nation-wide campaign conducted weekly by The Independent as the official publication of the Committee on Patriotism Through Education of the National Security League. To teach American ideals in the schools, colleges, homes, offices and workshops of the nation

## THE FREEDOM OF THE SEAS

**T**HE Great War, we have been told on numberless occasions, is a struggle "to make the world safe for democracy." While this is the great mighty purpose which overshadows all other aspirations, it is true, in a narrower sense, that for the United States at least this war was begun and will be finished as a war for the re-establishment of the great American principle that: "The paths of the sea must alike in law and in fact be free." These are the words of President Wilson, spoken before the United States Senate on January 22, 1917. "I am proposing," he said further, "that freedom of the seas which in international conference after conference representatives of the United States have urged with the eloquence of those who are convinced disciples of liberty."

The seas are the great highroads which bear the traffic between nations. We Americans for centuries have sent our ships and our goods back and forth upon the salt waters. For over a century American shipmasters and American citizens have crost and recrost the dark waters in the peaceful pursuit of their lawful occasions, carrying with them the grain and the meat of our agricultural communities, the products of our factories and of our mines. At no time have we sought unfair advantages; we have demanded only freedom from unlawful restrictions and equal opportunity for purchase and sale.

When the war between the great European nations started, and as long as we believed the struggle to be merely a battle for the maintenance of territorial and commercial advantages, in spite of our sympathies for the downtrodden and oppressed peoples, it was our sincere desire to be "neutral in fact as well as in name." For over two years we protested against what we believed to be the unlawful restrictions placed upon neutral commerce both by our present allies and by the Germans. Our objections to British and French violations of our rights were just as sincere as our objections to the practises of the Germans; but in the one case the issue involved only the goods of American citizens; in the other, it involved the preservation of their lives.

Our controversy with Germany which began when the United States protested against the establishment of the War Zone involved no new principle. Its roots extend deep into the soil of our ideals. Long before the thirteen colonies were united into a nation, the men of New England and of the southern colonies had protested against the Old World policy which looked upon the sea and its traffic as the exclusive right

BY ARTHUR M. WOLFSON

of the nation which was strong enough to maintain its trade by the use of force against other nations. Spain, Holland, France and England each sought in turn to drive all other nations out of the paths of the ocean; each sought colonies for the selfish purposes of merchants at home. "All kingdoms are maintained by rents or traffic, but especially by the latter, which in maritime places most flourisheth by means of navigation," said the famous Parchment of 1605. That was the ideal which finally found legal expression in England in the Navigation Act of 1660.

**F**OR two centuries the people of the colonies resorted to smuggling and other methods of nullification. In the ten years before the outbreak of the Revolution the opposition of the colonies became vocal; in 1776, in the Declaration of Independence, the United States first made official announcement of its belief in the policy of freedom of trade upon the ocean by protesting against the action of the king who had combined with parliament, "giving his assent to their acts of pretended legislation . . . for cutting off our trade with all parts of the world."

The Declaration heralded the coming of a new ideal of nationality; it also established a new ideal of international relations, the ideal reaffirmed in January, 1917, "that the paths of the sea must alike in law and in fact be free."

In the days when the first ships left the ports of Boston and New York, Norfolk and Charleston, flying the flag of the United States, the hazards of the sea were not confined to the ravages of wind and weather; the paths of the sea were still harassed by corsairs and sea rovers who preyed upon men bent upon peaceful pursuits. The whole northern coast of Africa, for instance, was infested by swarms of pirates who took tribute from merchant ships. Even England and France submitted to this humiliation. Only the infant Republic of the Western Hemisphere protested; but protests without force to back them proved to be vain. Consequently President Jefferson laid the matter before Congress and Congress decided on war; the new United States navy under leaders like Preble, Bainbridge, Barron, Decatur and Hull had its first baptism of fire in a four years' war against the Pasha of Tripoli, and the Mediterranean was opened forever for ships bent upon peaceful pursuit of international trade.

In 1812, this nation once more entered the lists in defense of the rights of American merchants. On June 1, 1812, President Madison called on the nation to take up arms once more in defense of the cause. "It might at least have been expected," he said, "that an enlightened nation . . . would have found, in its true interests alone, a sufficient motive to respect their rights and their tranquillity on the high seas." "Other councils have prevailed. . . . We behold our sea-faring citizens still the daily victims of lawless violence, committed on the great and common highway of nations." The war against England resulted. Tho the results of the struggle were inconclusive, the three years of fighting fixed for all times in the minds of all true Americans the idea that the paths of the sea must be kept open against unlawful aggression in times of war as well as in time of peace.

For one hundred years the people of the United States have taken every possible occasion to reemphasize this principle. It has been written by them into numerous international agreements. In 1899, the voice of John Hay impressed it upon the American delegates who sailed for the First Hague Conference. In 1907, Secretary Root eloquently reaffirmed it in his instructions to the delegates to the Second Hague Conference, and Joseph H. Choate defended it so ably that it seemed as tho the final victory had been won.

Once more, we are contending for this ancient American ideal—the right of innocent individuals to traffic upon the seas without fear of unlawful capture and especially without fear of death from violent attacks—because Germany has attacked it with weapons which strike at the very vitals of civilization. England may have been guilty of putting unlawful restraints upon men who follow the paths of the seas in innocence, but England has never wilfully deprived innocent men and women of their lives. "Property can be paid for," said President Wilson, "the lives of peaceful and innocent people cannot be." This single brief sentence sums up the whole difference. If this war is fought to a successful conclusion, the people of this country will undoubtedly once more raise their voices in support of the doctrine that the sea is a highroad open to all nations. If we are beaten, we shall have to submit to the doctrine that property may be destroyed and innocent men, women and children may be consigned to the bottom of the ocean if the purposes of an aggressor nation can be served by wholesale murder on the high seas.

#### ONE-HAND TYPING

*The ingenious arrangement of paper feed and carriage on this type-writer makes it possible for a man who has lost his right arm to attain normal proficiency in typing. Disabled Canadian soldiers sent home unfit for further service at the front are being trained and employed thus to carry on the clerical side of war work*

#### LEARNING TO GARDEN AGAIN

*The hoe this gardener is using has a special handle which fastens to his arm—another instance of the mechanical inventions that are making it possible for wounded men to find useful work in civilian industries. There is practically unlimited opportunity for their employment in the simpler phases of agriculture*

# AMERICA REMOTE

## An Englishwoman's Impressions in 1917

BY JANET PAYNE WHITNEY

Illustrated by George Gillett Whitney

A British statesman of the last century invented a phrase which electrified the House of Commons and the country. The echoes of it are still ringing among the rafters of Westminster. "I call," said Canning, "the New World into existence to redress the balance of the Old!"

It is being fulfilled today in ways of which its author little dreamed. The "balance" of the Old World is destroyed beyond repair, and the New World has a greater work on hand than merely to redress it. The elements of freedom and democracy in the Old World and the New are being fused together by fire to create an all-world structure so stably founded on justice and right-dealing that the unstable element of "balance" shall be forever after absent from it, and the relations of nations, instead of being comparable to a wavering pair of scales, shall be kindred to the "breadth, impossible to overturn" of the eternal hills.

Yet in this moment of fusion the contrast in surface details between the Old World and the New can hardly have been greater since the days when the Pilgrim Fathers left behind a land of comparative civilization for a continent of stern, uncharted wilderness.

America, untroubled by air-raids, is a land of light where England is a land of darkness. America is a land of plenty where England is a land of penury. America is a jovial raw recruit, going to war as to a pageant, with flying flags; England is a grim, war-hardened veteran, fighting, with bitter humor and sternly tragic heart, knee-deep in mire.

And yet it is unwise to generalize about America, because there are so many Americas—without going beyond the borders of the United States! There is President Wilson's America—which in beauty and dignity of conception recalls the Statue of Liberty in New York Harbor, holding up a light to the world. There is the America of the daily press—which so much resembles the England of the daily press that one wonders if both should turn out to be only made of paper!

There is the America of the New York streets, and the America of the Middle West, and there is cultured America, so cosmopolitan that it can recall to every wayfarer some traits of his native land, and find some point of contact with every intelligent mind.

When we left England, the half-penny (one cent) papers there had long been reduced to a single sheet—four pages of reading matter. Almost all publications were reduced in size, or printed on inferior paper at double the original price. The shortage of paper was an established fact, and the collection and sale of waste paper was quite a profitable industry. Behold the contrast! Almost at once on landing in New York, we bought a newspaper and

were aghast at the twenty sheets of literary art that became our property for the exchange of a single cent! Our unaccustomed eyes grew round with mingled horror and admiration! Was America most fabulously rich, or most heedlessly wasteful?

Later on we decided that she had so much paper she did not know what to do with it, as we found scattered newspapers in various stages of decay a wonderfully plentiful adornment of the Palisade bluffs and other country walks

*We had looked forward to seeing the lights at night, but when we did see them we had another shock in their extravagance*

in the immediate neighborhood of New York. "This is what they do," we said sorrowfully, "with the extra nineteen sheets!" We sympathized with them.

*Nor does one see here men in all stages of mutilation moving about the streets*

We had got very much tangled up with it ourselves!

We had looked forward to seeing the lights at night; but when we did see them we had another slight shock in the extravagance, brilliance and variety of the sky signs. Even London before the war was quite outshone by these wriggling snakes, these firework fountains, these kittens playing with reels, and all the other innumerable ingenuities of New York night advertising. We were intrigued and amused, and watched them with a fascination that was dangerous to life and limb in a land where all the traffic ran the opposite way from that to which we were accustomed, but amid all the glamour our war-educated minds caused us doubtfully to whisper, "Think of all the wasted coal—and electricity!" I wonder if spendthrift England will ever again unlearn the Spartan economies which in these last three years have almost become second nature? Let us hope not all, for some of them are good and strong, and make for healthier living and wiser spending.

When we saw the policemen with their truncheons under their arms, we thought perhaps some riot was on hand, but we soon learned that it was merely a habit, and even one that did not at all affect the kindness of their natures. We decided, however, that the British policeman gained both in comfort and dignity by having no weapons in evidence but large white gloves and a little red lamp! This was the one respect in which we found America more martial in appearance than the war-ridden land which we had left.

A rather cynical Englishman recently said to me, "You know, it's all very well for us to talk of the unspeakable horrors of the age in which we are now living, but people's memories are marvelously short! When once the war is over, the great majority of the world will feel that they have had a very interesting interlude!"

One certainly feels that this would be the general attitude of the America of the New York streets and of the press if the war should end within the next few months, before the actualities of it have bitten into the personal experience of the mass of the people. The war is so far away, so much an affair of words and pictures, a never-failing topic of conversation, a splash of lurid color flung across the drab background of everyday life. It is the majority, after all, who do find everyday life drab—either thru excess of idleness or excess of toil, or thru lack of perception of the exquisite and varied colors contained within "the light of common day." This unhealthy craving for excitement, this absence of true *joie de vivre*, found classically simple expression in the words of the girl who said "How dull it will be when the war is over!"

And one does feel remote here. One cannot sit on the seashore and hear the

Nor scrutinize with anxiety an airplane that flies up from the sea line

guns in Flanders; nor experience a small bombardment, with all its noise and fire and blood and horror, in a Zeppelin raid; nor scrutinize with anxiety an airplane that flies up from the sea line in case it should be the precursor of an enemy air fleet. Nor does one see here yet men in all stages of mutilation, moving or being wheeled about the streets. These specimens of war's handwriting are writ large for all to read. Perhaps America will need to learn to read them before the careless urban majority can join ranks with her thinking men and women.

But the soul of a people is even more subtle and full of unexpected possibilities than the soul of an individual, as capable of great flashes of enlightenment and understanding, of generosity and idealism. And apart from the heterogeneous medley of best and worst that collect in America's great cities, there remains the great unknown quantity of her vast country districts, populated by men and women who, in their way of living as often in their genealogy, are true descendants of the early Puritan colonists. What we have seen of these people persuades us to believe in the ultimate sanity and solidity of the American character. Practical, energetic, calm people they seemed, engaged in the colossal task of building up a country, and regarding a war as a disagreeable but necessary interruption of their lifework, to be finished up with as swift success as possible that they might return to get on with the real stuff of life.

Among these people we find there frequently exists as true culture, as great social ease, as one finds among the cultured people of the city. It is not every lady who can do her own housework, cook her own dinner, and then, lightly casting aside all kitchen cares with her apron, sit down at the head of her table and become a gracious and graceful hostess, discoursing ably on art or literature, current politics or international affairs as the talk

swings. This wonderfully complete womanhood seems almost to be an American invention, unless perchance it exists in that other great new country, Australia. This woman does not need any exotic interest to give vividness and drama to her life. To her, as to her men folk, the war is only a bitter and barbaric means to a reorganization of society in which only the arts of life shall find place, and the arts of death be utterly destroyed. This generation, it appears, must sin and suffer that the others may be free. And if the others shall be free indeed, it is worth the price, tho it cost the world.

AMERICAN culture has struck us as being often more self-conscious than English culture, but also quite often broader, if not always so deep. We imagined the first state to be due to the fact that America is an intensely self-conscious country and a very psychological one. She is interested in psychology as a science and in her own psychology as an example, and this very self-consciousness, which is often a drawback and a discomfort to her as to the adolescent, may, in her rapidly approaching maturity, become, in a deep and critical self-knowledge, one of the elements of new greatness. The breadth of American culture, and its really wide distribution, we have attributed partly to the splendid facilities of lecture-courses and libraries, and partly to the astonishing thoroughness with which so large a percentage of the population absorb in person the historical and artistic wealth of Europe. We had never met so many good Europeans—who really knew their Europe almost from end to end!—as during the short time we have been in America. It simply puts to the blush those "little Englanders" (however politically imperialist!) who are so stuck on their little island, so taken by its hidden beauties, its sweetness and allurements, that they can hardly bear to leave it. Yet be patient with us, brothers and allies, for there is no magic like Eng-

We bought a newspaper and were aghast at the twenty sheets for a single cent

land's magic when once she has cast her spell!

A phrase hard of understanding has made itself heard—"America for the Americans"—which has inspired us to think and question.

Who are the Americans? Presumably the authors of the popular phrase meant any who are either born citizens of the United States, or who have become naturalized as such. But who are these? Those who have been here for a few hundred years, who are here today, who are coming in, and will be coming on from generations yet unborn across the seas? English, Scotch, Irish, Russian, Italian, German, Hungarian—are they not pioneers from every nation, men who have struck out against circumstances for freedom and a wider life?

America is the melting-pot of the nations, and not of their worst but of some of their best! Men and women who flee from autocracy to democracy, from servility to independence; who quit narrow and safe circumstances to dare and adventure in a land of opportunity for themselves and their children; men and women hardy enough to cut the bonds of the past, to break the frost of custom, to leave the known for the unknown across that most terrifying of barriers to humanity—the sea. This is the material America has to her hand wherewith to shape the new international democracy. These are the Americans which America is for! Courageous lovers of freedom, humble followers of progress, many of them; some, selfish hunters of their own ambition, who need to be taught that the essence of democracy is the social conscience; but all, in their essence—or almost all—fine material for the world's work when, by the light of Liberty in her hand, America has led them to a high enough level for them to see that "the only price of peace"—social or international—is Justice.

## THE HOUSE ON THE SAND

BY HARRY KEMP

With monstrous patience, years of skill that wrought  
Beam, nave, and trave suiting misshapen thought,  
A Ruler reared his House, to over-tower,  
With its great, black, forbidding front of Power,  
All other edifices—it was built  
On hopes so evil they were blind to guilt,  
Founded on sacrifice of Law and Right  
And bases that went deep down into night. . . .

But, roused to thunder, winds and waters roar;  
Out of the stormy Dark converging, pour  
On fierce, unseen, innumerable wings  
The gathering whirlwinds of Life's outraged things.

What tho that House rise boldly, high on high,  
Yet over it must lift a vaster night;  
Its topmost heights cannot out-climb the sun  
Where stars, retributive, their courses run:  
Great tho it bulk today, it may not stand. . . .  
Night gathers, and the Storm,—and it is built on sand!

## EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## COLONEL NEWCOME'S RETURN

MEMORY—most delightful of earthly

BY WILLIAM MAKEPEACE THACKERAY

and valuable gifts. Then, at last, after an absence

gifts—keeps the past fresh and fragrant in our hearts; it keeps our affections alive thru the years, and beautifies our return to the places we have loved.

William Makepeace Thackeray, 1811-1863, the contemporary of Dickens, and the great novelist of social satire, wrote most tenderly in "The Newcomes" of a man in whom memory was both strong and faithful.

We who know Colonel Newcome love him as one of our dearest friends. He was born the son of a prosperous London tradesman. With a natural fancy for India he had gone to that land while a very young man, but he had gone in sorrow, for he had seen the young woman whom he loved—who loved him—obliged to marry a French count. Thomas Newcome remained in India some thirty-five years, but he was faithful to every old memory. He sent his little son, Clive, born in India, home to England, to the boy's aunt, Miss Martha Honeyman. The years went by. He sent home letters

of nearly forty years, Thomas Newcome—now Colonel Newcome—comes home to England and his beloved son. He is a fine, tall, dignified, gentlemanly figure, childlike in simplicity, noble in his ideals, and holding all his old memories as fresh as tho they were realities and not memories. Full of the deepest affection for his boy, and eager to renew every old acquaintance, Colonel Newcome sets out on a round of visits, in which, like a boy home on a vacation, he overwhelms every one with his hearty Good Cheer.

The selection tells of his coaching trips, in which he is cordial to every one; of his delighted visit to old Mrs. Mason, his former nurse, who has prayed for him all these years; and of his visit to Miss Honeyman, to whom he had entrusted his boy.

Dear old Colonel Newcome! Long may he and his kind flourish, happy, boyish, faithful, cherishing old memories, and bringing Good Cheer everywhere!

THE Colonel delighted in post chaising—the rapid transit through the country amused him, and cheered his spirits. In traveling he was as happy and noisy as a boy. He talked to the waiters, and made friends with the landlord; got all the information which he could gather, regarding the towns into which he came; and drove about from one sight or curiosity to another with indefatigable good-humor and interest. It was good for Clive to see men and cities; to visit mills, manufactories, county seats, cathedrals. He asked a hundred questions regarding all things round about him; and anyone caring to know who Thomas Newcome was, and what was his rank and business, found no difficulty in having his questions answered by the simple and kindly traveler.

Mine host of the King's Arms, Mr. Taplow aforesaid, knew in five minutes who his guest was and the errand on which he came. Was not Colonel Newcome's name painted on all his trunks and boxes? Was not his servant ready to answer all questions regarding the Colonel and his son? Newcome pretty generally introduced Clive to my landlord, when the latter brought his guest his bottle of wine. With old-fashioned cordiality, the Colonel would bid the landlord drink a glass of his own liquor, and seldom failed to say to him, "This is my son, sir. We are traveling together to see the country. Every English gentleman should see his own country first, before he goes abroad, as we intend to do afterward—to make the Grand Tour. And I will thank you to tell me what there is remarkable in your town, and what we ought to see—antiquities, manufactures, and seats in the neighborhood. We wish to see everything, sir—everything."

So Mr. Taplow knew in five minutes that his guest was a brother of Sir Brian, their member; and saw the note dispatched by an ostler to "Mrs. Sarah Mason, Jubilee Row," announcing that the Colonel had arrived, and would be with her after his dinner.

Some of the jolliest fellows in all Newcome use the Boscawen Room at the King's

"The Colonel delighted in post chaising"

Arms as their club, and pass numberless merry evenings and crack countless jokes there.

Duff, the baker; old Mr. Vidler, when he can get away from his medical labors (and his hand shakes, it must be owned, very much now, and his nose is very red); Parrot, the auctioneer; and that amusing dog, Tom Potts, the talented reporter of the *Independent*—were pretty constant attendants at the King's Arms; and Colonel Newcome's dinner was not over before some of these gentlemen knew what dishes he

William Makepeace Thackeray

had had; how he had called for a bottle of sherry and a bottle of claret, like a gentleman; how he had paid the postboys, and traveled with a servant, like a top-sawyer; that he was come to shake hands with an old nurse and relative of his family. Everyone of those jolly Britons thought well of the Colonel for his affectionateness and liberality, and contrasted it with the behavior of the Tory Baronet—their representative.

His arrival made a sensation in the place. The Blue Club at the Roebuck discussed it, as well as the uncompromising Liberals at the King's Arms. The Rev. Dr. Bulders, the rector, left his card.

Meanwhile, it was not gain or business, but only love and gratitude which brought Thomas Newcome to his father's native town. Their dinner over, away went the Colonel and Clive guided by the ostler, their previous messenger, to the humble little tenement which Thomas Newcome's earliest friend inhabited. The good old woman put her spectacles into her Bible, and flung herself into her boy's arms, her boy who was more than fifty years old. She embraced Clive still more eagerly and frequently than she kissed his father. She did not know her Colonel with them whiskers. Clive was the very picture of the dear boy as he had left her almost two-score years ago. And as fondly as she hung on the boy, her memory had ever clung round that early time when they were together. The good soul told endless tales of her darling's childhood, his frolics and beauty. To-day was uncertain to her, but the past was still bright and clear. As they sat prattling together over the bright tea table, attended by the trim little maid, whose services the Colonel's bounty had secured for his old nurse, the kind old creature insisted on having Clive by her side. Again and again she would think he was actually her own boy, forgetting in that sweet and pious hallucination, that the bronzed face, and thinned hair, and melancholy eyes of the veteran before her were those of her nursling of old days. So for near half the space of man's allotted life he had been absent from her, and [Continued on page 502]

# “While I build my factory here, you build homes for the workmen there”

**H**OUSING employees is the big problem that confronts expansion. Far-seeing employers provide housing facilities as they plan the building of great factories or enlarging present ones. They realize that buildings and machines are useless unless there are men to man the machines. Men are of no avail unless there are homes for them. The time is past when merely a roof over the head can be classed as a home. The better class of workmen won't live in such.

**The Better the Home, the Better the Workmen**

When time is an element—when speed of erection is essential—when cost is considered—you cannot depend upon the old time-consuming method of building. There is an easier, quicker, more economical and more satisfactory way.

**Lewis Machine Cut Houses**

To supply the demand for houses of all year around construction that can be erected quickly for the least cost, we have designed over 100 different standard models. This wide range makes it possible to meet all conditions and requirements. They are planned, designed, constructed and priced to meet today's conditions. Or our architects and engineers will work in conjunction with yours to produce new designs and models.

The low prices of Lewis Machine Cut Houses are made possible by our careful planning which practically eliminates all waste and because of quantity production and by labor saving machinery.

**24 to 48 Hour Shipments**

We can, as a rule, begin shipments of these standard models in 24 to 48 hours after order is received and continue shipments at regular stated intervals until the contract is completed. Each house shipped complete in a car.

Among the 1917 buyers of Lewis Machine Cut Houses who have purchased in quantity are such concerns as

The Goodyear Tire and Rubber Co.	Michigan Central Railroad
The Hercules Powder Co.	American Plate Glass Co.
The Bessemer Coal and Coke Co.	Inland Steel Co., etc.
Eastern Michigan Power Co.	Thompson-Starrett Co.
Tennessee Copper Company	U. S. Government

**For Industrial House Builders, Government Officials, Contractors and Builders**

Our facilities are such that we can start immediate shipment for the building of whole towns or communities. No contract is too large for us to guarantee record breaking time.

## A Real "Fountain of Youth" for Fine Furniture and Floors

Is your good furniture showing signs of use and age? Restore the beauty of newness with 3-in-One Oil. Put a few drops of 3-in-One on a cloth wrung out of cold water. Go over every piece in library, living-room, dining-room and bedrooms—not forgetting the mahogany case of the piano. Dry and polish with a soft cloth, following the grain of the wood.

The results will surprise and delight you. Brighten up desks and other office furniture in the same way.

Your floors, too, need regular treatment with 3-in-One. Make your own polish mop. Cut off any mop 4 inches from the handle and pour on a little 3-in-One Oil. This polish mop will take up all the lint and dust and make your floors look fine.

### 3-in-One Oil

is sold at all stores in 15c 25c and 50c bottles, also in 25c Handy Oil Cans. The 50c bottle is extra economical, containing  $\frac{1}{2}$  pint.

**FREE** Sample of 3-in-One Oil and Dictionary of Uses sent for the asking.

**Three-in-One Oil Co.**

165 UF Broadway  
New York

## YOU WOULDN'T TOLERATE A LEAKY ROOF —

—Why have "leaky" doors and windows?

Wherever there's a window or door, there's a 1-16 in. to 1-8 in. leak around it. In winter heat escapes. Dust, dirt, soot, damp, rain, noise, summer heat, etc., find easy admittance. Windows rattle. Atmospheric changes cause sticking and binding. End this forever.

Equip with 10 YEAR GUARANTEED

# CHAMBERLIN

## METAL WEATHER STRIPS

"THE STANDARD FOR 25 YEARS"

We equip windows, doors, casements or transoms—wood or metal—in new or old buildings.

**WRITE** for illustrated, descriptive book and list of users in your vicinity.

CHAMBERLIN METAL WEATHER STRIP CO.  
Headquarters: 119 Dinan Building, Detroit, Mich.

Dr. BLACKFORD

## Be a Good Judge of Men

If you knew the mental and emotional differences between blondes and brunets, you would be saved many a mistake. Blondes succeed best at certain kinds of work; brunets at other kinds. You persuade a blonde in one way; a brunet in another. You manage blonde employees best with one policy; brunets with another. The history of nations—of civilization—is woven through and through with these fundamental differences between blondes and brunets. To know them is to know the very first step in judging men. And it is all in "Blondes and Brunets," a little 48-page book by Dr. Katherine M. H. Blackford, who has specialized on this subject for twenty years and is retained by many large corporations to select men. The book is fascinating. You read it in an hour—study it for months. Only ten cents, stamps or silver. Send for it today.

HENRY ALDEN, Inc., Office 1907

50 E. 42d St., New York

## Don't Wear a Truss

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that relieves rupture, will be sent on trial. No obnoxious springs or pads.

### Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today.

C. E. BROOKS, 490D State St., Marshall, Mich.

MR. C. E. BROOKS

## SHIPS WILL WIN

(Continued from page 487)

tion not waited till today, but sent a man some months ago into the forest it is possible he could have induced the Southern Pine Association and the independent lumberman to concentrate all their efforts in producing the big lumber suitable for shipbuilding, and the Emergency Fleet Corporation could have paid the extra cost.

At present the contracts for building of ships are not standardized. This probably cannot be remedied now in all cases, but future contracts should be made uniform and in all such contracts penalties for non-performance of specifications should be added and bonuses should be given for quick work. Bonuses should not be given alone to the shipbuilder, but should be equitably divided between the shipbuilders and their workers. Bonuses should also be added to the old contracts where not now provided. Above all, priority in respect to financial help, the delivery of raw material and new contracts should be given to the yards that build ships fastest.

Wages should be standardized thruout the industry. One of the chief reasons why the Pacific coast is ahead of the gulf, the lakes and the Atlantic coast regions in shipbuilding is because the wages are highest there and thus the best and most progressive workers have sought employment under these favorable conditions.

The workers should be run in three shifts of eight hours each—certainly in two shifts every twenty-four hours. While night work is, of course, not so economical or efficient as day work, yet this is no time to consider anything but speed. Tho I discussed this everywhere I went, I found no serious realization on the part of either the officials of the Emergency Fleet Corporation, the shipbuilders or the workers of the supreme necessity of doubling or trebling the labor shifts. Where possible piece work should be substituted for time work. If the Government guarantees that the men will not be sweated, labor should have no valid objection to piece work.

Definite and immediate provision should be made for the comfort and safety of the working people. Adequate housing and transportation should above all, receive immediate attention. Mr. Ferguson has testified that he has been asking the Emergency Fleet Corporation for housing for four months. "We talked," said he, "until I was tired of it." The yard at Sparrows Point, Maryland, for instance, could employ only half a force for lack of housing; 18,000 men were employed there, but only 11,000 could be kept.

Congress fortunately has just appropriated \$50,000,000 for the housing for the workers. It is estimated that 40,000 houses will be needed at once. In the meantime houses should be requisitioned if necessary, and townspeople ought to be asked to board the workers as a patriotic duty until the new houses can be built.

The transportation is, of course, an equally important element in the labor problem. Mr. Andrews testified that at his yard at Camden, New Jersey, the trolley company provided twenty-seven cars for his 5095 men! He himself stood in line for over an hour to get a car. I can corroborate Mr. Andrews' experience with one of my own. I was at one of the great yards when the whistle blew, and I saw the men tired and grimed, for an hour fighting their way to the cars and riding home, either packed within like sardines, or hanging on the outside by their eyelids. In Baltimore, the transportation was solved by arranging to have the shipyards open and close at other times than when the peak

load of travel was at its highest. This plan should be adopted everywhere, and if finally the trolleys cannot be made to give adequate service, they should be taken over and run by the Government. And if that is not sufficient, private automobiles should be asked to volunteer their services and if necessary requisitioned.

Methods for the settlement of industrial disputes should be made more effective. Now a system of voluntary arbitration is in vogue, but it is evidently not working out well, as Mr. Hutchinson, the leader of the Carpenters' Union is defying his agreement with the Shipping Board. Already there have been thirty-seven strikes and eighty-four stoppages of work which involved 39,535 men and 587,336 lost days since the ship building program was inaugurated. If necessary a compulsory arbitration law, modeled after that so successfully in operation in New Zealand for the past generation, should be enacted.

There has been some talk in the Senate and other quarters of conscripting the workers, but if we ever come to this we must conscript employers too. It would be practical slavery to conscript men to work for private concerns. The Government has the only right to conscript and then all must be conscripted.

Every community in which there is a shipyard should be organized thru its Chamber of Commerce, labor unions, etc., so that the whole community will get behind the ship building program and make the speeding up of shipbuilding its first community interest. How the city of Rochester did this in respect to her munition works was told in The Independent of February 23. In Rochester all the business men have pledged themselves that until the war is won, Rochester munition plants shall be put before all other businesses in the community and no non-essential plant shall run at full capacity as long as any munition plant lacks men. This idea must be adopted by every city in which there are ships being built, and the leading business men must sit down at least once a week in conference with the shipbuilders so that the whole brains and power of the community can be put behind the ships.

Finally not only should the general progress of shipbuilding be given publicity thruout the country from Washington, so that all the people can be made aware of what is being accomplished, but local achievements should be published in each local community, so that each local shipyard will get the maximum of local support.

The Emergency Fleet Corporation could well afford to give badges and pennants to those shipyards that are doing better than their competitors and thus a healthy rivalry might be engendered between shipbuilding centers that would hasten the coming of American ship supremacy on the sea.

These are some of the things that must be done and done quickly if the United States is to play any effectual part in this great struggle for human freedom.

Unless this problem is attacked head on with every ounce of power we possess it will not be many months before miles of trains of American goods will cumber the docks of the Atlantic seaports waiting for ships to transport them across the sea as the docks of Vladivostock are now encumbered with the rotting freight from America and Japan waiting train shipment over the Trans Siberian Railroad. Surely the United States will never sink to the supineness and inefficiency of Bolshevik Russia.

Then let us bend every nerve to build our great fleet. We have the raw material, we have the men, we have the money and we have the will.

## The Men Who Serve You

THE Pullman car employees are in a distinctive sense the representatives of the Company. They are continually on dress parade; their conduct is a matter of supreme importance.

Each Pullman car has its porter, and on every train is a Pullman conductor, in charge of all porters on the train. Either is at your service throughout the journey for information or to supply any special wants within his power.

Courtesy and thoughtful attention are among the most important things that the Pullman Company has to sell; and they must be of high quality. A careful record is kept of the manner in which each employee does his work; and rewards of extra pay are given for perfect records.

It is noteworthy that twenty-five per cent of the eight thousand porters in the Pullman employ have been for over ten years in the service of the Company; and some have been in its employ for forty years. Pensions are provided for men retired from active service and provision is also made for sick relief for all car employees.

There are no rules for passengers save those which conduce to the comfort of all travelers; but the rules for employees, made in the interest of the passengers, are many and minute.

**ALLEN'S FOOT-EASE**  
The Antiseptic Powder to Shake Into Your Shoes

And sprinkle in the Foot-Bath. One war relief committee reports, that of all the things sent out in their Comfort Bags or "Kits," Allen's Foot-Ease received the most praise from the soldiers. The American, British and French troops use it, because it takes the Friction from the shoe and freshens the feet.

The Plattsburg Camp Manual advises men in training to shake Foot-Ease in their shoes each morning. Why not order a dozen packages to-day to mail to your soldier friends in training camps and in the army and navy. Sold by Drug-gists and Dept. stores everywhere, 25 cts.

**HIGH CLASS ASSISTANCE** for writers, speakers,  
club-women, debaters,  
Outlines, briefs, research. Reasonable rates. **BUREAU

## SHANGHAIED WITH THE FLEET

(Continued from page 489)

standing nearby that "our" race-boat crew held all the fleet trophies and that every ship in the base had been challenged without a single taker. They were undoubtedly proud of their crew, but it was obvious that they realized a crew ought to be just so good and anything over and above this stood in the way of their chance to separate any other ship's company from some of its coin.

A little later on in the afternoon I had the pleasure of seeing "our" race-boat crew go out for a trial spin. One look at the men convinced me that the racing trophies were in pretty safekeeping, for it would be hard to find a better and huskier looking lot. Well-known college coaches who annually train their crews for the grueling 'varsity races would welcome any one of these men as a shell candidate.

General fleet athletics have necessarily been curtailed to a certain extent, but most of the men interested in the different sports are still in training.

Boxing bouts were scheduled for the evening's entertainment. The ring was fitted up on the quarterdeck and with the hundreds of jackies crowded around the setting was sufficiently like the real thing to gladden the heart of the most hardened fistic fan. The referee, a chief master-at-arms from another ship, was a well known boxer in the fleet. He had been invited to officiate so there might be no partiality in the decisions.

A bout followed in which an in- experienced youngster tried to take a fall out of a man who was no novice at the game, with the result that our friend, the master-at-arms, acting under the instruc- tion of the athletic officer, stepped in and put a stop to the affair before the kid had taken any punishment. This incident impressed me as it demonstrated beyond a doubt that the fleet athletic officers are on the alert for just that sort of thing and keep close watch to see that sports of all kinds are kept in a proper and healthy condition in the fleet.

Before turning in for the night I was given to understand that the ship would get under way at 5:30 a. m. the next morn- ing to leave the base acting independently for practise in torpedo firing. The officers promised to take me out on the range in the fast captain's gig to follow in the wake of flying torpedoes running them down when all their stored-up energy had been ex- pended. All this sounded pretty good to me and I had visions of all kinds of fun and possible excitement. I felt that after such a day it would be fitting and proper for me to gracefully remark that I must return to town and thus conclude my short but happy visit to the fleet. I had seen a great deal and everyone had certainly done more than their share to give me a good time.

Such, however, was not to be the case. On deck at 5:30 a. m. I was treated to very much of a surprize party.

I saw that all the ships seemed to be belching forth more or less smoke from their funnels and there was every indica- tion that we were not going to be the only ship to leave the base. We were not either.

I shall never forget the sight. A great fleet getting under way in the haze of the early morning is a wonderfully inspiring thing to behold. As division after division got under way it seemed to me that the whole ocean was filled with battleships maneuvering in apparent confusion, but gradually with the utmost precision the

divisions fell into line of column formation and thus in perfect alignment the great fleet left its base. We had only steamed a short distance when the order was passed "secure for sea," and then I realized that I was being "shanghaied" pure and simple. The whole fleet was outward bound for nobody knew how long and nobody could give me any information on the subject.

At least I was relieved of the necessity for thinking up any urgent reason why I had to get back to town that night.

As I stood on the forecastle deck of the great super-dreadnought, only one in a line of ships extending miles in length, I realized that I was going to sea with the full fighting force of the nation and that among the thousands of officers and men I was the only representative of a hundred million people whose shores we were leaving. Wherever we went or whatever happened I would be there to see it and the delicious element of uncertainty made it all the more interesting.

It was not my first trip to sea with the fleet by any means but it was my first since the country has been at war. I wondered what the difference would be between this trip and others I had made in times of peace. I needed only to look around a bit to have that question at least partly answered.

The atmosphere of war was unmistakable when I saw men at the guns powder up and real shells close by, and special submarine watches set at different stations all over the ship.

It was apparent that submarines were expected to make their appearance but it was plain enough that every step had been taken to provide and to maintain all necessary precautions to insure immediate detection and adequate protection in the case of sub-surface attack.

The guns were manned night and day and the submarine watches were relieved at frequent intervals to insure maximum efficiency in the spotting of periscopes.

Of the days far at sea much could be written. Exercises, drills, hours of study and leisure, complicated maneuvers and strategic war games carried out with clock-like precision, all went to make up the life of a jack-tar during a busy week on the water. With it all there was always the ceaseless watching and waiting and, I might say, hoping for the lurking U-boat.

The one big idea in the fleet is "battle efficiency"—this is never lost sight of. Nothing is left undone that human ingenuity can devise which could possibly increase the destructive capacity of the fleet. Get your big punch in early and get it in first is the target the fleet is shooting at constantly.

The men are drilled at their stations until the working of any complicated mechanism becomes as smooth and as rapid as is possible with any machine whose operation involves the human element.

I have been with the big ships in all kinds of weather and have lived among the officers and men and I know something of the spirit with which they work and of their devotion to the service.

The navy never was better fitted or more ready to the last ship and the last man to do whatever it may be asked to do in the cause of democracy and to do that thing to the very utmost of its ability.

Of all features of American history has not the part played by the navy been the most outstanding and the most glorious? So it shall be when this great war passes into history, for the navy is animated by that same devotion and fighting spirit which has given us in days gone by so many chapters of glorious American history of which we are all so justly proud.

# Women's Organdie Neckwear at McCutcheon's

Many distinctive, exclusive, smart models originated to meet the requirements of the simple Spring and Summer Dress Fashions. Extensive assortments of Organdie Neckwear are presented in numerous styles of refinement, including the following special values:

Special Organdie Guimpe, Dutch Collar, Black Ribbon Bow ..... \$3.50

**Organdie Collars**—in six McCutcheon models. Lace-trimmed and Embroidered, 50c each.

## "FROM THE FIRST SHOT"

"Your new war-book, 'From The First Shot,' is a treasure. I can't tell you how much I like the book. The selection of material, the editorial arrangement, the printing,—are all so unusually excellent that the book is a masterpiece of its kind. It is the most wonderful picture history of the Great War that I have seen. In preparing this collection of pictures of the Great War, pictures drawn from every side, the air, the sea, the trenches, the camp, the city, the home,—you have done a service much like that done by M. B. Brady, the famous photographer of the Civil War. Congress rewarded him with a grant of money and the perpetual preservation of his pictures. I hope the people of today will recognize the worth of your book. Surely, no one could see it and not wish to own it. It is extraordinarily interesting."

## COLONEL NEWCOME'S RETURN

(Continued from page 196)

day and night, wherever he was, in sickness or health, in sorrow or danger, her innocent love and prayers had attended the absent darling. Not in vain, not in vain, does he live whose course is so befriended. Let us be thankful for our race, as we think of the love that blesses some of us. Surely it has something of Heaven in it, and angels celestial may rejoice in it, and admire it.

Having nothing whatever to do, our Colonel's movements are of course exceedingly rapid, and he has the very shortest time to spend in any single place. That evening, Saturday, and the next day, Sunday, he will faithfully accompany his dear old nurse to church. And what a festival is that day for her, when she has her Colonel and that beautiful, brilliant boy of his by her side, and Mr. Hicks, the curate, looking at him, and the venerable Dr. Bulders himself eying him from the pulpit, and all the neighbors fluttering and whispering to be sure, who can be that fine, military gentleman and that splendid young man sitting by old Mrs. Mason, and leading her so affectionately out of church? That Saturday and Sunday the Colonel will pass with good old Mason, but on Monday he must be off; on Tuesday he must be in London, he has important business in London—in fact, Tom Hamilton, of his regiment, comes up for election at the Oriental on that day, and on such an occasion could Thomas Newcome be absent? He drives away from the King's Arms through a row of smirking chambermaids, smiling waiters, and thankful ostlers, accompanied to the post chaise, of which the obsequious Taplow shuts the door, and the Boscawen Room pronounces him that night to be a trump; and the whole of the busy town, ere the next day is over, has heard of his coming and departure, praised his kindness and generosity.

Dear old nurse Mason will have a score of visits to make and to receive, at all of which you may be sure that triumphal advent of the Colonel's will be discussed and admired. Mrs. Mason will show her beautiful new India shawl, and her splendid Bible with the large print, and the affectionate inscription, from Thomas Newcome to his dearest old friend; her little maid will exhibit her new gown, the curate will see the Bible, and Mrs. Bulders will admire the shawl; and the old friends and humble companions of the good old lady, as they take their Sunday walks by the pompous lodge-gates of Newcome Park, which stands with the baronet's new-fangled arms over them, gilded, and filagreeed, and barred, will tell their stories too about the kind Colonel and his hard brother. When did Sir Brian ever visit a poor old woman's cottage, or his bailiff exempt from the rent? What good action, except a few thin blankets and beggarly coal and soup tickets, did Newcome Park ever do for the poor? And as for the Colonel's wealth, Lord bless you, he's been in India these five-and-thirty years; the baronet's money is a drop in the sea to his. The Colonel is the kindest, the best, the richest of men.

And you may be sure Thomas Newcome had not been many weeks in England before good little Miss Honeyman, at Brighton, was favored with a visit from her dear Colonel. The envious Gawler scowling out of his bow-window, where the flyblown card still proclaimed that his lodgings were unoccupied, had the mortification to behold a yellow post chaise drive up to Miss Honeyman's door, and having discharged two gentlemen from within, trot away with

servant and baggage to some house of entertainment other than Gawler's. While this wretch was cursing his own ill fate, and execrating yet more deeply Miss Honeyman's better fortune, the worthy little lady was treating her Colonel to a sisterly embrace, and a solemn reception. Hannah, the faithful housekeeper, was presented, and had a shake of the hand. The Colonel knew all about Hannah; ere he had been in England a week, a basket containing pots of jam of her confection, and a tongue of Hannah's curing, had arrived for the Colonel. That very night, when his servant had lodged Colonel Newcome's effects at the neighboring hotel, Hannah was in possession of one of the Colonel's shirts; she and her mistress having previously conspired to make a dozen of those garments for the family benefactor.

All the presents which Newcome had ever transmitted to his sister-in-law from India, had been taken out of the cotton and lavender in which the faithful creature kept them. It was a fine hot day in June, but I promise you Miss Honeyman wore her blazing scarlet Cashmere shawl; her great brooch representing the Taj of Agra, was in her collar; and her bracelets (she used to say, "I am given to understand they are called Bangles, my dear, by the natives.") decorated the sleeves round her lean old hands, which trembled with pleasure as they received the kind grasp of the Colonel of colonels. How busy those hands had been that morning! What custards they had whipped!—what a triumph of piercrusts they had achieved! Before Colonel Newcome had been ten minutes in the house, the celebrated veal cutlets made their appearance. Was not the whole house adorned in expectation of his coming? Had not Mr. Kuhn, the affable foreign gentleman of the first floor lodgers, prepared a French dish? Was not Betty on the lookout, and instructed to put the cutlets on the fire at the very moment when the Colonel's carriage drove up to her mistress' door? The good woman's eyes twinkled, the kind old hand and voice shook, as holding up a bright glass of Madeira, Miss Honeyman drank the Colonel's health. "I promise you, my dear Colonel," says she, nodding her head adorned with a bristling superstructure of lace and ribbons, "I promise you that I can drink your health in good wine!" The wine was of his own sending; and so were the China firescreens, and the sandal-wood work-box, and the ivory cardcase, and those magnificent pink and white chessmen, carved like little Sepoys and mandarins, with the castles on elephants' backs, George III and his Queen in pink ivory, against the Emperor of China and lady in white—the delight of Clive's childhood, the chief ornament of the old spinster's sitting room.

Miss Honeyman's little feast was pronounced to be the perfection of cookery; and when the meal was over, came a noise of little feet at the parlor door, which being opened, there appeared, first, a tall nurse with a dancing baby; second and third, two little girls with little frocks, little trousers, long ringlets, blue eyes, and blue ribbons to match; fourth, Master Alfred, now quite recovered from his illness, and holding by the hand, fifth, Miss Ethel Newcome, blushing like a rose.

Hannah, grinning, acted as mistress of the ceremonies, calling out the names of "Miss Newcomes. Master Newcomes to see the Colonel, if you please, Ma'am," bobbing a courtesy, and giving a knowing nod to Master Clive, as she smoothed her new

silk apron. Hannah, too, was in new attire, all crisp and rustling; in the Colonel's honor. Miss Ethel did not cease blushing as she advanced toward her uncle; and the honest campaigner started up, blushing too. Mr. Clive rose also, as little Alfred, of whom he was a great friend, ran toward him. Clive rose, laughed, nodded at Ethel, and ate gingerbread-nuts all at the same time. As for Colonel Thomas Newcome and his niece, they fell in love with each other instantaneously, like Prince Camaralzaman and the Princess of China.

I have turned away one artist: the poor creature was utterly incompetent to depict the sublime, graceful, and pathetic personages and events with which his history will most assuredly abound, and I doubt whether even the designer engaged in his place can make such a portrait of Miss Ethel Newcome as shall satisfy her friends and her own sense of justice. That blush which we have indicated, he cannot render. How are you to copy it with a steel point and a ball of printer's ink? That kindness which lights up the Colonel's eyes; gives an expression to the very wrinkles round about them; shines as a halo round his face—what artist can paint it? The painters of old, when they portrayed sainted personages, were fain to have recourse to compasses and gold-leaf—as if celestial splendor could be represented by Dutch metal! As our artist cannot come up to this task, the reader will be pleased to let his fancy paint for itself the look of courtesy for a woman, admiration for a young beauty, protection for an innocent child, all of which are expressed upon the Colonel's kind face, as his eyes are set upon Ethel Newcome.

"Mamma has sent us to bid you welcome to England, Uncle," says Miss Ethel, advancing, and never thinking for a moment of laying aside that fine blush which she brought into the room, and which is her pretty symbol of youth, and modesty, and beauty.

He took a little slim white hand and laid it down on his brown palm, where it looked all the whiter; he cleared the grizzled mustache from his mouth, and stooping down he kissed the little white hand with a great deal of grace and dignity.

## Capital Copy

It is estimated that \$2,500,000,000 will be collected this year under the war revenue act.

More than 6,000,000 persons this year will pay an income tax. It should be paid by check, money order or draft.

The third Liberty Loan campaign to begin April 6 will be aided by several "movie" stars. Mary Pickford, Marguerite Clark and Douglas Fairbanks already have accepted invitations to speak.

Surgeon General Gorgas, of the United States Army, has asked the American Red Cross to supply 5000 nurses for service in military hospitals here and in Europe between now and June 1.

To aid the great movement of backyard garden production which will help solve the food problem, the United States Department of Agriculture has prepared for free distribution Farmer's Bulletin 936, The City and Suburban Vegetable Garden.

The construction of fifteen more Liberty Theaters, to be located mainly at the National Guard camps in the South, has been ordered by the War Department Commission on Training Camp Activities, according to announcement by Raymond B. Fosdick, chairman. Added to the sixteen Liberty Theaters already running in the National Army cantonments, this makes a chain of thirty-one theaters to be operated by the Government for the amusement of the soldier.

# A Tribute

The patriotism of the employes of Swift & Company is being manifested in so many substantial ways that we take pride in acknowledging here the evidence of their staunch Americanism.

3089 men from our ranks are now in army khaki and sailor blue uniforms.

This impressive figure represents nearly a full regiment from this firm.

In this Swift Legion of Honor, 103 of the men have won commissions in the army.

When "Preparedness" was the admonishment of the hour—the Swift Military Club was organized—in it have been trained hundreds of men.

It is our local "West Point"—we know that its graduates are better soldiers because they have gone into the army and have been promptly promoted. Some of them have won commissions.

28,718 Swift employes own Liberty Bonds, to the amount of \$3,879,700.

The women employes of Swift & Company, and the wives and mothers of employes, have turned thousands of pounds of wool into sweaters, socks, helmets and scarfs for our men in uniform.

They have donated large sums of money to the Red Cross.

They have contributed to the war funds of the Y. M. C. A. and Knights of Columbus.

It is an inspiration to observe the flags waving on the desks of department heads in our Chicago office, indicating that every employe in the department is buying War Savings Stamps every week.

Swift employes, voluntarily, are contributing weekly sums to a comfort fund through their Military Welfare Association to provide their associates in service with smokes, sweets and other needs.

Food Conservation pledges are being kept in their homes.

In our employes' restaurants we are abstaining from meat and wheat on the days now on our war calendar, and are doing it cheerfully.

The name of Swift was never associated with more valiant patriots than the men and women who make up its official family.

The company is proud of this magnificent war record.

Our employes know that there will be other appeals and they stand as a unit, 48,000 strong, eager to give and sacrifice more.

With a full and grave conception of our mutual obligation we blend our loyalty and responsibility with theirs.

## Swift & Company

*L. F. Swift* President.

## SENSIBLE INVESTING SIMPLIFIES SAVING

Those who are distinctly successful in saving never allow their dollars to remain idle. They follow a well-defined plan of putting funds to work in some seasoned stock or bond.

Every dollar invested in securities on

T. W. MOFFAT, Treasurer.

### THE ELECTRIC STORAGE BATTERY COMPANY

Allegheny Avenue & 19th Street,  
Philadelphia, March 6th, 1918.

The Directors have declared a dividend of one dollar (\$1.00) per share from the net earnings of the Company on both Common and Preferred Stocks, payable April 1st, 1918, to stockholders of record at the close of business on March 18th, 1918. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

#### I. The Story of the Week.

Your class is a society for the discussion of current events. The president of the society has organized a contest in which all are to take part. He has divided the society into committees. A prize is to be given to the committee that makes the best report. The subjects on which reports are to be made are as follows:

1. The week's news concerning fighting, and military movements.
2. Recent progress of war preparations in the United States.
3. The Russo-Japanese situation.
4. Recent important events in the United States.
5. The most important news of the week.
6. The particular persons most prominent in the news of the week.

#### II. Editorial Articles.

Your class is a class in a school of journalism. The instructor has divided the class into seven groups for the study of methods in writing editorial articles. Every group is to select an editorial article that falls under an assigned heading, and is to prove conclusively that the article is the one that should have been selected. The assigned headings for the seven groups are as follows:

1. The most interesting editorial article.
2. The most emphatic.
3. The most thoughtful.
4. The most original.
5. The most scholarly.
6. The most helpful.
7. The editorial article most worthy of imitation.

#### III. Colonel Newcome's Return. By William Makepeace Thackeray.

1. Tell of your own experiences in revisiting old friends and old associations after a considerable lapse of time.
2. Give an account of Colonel Newcome's life up to the time of his return to England.
3. With what spirit did Colonel Newcome revisit old scenes?
4. How did the Colonel impress various types of people?
5. What shows the Colonel's kindness? thoughtfulness? sentiment? gentlemanly character? simplicity? nobility? dignity?
6. Characterize the other persons named in the selection.
7. Name, and explain, the old English customs mentioned here.
8. What gives the article its spirit of Good Cheer?
9. What characteristics of Thackeray's style are evident in the article?

#### IV. The War for Democracy.

You are member of a society that is doing all in its power to uphold the Government of the United States. The members of the society are assigned to write, to speak in public, and to converse with people whom they may meet, on patriotic topics. Study this number of The Independent as an aid in your patriotic work.

1. Consider the methods of writing employed in the different patriotic articles. Which method do you think most effective? Why?
2. Which patriotic article has the best plan? Explain.
3. Which article gives you the best material for public speaking? Explain. Give a four-minute speech based on the article you prefer.
4. Which article gives you the best material for patriotic conversation? Explain. Give an example of how you might use the article in chance conversation. Present your suggestions in the form of written dialog.
5. Imagine that you are the author of "Shanghaied With the Fleet." Give an oral account of your experiences, and add your impressions concerning the worth of the United States Navy.
6. Write a short, spirited oration in which you show that the United States has always stood for the freedom of the seas.
7. Explain, as if to a person with whom you are talking, how the expression, "freedom of the seas," is connected with the present war.
8. Present a short summary of the facts with regard to the need for ships.
9. Give, in conversational form, an account of the present state of shipbuilding in the United States.
10. In a single paragraph present suggestions that will lead to a successful ship-program.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

#### I. A Campaign for Intelligent Patriotism —"The Freedom of the Seas."

1. What is the central thought in this article? Quote a sentence which summarizes this thought.
2. What are the facts which justify the statement that this war is being fought by the United States for the freedom of the seas?
3. What were the "acts of pretended legislation" to which the Declaration of Independence referred?
4. In what respect were the Tripolitan War and the War of 1812 alike? In what respects were they different?
5. What are some of the conferences to which the President referred in his speech of January 22, 1917?
6. "Property can be paid for, the lives of peaceful and innocent people cannot be." Why is this sentence quoted in this article?

#### II. Our Shipping Program—"Ships Will Win."

1. Why is our shipping spoken of as "the neck of the bottle" in this war?
2. "... it does not take a supermathematician to predict that disaster and perhaps defeat awaits the Allies," etc. Tabulate the figures which led the author to make this remark.
3. Summarize the shipbuilding program thus far adopted by this country. How far has this program advanced?
4. What have been the chief causes of delay in the program? What remedies are proposed?

#### III. Domestic Affairs—"An Attack Upon the Direct Primary," "Political Indictments," "In Congress."

1. What indications of political unrest do you find in these news items? What movement for allaying this unrest?
2. Investigate at least one of the "three pieces of important legislation" referred to in the news item.

#### IV. The Baltic Provinces—"The Resurrection of Lithuania."

1. Locate Lithuania and the Baltic Provinces on a map.
2. Distinguish between Lithuania and the Baltic Provinces. Trace the history of these provinces by reference to an encyclopedia or to a history of Russia.
3. Why does the editor speak of Lithuania as "one of the most unfortunate of ... buffer states"?
4. "The Prussian power ... had its origins in these Teutonic Knights of the Cross," etc. What is the history of these Teutonic Knights?
5. Interview, if you can, one of the Lithuanians in the United States. Does he agree with the editor?

#### V. The Austrian Empire—"The Austrian Paradox."

1. Why is the opening sentence a good topic sentence both from a literary and from a historical point of view?
2. "Austria has been defeated by all of her neighbors," etc. What are the facts in support of this statement?
3. "The greatest Prussian statesman was Bismarck. ... The greatest Austrian statesman was Metternich," etc. Since the two men had exactly opposite purposes, how can these two statements be true?
4. It used to be said that the Austrian Empire would go to pieces upon the death of Franz Joseph. Do you see any signs that this is happening?

#### VI. The Road to India—"The New Route to India," "Rumanian-Russian Peace," "Moscow the Capital," "The Protection of Siberia," "President's Message."

1. "... for the Germans are at the gate of Herat," etc. Explain the figure of speech and discuss the events which have led to this state of affairs.
2. Look up the history of the struggle between England and Russia for the control of Afghanistan. Read some of Kipling's stories and poems which deal with this subject.
3. What is the connection between the Rumanian peace and the state of affairs in southern Asia?
4. From a study of the map decide which route to the East is better: (a) the Bagdad route, (b) the route from Batum.
5. Compare the attitude of the President toward the revolutionists with that of Lord Cecil. Which seems most helpful?
6. What will be the result if Japan occupies eastern Siberia as is proposed?

## JUST A WORD

"Halt the Hun," the Liberty Loan poster by Henry Raleigh, which is reproduced on the cover of The Independent this week, presents one of the battle slogans which inaugurate the nation-wide campaign for the Third Liberty Loan.

Nine million posters of this and other designs have been sent out thru the United States, Hawaii, Alaska, Porto Rico, Cuba, the Philippines and France to drive home the appeal of the Liberty Loan to all Americans. April 6, the first anniversary of America's entrance into the war, is the date on which the drive begins.

In the April 6 issue we shall introduce to The Independent readers the new director of The Independent Motor Efficiency Service, Mr. John R. Eustis, already known to motorists as the author of numerous articles on every phase of motor travel and motor transportation. Mr. Eustis' reputation as a motor authority has been established thru seventeen years of constant study in the development of motor vehicles and their increasing uses. In the first and third issues of each month he will give The Independent readers the benefit of this experience in a timely article full of interesting and practical information covering every angle of motoring, from the man who drives his own car or the corporation head who is planning a substantial addition to his delivery fleet. Mr. Eustis will also answer by letter any questions that The Independent readers may want to ask him concerning motor cars, trucks, and their equipment.

Spring Planting is the topic of chief interest in the next Countryside Section of The Independent, published next week. A colorful garden cover, by Willard Fairchild, introduces the subject, articles by garden authorities present a wealth of practical information and sound advice, and photographs of actual gardens illustrate some of the important points. Hugh Findlay, professor of horticulture in Syracuse University College of Agriculture, will tell you in this number "What to Do in April" if you would have flowers, fruit and vegetables in their season later on. H. W. Darr, who writes from many years' experience as a gardener-for-choice, will make you envious of his "Patch of Peas."

There are notable incentives to constructive spring house-cleaning in two of the articles to be published in the Countryside Section of The Independent next week. George Leland Hunter, whom The Independent readers already know as the author of "Tapestries for Everybody," "The Return of Carpeting," "Lamps," "Good Cheer in Wall Papers," "The Period Styles" and several other articles on the important aspects of home furnishing, will tell you all about the best chintzes and cretonnes to

dress up your whole house for spring time. "Taking Efficiency Into the Kitchen" is the subject of an article by Mildred Maddocks, director of the Good Housekeeping Institute. Miss Maddocks is probably the foremost authority in this country on how to run a kitchen right; she has studied kitchen efficiency for many years and experimented widely on the numerous labor-saving devices of modern kitchen work. You will find her article full of practical suggestions, whether you are building a whole new kitchen or buying an egg beater.

## WORDS OF THE WEEK

**GREAT RUSSIA**—The central part of the Russian Empire in Europe, the nucleus of the Russian Empire of which Moscow was the original capital.

**WHITE RUSSIA**—The western provinces of the empire now largely occupied by the Germans; the population is of mixt Russian, Lithuanian and Polish blood.

**"HINDENBURG LINE"**—A carefully prepared line of defense prepared by the Germans early in 1917 to which they retired just before the allied offensive in the spring of 1917.

**LIBERTY MOTOR**—An engine specially designed last year in this country for use in our aeroplanes. The engine consists of standard parts which are being manufactured in various factories and assembled in one place.

**"HELLO GIRLS"**—A group of American women who speak English and French who have been enlisted into the Signal Corps and who are being sent to France to act as telephone operators at Army Headquarters.

**LITTLE RUSSIA**—A name given to the southern provinces (excluding those bordering on the Black Sea) in the basin of the Dnieper River. These are the provinces now included in the new Ukrainian republic.

**BUFFER STATES**—Countries or provinces like Belgium, Luxemburg, Poland and Lithuania lying between two hostile nations. These buffer states are apt to be the battle ground and hence the innocent sufferers in times of war.

**LIBERTY TRUCK**—A motor truck designed especially for the use of our army in this war. The parts are manufactured in nearly a hundred factories according to standard models so that they may be made in large quantities and rapidly assembled for use.

**"THE GATE OF HERAT"** (Herat)—Herat is a city in the northwestern part of Afghanistan, the buffer state between Persia, Russia and India. Herat is often called the "key to India" because the nation which controls it has an open road thru Afghanistan into India.

**TREBIZOND** (Treb'izond)—A city in Asia Minor on the coast of the Black Sea, founded by Greek settlers in the seventh century B. C. For centuries it has been the gateway of the trade into Armenia and Persia. It was captured by the Turks in 1461, taken by the Russians in April, 1916, and recently retaken by the Turks.

**KREMLIN**—The citadel of Moscow protected by walls about a mile and a half in circuit which were built in the fifteenth century. In the enclosure are many of the historic government buildings and churches of the empire. The Kremlin was the seat of the Russian Government till Peter the Great removed the capital to Petrograd in 1703.

## HIGHER RANK FOR THE MEDICAL CORPS

**I**T is unfortunate that at such a critical time a controversy should arise between the War Department and the head of the Army Medical Corps. Especially since the War Department is wrong.

General Gorgas, Surgeon General of the United States Army, believes it of the highest importance that it should be made possible to give higher rank to officers in the Medical Corps.

No officer in the regular Medical Corps holds rank above that of Colonel; no officer in the reserve Medical Corps holds rank above that of Major. It should be immediately apparent that a medical and sanitary officer with the rank of Major or even Colonel would find himself at a regrettable disadvantage in any conference or other relation with line officers of general rank. Line officers, General Gorgas declares, have had no hesitation in ignoring the sanitary recommendations of medical officers of lower rank. A typical case occurred at a port of embarkation when the ranking line officer refused to adopt the suggestion of the ranking medical officer, with the result that the port was overwhelmed with sick soldiers.

The army, like, we suspect, every other army in the world, lays great store by shoulder straps. It is doubtless inevitable that in the affairs of the army weight should be given to rank just because it is rank, regardless of the ability or brain power that accompanies it. A major general carries more guns—to use an old naval figure—than a brigadier general; a brigadier than a colonel; a colonel than a major; and so on down the line.

It is absurd—more than that, it is dangerous—that the Medical Corps, whose officers bear the primary and tremendous responsibility of the health and physical efficiency of the army upon their shoulders, should be able to send to a council table no officers of higher rank than the commander of a single regiment. This handicap upon the Medical Corps is a serious menace to the welfare of the National Army and its component parts, the young men of America. The nation cannot afford to permit such a menace and such a handicap to continue.

There is another aspect of the case that is only less im-

portant: Many of the finest surgeons in America—men of worldwide reputation—are giving their services with patriotic generosity in the Reserve Medical Corps. They include such men as Dr. Charles H. Mayo, of Rochester, Minnesota; Dr. George W. Crile, of Cleveland; Dr. John B. Walker and Dr. William Blake, of New York; Dr. Frank Billings, of Chicago; Dr. William H. Welch, of Baltimore, and Dr. Joseph Marshall Flint, of the Yale Medical School—each one with the rank of major, the same rank held by the commander of half a regiment of men. It is not the slight put upon the fine flower of America's medical profession that counts—tho no nation ought to refuse to recognize by even the poor method of granting adequate military rank the worth of the service which is being thus freely given. It is the clog upon their effectiveness, the barrier to their greatest usefulness, which the nation should be eager to resent, the Government anxious to remove.

General Gorgas has done a good service in putting before the Senate Committee the facts in this unfortunate situation. It required courage to oppose his superiors—the Secretary of War, the War College, and the General Staff. But William Gorgas has never lacked the courage of his convictions and has never been found wanting in the convictions themselves. His great achievement in making the Isthmus of Panama “as safe as a health resort” for the workers on the Panama Canal can never be adequately rewarded by the American people. It should always stand as a guarantee of his broad vision, his constructive ability, and his unselfish devotion. It must ever establish a presumption in favor of any proposal, within the sphere of his special knowledge and peculiar experience, which he may make.

The Acting Secretary of War has opposed the proposal of the Surgeon-General on the ground that it would disrupt and unbalance rank thruout the army. It is a wooden and bureaucratic objection.

It is a gratification to know that the President agrees with General Gorgas. We trust that he will make his agreement vigorously effective. Nothing must be allowed to militate against the good health and high physical efficiency of the fighting youth of the nation.

## ON THE INDIAN FRONTIER

**W**E can now perceive that the defection of Russia did not obliterate the eastern front. It merely moved it 2500 miles further east. The names of Riga and Petrograd are likely to be henceforth displaced in the despatches from the seat of war by Herat and Kandahar. In last week's news we read of “fierce battles in Turkestan; 20,000 casualties”; “Russian Red Guard invades Persia”; “Rebellion in Tibet”; “Georgians and Armenians defend Transcaucasia”; “British suppress native rising in Baluchistan.” What do these mean? Who is fighting whom

and what for? What is the connection, if any, between these five items?

Nobody can tell from what information is made public. The only thing we can see for certain is that India is encircled on the north, northwest and west by disturbances. Such disturbances are not disturbing in ordinary times. At most they meant a bothersome border war. At the end of it the boundary of barbarism would be pushed back a bit and some British general would acquire a title to match Lord Roberts of Kandahar and Lord Kitchener of Khartum.

But now we know that there are mighty and mysterious forces behind such movements. German agents may work as well thru Turk or Tatar, Mollahs or Bolsheviki. The sound of European cannon has waked strange echoes in the Caucasus and the Himalayas. It has roused sleeping races and revived ancient fanaticisms. The photographs of Haji Mohammed Wilhelm with a fez in place of a *Pickelhaube* and of the Christian churches demolished by his guns in France and Belgium were circulated from Morocco to Calcutta early in the war. The high priest of Islam standing in front of the mosque of Mohammed the Conqueror at Constantinople called to the millions of his faith:

Oh, ye Faithful, what do ye wait for? How often have the savage Russian, the traitorous English, the Frenchmen of impure parentage, planted their unclean flags upon your holy mountains. Listen to the will of God, the desire of your Prophet, the command of the Caliph that you give no rest to the enemy. If you have no arms, tear his throat with your teeth. Jihad! Jihad! Oh, Moslems! The Great God is ordering you to fight everywhere. God will give you victory. He gives you the houris and the damsels of heaven.

The call at the time seemed to fall upon deaf ears. Algeria and even newly occupied Morocco gave aid to their French rulers. Egypt remained quiescent and Arabia rose at English instigation against the Caliph of Constantinople. Mohammedan princes in India sent their subjects to France. Except for a mutiny at Singapore, a refusal to take part in the expedition against Bagdad and some disturbances in India we have heard of no serious trouble from Islam. But the danger has revived in a new form and on a new front. Dr. S. G. Wilson in his "Modern Movements Among Moslems," speaking of the failure of the Holy War, wrote: "However, had the Austro-Germans conquered the Allies and the campaigns of Turkey in Egypt, the Caucasus and Persia been successful, the Moslem world would have been agitated to its depths and its widest extent." In such a case, he said, the sixty million Moslems in India and the twenty million Moslems in Russia would join forces to throw off the hated infidel yoke.

The present situation comes alarmingly near to fulfilling the conditions of this prophecy. Altho the Allies hold north Africa, Arabia, Mesopotamia and the Persian Gulf, the Austro-Germans have conquered the biggest of the Allies and have opened a way thru the Caucasus and northern Persia and another thru southern Russia and Turkestan to Tibet and Afghanistan. German trains can now be run from Antwerp to Samarkand. Less than four hundred miles beyond the railhead lie Kabul and Kandahar, and the Afghans who hold the mountains between are Mohammedans of the most fanatical. The "Russian peril" that kept the English on edge for a half century is now transformed into a German peril still more formidable. Kipling could bring his "Man Who Was" up to date by merely changing the name of the nationality. Such is the menace that Germany has brought upon the world thru her treachery to Christendom and civilization.

## THE BENEFITS OF BABEL

IT was a naïve assumption of the ante bellum internationalist—or as he now prefers to be called, the mon-dialist—that the more people knew of one another the more they would like one another. Let us have a common language, they said, and love will reign thruout the world. Now this is dead against all experience. People can't begin to quarrel until they talk the same tongue. We do not know how well Esperanto is provided with "cuss-words," but if it lacks them they will have to be invented, for they will be more needed than ever when all races get to talking together and about each other. A tourist can get along very happily in China or India unless he understands what the natives are saying about him. How much more we admired the Germans in the days when we read little of their modern literature than we do now when our newspapers quote

theirs every day. Our great American philosopher, Mr. Dooley, said some years ago in commenting on the difficulty that an American President had in so wording his message that it would not be understood by those who speak the King's English:

With England we ar-re on such terms as must plaze ivry Canajeen, but not on anny such terms as wud make anny Irish-man think we ar-re on such terms as we ought not to be. In other warruds, we cherish a deep animosity mingled with passionate love, such a feelin' as we must entertain to a nation with common impulses fr th' same money an' a common language iv abuse.

This warning is doubly needed now when we are joined to our kin across the sea by the bonds of a common alliance or, to speak more accurately, a co-belligeration. If the Irish only spoke Gaelic instead of merely pretending to they might get along very comfortably with their English neighbors, each race having its own opinion of the other and expressing it freely without hurting anybody's feelings.

The Bible enjoins us to love our neighbor—thus demanding of us the most difficult exercise of the virtue. If we had been asked to love the antipodeans we could have qualified without hesitation, but to love the person living in the house next door or in the flat above often puts too much of a strain upon our charity. According to the schoolboy's definition "a friend is one who knows all about you but likes you just the same." Misunderstandings give rise to trivial quarrels. They are easily cleared up by a little frankness. The really serious quarrels are those that arise out of mutual understandings, for these are irremediable.

"Two of a trade can never agree" says the proverb. That is because they talk the same technicalities. Æ defines "a literary movement" as "half a dozen writers living in the same place who hate one another." Yet they may all live very peaceably with the surrounding laity who do not understand them but only admire. "Language was given man to conceal thought," said Talleyrand. Of course he meant not language, but languages. The main policy of an Austrian statesman has always been to cultivate rival tongues so as to preserve the peace of the realm.

The faculty of mind-reading, if it exists at all, is a rare gift—fortunately for if everybody possess it the world would be too horrible to live in. Nearly as bad would be a universal language. With a billion and a half of people all using the same tongue peace on earth would be an impossibility. Blessed be Babel. It is the only salvation from Gehenna.

## ALIENS OR ALLIES?

TO recognize that enemy aliens may be allies is not so difficult as it seems if we learn the lesson pointed out by a recent experiment in education at Camp Sherman, a National Army camp at Chillicothe, Ohio.

Camp Sherman, like many of the cantonments near manufacturing or mining centers, has a large foreign population, made up in this case chiefly of Serbians, Croats, Slavs, Poles, Rumanians and Bohemians, all nations for whose freedom we are fighting. After the declaration of war with Austria-Hungary the War Department issued an order directing the discharge of all alien enemies who so desired, and a large percentage of these men who were technically Austrian subjects applied for such a discharge.

At the same time Professor H. A. Miller, of the department of sociology in Oberlin College, a student of the national prejudices and aspirations of the peoples of South-eastern Europe, arranged with the military authorities to hold four mass meetings to explain to these "enemy aliens" in their own language the circumstances of America's participation in the war and its interrelationships with the struggles of the small nations of Europe. At the close of the first meeting over nine hundred and fifty Slovaks and Bohemians out of a thousand eligible to discharge declared their resolution to stay in the National Army. The meetings of the other nationalities had similar results.

The status and feeling of these races is very little understood in this country; we are inclined to be suspicious of them from the mere fact that thru an arbitrary classification they are considered "enemy aliens" while they are really enthusiastical allies. Meetings like these at Camp Sherman open large possibilities of increasing by intelligent propaganda the fighting strength and morale of America's army. If we will only take the trouble to explain to these aliens what the real situation is, they will make soldiers above the average in enthusiasm and loyalty to the cause of freedom for democracy.

THE ONLY WAY

THE most important thing for the American people at this moment is to realize vividly what we are in for, and what we must resolve to get out of it. Mr. Taft, speaking informally at Pittsburgh the other day as President of the League to Enforce Peace, put the matter succinctly and well:

The successful working out of the plan of the League of Nations to Enforce Peace depends primarily on winning victory over the Kaiser and his Potsdam gang on the western front. The whole energies of the nation should be devoted to that by adequate preparation.

We face a two or three years' war and we should, in our draft, provide now for an army of 5,000,000 men, train them and, as our ships are built, send them over.

With these we can win the war, and when we do all the nations, including the German people, made amenable by defeat of their present vicious leadership, will be anxious to make a league to prevent another war.

We cannot make progress by further debate with Germany and Austria. Blows are the only arguments now possible to win permanent peace.

Mr. Taft is right. This is now the only way. We must face it with high courage and grim determination.

FOOD CONSERVATION AT THE SOURCE

MR. HOOVER has labored manfully with the vast problem of conserving our food supply. The people have coöperated with him cheerfully and well. Much has been accomplished. But much is not enough.

Already, Mr. Joseph Cotton, who is Mr. Hoover's assistant in charge of the conservation of meat, declares that the meatless days do not work. People will buy and eat meat on those days, it appears, especially those who are receiving larger incomes than usual because of war wages. It is likewise asserted with authority that we are not saving enough wheat.

If such is the case, it is time to adopt other methods. The voluntary wheatless, meatless, porkless day method was good, if it worked. But it had one fatal weakness. It was sure to break down sooner or later. For it began at the wrong end.

There is no question that the housewives of the nation tried faithfully and enthusiastically to carry out Mr. Hoover's behests. But they found themselves confronted by conditions which were almost too much for human nature to combat. For example: housewife went to market on a porkless Saturday. She wanted to do precisely what she ought. So, according to the instructions of Mr. Hoover which had been burned into her consciousness from placard, poster, advertisement and newspaper article, she asked for chicken. The butcher had no chicken. There had been none in market when he went there. She asked for lamb. It was scandalously high in price. How about beef, then? Equally high. What was the cheapest thing he had? Pork!

Now, what could the conscientious housewife do—in justice to her duty of loyalty and her responsibility to her home finances? It was a cruel predicament.

On another day she, or any other mother of a house-

hold, went to the grocer for flour. She must, she discovered, buy just as much of some other cereal as she did of wheat flour. But the other cereals were scandalously costly. What could she do? It was a hard situation.

It is just this kind of problem that the American housewife has found herself continually confronted with under the voluntary plan of food conservation. With the best intentions in the world, she finds herself beginning to wonder if that is the best way for the nation to go about it. And she is right. It is a grave question whether the time has not come to take hold of the problem at the other end.

Our Allies and our armies need wheat and beef and pork. The farmer and the millers have the wheat; the packers the beef and pork. Let the Government buy from the farmers, the millers and the packers what is needed for abroad. Then let the rest of us take what is left. We will eat what there is, and cheerfully go without what there is not. We will not be subjected to the terrific strain of feeling the obligation to buy the expensive food when the cheap food lies in apparent plenty before us.

If, when the needs of "abroad" are satisfied, so far as may be, there is not enough to go around, let us have food cards and apportion what there is equitably among us all.

We are not afraid, Mr. Hoover, to stint ourselves. But make it easy for us rather than hard. We are only human. What you are after is to increase the available supply for export abroad. You have been trying to do it—and succeeding pretty well—by cutting down the demand at home. Try cutting down the supply first, by taking out what you need. You will find that the demand will fit itself to the diminished supply.

Try food conservation at the source.

Don't think peace, think victory!

Don't forget to set your clock an hour ahead when you go to bed Saturday night. The sun will do the rest.

If the Bolsheviki keep on we may read in the encyclopedias of 1920: "Among the smaller states of Europe, of whose existence not every one is aware, we find Luxembourg, Liechtenstein, Andorra, Monaco, San Marino and Russia."

Delaware has ratified the Federal prohibition amendment. That makes nine. There were only twelve legislatures in session this year. Nine have ratified, one has rejected, two have side-stepped. That is precisely the right proportion for ultimate adoption.

The United States Senate trembles on the verge of endorsing the Federal Suffrage amendment. It probably needs only a pair of votes to push it over. Why not write to the Senators from your state in the name of democracy and justice and government by the people? Women are, you know.

All Canada, except Ontario and Quebec, will be "dry" next week. The two premier provinces will follow suit at the end of the year. The prohibition wave sweeps on. It may not be much more than a year until a man will be unable to get a drink anywhere in North America north of the Rio Grande.

There are two dates that should loom large in the consciousness of every American. The first is April 6, when the campaign for the Third Liberty Loan begins. The second is May 20, when the second Red Cross Drive gets under way. Both these undertakings must be smashing successes. Are you ready to do your part?

The Red Cross sends this message to the boys in camp: "Do you know that the Red Cross is doing everything possible now to prevent your loved ones from suffering because of your absence? Are you anxious about the people at home? Is your wife lonely, inexperienced or worried? Does your kid brother or sister need advice? Rent due? Insurance due? Sickness? Family in need of assistance of any kind? Tell the Red Cross Field Director at your camp about it! Or, tell your captain to tell him! Then forget your worries." This is worth knowing. What the Red Cross undertakes, it performs.

# THE STORY OF THE WEEK

## Coördination of War Activities

Two important steps toward a better coördination of the Government's activities in the prosecution of the war were taken last week. The President called into a two hour conference the heads of the war administrative bodies. The officials who met with Mr. Wilson were Chairman Hurley of the Shipping Board, Food Administrator Hoover, Fuel Administrator Garfield, Director General of Railways McAdoo, Chairman Vance McCormick of the War Trade Board, and Chairman Baruch of the War Industries Board. It is planned to hold another conference within a week; and it is not improbable that the meeting of these important administrative officials with the President will be made a regular weekly event. The subjects discussed were primarily the shipping situation in the light of the revelations made by the British Admiralty, and in addition a better means of fuel distribution and the vital question of the transportation of war material. The question was raised of the possible transfer of coastwise shipping from the control of the Shipping Board to that of the Railway Administration. No public announcement was made of the conclusions reached at the conference; but the general impression was permitted to appear that definite progress was made in the coördination of the different lines of activity.

Meanwhile the Chamberlain bills for the creation of a Department of Munitions and a War Cabinet have lain dormant pending the Senator's return from an absence enforced by illness. The new conference with the President may prove to be such a valuable means for securing coöperation and efficient team work that it will take much of the force out of the demand for a War Cabinet. Especially would this be true if the Secretary of War and the Secretary of the Navy were added to the group.

The other movement toward coördination of effort consisted in two long conferences between the War Council and the members of the Senate and House Military Committees. These meetings are also to be held weekly. The representatives of the War Department set very fully before the senators and representatives the existing situation in regard to the prosecution of the war in all its branches. The questions of the members of Congress were answered with perfect frankness. The particulars in which the War Department was behind schedule were disclosed without reservation, and a full statement was made of the steps which were being taken to remedy the delinquencies. The committees were shown by a member of the Army War College a summary of the activities on all the fronts in Europe, and reports from

## THE GREAT WAR

*March 15*—Germans occupy Odessa and Nikolayev. French gain trenches in Champagne.

*March 16*—Germans raid American lines north of Toul. Congress of Soviets at Moscow adopts peace treaty.

*March 17*—Sinn Fein riots in Belfast. French raid German trenches at Malancourt, northwest of Verdun.

*March 18*—Supreme War Council of Allies denounces German aggression in Russia. German prisoners fighting Bolsheviki in Siberia.

*March 19*—Native risings in Baluchistan suppress by British. Secretary of War Baker visits American front.

*March 20*—President takes over Dutch ships in American ports. Trotzky asks for American officers to train volunteer army.

*March 21*—British Admiralty reports loss of eleven merchant vessels over 1600 tons and eight smaller. German destroyers bombarding Dunkirk attacked by French and British fleets.

General Pershing of the activities of his forces were also presented.

These two plans for knitting together the various war activities of the Government, and especially the arrangement for keeping the congressional committees in close touch with the progress of events, are doubtless the result, at least in part, of the vigorous criticism of the prosecution of the war in Congress and the press of the country. But that is the true function of criticism. Not to embarrass or hamper, but to stimulate to improvement and reform.

## In Congress

The Overman bill for extending the power of the President to rearrange and coördinate the administrative bureaus and other agencies was reported favorably by the Senate Judiciary Committee last week. Three Republicans joined with eight Democrats in favor of the report, while two Democrats allied themselves with five Republicans against it. Several amendments were made by the committee, but none which would seriously limit the power granted to the President to reorganize the administrative agencies. In the Senate the bill is certain to excite strong opposition and to be the subject of elaborate and spirited debate. The chief objection to the bill is not to the reorganizations and readjustments that would be likely to result from it, but to the giving of blanket powers to the President to change and shift the parts of the executive organization at will.

A bill has been prepared in the War Department and sent to the Senate Military Committee, which would empower the President during the war to take over private property of any kind, whenever it is deemed necessary for the national security or to facilitate the

conduct of the Government's affairs. The owners of the property would be adequately compensated. The purpose of the bill is to enable the Government to move quickly in the acquisition of real estate, office buildings and other property needed for war work. The bill would obviate the resort to long drawn out condemnation proceedings and at the same time would safeguard the rights and interests of the owners of the needed property.

The House Committee on Naval Affairs has reported the Naval Appropriation bill which carries appropriations of one and one-third billion dollars. The sum of \$100,000,000 is set aside for the production of U-boat chasers, destroyers and other small craft, including the new craft now being manufactured by Henry Ford, which are to be known as the Eagle class. The number of destroyers to be built is not specified in the bill, for obvious reasons, but the committee announces that it is intended that within a year the United States shall have the greatest destroyer fleet in the world.

**Daylight Saving** Congress has passed, and the President has signed, the bill to save an hour of daylight for seven months of the year. It provides that all the clocks in the country shall be set an hour ahead at two a. m. on Easter Sunday, March 31, and set back again on the last Sunday in October. The United States thus follows the example of most of the other leading nations of the world.

There seems to be considerable confusion in the popular mind as to just what the change will mean in daily life. The fact is simple, but a little puzzling until it has been experienced. On the night before Easter Sunday the individual who goes to bed at ten, say, will set his clock or watch forward to eleven. If he gets up the next morning at his usual hour, he will have had an hour less of sleep than is his custom. But that is the only difference that each of us will find. Except this. As the days go by, we will be surprised, and probably delighted, to discover that the afternoons are longer. The sun will set an hour later all thru the summer. On the longest day in the year sunset, in the latitude of New York, will come at half-past eight instead of at half-past seven. There will be a gratifying increase in the time after working hours in which recreation may be indulged in out-of-doors.

There will be other gains in the industrial and business world in the saving of coal used for the generation of light. But for the individual, an hour of daylight will merely have been subtracted from the beginning of the day when he is asleep and tacked on to the end when he is awake. He must not, however, forget to put the hour hand for-

ward on Saturday, March 30, or he will be late to church on Easter morning.

**Prohibition Progress** The Federal prohibition amendment has passed the legislatures of two more states, been rejected in one, and side-tracked in two. On March 4 Texas ratified the amendment by a vote of 15 to 7 in the Senate and a vote of 71 to 29 in the lower house. On March 13 the Rhode Island Senate voted not to ratify, by a vote of 20 to 18. The New Jersey legislature postponed the whole matter for another year. Last week the New York legislature refused to take affirmative action.

On March 18 Delaware ratified the amendment by a vote of 13 to 3 in the Senate and a vote of 27 to 6 in the Assembly. All the legislatures that meet normally this year have now acted—or refused to act—upon the amendment. Three-quarters of them have ratified it, the exact proportion necessary, thruout the nation if it is to become part of the Federal Constitution. Of the four states to give their approval to national prohibition five are “dry” and four are “wet.” A special session of the South Dakota legislature is now meeting. The Governor has recommended the prompt ratification of the Federal amendment.

**The President on the Duty of Democrats** President Wilson last week sent a letter to a harmony meeting of Democrats of all factions in his own State of New Jersey, in which he set forth his conception of the duty of the Democratic party at this moment. He referred to his “responsibility as leader of a great party,” and the privilege that was his to point out what course Democrats should take “in order that the exigency of a great hour of crisis may properly be met.” He continued as follows:

Every sign of these terrible days of war and revolutionary change, when economic and social forces are being released upon

the world whose effect no political seer dare venture to conjecture, bids us search our hearts thru and thru and make them ready for the birth of a new day—a day, we hope and believe, of greater opportunity and greater prosperity for the average mass of struggling men and women, and of greater safety and opportunity for children.

The old party slogans have lost their significance and will mean nothing to the voter of the future, for the war is certain to change the mind of Europe as well as the mind of America. Men everywhere are searching democratic principles to their hearts in order to determine their soundness, their sincerity, their adaptability to the real needs of their life, and every man with any vision must see that the real test of justice and right action is presently to come as it never came before.

The men in the trenches, who have been freed from the economic serfdom to which some of them had been accustomed, will, it is likely, return to their homes with a new view and a new impatience of all mere political phrases, and will demand real thinking and sincere action.

Let the Democratic party in New Jersey, therefore, forget everything but the new service which they are to be called upon to render. The days of political and economic reconstruction which are ahead of us no man can now definitely assess, but we know this, that every program must be shot thru and thru with utter disinterestedness; that no party must try to serve itself, but every party must try to serve humanity, and that the task is a very practical one, meaning that every program, every measure in every program, must be tested by this question, and this question only: Is it just; is it for the benefit of the average man, without influence or privilege; does it embody in real fact the highest conception of social justice and of right dealing without respect of person or class or particular interest?

This is a high test. It can be met only by those who have genuine sympathy with the mass of men and real insight into their needs and opportunities, and a purpose which is purged alike of selfish and of partizan intention. The party which rises to this test will receive the support of the people because it deserves it.

**A Loyalty Test** The election of a United States Senator in Wisconsin to fill the vacancy caused by the death of Senator Husting furnishes the occasion for a test of popular loyalty in a region where there is most reason to believe that disloyalty exists. Primary elections were held last week to determine the candidates of the various parties. In the Democratic party there was no question of disloyalty—both candidates being men whose Americanism is above suspicion. In the Socialist party there was equally no question, but for the opposite reason. The only candidate there was Victor Berger, Socialist Congressman from Milwaukee, now under Federal indictment for the making of speeches and the publication of articles tending to obstruct recruiting, encourage disloyalty and interfere with the prosecution of the war. In the Republican party there was a straight-out issue between loyalty and disloyalty. The two candidates were Congressman Irvine L. Lenroot, a radical Republican of long experience and prominence, and James Thompson, an obscure citizen who was put forward by Senator La Follette as his candidate. Lenroot made his vigorous campaign on a single issue—loyalty. He asked only for the votes of Americans who were uncompromis-

ingly devoted to their country. Thompson made no campaign beyond issuing from his home a few letters in which he evaded Lenroot's demand that he tell whether he was for the United States or against it.

The result of the Democratic primary was the overwhelming choice of Joseph E. Davies, chairman of the Federal Trade Commission, who was the acknowledged candidate of the Administration. In the Republican primary the result was for several days in doubt. But Lenroot was finally chosen by a narrow margin of some 4000 votes. The votes for Thompson came in largest measure from the counties in which the German element is most predominant. There was no issue of political progressiveness and conservatism between the two Republican candidates, since Lenroot has long been one of the most aggressive of the Progressive Republican leaders in Congress.

The election which is to come will doubtless be sharply contested. It is unfortunate that it is a three-cornered fight. For there is strong probability that the pro-German and anti-war elements in the state will unite upon Congressman Berger, while the loyal voters will be divided between Davies and Lenroot. A modified loyalty issue will be made between the Democratic and Republican candidates, on the ground that Lenroot was a pacifist and opposed to America's entrance into the war up to the time that it actually took place.

In a letter accepting Mr. Davies's resignation from the Federal Trade Commission, the President has virtually endorsed his candidacy by saying:

May I also add a word of thanks to you for your steadfast loyalty and patriotism during that trying period before we were thrust into the war, while, to avoid becoming involved therein, every effort was being made aggressively to assert and fearlessly to maintain American rights?

#### THE DUTCH SHIPS NATURALIZED

President Wilson in a proclamation issued on March 20 directed the Secretary of the Navy to hoist the American flag on the Dutch ships now in the territorial waters of the United States. There have been extended negotiations between our Government and Holland on the question of taking over this shipping, but the Dutch Government has been unable, in view of German threats, to act of her own free will. It has been estimated that there are about 500,000 tons of Dutch ships in American waters; the photograph above shows those at anchor in the Hudson River above New York Harbor

presented the first opportunities to apply the acid test in our country to disclose true loyalty and genuine Americanism. It should always be a source of much satisfaction to you that on these crucial propositions you proved true.

Mr. Lenroot voted against the Administration on each of the three issues mentioned by President Wilson. But since America's entrance into the war, the Wisconsin Congressman has been an unequivocal supporter of the vigorous prosecution of the war.

**A Garden Army** A school garden army of five million boys and girls, to be worked out thru the Bureau of Education, is the plan of Secretary Lane, and the President has issued a special appeal for the idea. "Every boy and girl," he says, "who really sees what the home garden may mean will, I am sure, enter into the purpose with high spirits. The movement to establish gardens and to have the children work in them is just as real and patriotic an effort as the building of ships or the firing of cannon. I hope that this spring every school will have a regiment in the volunteer war-garden army."

It is planned to form the garden army in schools in every city, town and village in the country, and to have the children produce as far as possible all of the vegetables for their home consumption.

**Seizure of Dutch Shipping** The long line of Dutch vessels which have been lying idle in the upper Hudson since July 17 while the whole world was short of shipping will now be utilized. These ships were mostly loaded with grain for Holland, but the Allies were unwilling to supply a large amount of grain for such a purpose when their own armies and peoples needed it so much especially since an equivalent amount of food or stock fed with this grain would be sent from the Netherlands into Germany. After prolonged negotiations an agreement seemed to have been reached in January by which 150,000 tons of Dutch shipping should be employed at the discretion of the United States partly in the service of Belgian relief and partly for Switzerland, under safe conduct to Cete, France, on condition that for each vessel sent to

#### OUR CASUALTIES

The total casualties among the American expeditionary forces, as announced by the War Department on March 20, have reached a total of 1961.

	Deaths
Killed in action .....	157

**THE WAR CROSS TO COL. MACARTHUR** Colonel Douglas MacArthur, who led his men in a raid on the German trenches, has been given the Croix de Guerre by the French Government for gallantry in action. Colonel MacArthur is the son of the late Major-General Arthur MacArthur, one of the commanders of American forces in the Philippines

change for similar tonnage sent from Holland to the United States.

This agreement, however, was not carried out because the German Government threatened to destroy the ships leaving Holland and it was feared with reason that the U-boats would sink the vessels carrying supplies to Belgium and Switzerland even outside the danger zone as laid down by Germany.

Under the circumstances further negotiation seemed likely to lead to no result and delay was dangerous so on March 7 an ultimatum expiring on the 18th was delivered to Holland by Great Britain and the reply being unsatisfactory, Great Britain and the United States on March 20 took over the Dutch shipping in their harbors, amounting it is said, to a million tons, of which half is in American waters. The President's proclamation states that "the law and practise of nations accords to a belligerent power the right in times of military exigency and for purposes essential to the prosecution of war, to take over and utilize neutral vessels lying within its jurisdiction;" and cites the Act of Congress June 15, 1917, which "confers upon the President power to take over the possession of any vessel within the jurisdiction of the United States for use or operation by the United States."

In a supplementary statement the President recites the failure of the negotiations and explains their cause as follows:

But the events to which I have alluded have served to demonstrate conclusively that we have been attempting to negotiate where the essential basis for an agreement, namely, the meeting of free wills, is absent. Even were an agreement concluded, there is lacking that power of independent action which alone can assure performance. I say this not in criticism of the Dutch Government. I profoundly sympathize with the difficulty of her position, under the menace of a military power which has in every way demonstrated its disdain of neutral rights. But, since coercion does in fact exist, no alternative is left to us but to accomplish, thru the exercise of our indisputable rights as a sovereign, that which is so reasonable that, in other circumstances, we could be confident of accomplishing it by agreement. Steps are accordingly being taken to put into our service Dutch shipping lying within our territorial jurisdiction.

Ample compensation will be paid to the Dutch owners of the ships which will be put into our service and suitable provision will be made to meet the possibility of ships being lost thru enemy action.

**The War in the Air** It is already evident that the aerial arm is to be an important, perhaps the decisive factor in the coming campaign. Airplanes used singly for scouting revolutionized warfare three years ago by almost eliminating the element of surprise and now that they fly in fleet formation by day or night and scatter tons of explosives far behind the lines a second revolution has been accomplished.

Altho the British took little part in the early developments of aviation they have since the war began forged rapidly to the front. In the week ending March 17 the Royal Flying Corps destroyed ninety-nine German planes and drove down forty-two. Their own losses were twenty-three. Between October and March the British aviators made thirty-eight raids into Germany, where they dropt forty-eight tons of bombs. In these raids 255 machines took part and only ten were lost.

London reports that the enemy lost 292 machines in January, 277 in February and 278 in the first seventeen days of March. On Sunday the 17th British aviators destroyed eighteen enemy airplanes, drove down eight others, destroyed one observation balloon and discharged ten and a half tons of bombs on the rest billets, railroads and airdromes behind the German lines. Four of the British machines are reported missing. On the other hand Berlin claims that twenty-three Entente airplanes and two captive balloons were shot down. Rome reports on the 18th seven enemy airplanes brought down, two by the Italians, two by the French and three by the British on the Italian front.

The output of American airplanes has not come up to expectations and the matter is now under investigation, but the rumor of American preparations

#### CAPTAIN ROOSEVELT IS HONORED

Captain Archie Roosevelt, wounded in service in France, has been given the French War Cross (Croix de Guerre) for gallantry in action. "It is the greatest thing our family has received," said Colonel Theodore Roosevelt when he heard that his son had been given the medal

has filled the German heart with dread. "The Americans are coming!" screamed the women of Mulheim as they dashed for bombproof shelters when four or five airplanes appeared over the city at noon of the 12th. But the squadron was bent on bigger game and did not waste any of its ammunition on Mulheim. Instead it rained its bombs on Coblenz, further up the Rhine. Here, according to a Dutch observer, fifty persons were killed and great material damage done.

The Allies have now adopted the Ger-

man custom of distributing their prisoners among the cities near the front liable to aerial raids.

The German airplanes have taken to dropping on the American trenches rubber balls eighteen inches in diameter, filled with what the soldiers call "mustard oil." This is a chlorine compound which volatilizes slowly so the place where it strikes is for some time uninhabitable. Its odor is not strong like chlorine or bromine, but a drop of it on the skin or clothing develops frightful ulcers. Gas masks therefore afford but little protection.

**The Shipping Balance** The German claim that 9,500,000 tons of shipping was sunk last year is denied by Sir Eric Geddes, First Lord of the Admiralty, who puts the figure at 6,000,000 instead. During the last quarter of 1917, he says, the British shipyards turned out 420,000 tons of new merchant vessels and the foreign shipyards including American 512,000. The losses during that period were 1,200,000 tons, the lowest for any quarter of the year. When the U-boats began their ruthless activity, British shipbuilding had reached its lowest ebb for during the last quarter of 1915 only 42,000 tons of new shipping were turned out. This was raised to 213,000 tons for the last quarter of 1916 and 420,000 for that of 1917, so if this ratio between construction and destruction can be kept up the losses due to the U-boat can eventually be made good. The total loss to the world's shipping during the war Sir Eric puts at 2,500,000 up to the end of 1917. The total allied and neutral tonnage now afloat amounts to 42,000,000.

Accordance to Washington figures the total loss in world tonnage due to enemy action and marine risk since the war began is 11,827,572 gross tons, of

## THE FLYING CORPS IN A "GOOFA"

The ancient river boat of the Tigris has been modernized by the men of the British Flying Corps in Mesopotamia into this curious side-wheeler. The paddles stabilize the "goofa" and by means of a crank which the men in the boat turn they furnish a fair motive power

which the loss in 1917 alone was 6,723,623 tons. As against this the total output of world tonnage in the same period was only 6,606,275 gross tons, the total for 1917 being 2,703,355 tons. The total enemy vessels captured since the war began amounts to 2,589,000 gross tons.

**The Moscow Government** The only visible government in Russia consists of the Soviets, the councils of working class revolutionists which were organized in advance in every industrial center and immediately on the overthrow of the Czar assumed control to the exclusion of other classes and the constituted officials. The name of these organizations was extended to "Council of Workmen's and Soldier's Delegates" because the revolution was largely the work of the army, but the addition was practically a duplication since the soldiers were mostly workmen or peasants. The Soviet of Petrograd, being the largest and occupying the capital, was the most powerful, and from the start of the revolution overruled the nominal governments just as in France the Committee of Public Safety overruled the National Convention. The moderate ministry of Milyukov fell because it did not carry out the will of the Soviet and repudiate the Alliance, and when his successor, the radical Kerensky, failed to induce the Allies to join with Russia in peace negotiations, he was overthrown by a bloody rising in Petrograd. Then the Soviet leaders, Lenine and Trotzky, came into power and opened peace negotiations with the Central Powers at Brest-Litovsk. Even Trotzky could not consent to the terms imposed by Germany, but when he came home with empty hands he was thrown out, and Lenine, determined on peace at any price, called a Soviet of Soviets, a congress of delegates from the local councils, to meet at Moscow.

This congress was almost exclusively composed of Bolsheviks, that is to say, the Maximalists, the most extreme and uncompromising of the socialists. The only other party allowed to participate was the Social Revolutionary. These offered some protests

against the acceptance of the German terms of peace, but the treaty of Brest-Litovsk was ratified by 794 to 261, with 115 abstaining. The Social Revolutionists thereupon withdrew their six representatives from the cabinet as a sign of their repudiation of the treaty, but pledged their support to the Bolshevik government in such of its activities as they judge consonant with the October revolution.

The new government as constituted by the Congress of Soviets will be in the hands of a central committee of 200 members elected by the Soviets and sitting at Moscow. The Red Guard, the revolutionary army, must now be disbanded in accordance with the treaty, but the Soviets are authorized to organize local armies of both sexes.

Trotzky, as Minister of War, has asked for ten American officers to aid in training the new army at Petrograd and for American civil engineers to reorganize the railroads.

**The Message of the Soviets to America** President Wilson's message of sympathy and encouragement to Russia, transmitted thru the representatives of the Soviets at Moscow, was read to the congress at its opening by Chairman Sverdlov and was received with applause. The following reply was drafted by the Central Executive Committee:

The Congress expresses its gratitude to the American people, above all to the laboring and exploited classes of the United States, for the sympathy expressed to the Russian people by President Wilson thru the Congress of Soviets in the days of severe trials.

The Russian Socialistic Federative Republic of Soviets takes advantage of President Wilson's communication to express to all peoples perishing and suffering from the horrors of imperialistic war its warm sympathy and firm belief that the happy time is not far distant when the laboring masses of all countries will throw off the yoke of capitalism and will establish a socialistic state of society, which alone is capable of securing just and lasting peace as well as the culture and well being of all laboring people.

Mr. Gompers' message pledging the support of American labor to Russian freedom was also read and applauded.

The Bolshevik organs express the

belief that the United States will help Russia and free her hands to resist German and Japanese imperialists.

**Allies Condemn Russian Peace** The Supreme War Council of the Entente Allies meeting at London issued a declaration of protest against the terms of peace imposed by the Central Powers on Russia and Rumania. We quote the essential paragraphs:

For us of the Entente governments the judgment which the free peoples of the world will pass on these transactions would never be in doubt. Why waste time over German pledges when we see that at no period in her history of conquest—not when she overran Silesia nor when she partitioned Poland—has she exhibited herself so cynically as a destroyer of national independence, the implacable enemy of the rights of man and the dignity of civilized nations.

Poland, whose heroic spirit has survived the most cruel of national tragedies, is threatened with a fourth partition, and, to aggravate her wrongs, devices by which the last trace of her independence is to be crushed, are based on fraudulent promises of freedom.

What is true of Russia and Poland is no less true of Rumania, overwhelmed like them in a flood of merciless passion for domination.

Peace is loudly advertised, but under the disguise of verbal professions lurk the brutal realities of war and the untempered rule of a lawless force.

Peace treaties such as these we do not and cannot acknowledge. Our own ends are very different. We are fighting, and mean to continue fighting, in order to finish once for all with this policy of plunder and to establish in its place the peaceful reign of organized justice.

**The Peace Treaty in the Reichstag** Chancellor von Hertling, in laying before the Reichstag the treaty between Germany and Russia, signed at Brest-Litovsk on March 3 and ratified by the Congress of Soviets at Moscow on March 16, said of the treaty:

It contains no conditions whatever which dishonor Russia, no mention of oppressive war indemnities, no forcible appropriations of Russian territory. A number of the border states have severed their connection with the Russian state in accordance with their own will, which was recognized by Russia. In regard to these states we adopt the standpoint formerly expressed by me, that under the mighty protection of the German Empire they can give themselves political form corresponding with their situation and the tendency of their kultur, while at the same time, of course, we are safeguarding our own interests.

We have not for a moment contemplated, and do not contemplate, opposing the justified wishes and endeavor of Russia to be liberated.

But the Center and the Left of the Chamber did not take the same view of it. Doctor David, speaking for the Majority Socialists, who have supported the Government during the war, denounced the treaty in the following vigorous language:

Not only did the Bolsheviks capitulate, but our diplomatists capitulated to the militarist ideas of might. General Hoffmann cast the victor's sword into the scale.

This peace has evoked dissatisfaction among the widest circles in the German nation and has shaken the confidence in the honesty of the German policy. Reference to Brest-Litovsk represses all peace feeling in France and Great Britain. The Entente already is at work again welding together the broken ring in the East.

Our main object—the internal dissolution of the enemy coalition—has not been attained, but has been made more difficult.

We must have guarantees that the Government's acts correspond with its words. The military party wants to bottle up the Poles in the east and to carry our big annexations in the west under the watchword of military security.

**The Germans on the Black Sea** The German advance in the north of Russia seems to have been stopped, but several expeditions are reported to be penetrating the Ukraine at the invitation, it is claimed, of the Ukrainian Rada for the purpose of suppressing the Bolshevik disorders. One has reached nearly to Orel, between Kiev and Moscow.

Another German expedition is following along the northern shore of the Black Sea. Odessa, the chief southern city of Russia, was occupied without opposition and greatly to the relief of the propertied classes, for it put an end to the reign of terror. General Muraviev, the Bolshevik commandant, before he left the city levied an assessment of \$10,000,000 on the population and ordered a massacre of officials, capitalists and bourgeoisie. But before these measures could be carried out the Germans entered from the north and the Bolsheviks made their escape on steamers to Sebastopol. Pogroms (anti-Jewish riots) are reported to have taken place in the last days of the Bolshevik régime. The German Admiral Siegert has been appointed governor of Odessa. Fifteen Russian warships were found in the harbor of Odessa.

Continuing eastward the Germans entered Nikolayev, the leading grain port of Russia. An American grain dealer recently in Nikolayev estimates that five million bushels of wheat are stored there. The Germans at once took possession of the navy yard, which covers 200 acres and employs 10,000 men.

Then the Germans moved on to Kherson and doubtless intend to occupy the Crimea and Sebastopol, which the British, French, Turks and Italians captured in 1855, after a siege of nearly a year.

By the occupation of these ports by the Germans and the surrender of the Dobrudja by the Rumanians the Central Powers virtually gain possession of all the shores and shipping of the Black Sea. Thru trains from Berlin to Odessa were at once set running, and German engineers are planning to construct a deep canal connecting the Vistula and Dnieper rivers, so as to make an all-water route from the Baltic to the Black Sea. The cost of this project for a depth of twenty-seven feet was formerly estimated at \$100,000,000.

**The Duchy of Courland** From the speech of the German Chancellor to the Reichstag we can infer the intentions of Germany in regard to the Baltic provinces that have been wrested from Russia. Courland, he said, had been recognized as an independent state, desirous of severing its connection

with Russia and establishing economic, military and political connections with Germany. Lithuania was expected to take the same step. In regard to the farther provinces, Livonia and Esthonia, Count von Hertling said, the case was different. They would according to their own invitation be policed by Germany until order and security were restored and then, he hoped, they would "place themselves in close and friendly relationship to the German Empire but in such a way as not to exclude peaceable friendly relations with Russia."

This policy was further elucidated by Under Secretary of State Radowitz in receiving the deputation from Courland:

The Emperor has charged me to recognize the reestablished Duchy of Courland as a free and independent duchy and assure it the protection and assistance of Germany in constructing the constitution to provide for a parliament on a free basis and for close relationship with Germany, which has been resolved upon by the Courland National Council.

The government which is thus recognized as competent to dispose of the destinies of the country is the so-called National Council at Mitau composed of about eighty members, mostly Courland Germans but including some Pro-German Letts. This Council has asked the German Kaiser to become Duke of Courland as well as King of Prussia because they "have the fullest confidence in his just and firm government." The Kaiser has not yet accepted the offer. In the meantime Count von Keyserling has been appointed commissioner to administer Courland, Lithuania and other eastern territory. Count von Keyserling was born in Courland in 1858 and is well known as an author and philosopher.

Courland contains about 700,000 inhabitants of whom four-fifths are Letts, largely of the peasant class. The Germans who comprize some eight per cent of the population hold most of the large estates. The Jews who also amount to about eight per cent are mostly in the cities. The rest of the

population consists of Russians, Poles and Lithuanians. In order to increase the German hold on the province the Bavarian Colonization Society is going to send 50,000 German colonists.

### The American Sector

The "frontier of freedom" is what Mr. Baker called it when he entered the listening post and looked over No Man's Land toward the German lines. With a determination to see things for himself and to get at the men without intermediaries the Secretary of War insisted upon going thru the trenches and dugouts on the front line of the American sector before the fortress of Toul. Here he met several of his old acquaintances from Ohio. As he was returning from the front a four-inch shell exploded in a crater less than fifty yards from his automobile. At the base hospital he visited Captain Archie Roosevelt and congratulated him on winning the Cross of War. The man who took the first German prisoner gave the helmet of his captive to Secretary Baker, but he said that it was too precious a gift for him to keep and that he would give it to the soldier's mother. In an address to the "Rainbow" Division (the Forty-second) he explained why it had been found necessary to restrict information as to the movements and position of the troops.

The "Fighting Sixty-ninth," the Irish regiment of New York, now reorganized as the 165th, was disappointed that it could not celebrate St. Patrick's Day by a march toward the enemy or at least a fight, but the day passed more quietly than usual. The Americans on the sector between Flirey and Seicheprey have been subjected to lively fire from the German artillery at intervals but they have suffered more from the gas bombs dropt by the airplanes or fired from guns. American patrols have more than once visited the enemy front line and found it deserted. New England troops are getting practice in the French sector along the Chemin des Dames where Nivelles delivered his offensive last April.

### WHERE THE GERMANS BROKE INTO RUSSIA'S STOREHOUSE

The capture of Odessa, "the back door of Russia" on the Black Sea, and the consequent capture of the nearby port of Nikolayev gave to the Germans vast stores of wheat, some military supplies, fifteen warships and a base of strategic importance for future movements. The photograph above of wheat deliveries at Odessa docks suggests the great quantity of exports which made Odessa the "queen city of the Black Sea."

# AMERICA'S FIRST YEAR OF WAR

**I**T is now nearly a year since this republic was driven to accept the aggressions of the Teutonic allies as constituting a state of war. Devoted to peace, unarmed, and not unfriendly, we sought with determined patience to avoid the quarrel. We tried, by every worthy means, to appeal to their reason and their interest; and, in order that our acts might not give the lie to our words, we necessarily avoided even the appearance of hostile measures while we offered peace. We waited until every fair-minded citizen of our peace-loving democracy was aware that peace was impossible before we reluctantly began to prepare to defend ourselves.

When war was declared we had the first great preparation of a self-governing nation entering a war: we had at last a united people, a people ready to turn from the pursuits of peace that had been our great pride and our sole ambition, and eager in the interests of national defense to surrender property, comfort, even life itself. But we had still to recruit a whole nation to arms, convert it to unaccustomed pursuits, train it in alien industries and find not only the tools of war but the machinery to make those tools and the workmen to direct that machinery.

The record of the first year of war proves that the unparalleled demands of the tremendous emergency have been met in a manner to justify our faith in the driving genius of America. It is not claimed that everything has been done that should have been done, that every task has been discharged with precision and perfection, but it is claimed that our achievement is without parallel in history, and that every American citizen has a right to pride and faith and confidence.

It is significant indeed that no criticism has come from the representatives of the Allies who have watched our program from the first. It is even more significant that domestic criticism has not yet established a single conclusive case of incompetency, or dishonesty. Errors have been made, but no error has been repeated.

This claim of honest and successful effort may be made without suspicion of partizanship, for to the great work have been called men of all parties, and in the doing of the work all partizanship has been forgotten.

When the scandals and shames of 1898 are recalled, the waste and graft and criminal neglects, it is well to be

## The Seventh Message from the United States Government to the American People

Presented every week in  
The Independent by George Creel  
Chairman of Committee  
on Public Information appointed by  
President Wilson

proud of 1918 with this showing of clean achievement.

The Navy, our first line of defense, has leaped from a personnel of 83,000 to a fighting strength of 350,000. Over 1000 war vessels are now in commission, whereas there were only 300 in the early days of 1917. Contracts have been placed for 950 vessels. More than 700 privately owned vessels have been purchased or chartered. The seized German ships, supposedly damaged for the duration of the war, were quickly repaired by Navy engineers, and within five months were again in commission under the American flag.

But the Navy has done more than merely expand. It has been engaged day after day in the actual business of naval warfare. It has sunk submarines. It has convoyed hundreds of merchant ships and transports across the Atlantic. It has lost only two naval vessels to the submarines—the destroyer “Jacob Jones” and the patrol vessel “Alcedo.” It has taken over the patrol of the western Atlantic, protected our coasts from enemy attacks and our commerce from German raiders. It has assisted the British in patrolling European waters. The first American forces to land in France were units of the naval aeronautic corps, landed at a French port early in June, 1917.

To combat the submarine the Navy is building a larger fleet of destroyers than any other nation ever attempted to build in the same period of time.

The Regular Army, from a scant 128,000, has grown to 512,000; the Na-

tional Guard in Federal Service has expanded from 80,446 to 450,000; and a half million young Americans are in the National Army. That is to say, within a year the army of the United States has grown from 9524 officers and 202,510 men to 123,801 officers and 1,528,924 men.

A natural pride is taken in the speed and precision of this progress, for at every point were involved new undertakings of unparalleled magnitude that tested the national competence and determination.

On May 18 the selective service act became law by an almost unanimous vote of Congress. On June 5 the entire male population of the United States within draft age, approximately ten million men, were registered between dawn and dark. On June 30, 4557 local boards were ready to begin the task of examination and exemption. For the training of these men there

had to be provided almost instantly sixteen cantonments, great cities of wood and steel complete in every municipal detail. On May 7 the order to select sites was given; on June 15 building began; and within ninety days after the driving of the first nail the first selected men entered the cantonments.

Sixteen other cities were brought into being for the training of the 400,000 men of the National Guard, called into Federal Service on July 3.

The business of officering the Army went hand in hand with its creation. Sixteen officers' training camps were rushed to completion, and on May 15 received 30,000 volunteer entrants. Of this number 27,341 qualified. A second series of 23,000 candidates was started August 27 and 17,000 received commissions. In January a third series of 18,000 began training. These men, drawn from civil life to lead an armed democracy, constitute that democracy's reply to the fear of militarism.

The Navy, facing its problem of training no less splendidly than the Army, built more than 250 new training stations for its eager volunteers.

In order to give the health of both soldiers and sailors the most expert care, over 12,000 of the foremost physicians, surgeons and sanitarians were taken into the Medical Service. While the civil population was called upon to deny itself wheat and meat and many luxuries of diet, the encampments were supplied abundantly with the best quality of food. The improvement in the physical condition of the men in train-

“The public is now as much part of the Government as are the army and navy themselves; the whole people in all their activities are now mobilized and in service for the accomplishment of the nation’s task in this war”

ing has served as an answer to every attempt to chill the soldier’s spirit of sacrifice by playing upon the natural anxieties of those for whom he had left the comforts of his home.

On June 15, scarcely two months after our entrance into war, General Pershing and his staff arrived in France, and on July 3 the first division of American soldiers reached the land of Lafayette and Rochambeau.

Every man in the expeditionary force had to have supplies for six months, so that each 100,000 represented an equipment for half a million. These demands upon equipment and supplies had to be met first of all. In the processes of training armies at home, the inadequacies due to considering war as an emergency and not as an abiding national purpose were reduced to a minimum of temporary physical discomfort, and the tools of the fighting forces were sent primarily where the fighting forces were.

What those tools amount to can be best indicated by the fact that the appropriations for the War Department for the fiscal year 1917 amounted to \$403,000,000, and for 1918 to \$7,527,338,716; and of this sum \$4,756,500,000 was allotted to the Ordnance Bureau. An amount equal to three times the ordinary annual expenditure of the Government for all purposes was thus placed at the disposal of a department which in April, 1917, numbered only 97 officers. Its personnel has been increased to over 3000 officers and 26,000 enlisted men.

The scale on which ordnance operations are being conducted may be appreciated from the fact that deliveries of rifles for the United States forces are now being made at a rate of 45,000 a week, which is sufficient to equip three army divisions. Deliveries in quantity of the new Browning light machine gun began in February and will reach the maximum rate in June, when several thousand will be turned out every week. The heavier machine gun, the Colt-Browning, has been delayed a week or two longer than the light gun. The heavier gun in a Government test fired 20,000 shots in forty-eight minutes, without malfunction.

The Shipping Board, facing a task of unparalleled magnitude and complicated by every difficulty, now has under way a program that promises to meet our needs.

At the time of the congressional investigation of the board, Mr. Hurley

reported that he had under construction 1427 ships of 8,573,108 dead weight tons. Four hundred and thirty-one of these were ships commandeered on the stocks from the private owners for whom they were being built at the time the board took over the shipping business of the country. Of the new ships contracted for by the board, thru its fleet corporation, 559 are steel, 379 wood, and 58 composite.

The board has had about two billion dollars to work with. A most important part of its labors so far has been devoted to the extension of advice and financial assistance to 42 different shipyards. Ships are building on the board’s own contracts in 110 yards, only 36 of which were in existence at the beginning of 1917. Requisitioned ships are building in 22 additional yards.

Hope that a large part of the program under construction can be finished this year rests on such facts as that on the Pacific coast hulls have been rushed to completion in sixty-four days.

Two great Liberty Loans have been launched. The first called for two billion dollars and over three billions were subscribed; the second for three billions and almost five billions were pledged. Of these amounts, nearly four billions have been loaned already to other nations at war with the Imperial German Government.

That we might discharge our duty to the peoples of other countries by sharing our supplies with them, generously and honestly, a Food Control act was passed on August 10, and it is in effi-

cient operation. The Food Administration has been successful in saving large quantities of staples for shipment to Europe. This is the primary object of its existence. But it has also done work of vital importance in keeping the prices of commodities such as bread, meat and sugar much below what they would be under free competition.

On December 26, 1917, the announcement was made that the railroads of the United States had been taken over by the Government to be operated under Secretary McAdoo as Director General. Thus a system of 260,000 miles of railway, formerly in the control of 441 distinct corporations, has been brought together under the management of a single head.

The Fuel Administration has prevented profiteering in coal, adjusted labor problems in the mines so as to prevent strikes, and so

distributed fuel that the most pressing needs were first supplied. The Administration has been forced to struggle with the coldest weather the country has suffered in many years. It was compelled by railway and port congestion, and by the pressing needs of Europe, to issue in midwinter a Monday closing order against all but vital industries. As a result of this order, within twelve days, 480 ships carrying two million tons of food, fuel and munitions were coaled and sent from our ports, the stoppage was removed from the stream of traffic, freight congestion was relieved and the supply of coal to factories was resumed.

The nation’s satisfaction in these achievements, heightened as it may well be by the expressions of appreciation from those nations who await our aid in the great struggle, is fundamentally, not in the things done but in the larger purpose for which they are done. It must not slacken our efforts in grappling with the greater tasks yet before us. It should not be diminished by the unthinking whose standards of military preparation and achievement are those of the predatory powers who have devoted the years of peace to the purposes of armed conquest. No man who battles for America, no home from which he has been taken, can now or in years to come be robbed of the priceless comfort of knowing that he defends the cause of a nation whose ways were the ways of peace and whose purposes may be read in its devotion to freedom, justice and the rights of our common humankind.

# PROPAGANDA AND PROJECTILES

## A Survey of the Great War's Progress

BY EDWIN E. SLOSSON

IT is, on April 6, just a year since the United States entered the Great War as an actual belligerent. That year will be counted as one of the most momentous in the history of the world. Certainly no period of the Great War has shown such startling changes. Verily we know that this is Armageddon, for our eyes have witnessed the resurrection of the dead. Dead nationalities are rising from a long buried past to claim a place in the sun. Historic names missing from the map for centuries again appear upon it. Tatars, Georgians, Irish, Siberians, Jews, Letts, Esthonians, Lithuanians, Ukrainians, Crimeans, Moldavians, Poles, Finns, Don Cossacks, Armenians, Croats, Czechs, Slovaks, Slovenes, assert their individuality and declare their independence. We behold empires dissolve into states and these into tribes and communes. Old boundary lines have been washed away as by a flood and as in the olden time the extent of a power is determined solely by the area occupied by its armies. It seems that the synthetic process of recent centuries is being undone in a few years and the states of modern times are being resolved into discrete elements as in the Middle Ages.

What new integrations may arise out of this chaos does not yet appear. Nationalism and class-consciousness cut athwart one another and spoil the prospects of both. Germany seems determined to establish a military empire like that of ancient Rome. If the various peoples claiming nationality escape such forcible inclusion new federations and confederations and leagues may arise by their free combination. It is suggested that ports in dispute such as Constantinople, Triest, Odessa, Dantzig and Antwerp, be made free cities, so we may see a revival of the Hansa Towns. New synthetic forces are at work bringing together alien nationalities on racial, religious or commercial commonalty. The Quadruple Alliance is visibly consolidating in the *Mitteleuropa* of Naumann's dream. Pan-Slavism is disappearing. Pan-Islam again confronts Christendom. Pan-Turanianism is taking shape in the Near East, while Japan has with the approval of the United States declared a Monroe Doctrine of the Far East.

The continents are commingling. Chinese are making munitions in France. Maoris are fighting Germans. Africa is furnishing soldiers for the Allies. Turks have been called back into Europe to aid their ancient enemies, the Austrians. North and South America, eastern Asia and western Europe are united against Central Europe. A railroad connects Africa and Asia across the desert of Sinai. A tunnel is being dug under the Bosphorus to connect Europe and Asia. Germany has fallen heir to Russia's imperialistic schemes and gained control of the routes leading across or around the Black and Caspian seas to the Afghan gate of India.

*Underground & Underwood*

*Sending copies in German of President Wilson's speech of December 5 to the Boches by montgolieres (small balloons)*

Her U-boats may now be launched on the Amur River a thousand miles from salt water and thence sent down into the Pacific Ocean—unless Japan bars the way.

The year has been characterized by military rigidity and political fluidity. Propaganda has accomplished more than projectiles. Germany's three great victories, over Italy, Russia and Rumania, were the work of the diplomat rather than the warrior. Russia's chief offensive was the unsuccessful effort at the Brest-Litovsk conference to rouse a revolution in Germany. President Wilson's speeches and messages are recognized as having been of great value to the Allies and it is hoped that rained down from airplanes they will be influential among our enemies.

The war has resolved itself into a question of *morale*. Which people will lose heart first? This makes prediction difficult, for it is easier to count men and guns than to weigh human wills.

THE United States is more united in favor of the war and supports it with more resolute will than any of the former wars, the Revolution, 1812, Mexican or Spanish. Historic policies have been cast aside without hesitation. Traditional animosities are forgotten. Americans of enemy ancestry have for the most part loyally acquiesced in the situation and even participated in preparedness. Congress votes all the funds demanded and, without partizan prejudice confers exceptional powers upon the administration. Popular hostility is directed only against those suspected of intriguing against the Government or of delaying its war work. Conscription was adopted without serious opposition and put into effect without disturbance.

No section of the United States has shown such repugnance toward compulsory overseas service as have Australia, Ireland, Quebec and South Africa.

The example of the United States in declaring war against Germany was followed by the only Asiatic republic, China, the only African republic, Liberia, and the largest South American republic, Brazil, as well as by Cuba, Panama, Siam and Greece. Other South American republics have severed relations with Germany and declared their sympathy with the Allied cause.

America's chief contribution to the cause of the Entente Allies has so far been financial. The loans of the United States to foreign nations foot up nearly to five billion dollars, distributed as follows: Great Britain, \$2,520,000,000; France, \$1,440,000,000; Italy, \$550,000,000; Russia, \$325,000,000, of which only \$187,000,000 has been paid out; Belgium, \$93,400,000; Serbia, \$6,000,000 and Cuba, \$15,000,000. This aid, as is frankly admitted, saved the Allies from financial disaster.

The repudiation of the Russian national debt and the confiscation of lands, mines and factories by the Bolshevik Government means, if the action holds, that France, Great Britain and Belgium have suffered a loss from their former ally comparable to the destruction of their property by the German army and navy. The national debt of Russia is over nine billion dollars, a large part of which was loaned by France to increase the military strength of Russia in anticipation of a war with Germany, and besides this immense sums were invested in Russian industries by the nationals named above.

IN all countries except the United States there have been decided or complete changes of administration. In Greece and Russia the sovereign has been overthrown. In Germany the Reichstag on July 19 declared against the annexation policy of the Government and the Prussian Protestant Premier was replaced by a Bavarian Catholic. In Italy the party of Giolitti, who formerly was pro-German, now again holds the balance of power. In both France and England the all-party government has been broken up thru the withdrawal of the Socialist and labor element, which nevertheless continues to support the war.

The British Labor party declares against annexations, economic warfare and secret diplomacy and in favor of a league of nations. On these, as in various other points, the policy of the United States as enunciated by President Wilson shows a strong similarity. His demand for the abolition of secret diplomacy has received a conspicuous confirmation in the publication by the Bolsheviks of certain documents found in the archives of the Russian Foreign Office. These revealed that Italy demanded, besides Triest and Trentino, exten-

sive territories in Europe, Asia and Africa to which she had little claim on racial or historic grounds; that France was negotiating with Russia for the alienation from Germany not only of Alsace-Lorraine, but of all the lands on the left side of the Rhine; that Rumania was forced into the war by Russia and betrayed into the hands of the Germans; that Japan and Russia had concluded a secret treaty relating to their claims in China at the same time as the treaty they gave to the world, and similar disclosures that have affected public opinion in belligerent and neutral countries.

The unrestricted submarine warfare that preceded and instigated American participation in the war turned out to be a disappointment to both sides. Germany expected that it would bring England to her knees in a few months. England hoped to sink U-boats faster than they could be built or at least to build merchantmen faster than they could be sunk. But by the end of the year the U-boats are operating on a more extended radius of action and they have sunk two or three times as many vessels as have been launched. England is on short rations but not so near starvation as Germany. The United States has started shipbuilding on a gigantic scale, but so far the output is below and behind expectations. Equilibrium between destruction and construction has not yet been established and until it is the gap between the European belligerents and their allies and supporters overseas is daily widening.

Naval operations have been practically confined to the submarine warfare. The fleets of both sides have remained hidden away. The bigger the battleship the more timid it is. Two German raiders, the "Sea Eagle" and the "Wolf," slipped thru the British blockade and voyaged as far as the Pacific. The former was stranded there and the latter returned to Kiel. Japanese warships are now patrolling in the Mediterranean and American in the Atlantic. During the year Germany has gained control of the Baltic and Black seas, but for the rest Britannia rules the wave.

The land war-

fare of the year may be summed up by saying the Allies, on the whole, have gained in Africa and lost in Europe, while in Asia both sides have made gains and it would be hard to tell which has now the advantage of position there.

**T**HE whole continent of Africa is today in the possession of the Allies with the exception of the Spanish colonies and Abyssinia and Liberia. Of these two nominally independent states, Abyssinia has been virtually conceded to Italy by the secret treaty with England and France, while Liberia is under the protection of the United States. In East Africa a little band of Germans with native auxiliaries held out with amazing pertinacity for more than three years, but they were finally ousted by an attack from all sides by British, Belgians and Portuguese and are now reduced to guerrilla warfare in Portuguese territory. Germany has therefore lost the last of her African possessions, a territory more than four times her European area, on which she relied for her future food and raw materials. Members of the British and South African governments have declared that never again shall these lands be placed under German tyranny, but the Labor

party proposes a plan for placing these and other tropical lands under joint international control.

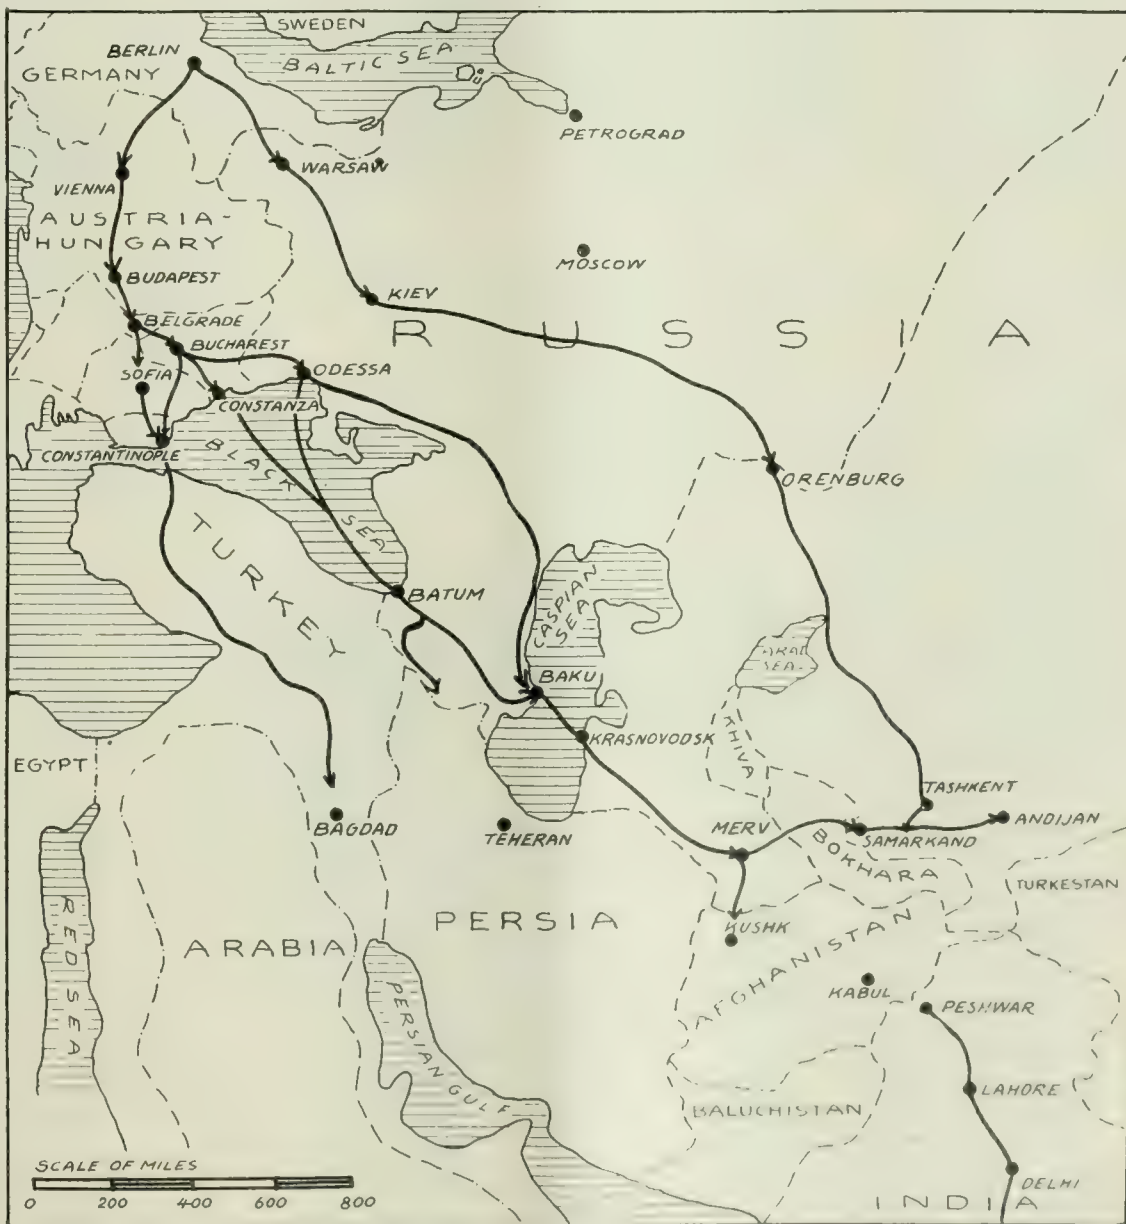

In Asia Minor the British have wiped out the memory of their former defeats at Kut and Gaza by the conquest of Mesopotamia and Palestine. A new and better planned expedition sent up the Tigris River took Kut-el-Amara, and on March 11, 1917, reached their goal, Bagdad. Since then the British have extended and secured their gains on the Tigris and Euphrates.

General Allenby, who in July took command of the expedition from Egypt, broke thru the gates of Gaza and entered Jerusalem before Christmas. Since then he has advanced beyond Jericho and the Jordan. The British Government has announced that the Jews will be allowed to found a state of their own in Palestine, so the dream of the Zionists seems likely to be fulfilled.

On the other hand, the Allies in Asia have received a severe setback thru the collapse of Russia. The Bolsheviki Government disclaimed the imperialistic aims of the old regime and willingly consented, not only to the evacuation of the Turkish and Persian territory occupied by Russian troops during the present war, but also to the retrocession of Kars, Batum and Erivan in Trans-

caucasia, which Russia gained in the wars of 1828 and 1878. Accordingly the Turks have reoccupied the towns of Trebizond and Erzerum and regained all Armenia. This gives them an opportunity to complete the job of exterminating the Armenian race and it also brings them on the flank and rear of the British at Bagdad.

Turning to Europe, we find that Germany has knocked out Russia and Rumania and delivered a terrible blow upon Italy. No such successes have rewarded the Allies, but on the French front, to which their efforts have been confined, they have inflicted heavy losses upon the Germans and driven back long stretches of their lines to a distance of several miles. About Verdun the French regained without difficulty in July the positions which the Germans had taken the year [Continued on page 530]

NEW ROUTES TOWARD INDIA

The arrow-headed lines show that the Germans have now acquired possession of five routes leading from Europe into Asia. The railroads are already constructed and the steamer lines in actual operation. The German Empire has virtually extended eastward until it becomes coterminous with the British Empire in Asia. But the routes to India south of the Caspian are blocked by the British at Bagdad and the routes east of the Caspian are blocked by the mountains of Afghanistan and their warlike inhabitants

# WHAT ARE WE FIGHTING FOR?

BY A. LAWRENCE LOWELL

PRESIDENT OF HARVARD UNIVERSITY

THE United States entered the war because one of the chief objects of every government must be to protect the lives and property of its citizens from destruction in violation of the rules of international law and the principles of humane civilization. After the renewal of submarine warfare conducted in disregard of law and humanity a great nation that did not protect its citizens would have been an object of scorn whose rights could be disregarded in future. We should have been a certain mark for aggression by any power whose desires might conflict with ours; and especially by Germany as soon as she had recovered her strength, and found her ambitions blocked in Africa and Asia. Nor should we have had a claim to expect aid or sympathy from any nation in resisting an attack upon our shores, or upon Central or South America.

The aims of the United States in declaring war were strictly defensive. We did not take part with the Allies to obtain any benefit territorial, economic or financial, for ourselves or for any other country. But if so, why does our President, together with Mr. Lloyd George, tell the world that the terms of peace must include changes of territory among the belligerents? There are two reasons for this, not unconnected, altho resting on distinct principles.

The first is that having been drawn into the war in defense of our own citizens we do not propose to stop, if we can help it, until justice has been done to the peoples who have now become our allies. When a man takes part in a fight he inevitably makes, to some extent, common cause with the other men who are fighting on his side, and he cannot honorably leave them in the lurch. If a robber has picked my pocket of ten dollars, and I find that another man from whom he has stolen one thousand dollars is pursuing him; if I join in the pursuit and after the other man becomes exhausted, or gets a knock-out blow, the robber turns on me, can I say to him, "Give me back my ten dollars and you can keep the money of the other man"? We have now made common cause in arms with the Allies, and we cannot desert them by backing out and leaving them to suffer from injuries unredressed. If Germany had, either before or during the war, taken part of our territory, or ravaged it, we should have a mean opinion of our allies if they made peace with her without insisting on restoration and reparation for us; and we cannot do to others what we should blame and despise them for doing to us. This applies to our demand for restitution and indemnity in the case of Belgium, Serbia and France. It covers also the cases of Alsace-Lorraine, taken by force, or under the duress of force, in 1870.

Moreover, this war, in whatever way

*This is the first of a series of forward-looking articles on America's aims and ideals in the war, written for The Independent by the leaders of thoughtful America. In an early issue we shall publish the second article, written by Prof. John Dewey, of the philosophy department in the University of Columbia; later articles in the series will be presented by Gerald Stanley Lee, author of "Crowds," "We" and "Inspired Millionaires"; and by Corra Harris, author of "In the Valley," "A Circuit Rider's Wife," "Co-Citizens" and other stories interpreting the philosophy of plain folks.—THE EDITOR*

it ends, will certainly be followed by some reorganization of Europe, apart from the restitution of the territory of our allies. Being a party to the war, we cannot shirk the responsibility of seeing that the peace which concludes it is right and just. We cannot say that whether the changes made involve oppression and injustice or not is of no interest to us, and no affair of ours. As a civilized and free nation we must throw our weight into the scale for the liberation of oppressed peoples and the fair treatment of all peoples, and it is well that we should say so now.

The second reason for including territorial adjustments among the terms of peace comes from the fact that we are not fighting for terms at all. If Germany were to offer to abandon her submarine warfare during the remainder of the conflict we could not now withdraw, because it would mean merely a desperate attempt to detach another belligerent, not a recognition of neutral rights or a renunciation of the menace of aggressive militarism. Even if she were to offer any terms the Allies pleased, purely in order to recover her

strength and begin war again under more favorable conditions, they could not be accepted, because we are in fact fighting to prevent the recurrence to ourselves and to mankind of such a calamity as this war. We are not fighting for the sake of war, but to prevent war. We are fighting that such things as have happened within the last three years shall, if we can help it, never occur again. In any peace, therefore, we must seek to remove the causes of future wars.

Now among the chief causes of recent wars have been the aspirations of people of the same race, or rather who speak the same language, to unite as a nation and be free from the domination of another race. It is interesting to consider the influence of this motive in the great struggles that have occurred in Europe, let us say since the Crimean War. In the period immediately succeeding a number of wars arose from the efforts to create a united Italy and a united Germany. The first of these conflicts was that between France and Austria in 1859. The ostensible cause of that war, and to a great extent the underlying motive that provoked it was the desire to free the Italians in Lombardy and Venice from the Austrian yoke. Five years later came the war of Prussia and Austria against Denmark. It was only a prelude to the Austro-Prussian War of 1866, which had as its occasion a quarrel over the administration of the duchies wrung from Denmark, but which was really carefully planned to drive Austria out of the loose Germanic Confederation and unite Germany in a single federal body under the hegemony of Prussia. The last of this series of wars was the Franco-Prussian War of 1870, where the quarrel arose nominally over a candidate for the throne of Spain, but which was in fact provoked by Bismarck in order to complete the union of the German states in what is now the German Empire. Before a decade had passed began the first of the wars caused by the efforts of the Christian Slavs in the Balkans to rid themselves of the rule of the Turk. In 1876 there began the attempt to free Bulgaria, which was followed by the war between Russia and Turkey. From that time there was no war between European nations on any large scale until the first of the late Balkan wars in 1912. This was, of course, an attempt to carry farther, and indeed to complete, the process of liberating the Balkans from the control of the Turk; and it was succeeded by the second Balkan war, a quarrel between the victors over the spoils, turning in part on the question whether the people of Macedonia were essentially Bulgarian or not. Finally the occasion and the pretext, tho not the real underlying cause, of the present war was the condition of the [Continued on page 534]

PRESIDENT LOWELL

## A black and white portrait of a young man, likely a sailor, wearing a dark cap and a uniform with a striped collar. He is looking slightly to the right. The image is framed by a thick black border.

A black and white portrait of a young man, likely a military cadet, wearing a high-collared uniform jacket with epaulettes and decorative buttons. He has short, dark hair and a serious expression. The portrait is framed by a simple black border.

A black and white portrait of a young man with dark hair, wearing a dark suit jacket, a white shirt, and a patterned tie. He is looking directly at the camera with a neutral expression. The background is a mottled, textured grey. The portrait is framed by a thin black border.

A black and white portrait of a young man with short, dark hair, wearing a dark suit jacket, a white shirt, and a dark tie. He is looking slightly to the left of the camera with a neutral expression. The background is a plain, light-colored studio backdrop. The photograph is mounted on a larger, light-colored card.

A full-length portrait of a man in a military uniform, standing and holding a rifle. He is wearing a campaign hat, a dark jacket over a light-colored shirt with a sash, breeches, and puttees. The rifle is a long-barreled, bolt-action type.

A full-length portrait of a young man standing, wearing a dark, wide-brimmed hat, a light-colored, buttoned-up jacket with a high collar, dark trousers, and dark shoes. He is smiling slightly.

A black and white photograph of a man in military uniform, wearing a wide-brimmed campaign hat and holding a rifle, kneeling in a field.

A black and white portrait of a young man in a military uniform. He is wearing a light-colored garrison cap and a dark jacket. He is looking slightly to his right with a neutral expression. The background is dark and out of focus.

A black and white photograph of a man in a sailor suit, standing with hands on hips. The man is wearing a dark, long-sleeved sailor suit with a white collar and a white sailor's cap. He is smiling and has his hands on his hips. The background is a plain, light-colored studio backdrop.

THE MEN OF THE NATIONAL ARMY CHOSEN TO GO TO FRANCE—A GRAND RE

AT CAMP GORDON OF THE TROOPS WHO HAVE FINISHED TRAINING THERE

© Committee on Public Information, from Underwood & Underwood

SIGNAL SQUAD PRACTISE AT A NATIONAL ARMY CAMP

THE UNITED STATES WAR MAP

The training camps of National Guard divisions, National Army divisions, the army aviation schools, regular army stations, naval training stations and naval aviation stations are all located for easy identification on this map of the United States at the end of our first year in the war. Six regular army stations have been established. Camp Greene, Charlotte, North Carolina; Camp Logan, Houston, Texas; Camp McClellan, Anniston, Alabama; Camp Wheeler, Macon, Georgia; Camp Fremont, Palo Alto, California; Camp Fort Bliss, Texas. Fourteen training camps for divisions of the National Guard, eighteen training camps for the National Army, six recruit depots to receive newly enlisted men, Columbus Barracks, Ohio; Jefferson Barracks, Missouri; Fort Logan, Colorado; Fort McDowell, California; Fort Slocum, New York; Fort Thomas, Kentucky. Three Signal Corps Officers' training camps, three Medical Officers' training camps, two Quartermaster Corps training camps, two Engineer Officers' training camps, one Ordnance Officers' training camp, and two Reserve Officers' training camps. Eight ground schools of military aeronautics have been established in as many universities, and twenty-four field schools give aviators for the American army their actual instruction in flying. The navy has four regular training stations at Newport, Rhode Island; Norfolk, Virginia; Great Lakes, Illinois, and San Francisco, California. Eight reserve force training camps, Bamkin Island, Boston Harbor; Cloyne Field Barracks, Newport, Rhode Island; Pelham Bay Barracks, New York, New York; Wissahickon Barracks, Cape May, New Jersey; Barracks, Key West, Florida; Municipal Pier, San Pedro, California; University of Washington, Seattle, Washington; Municipal Pier, Chicago, Illinois. There are four Marine Corps stations

*This war is a fifty-fifty proposition. The first fifty belongs to the men in khaki. The other fifty belongs to the teachers of America*

## TEACHING TEACHERS

Fifth message from the National Security League, Committee on Patriotism through Education, of which The Independent is the official publication

**T**HE Kaiser, "a gleaming dagger wrapt in

BY ROBERT McNUTT McELROY, Ph.D.

HEAD OF THE DEPARTMENT OF HISTORY AND POLITICS IN PRINCETON UNIVERSITY  
AND EDUCATIONAL DIRECTOR OF THE NATIONAL SECURITY LEAGUE

has already brought together thousands of public school teachers

the Sermon on the Mount." "Whispering traitors." "Predatory Potsdam gang."

These are phrases which if fully understood by America would make forever sure the quarter of an hour which always makes the difference between victory and defeat. "In all wars," says Clemenceau, "he is conqueror who can believe a quarter of an hour longer than his antagonist, that he is not defeated."

The problem of America now is to make safe that quarter of an hour, upon which depends not only our safety but in all probability the safety of democracy. This war today is a fifty-fifty proposition. The first fifty belongs to the men in khaki. They must win, and defeat the hosts of death which are advancing. Upon military victory depends one-half or more of the success of the mission to which we as a nation have heroically and devotedly dedicated ourselves—the mission of making the world "safe for democracy."

The other fifty per cent belongs to the teachers of America, both those who preside officially in classrooms and those who preside in editorial chambers of great and small newspapers and magazines, those who from a myriad pulpits appeal to the hearts of men and those who have dedicated their lives to the process of interpreting the heart of America to the poor of our land. All these are teachers of America, and upon them depends the enormous task of seeing that this generation is steadfast for victory which alone can secure freedom and a lasting peace, and that the next generation is mentally and spiritually prepared for the great reconstruction which must be wrought out before democracy can ever be safe from the heresies and other dangers which lie in wait for its soul, a soul which President Wilson has eloquently defined as "equal justice."

The men who command the training of the boys in khaki speak in no general terms. Their duty is to give specific instruction as to how the bayonet shall be held, how troops in line shall maneuver, how the great black shells of destruction shall be fitted to the en-

gines of death. No one exhorts them to union; but many are constantly laboring to train them for united action. They know that you cannot train soldiers by exhortation or by the use of general terms.

Nor, in the training of that other army, the other fifty per cent, can you secure intelligent response by general exhortations, and shrieks for virtue. The teachers, like the soldiers of America, need the bayonet drill, the school of the squad, the school of the company and the school of the line. They must learn to use with precision those simple elementary ideas which once sent home to the minds of the children and thru the children to the minds and hearts of the parents, will give the unity of thought which is necessary to unity of action. Individually, these teachers may be, as most of them are, strong, intelligent and patriotic; but the problems of America today are not to be solved by individual action. This nation is being examined and the responses must be given by the nation. The mobilization of the intellectual leadership of America to create the morale which will steady our nation for victory is the present pressing problem for the intellectual leaders of America.

**T**HE National Security League has undertaken that great national drive for mental and spiritual preparedness without which physical preparedness must fail of complete success. Its plans are based upon experience. Having tried many forms of propaganda, the League is convinced that the schools of the country offer the best medium thru which to instruct, unify and inspire public opinion upon the issues which today dwarf into insignificance all other issues. It knows that it is not necessary to make the teachers patriotic. They are patriotic; but they do need to be inspired with a sense of the dignity and the boundless possibilities for national service of their great profession, to realize the power born of common counsel, to touch minds with men and women whose ways of life have given them world vision.

With this idea in mind the League

to listen to interpretations of the meaning of the war from many men and women of many races and nations. In the week of March 18 to 22 twelve carefully chosen speakers, exchange lecturers between New York and Chicago, spoke to almost thirty thousand teachers of the public school systems of these two chief cities of America. The teachers responded gladly because they wished to add to their power of service, and because they understood that this training no more reflected upon their manhood and womanhood than the call to Camp Upton, Camp Grant, Camp Wheeler or Camp Lewis was a reflection upon the honor, the intelligence or the patriotism of our gallant men in khaki.

The League is planning to carry this work further. This summer it will establish training courses in fifty teachers' training camps, where it will do upon a national scale work that it has already successfully launched, in a limited way. If, in these camps, thru the lips of great leaders of thought in America, it can inspire the teachers of America—rural, urban and suburban—as others have already been inspired in certain centers of experimentation, there will come into operation in the autumn an organized spiritual force which will awe into silence the "whispering traitors" and those blatant cravens who prate of peace while the battle-ax is swinging above their heads, or who dream of peace parleys with the red-handed enemy who has repudiated his own signature at the call of ambition.

The colleges and universities thruout the whole nation have been asked to furnish the officers for these teachers' patriotic training camps. In many of these institutions there are teachers with world-vision, the power of interpretation, and the longing for "a man's costume" which their gray hairs or physical disabilities render forever unobtainable. They will respond and become officers of an army such as the world has never seen before, an army organized and mobilized to interpret truth and to destroy ignorance upon which the vulture crew Autocracy has always fed.

## EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## THE LITTLE MINISTER DINES OUT

ONE of the most popular plays in the world is "As You Like It,"

in which the beautiful young girl, Rosalind, daughter of a duke, puts on boy's clothes, and runs away to the forest. There, as a boy, she tantalizes her lover, Orlando, who at no time suspects her identity. The exquisite foolery in the heart of the forest, combining the spirit of mischief and of young love, has delighted the centuries, for "All the world loves a lover."

Mr. James Matthew Barrie, the celebrated Scotch author, whose humorously original novels, like "The Little Minister," and whimsical plays, like "Peter Pan" and "What Every Woman Knows," have delighted all English speaking people, has given us in "The Little Minister" a situation that has all the charm and good spirit of "As You Like It."

The Little Minister is the youthful preacher in the little Scotch town of Thrums, where he holds a position looked upon with awe. When the authorities are about to close in on some discontented weavers they find that the poor people have been stirred up by a mysterious gipsy girl, whom they try to arrest. She eludes them by wrapping herself in a cloak and pretending to be the Little Minister's wife, afterward leaving the cloak in the Little Minister's garden. The girl appears and disappears, mystifying every one, like

old Nanny Webster, who was about to be taken from her mud hut to the poorhouse when the gipsy comes to her rescue and provides her with funds. Babbie, the gipsy, is, in reality, the adopted daughter of Lord Rintoul. Of gipsy descent, and well able to speak the Scotch dialect, she had often put on gipsy garb and gone about the country. She has all the adventurous spirit and good-natured fun of Rosalind; and the peasant surroundings are her Forest of Arden.

The selection tells how she audaciously invites the Little Minister to take tea with her and Nanny. The disguised girl, knowing the minister's love for her—and already loving him—tantalizes the preacher as Rosalind tantalized Orlando. She orders him to chop up his staff for firewood, and to go for water, and she horrifies old Nanny by saying, "Oh, you stupid!" when he burns the kettle, and by saying: "Sit there, and don't rise till I give you permission!" The mischievous girl, the awed old woman, and the Little Minister—head-over-heels in love, sit down in the mud hut to a supper of "tea, butter, loaf-bread, and cheesies." Every one is happy. The air is full of clever nonsense, and over all is the spirit of Arden—love, laughter and mischief. In this scene of delightful foolery we transport ourselves for a moment into Arden itself.

NANNY'S home was as a clock that had been run out, and is set going again. Already the old woman was unpacking her box, to increase the distance between herself and the poorhouse. But Gavin only saw her in the background, for the Egyptian, singing at her work, had become the heart of the house. She had flung her shawl over Nanny's shoulders, and was at the fireplace breaking peats with the leg of a stool. She turned merrily to the minister to ask him to chop up his staff for firewood, and he would have answered wittily but could not. Then, as often, the beauty of the Egyptian surprised him into silence.

"Nanny and I are to have a dish of tea, as soon as we have set things to rights," she told him. "Do you think we should invite the minister, Nanny?"

"We couldna dare," Nanny answered, quickly. "You'll excuse her, Mr. Dishart, for the presumption?"

"Presumption!" said the Egyptian, making a face.

"Lassie," Nanny said, fearful to offend her new friend, yet horrified at this affront to the minister. "I ken you mean weel, but Mr. Dishart'll think you're putting yourself on an equality wi' him." She added in a whisper, "Dinna be so free: he's the Auld Licht minister."

The gipsy bowed with mock awe, but Gavin let it pass. He had, indeed, forgotten that he was anybody in particular, and was anxious to stay to tea.

"But there is no water," he remembered, "and is there any tea?"

"I am going out for them and for some other things."

the Egyptian explained. "But no," she continued, reflectively. "if I go for the tea, you must go for the water."

"Lassie," cried Nanny. "mind wha you're speaking to. To send a minister to the well!"

"I will go," said Gavin, recklessly lifting the pitcher. "The well is in the wood. I think?"

"Gie me the pitcher, Mr. Dishart," said Nanny, in distress. "What a town there would be if you was seen wi'!"

"Then he must remain here and keep the house till we come back," said the Egyptian, and thereupon departed, with a friendly wave of her hand to the minister.

"She's an awfu' lassie," Nanny said, apologetically. "but it'll just be the way she has been brought up."

"She has been very good to you, Nanny."

"She has; leastwise she promises to be. Mr. Dishart, she's awa'; what if she doesna come back?"

Nanny spoke nervously, and Gavin drew a long face.

"I think she will," he said, faintly. "I am confident of it," he added, in the same voice.

"And has she the siller?"

"I believe in her," said Gavin, so doggedly that his own words reassured him. "She has an excellent heart."

"Ay," said Nanny, to whom the minister's faith was more than the Egyptian's promise. "and that's hardly natural in a gaen-aboot body. Yet a gipsy she maun be, for naeboddy would pretend to be ane that wasna. Tod, she proved she was an Egyptian by dauring to send you to the well."

Her mind relieved on this matter, the old woman set off for the well.

Gavin returned to the fire and watched a girl in it in an officer's cloak playing at hide-and-seek with soldiers. After a time he sighed, then looked round sharply to see who had sighed, then, absent-mindedly,

lifted the empty kettle and placed it on the glowing peats. He was standing glaring at the kettle, his arms folded, when Nanny returned from the well.

"I've been thinking," she said, "o' something that proves the lassie to be just an Egyptian. Ay, I noticed she wasna nane awed when I said you was the Auld Licht minister. Weel, I'se uphaud that came frae her living ower muckle in the open air. Is there no' a smell o' burning in the house?"

"I have noticed it," Gavin answered, sniffing. "since you came in. I was busy until then, putting on the kettle. The smell is becoming worse."

Nanny had seen the empty kettle on the fire as he began to [Continued on page 537]

The little minister, who used to address himself in terms of scorn when he wasted an hour, was at present dallying with a teaspoon

# FORWARD MOVEMENTS IN EDUCATION

## New Experiments and Methods in Various Fields Work Successfully in Their Practical Application

### WAR FRENCH

WHEN war was declared by the United States, certain Professors of French realized that in the months to come thousands of American men and women would go to France to serve on or behind the battle line. Very few of these men and women could understand or speak French. The teachers of French realized that ignorance or knowledge of the French language might in many instances make the difference between delay and speed, between blundering and efficiency, between suffering and relief, between death and life.

The faculty of the Romance Department of the University of Chicago saw that a great opportunity was presented for rendering signal service to their country. Under the leadership of ERNEST H. WILKINS and ALGERNON COLEMAN, instruction in French was given to classes at Fort Sheridan, to various groups and organizations in the city of Chicago, and to students at the University. These lessons were developed to meet the special needs of soldiers, doctors and nurses. After the lessons had been used in mimeograph form in these and subsequent classes, they were published in convenient textbook form for future use.

After almost a year's experience a new textbook for soldiers, "Army French," has been prepared and recently published, which instructors in various camps report as being better adapted to their needs than any other book they have seen. This text, the text for doctors and nurses and the supplementary reader or conversation book are all widely and successfully used.

### MATHEMATICS

Criticism has been made for years regarding the inefficiency of the work in the field of secondary-school mathematics. It has been pointed out that only a small percentage of the students who begin the subject complete the course; it has been felt that the work is not vitalized; that interest is lacking on the part of the students. Experiments conducted in the University High School of the University of Chicago demonstrated that the obstacles could largely be overcome by teaching arithmetic, algebra, geometry, and trigonometry as one subject in the form of general mathematics. Thus the abstractions have been made concrete, and the material of each topic has aided in the understanding of the others. The result is a successful series of textbooks by Ernst R. Breslich, Head of the Department of Mathematics in the University of Chicago High School, which is being successfully used in public and private schools throughout the country.

### ECONOMICS

There was a time when classes finished the prescribed textbook and stopped. The opinions of one man on the many important questions were a law and gospel to the student. Today in most colleges, classes study from books of readings selected from all sources and written by experts in each particular field. The series is known as *Materials for the Study of Economics*. This series of source books and outlines, at present seven in number and rapidly growing, has been developed in the Department of Political Economy of the University of Chicago. The pupil is afforded an unbiased view because the books present both sides of a question.

A new series, *Materials for the Study of Business*, under the editorship of LEON C. MARSHALL, Dean of the School of Commerce and Administration of the University of Chicago, has recently been launched by the appearance of a textbook on "Quartermaster and Ordnance Supply," prepared by instructors in the Ordnance Course at the University of Chicago. The second volume, "Readings in Industrial Society," compiled by the editor of the series, is scheduled for spring publication. Other volumes are in preparation.

### LITERATURE

We learn to appreciate literature not so much by reading about literature as by reading the literature itself. WALTER C. BRONSON, of Brown University, was one to appreciate this fact and he set to work to assemble the best of English poetry, American poetry, and American prose in handy volumes. Illustrative and explanatory notes furnish a variety of interesting side-lights and information about the authors and their selections.

Further aids to the study and interpretation of literature are available and include a work by PERCY H. BOYNTON on London in the various literary periods, an introduction to literary theory and interpretation by RICHARD G. MOULTON, and a special method of conducting classes in Shakespeare by ALBERT H. TOLMAN.

### RELIGIOUS EDUCATION

The present awakening in religious education dates back more than twenty years, and counts as one of its chief sources, the energy and varied activities as well as the profound interest of WILLIAM RAINEY HARPER, first President of the University of Chicago. To him and to his colleague, ERNEST D. BURTON, of the New Testament Department of the University, we owe the plans for the production of a series of textbooks, *The Constructive Studies*, which gives to religious education in the Sunday School and elsewhere the same serious and dignified character as has so long been a recognized standard of the day school.

This series now numbers thirty volumes, ranging from the kindergarten to adult classes. They are well bound, clearly printed, and handsomely illustrated, and are used in Sunday Schools representing many Protestant denominations, as the basis of a complete curriculum or as individual texts in certain classes.

*Principles and Methods of Religious Education* is a series of handbooks recording practical and successful experiments by men familiar with the scientific principles of religious education. Five volumes are now ready, convenient in form, inexpensive, popular in presentation, treating of subjects of vital interest. They are invaluable to all who are engaged in religious education.

*Outline Bible-Study Courses* constitute a continually increasing series of extension courses in religious subjects for personal study or for classes. All of these courses are prepared on the basis of modern scholarship, using only the Bible as a textbook, yet are free from disputations or theological questions.

*Handbooks of Ethics and Religion* is a series of text and reference books for the use of college classes and for general reading. The subjects have been selected and arranged in logical and progressive order, providing work for the four college years, and the best college teachers have been secured to prepare the volumes, of which there are now five.

In view of the increasing responsibilities of editorship, in connection with these different series, a group of three men in the University of Chicago now share the work: ERNEST D. BURTON, Head of the Department of New Testament and Early Christian Literature; SHAILER MATHEWS, Dean of the Divinity School; and THEODORE G. SOARES, Professor of Homiletics and Religious Education and Head of the Department of Practical Theology.

The University of Chicago Press,  
5751 Ellis Avenue, Chicago, Ill.

Gentlemen:

I am interested in the subjects checked and ask that you send me, by return mail, titles, descriptions and prices of your books in these fields.

- ☐ War French.
- ☐ Secondary-School Mathematics.
- ☐ The series "Materials for the Study of Economics."
- ☐ The series "Materials for the Study of Business."
- ☐ Literature.
- ☐ Graded Lessons for Sunday Schools.
- ☐ Principles and Methods of Religious Education.
- ☐ Outline Bible-Study Courses.
- ☐ Handbooks of Ethics and Religion.
- ☐ A copy of your Descriptive Catalog of Religious Publications.
- ☐ A copy of your Descriptive Educational Catalog.

# THE NEW BOOKS

## The Heart of the Puritan

AUGUSTUS ST. GAUDENS' statue of The Puritan or Deacon Chapin stood in Paris in 1900 like a man so sure of his "firm foundation," so certain of the infallibility of his convictions, that the sea of humanity which swirled about his feet broke in foam, leaving him unmoved.

That his mask has hidden a very human person Miss Hanscom proves from his own testimony. He would have taken notes on the Paris he watched day after day thru that hot summer, and they would not have been entirely disapproving.

Miss Hanscom's wide reading in the history, biography and literature of New England has made her question Mr. George Edward Woodberry's statement that "the heart of the Puritan is a closed book." She forces the Puritan himself to open it wide enough for us to see not only his big virtues, but his small and amusing vices of egotism and vanity, and his warm need of love and appreciation.

A big virtue—when the Gouverneur of Connecticut writes to the Commander of the Dutch at Manhattan;

Sr,—It being not the māner of Christiā or civill nations to disturbe ye poore people in cottages and open villages, in the tymes of warr, . . . but to suffer them to goe on wth their husbandry, and other country affaires, we cānot but wonder. . . .

at the disregard of this well-established principle of the law of nations by the Dutch.

Wait Winthrop and Jonathan Belcher remind one not a little of our good friend Samuel Pepys, in the detail they are able to give and the interest they show in camel coates and leathern wastcoat and breeches, with gold lace. Samuel Sewall does his best with Josiah Willard, who

had cut off his hair (a very full head of hair) and put on a Wigg. . . I enquired of him what Extremity had forced him to put off his own hair, and put on a Wigg? He answered, none at all. But said that his Hair was streight, and that it parted behinde. Seem'd to argue that men might as well shave their hair off their head, as off their face. I answered men were men before they had hair on their faces (half of mankind have never any). God seems to have ordain'd our Hair as a Test, to see whether we can bring our minds to be content to be at his finding; or whether we would be our own Carvers, Lords, and come no more at him. . . .

Eligible widowers suffered then as now; witness Dr. Cotton Mather driven into marriage with

a Gentlewoman of Piety and Probity and a most unspotted Reputation; a Gentlewoman of good Witt and Sense, and discretion at ordering an Household; a Gentlewoman of incomparable Sweetness in her Temper, and Humour; a Gentlewoman honourably descended and related; and a very comely Person

to escape the importunities of another young Gentlewoman who

must confess herself charmed with my Person, to such a Degree, that she could not but break in upon me, with her most importunate Requests, that I would make her mine.

Judge Samuel Sewall's third courting, begun with Madam Winthrop and ending with Mrs. Mary Gibbs, calls for sympathy. The effort and expense were not inconsiderable, with gifts of Dr. Preston's Sermons at six shillings, and Sugar Almonds at three shillings per pound.

The Puritan's ideas and practises Of Education, Of Trade, Of Travel, Of Episcopacy, Of Prophecies and Warnings, furnish for us his mind and heart as Alice

Augustus St. Gaudens' statue of the Puritan

Morse Earle's *Home Life in Colonial Days* gives us his background.

Miss Hanscom has done a service to him, and his descendants, for which they in their present abode in the truly American states of Oklahoma and Kansas may well be grateful.

*The Heart of a Puritan*, by Elizabeth D. Hanscom. The Macmillan Company. \$1.50.

## An Unfinished Tower

AMONG the manuscripts left by the late Henry James was that of an unfinished novel, *The Ivory Tower*, the incompleteness of which matters little, as the novels of James were seldom finished in the sense of climax. Most interesting is the collection of "notes for *The Ivory Tower*" at the end, as it shows his meticulous care in constructing the outline of his novels! plot, situation and characters being long considered and methodically arranged before the actual writing of the story. It is not often we get such a peep into an author's workshop. Here is a detail:

My heroine, I think, must be on a visit of a number of days to Gussie. I want Davey first with Rosanna, and I think I get something like his having walked over, along the cliff, to their house, to bring her, at his wife's request, over to tea. Yea, I have Davey's walk back with Rosanna, and her father's declining to come, or saying he will follow afterward; his real design being to sneak over again, as I may call it, to the other house, in the exercise of his intense curiosity.

Each bit of the scenario of the novel is worked out with the same care. It is the art of the lapidary. The names of the characters are studied elaborately:

Harton Crimper, among his friends Haughty Crimper, seems to me right and best, on the whole, for my second young man. I don't want for him a surname intrinsically pleasing; and this seems to me of about the good nuance. . . . My Girl, in the relinquished thing, was Cissy Foy; and this was all right for the figure there intended, but the girl here is a very different one, and everything is altered. I want her name to be Moyra, and must have some bright combination with that; the essence of which is a surname of two syllables and ending in a consonant, also beginning with one. I am thinking

of Moyra Grabham, the latter excellent thing was in the *Times* of two or three days ago; its only fault is a little too much meaning, but the sense here wouldn't be thrown into undue relief, and I don't want anything pretty or conventionally pleasing. Everything of the shade of the real.

So much for the elaborate Chinese carving on *The Ivory Tower*, and so are some books written! The scene of the story, as it stands, is Newport; its theme, the reaction of a young man simply and sparsely bred to the sudden accession of a large fortune. His friends are quite ready to relieve him of the embarrassment of its weight, a thing he is intelligent enough to surmise. However, it is useless to try to summarize *The Ivory Tower*, the reader must study its unfinished perfection for himself.

*The Sense of the Past*, the second novel which Henry James left unfinished, follows the steps of a young American into an ancient London house which he has inherited from an English uncle and also, into the period the house represents, that of a century ago. The touch of the supernatural is lightly held, and the book is as masterly in its way as "The Turn of the Screw," altho lacking the horror of that tragedy of lost souls. The fragment, even as it stands, is an artistic triumph, in spite of the style so coherently inchoate. Henry James's sentences are like picture puzzles; each adverbial clause when fitted into its place by the painstaking reader adding a necessary detail to the picture, the effect of which is quite as much due to our mental effort as to the author's. His is not a good style, to our thinking; but it rewards exertion by a definite atmosphere and apprehension at the last.

*The Middle Years* was to be the continuation of James's thoroly delightful "Notes of a Son and Brother," and one is justified in keen regret that the author did not live to complete the story of the years spent in the England of his dreams and affection. Those early impressions of London he recalls with an enthusiasm out of all proportion to their apparent importance, lavishing pages of description over his first meal:

This doom of inordinate exposure to appearances, aspects, images, every protrusive item almost, in the great beheld sum of things, I regard as having settled upon me once for all while I observed for instance that in England the plate of buttered muffins and its cover were sacredly set upon the slop-bowl after hot water had been ingeniously poured into the same and had seen that circumstance in a perfect cloud of accompaniments.

The recollections of Lowell, Tennyson, George Eliot and Lewes are of no more importance to James than those of buttered muffins, but the reader may be forgiven for enjoying them more. The glimpse of George Eliot and Lewes, "our celebrities sitting in that queer, bleak way," by a fireless, tealess hearth, and the host rushing after his guests with the volumes of Henry James's latest novel, shouting: "Ah those books—take them away, please, away, away!" is delicious. We cannot help sharing the eager young American's joy in the "Dickens' flavor" of that London which is growing ever more remote as we write, and we are assured that no Englishman by birth could have loved the dim city more than did its adopted son.

*The Ivory Tower*, by Henry James. Scribners. \$1.50. *The Sense of the Past*, by Henry James. Scribners. \$1.50. *The Middle Years*, by Henry James. Scribners. \$1.25.

# ASIDE FROM SENTIMENT

## Plain Facts and Figures on the Third Liberty Loan

**A**N expert on Government bonds says: "The credit of any nation at any given time may be said to be determined by three leading considerations: "(1) Its debt statement or the size of its debt compared with its resources and with its population. "(2) Its debt history or its record of good or bad faith. "(3) Its general standing with the other nations of the civilized world." Let us apply these tests to the Liberty Bonds.

First: Including the third Liberty loan the debt of the United States will be about one-twentieth of our national resources. That is, there is \$20 of assets behind every \$1 of Liberty bonds; \$1000 of national wealth behind every \$50 Liberty bond. And there is the earning power of over 100,000,000 people—about \$50,000,000,000 a year according to a recent computation. Some think the national income as low as \$35,000,000,000 a year.

The next strongest and wealthiest nation, Great Britain, is worth possibly \$100,000,000,000. Canada and Australia are not included because they contract and pay their own debts on their own account. Great Britain owes about \$20,000,000,000. There is \$5 of assets behind every \$1 of her bonds. Her population is about 45,000,000. Her national income is about \$12,000,000,000 by a liberal estimate.

Germany is not worth more than \$80,000,000,000 and probably not that. She owes about \$20,000,000,000 and so perhaps as much as \$4 is back of every \$1 of her war bonds. Germany's population has never exceeded 70,000,000 and her national income has been a little less than Great Britain's. The war has destroyed her commerce and perhaps her people earn \$10,000,000,000 a year.

Counting the third Liberty loan our debt is about \$125 a head. Great Britain's is something like \$440 a head and Germany's may be \$285 a head.

But Great Britain's income is roughly \$265 a head while Germany's is certainly not over \$145 a head—and Germany's assets are smaller and dwindling all the time. America's income is somewhere between \$350 and \$500 a head.

Second: The debt history of the United States is exclusively a record of good faith. We have always paid one hundred cents on the dollar, have never defaulted interest and have never forced our bondholders to take a lower rate. The debt histories of Great Britain and Germany, tho excellent, contain nothing to compare with the way in which we have paid off the principal of our debts.

Third: America's general standing among the nations, always high since the Civil War, has been reflected in a public credit that has for years been higher than that of any other country and maintains its rank today. Liberty bonds sell at a higher price, yielding a lower rate of interest to those who purchase them, than the bonds of any other nation, and this simply because of their supreme safety and America's tremendous prestige.

There is only one rating to give the Liberty bonds. They are AAA-1. There are other A-1 Government bonds but none on earth backed by so much wealth, so much earning power, such a record for paying up and such a high credit rating. There are no other Government securities whose value is likely to go so high after the war.

# What Shall I Send Him Now?

He already has a razor set, and trench mirror, and air pillow and sweater and all the other things. There must be *something* more he would like.

## Here is a Splendid Suggestion. Just the Thing! Send Him the New ROTH MEMORY KIT

We have made up a limited number of stout khaki cases, very handsome and very serviceable. A wonderful Memory Course of 7 lessons by David M. Roth, the distinguished Memory Expert, slips nicely into "the old kit bag." About the size of a small camera. This is just for the boys in camp and on shipboard and "over there."

Let us send one to *your* boy with a card bearing your good wishes and see if it doesn't make a hit.

These lessons will give him and his camp mates a lot of enjoyment to say nothing of what they will do to improve his memory. You will be surprised when he comes back—if he has just spent a little time with these delightful lessons (and you may be sure he will)—to see what a remarkable memory he has developed and how his mental power has increased.

## A Better Memory in One Evening

David M. Roth is the acknowledged memory expert. He does amazing things with his own memory but says, "There is not a thing I do with my memory that any other person of average intelligence cannot also learn to do."

Mr. Roth teaches us how to remember what we want to remember. He has prepared his complete memory method in a course of seven lessons which has all the fascination of a game. With it one can learn easily and quickly how to remember names, addresses, numbers, people and business figures.

The fear of forgetting vanishes the minute anyone begins the study of Mr. Roth's simple method of remembering. Then the pupil is delighted at the new sense of confidence and power that has come to him when speaking on his feet or in business discussion or in holding up his end of a conversation.

To spend one evening with Mr. Roth at his first lesson is to open up a new world of names, faces, facts, figures and mental picture records.

It means to discover a mental power that one never dreamed of possessing. Thousands of Mr. Roth's pupils have testified to this.

Mr. Roth makes the act of remembering a pleasure—an easy, natural, automatic process of the mind. It enables one to supply the right fact, name or number for instant use when it is most needed. It all lies in knowing how and Mr. Roth's method is a revelation to everyone who is fortunate enough to secure a set of his delightful lessons. Mr. Roth has authorized the Independent Corporation to offer the complete course of seven lessons for only \$5 (or \$5.50 in Khaki Case), and remember that his fee for personal instruction to classes limited to 50 members in business houses and institutions is \$1000.

See full page advertisement in Independent, of March 2, for the complete story.

"Here is the whole thing in a nutshell: Mr. Roth has a most remarkable Memory Course. It is simple, and easy as falling off a log. Yet with one hour a day of practice, anyone—I don't care who he is—can improve his Memory 100% in a week and 1000% in six months." —H. Q. Smith, Division Manager, Multigraph Sales Company, Ltd., Montreal, Canada.

This is the ROTH MEMORY KIT. Only \$5.50 complete

## PROPAGANDA AND PROJECTILES

(Continued from page 519)

before at a cost of half a million men. Shortly before the American advent into the war Hindenburg put into effect his new defensive scheme, the flexible front, an application of Fabian tactics to modern warfare. The new Hindenburg line as established in March, 1917, extended from Lens to Rheims, with Cambrai, St. Quentin and Laon as the chief points in between. The British and French made a joint attack on it in April but were unable to break thru, altho they captured 50,000 men and 500 guns and 1000 field guns. In both countries the failure of the spring offensive has given rise to acrimonious discussion, the military blaming the politicians for it, and vice versa. Official investigations have been made to fix the responsibility, but their findings have not yet been made public. The storming of Vimy ridge by the Canadians and the blowing up of Messines ridge were brilliant exploits but did not lead to anything.

The French did not attempt another offensive in 1917, but the British in November struck at Cambrai. During the first few days they made encouraging gains, but lost a large part of them when the German counter-attack came. This spring both sides seem reluctant to undertake an offensive, and the year ends in comparative quiet, with the new American army holding a sector south of the St. Mihiel salient and near the Lorraine frontier.

The army of the Allies at Salonica has done nothing during the year.

On the Italian front General Cadorna undertook an offensive over the Carso in midsummer with some apparent success, but on October 25 the Austrians broke thru a sector to the north, weakened by intrigue, and swept rapidly over Venetia. For a time it was feared that the invasion would be pushed to the Po, but fortunately it was stopped on the Piave by the aid of French and British reinforcements and Venice was saved.

The revolution in Russia removed one of the chief obstacles to America's wholehearted participation in the war. It would have been difficult to arouse the American people to any enthusiasm for the extension of the Czar's rule over non-Russian territory, which was one of the stated aims of the Allies, but when it came to a question of the defense of a Russian republic against conquest by the Kaiser all hesitation vanished. Yet the revolution proved to be a greater loss to the Allied cause than the accession of America is able to compensate. As in the French Revolution the power passed quickly from a moderate to a radical group and then to the most violent and extreme faction, the Bolsheviks or Maximalists, who were intent only upon class rule and cared nothing for patriotism, legality, property rights, international obligations or democratic institutions. The army, demoralized by the abolition of order and discipline, could not be roused even by the eloquence of Kerensky to make a stand against the invader. Finally the Bolshevik leaders, Lenine and Trotsky, accepted an humiliating peace which virtually threw the border provinces of Russia into German hands. Rumania, cut off from all aid from the Allies, was also forced to conclude a peace giving the Dobrudja to Bulgaria and the Alpine passes to Austria.

So the German line of defense has been shortened by half and instead of a powerful and aggressive enemy upon her eastern side she has a chain of minor nations stretching from the Arctic to the Black

## "Greater Love Hath No Man Than This: That He Lay Down His Life for His Friend."

That was the splendid way in which Captain Cyril Morton Horne met his end. A wounded soldier lay in front of the trenches. As the young officer brought him in, a shrapnel shell burst overhead—and he fell. But though he was only twenty-nine years of age, he had already sung brave songs of other heroes. And these are now collected and are given you in

## Songs of the Shrapnel Shell

It is a book of soldier songs—worthy of the noble spirit of the man who wrote them and of the men of whom he wrote.

Sea, all owing their existence to her and subject to her control. A population of 180,000,000 lies helpless before her and a region of immeasurable resources extending to the Pacific has been opened to her exploitation in the future. Its supplies of food, fuel and metals are not all at present available, but enough may be secured by robbing the Russians to relieve the necessities of the Central Powers.

The unscrupulous and aggressiveness displayed in the German dealings with Russia have confirmed Americans in the belief that such a power as militant Germany is dangerous to democracy. Perhaps the chief contribution which America has so far made to the war is to have brought this fundamental issue clearly to the front and so made plain that this is not a sordid strife over dynasties, boundary lines, trade privileges or the balance of power. The past year, altho its military operations have been relatively insignificant, has altogether altered the aspect of affairs. This is not the same war as started in 1914, nor indeed the same as the United States entered a year ago.

## Remarkable Remarks

ED. HOWE—I am no puritan.

CORRA HARRIS—The father of our country is not dead.

BILLY SUNDAY—God is now leading the armies of the Allies.

SENATOR JOHNSON, of Florida—New York is quite a little village.

GEORGE CREEL—Do not lend yourself to the cheap gossip of the smoking car.

G. K. CHESTERTON—The Higher Criticism is perhaps the lowest form of High Life.

MOREFIELD STOREY—No man who looks down upon his fellowman is fit to govern man.

PRESIDENT SENG KWO CHANG—I have examined myself and feel that I have many defects.

DUKE ERNST DUNTER—How dare President Wilson pose before Germany as a moral leader?

MARK M. JONES—At the Edison Works everybody punches a crank every day, including Thomas A. himself.

HERR LANDSBERG—This war, no matter how it ends, can bring naught save hunger and suffering to the people.

COUNT WESTARP—Wilson with his slimy impudence is trying to seduce the Germans into disloyalty to their Royal House.

IRVING BACHELLER—If the last three years have taught us anything it is this: the superman is going to be unsupervised.

WILLIAM BRADY, M.D.—Black dyed stockings sometimes stain the skin peacock blue. This is annoying but not dangerous.

EMPEROR WILLIAM—Everything goes to show that our superior military commandship will break our opponents' war will.

SENATOR PENROSE—The American people have lost confidence in the Wilson Administration and have determined to restore the Republican party to power.

LORD RHONDDA—What the greedy grousers of this country speak of as famine the hungry Germans would look upon as luxury.

THE PATRIARCH OF ALL RUSSIA—By the power given us by God we forbid ye Bolsheviks to participate in Christ's communion.

NIKOLAI LENINE—Only unrestrained phrase-making can impel Russia at this moment and in these conditions to continue the war.

KING GEORGE—The aims for which I and my allies are contending were recently set forth by my government in a statement which received the emphatic approval of my people.

# The Service of the Clock

TRENT

THE one thing that distinguishes the true clock is its truthfulness of performance, a standard gauged by what it does: by the *service* its movements render.

SETH THOMAS movements, honestly exact in their duties and perfect in their timekeeping, give a *service* upon which the whole of SETH THOMAS achievement depends.

Your jeweler will be pleased to show or procure for you, the TRENT pictured here, or any of the other clocks illustrated in our new catalog.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

## Essential Investments

Netting 4½% to 7½%

Just as it is necessary to conserve fuel and food and to buy Liberty Bonds, so is it of vital importance that your surplus funds go into essential investments.

Which investments are essential? Why are such investments now imperative if you would get the best return at the least risk?

These questions are answered in our brief folder, "Essential Investments," which we would be pleased to send you on request. Mention edition A. B.

An opportunity like the present to secure investments in essential industries at such high rates of yield is unprecedented and may not occur again.

May we be of service to you?

# Market Place Talks

BY LUIGI CRISCUOLO

## THE FUTURE OF RAILROADS

**I**N view of the growing power of the Federal Government over corporations, unusual interest is centered upon the possible treatment of the railroads with respect to their future financial problems. The matter of compensation has been given a basis which can be used to assure security holders that their investments will be safeguarded under Government operation of their properties. It is not impossible for security holders to be better taken care of under centralized government operation than they were when the 257,000 miles of railroads in the United States were operated by hundreds of separate systems, large and small, independent or controlled by the large moneyed interests.

During the peak of the reorganization period, in 1915, over one-sixth of the entire railroad mileage of this country was in the hands of receivers. The aggregate bonded debt of the railroads so affected exceeded \$1,500,000,000 and the capital stock amounted to nearly \$700,000,000; almost \$675,000,000 of the bonds referred to were in default, causing distress to thousands of persons who were dependent upon the income from securities. In the majority of cases an inadequate financial structure was the predominant cause of receivership, altho the cause of declining credit was in part due to stationary rates in the face of increasing costs. It was obvious that if railroads could not receive higher rates as the cost of operation was mounting rapidly, the margin of earnings applicable to fixed bond interest had to decrease. The result was that such railroads as were fundamentally weak could not sell securities to take care of their maturing obligations.

Among the railroad systems which were plunged into difficulties thru the lack of a strong financial structure or an adequate refunding mortgage, were the Missouri Pacific, Missouri, Kansas & Texas, St. Louis & San Francisco, International & Great Northern, and, indirectly, the Chicago & Eastern Illinois and the New Orleans, Texas & Mexico. Of these companies, all have been successfully reorganized with the exception of the Missouri, Kansas & Texas, Chicago & Eastern Illinois and the International & Great Northern. These last have been in process of reorganization for the past four or five years. At a time when it might be possible to take them out of the hands of receivers, such action is not possible because in order to do so securities must be sold, and the sale of securities is now under strict Government control. Two companies which are not in bankruptcy, but which, nevertheless, are in financial difficulties and will have to ask Government aid, are the New York, New Haven & Hartford Railroad and the Brooklyn Rapid Transit Company.

The War Finance Corporation is organized to provide for just such contingencies as have been referred to, since the railroads are now under Government control and are an essential part of its great war-machine. Therefore, it is to the interest of the Government to see that the railroads are maintained in the best of financial as well as physical condition. The Government is em-

powered under the plan to come to the assistance of railroad corporations by advancing them funds to take care of maturing obligations, for the purchase of equipment and for improvements and additions. The loans by the Government will be secured by deposit of securities of such companies as may be in need of funds, either newly created bonds or notes, or good collateral held in the treasury. In order that holders of securities of railroads which are apt to profit by the Government plan may have a general idea of the situation, a résumé of the prospects is given herewith:

### MISSOURI, KANSAS & TEXAS

This is perhaps the most involved reorganization of the three previously mentioned because the company has twenty-five distinct issues of bonds and two issues of stock. The bonded debt amounts to nearly \$120,000,000, which is large for a company whose physical condition was recently stated to have been worse than that of any large system in the Southwest. A plan of reorganization has been in process of formation for the past three years, the most junior of the bond issues consisting of \$19,000,000 extended 6 per cent notes which matured in May, 1916, and were not paid. The plan provides for an exchange of all of the bonds, a majority of which are in default, into proportionate amounts of first mortgage bonds, adjustment bonds, preferred stock and common stock. The cash requirements of the company were to be provided for by an assessment of \$30 per share on the preferred stock and \$33 on the common stock.

It is certain that with railroad earnings more or less of an unknown quantity now that the Government can route traffic in the interest of economy rather than the advantage of the individual railroads, security holders will not be very anxious to advance money on an uncertain proposition when sound securities are selling at low prices. The logical conclusion is that the Government should take absolute charge of the reorganization of this and other railroads in similar circumstances, thus saving large legal and other expenses. If this is done, under Government supervision, such conflicting interests as are present would have to bow before the power of the Director General even tho there may be no precedent for drastic action.

Following are the better-known issues of the Missouri, Kansas & Texas:

First 4s, due 1990.....	\$39,999,500
Second 4s, due 1990.....	20,000,000
General 4½s, 1936.....	10,421,000
First Ref'g 4s, due 2004.....	9,992,000
Secured Notes 6s, due 1915.....	19,000,000
MKT of Tex. First 5s, 1942.....	4,505,000
M K & Eastern First 5s, 1942.....	4,000,000
M K & Oklahoma First 5s, 1942.....	5,468,000

### CHICAGO & EASTERN ILLINOIS

This road went into the hands of receivers in May, 1913, when the St. Louis & San Francisco refused to stand by its guarantee on its own certificates for Chicago & Eastern Illinois preferred and common stock. Nearly \$54,000,000 out of \$58,000,000 of the company's bonds are in default but all have been tentatively provided for in a proposed plan of reorganization which

has been ready for some time and has been withheld to await better times in the security markets.

It is understood that when there was a possibility of the company being taken out of the hands of the court, bankers would not underwrite a small issue of bonds which were to be sold to provide funds to take care of receivers certificates, floating debt and the financial requirements of the near future. Now that the Government can assume direction of the matter, it is likely that the Chicago & Eastern Illinois, as one of the best roads of the Middle West in past years, will receive favorable attention. Earnings for the past year have been very good and aside from the necessity of taking care of maturing obligations in the immediate future, there are no large financial requirements.

Following are the better known of the Chicago & Eastern Illinois issues:

General Consolidated 5s, 1937.....	\$21,343,000
Refunding & Improvement 4s, 1955..	18,019,000
Purchase Money 5s, 1942.....	5,094,000
Receivers Certificates 6s, 1917.....	6,000,000
Evansville & Ind., Consol. 6s, 1926...	1,853,000
Evansville & Terre Haute, Ref'g 5s, 1941 .....	1,278,150

#### INTERNATIONAL & GREAT NORTHERN RAILWAY

This company had an issue of \$11,000,000 three-year 5 per cent notes which matured on August 1, 1914, and are not yet paid. The notes are secured by \$13,750,000 first and refunding mortgage 5 per cent bonds which cover the entire property of the company, 1100 miles of road in Texas, subject to \$11,291,000 first mortgage 6s which mature on November 1, 1919, and \$198,000 Colorado Bridge bonds due in 1920. The company is a reorganization of a company bearing practically the same name, which it succeeded in 1911. It was generally believed that the company was in prosperous condition but the impossibility of selling bonds at the time the war broke out in Europe as well as declining credit due to floods which did a great deal of damage to the property, made it impossible to pay the notes at maturity. A receivership was the result.

In the past two years the company's earnings have increased considerably and for the calendar year 1917 the earnings were the best in the company's history. A good surplus remained after allowing for all interest charges, including those on the notes as well as \$1,108,000 first refunding 5s which are outstanding.

There appears to be no reason why the Government should not take care of this property at once in spite of the fact that it has a large maturity in 1919. The floating debt can be taken care of by a loan from the Government and the property can be restored to the noteholders by means of a foreclosure of the notes and distribution of a pro-rata amount of refunding bonds to each noteholder. If the war should not end by the time the 6 per cent bonds mature in November, 1919, there is nothing to prevent the Government from taking care of them.

There has thus been given a summary of the more important possibilities in the realm of corporation financing under Government supervision. While not ultra-radical, it seems to me that the beginning of Government control in matters of corporate finance seems to foreshadow not merely a temporary supervision of corporate affairs, but it would not be a surprise if the properties now going under Government control were never restored to private ownership excepting as unified propositions: one system of interstate railroads, one system of interstate telephone companies, one system of interstate express companies, one system of steamship lines. Competition is the death, not the life, of trade.

## U. S. Army or Navy Red Cross or Y. M. C. A.

Letters of Credit are the safest and most convenient medium for carrying funds.

During the war we are issuing such Credits, *free of commission*, to officers and men in the U. S. Army and Navy, and to those engaged in Red Cross or Y. M. C. A. work.

*We have also sent our American representative to France for the convenience of our friends, with headquarters at the office of the Credit Commercial de France, 20 Rue Lafayette, Paris.*

# WHAT ARE WE FIGHTING FOR?

(Continued from page 529)

Serbian peoples, part of whom lived in Serbia and part under the rule of Austria-Hungary.

If the question of race has been a source of war in Europe for two generations we cannot expect it to disappear in the future unless racial aspirations are reasonably satisfied: for it has grown up with democracy and the spread of popular education. So long as government was conducted exclusively by a throne and aristocracy, the ruling class was constrained to speak one language, that of the court and of polite society. All cultivated people in the land were educated in the same literary tongue, which was naturally used in official transactions. The uneducated classes talked their own dialects and cared little what their rulers spoke. They have not always objected even when these men affected a foreign culture. Frederic the Great thought himself a French litterateur and spelled his name like a Frenchman. But when popular elections were introduced, and still more when primary schools became universal, the question of language assumed a far greater importance. Then the matter of race was brought to the forefront. The Czechs in Austria, for example, must insist that their children shall be taught in Czech, and that their language shall not be excluded from public affairs, or their people will inevitably be Germanized. The sentiment has, no doubt, in some cases been exaggerated until men of letters have raised a dialect into a language, and local patriotism has inspired a small branch of a great race with a feeling of distinct nationality. Yet the sentiment is real, and if it is not given political expression, and the people who hold it are not allowed the means of economic development, it is certain to remain a source of agitation and a probable cause of war. A prudent man does not keep in his house combustible objects where they are liable to be set on fire. We are not fighting this war to prepare materials for another, or to leave in the world explosive elements, if it is possible to avoid doing so. A great war may start from the discontent of a small people; and if the condition of the large European countries should remain unchanged after peace is concluded, it might well be, for example, that a future revolt of the Czechs or the Croats would, from sympathy or policy provoke the interference of some great power, as the ultimatum to Serbia provoked the intervention of Russia in July, 1914. Europe might be set ablaze by race questions in Austria-Hungary, as she has been by troubles in the Balkans; and such a source of war ought to be foreseen and prevented.

The President's statements about territorial changes have, therefore, the same object as his declarations about a league of nations. Neither of them has the slightest punitive intent. Both are designed to prevent future wars, by removing causes of strife, by allowing free play to national development on the part of peoples great and small, and by restraining war until every other means of settlement has been exhausted.

Three years ago it was necessary to argue that the United States could no longer maintain a position of complete isolation, that she must assume the duties and responsibilities which her growth and the increasing rapidity of transportation across the ocean had cast upon her; and the burden of proof was upon him who asserted that our traditional policy had been outgrown. But we have not been able to pre-

serve our isolation in this war, and it has become our obvious interest and duty to see that another preventable war does not break out, into which we shall again be drawn. To do this we must insist upon terms of peace that will remove as many of the causes of war as possible; and we must form with other countries having the same object in view, a league of nations which will secure the submission of international controversies to a tribunal or a body of conciliators, and which will provide a deliberative body for the formulation of international law and the public discussion of international problems. We must be prepared to join with the other great nations of the earth in compelling, by force if necessary, a resort to these peaceful methods for the settlement of disputes before a recourse to violence. The object in stating our terms is not an immediate, but a permanent, peace, and while we can maintain a force in the field we can demand nothing less.

### Capital Copy

American flags provided by France have been placed over the caskets of the first American troops who died in battle.

The President has ordered the reservation of 640 acres for the use of certain Skull Valley Indians now residing there.

The Committee on Agriculture of the House favored a bill to appropriate \$10,000,000 to be used to purchase seeds for farmers.

Insurance written by the United States Government to protect its fighting forces and their dependents has passed the \$12,000,000,000 mark.

Admiral Bowles denies the statement that has been widely published, to the effect that he had said the plan to construct wooden ships has proved a failure.

The Red Cross has just organized a bureau to supply information on casualties among soldiers, with William R. Castle, Jr., formerly dean of Harvard College, in charge.

Secretary Lane has announced that motor-cycles will be admitted in Yellowstone Park. This makes all the national parks open to both automobiles and motor-cycles.

There will be greater elasticity in the method of enforcing the second draft. Each state's quota will be based on the number of men in class 1 instead of the total population.

Because of the depletion in the teacher's ranks, married women will be permitted to fill their places by order of the United States Commissioner of Education, P. P. Claxton.

Clerks in two of the government departments in Washington have adopted 150 children in response to an appeal of the organization known as The Fatherless Children of France.

The United States Food Administration has shipped 1500 farm tractors to France, in order to increase France's crops and to lighten the burden of toil on her old men, women and children.

The Government is constructing a restaurant that will accommodate 850 persons at one time and will serve 5000 a day for the convenience of the employees of the Ordnance Department in Washington.

According to the *Rheinisch-Westfälische Zeitung*, wood is now being largely used in place of ivory, celluloid and other substances in the manufacture of combs in Germany. Excellent toilet combs, it is stated, are made from thinly cut, faultless birch and beechwood.

Friends and relatives who are disgruntled or distressed by the delay of mail and packages sent to their boys in France must remember that some 3,000,000 pieces a month are sent to the soldiers there. The boys are scattered all over France and the small number of delays, tho unfortunate, seems unavoidable.

## 100% Safety and 6% Interest Income Tax Paid

**S**AFETY first and foremost! Buy only the soundest securities in times like these. Make sure that the principal and interest of your bonds will be paid promptly in cash on the days due.

Safety being assured, insist on a good interest rate. You need a return of about 6% to meet the burdens the war has brought and the high cost of living.

Finally, buy securities on which the mortgagor pays the Normal Federal Income Tax.

The sound first mortgage serial bonds, safeguarded under the *Straus Plan*, meet these and all other requirements of anyone seeking a good investment. They are safe, they yield 6% net, they are not subject to market fluctuations in value, they are in convenient \$1,000 and \$500 denominations, and the mortgagors pay the Normal Federal Income Tax.

Write today for our valuable booklet, "Safety and 6%," and our current investment list, describing a well-diversified variety of well-secured bonds. Ask for

# INSURANCE IN NINETEEN SEVENTEEN

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

**D**UE almost entirely to conditions growing out of the war, the premium income of the fire insurance companies was greatly increased during the year ending December 31, 1917. Values all over the world have steadily advanced since the war commenced and are now at the "inflated" stage, and constantly mounting. The coverage of these increased values by insurance, even at old rates, would result in an enlargement of the premium income; but there was also a slight rise in the average rate during the year consequent upon the malicious work of enemy agents and the high pressure under which all industries have been operated. Prior to 1916 the average premium rate had been steadily declining for several years, but in that year it rose slightly to 99½ cents per \$100, as compared with 95½ cents in 1915. It is estimated that the 1917 figure will be two or three cents above \$1 a \$100.

In round numbers, the total premiums received by the companies reporting to the New York Insurance Department for the year ending December 31, 1916, for insurance against fire, tornado, hailstorm and automobile were \$351,000,000, and for marine coverages about \$44,000,000. In advance of the figures, which are not yet published, the estimate for 1917 places the total premiums on fire, tornado, hailstorm, etc. (including explosion and war hazard) at \$400,000,000 and the marine at \$60,000,000.

While all the companies in the United States are not transacting business in New York and, therefore, are not reporting to that insurance department, all of the most important, and many of the least, are, a fact which permits us to conclude that the figures from that state may be regarded as fairly representative of seventy-five per cent of the whole.

In accounting for the increase of fire premiums by domestic companies and companies coming from countries now in alliance with the United States, it must be borne in mind that all enemy companies were liquidated during the last four months of 1917 and their business was largely taken over by the former. This was particularly obvious in the matter of reinsurances in enemy companies, all of which had to be reassumed by the direct-writing companies of American and Allied domiciles.

Commenting on the rate-increases in 1917, Superintendent of Insurance Phillips, of the New York Department, observes in his recently published preliminary report:

"The European war has perhaps indirectly influenced existing conditions, and our country's entry into the war has, in a measure, served to aggravate the situation. Numerous rate increases have been effected on classes of risks which, it is alleged, showed an unsatisfactory fire experience, and an additional general advance of 10 per cent on all fire insurance rates thruout the state has become operative, the necessity for which has been attributed to the following causes: Increased taxes, including capital stock; income and premium taxes; increased postage, telegraph and telephone expenses; increased cost of printing and supplies; salary increases; increased cost of material for replacing property partially destroyed or damaged by fire; increased value of losses; depreciation of security holdings."

Continuing, Superintendent Phillips touches on the matter of fire loss experience in 1917, "greater," as he says, "than any previous year, excepting that of the

San Francisco earthquake." Adding: "There is little hope of appreciable improvement in the situation for the present year, altho the many disastrous fires destroying invaluable stores and irreplaceable foodstuffs have caused the Federal Government to exercise extraordinary precautions to prevent further destruction of food and munitions by incendiary fires."

A complete compilation of the reports of the companies of their 1917 business has not been made by the department and it is, therefore, impossible to compare losses paid with premiums received. For that reason we are unable to conclude whether the year's business shows any underwriting profit, for, altho there is a large increase in income, it is safe to conclude that the amount of losses has also risen, in addition to which there is a heavy increased liability in unearned premiums. The reader who is not familiar with fire insurance finance must keep in mind that the gross premiums received by a company in any year are earned at the end of that year to the extent of but one-half only, the unearned being payable on demand and carried in the balance sheet as a liability.

But we may get an approximate idea of the companies' fire loss experience by consulting the figures compiled each year by the *Journal of Commerce and Commercial Bulletin* of the fire waste in the United States and Canada. The figures for the year 1917 are \$267,273,140, as against \$231,442,995 in 1916. Comparing these, we find the increase in 1917 over 1916 to be \$35,830,145, or about 15 per cent. As Superintendent Phillips stated they were heavier last year than in any year since the San Francisco fire, when the amount was \$460,000,000.

While it would be unsafe to make any prediction respecting the results experienced by the companies in their trading during the year, a careful consideration of all the factors heretofore noted would not warrant the conclusion that they had made more than a small, if any, profit.

**T**HE outstanding feature in the field of life insurance centers in the results achieved by the Government in covering the fighting forces of the country. This work has been materially aided by the life insurance companies and their agents. Many of the latter have given liberally of their time and experience in securing the applications of the men and women in the service. The record made since October, when the Insurance Act was approved, was never equaled and, probably, will never be surpassed. By December 31, 1917, the total amount insured was about \$3,000,000,000. A report just at hand places the figures on March 6, at \$11,256,448,500, under 1,392,324 applications. The report adds that applications in transit from the Expeditionary Forces will carry the total well above \$12,000,000,000. The average amount of each policy is put at \$8085. As the Treasury bulletin states, "the Life Underwriting Section of the Bureau of War Risk Insurance has grown to be the largest life insurance company in the world."

The life insurance companies of the country have also transacted a very large business, many of them having broken all previous records as to amount of new insurances granted. In the preliminary report of the New York Insurance Department, already quoted from, we learn that the life companies transacting business in

that state, from statements filed up to the time the report was written, seem to have made a gain in insurance in force larger by forty per cent than the increase made in 1916 over 1915.

At the end of 1916, the thirty-four life companies reporting to the New York Department had in force a total of \$21,224,383,158. This represents the work of many years of effort, and it seems insignificant as compared with the twelve billions put into force in five months by the Government. However, in considering that point it is necessary to keep two important facts in mind. First, perhaps as much as ninety per cent of it is permanent long-time, full-rate insurance. Second, all the premiums on it are borne by the persons insured. In these two particulars it differs from the Government insurance. All the latter is Term insurance, the "Term Rate" only being paid by the insured, the cost of the war risk being assumed by the Government. The premium rate on all that insurance increases each year; while that in the companies remains at a level price year after year, the net cost generally undergoing annual reduction thru dividend salvages.

**D**URING recent years there has grown up in this country a form of indemnity called Group Insurance, under which an employer protects a group of individuals thruout the period of their service to him. The former usually pays the entire premium, altho in some instances the arrangement provides for certain contributions from the employees. The form has grown in popularity each year and it is estimated that the amount of it in force on December 31, last, was \$300,000,000. At present only seven companies are writing this form of life insurance.

Steadily since the investigation of life insurance companies conducted by a joint committee of the New York legislature in 1905, an investigation which was primarily precipitated by internal dissensions in the management of the Equitable Life Assurance Society, public interest has been maintained in the proposition made twelve years ago to retire the \$100,000 capital stock of that wealthy corporation and transform it into a mutual. Since the ownership of a majority of the stock passed from the Hyde family, first to Mr. T. F. Ryan, then to Mr. J. Pierpont Morgan, finally to General Du Pont, repeated promises of mutualization were forthcoming. General Du Pont attacked the problem vigorously. There were many difficulties. The minority interests were strong and determined. But the fight was won in 1917. Of course the case got into the courts, where the minority were finally beaten. The plan was approved and submitted to the policyholders who ratified it, and the Equitable is now their property. Commenting on the transaction, Superintendent Phillips says:

"The plan now effective affords a feasible, and, in my judgment, fair method for complete mutualization. In any event, the majority stock is immediately acquired and held by trustees for the benefit of policyholders until the acquisition of the balance of the shares, so that it will not be possible for any person, or clique, to absolutely control the management by virtue of stock ownership. This power henceforth will be exercised by the policyholders, who have the exclusive right to choose directors and thereby direct the affairs of the company."

THE LITTLE MINISTER  
DINES OUT

(Continued from page 526)

“speak, and so solved the mystery. Her first thought was to snatch the kettle out of the blaze, but remembering who had put it there, she dared not. She sidled toward the hearth instead, and saying, craftily, “Ay, here it is; it’s a clout among the peats,” softly laid the kettle on the earthen floor. It was still red with sparks, however, when the gypsy reappeared.

“Who burned the kettle?” she asked, ignoring Nanny’s signs.

“Lassie,” Nanny said, “it was me;” but Gavin, flushing, confessed his guilt.

“Oh, you stupid!” exclaimed the Egyptian, shaking her two ounces of tea (which then cost six shillings the pound) in his face.

At this Nanny wrung her hands, crying, “That’s waur than swearing.”

“If men,” said the gypsy, severely, “would keep their hands in their pockets all day, the world’s affairs would be more easily managed.”

“Wheesht!” cried Nanny, “if Mr. Dishart cared to set his mind to it, he could make the kettle boil quicker than you or me. But his thochts is on higher things.”

“No higher than this,” retorted the gypsy, holding her hand level with her brow. “Confess, Mr. Dishart, that this is the exact height of what you were thinking about. See, Nanny, he is blushing as if I meant that he had been thinking about me. He cannot answer, Nanny; we have found him out.”

“And kindly of him it is no to answer,” said Nanny, who had been examining the gypsy’s various purchases; “for what could he answer, except that he would need to be sure o’ living a thousand years afore he could spare five minutes on you or me? Of course, it would be different if we sat under him.”

“And yet,” said the Egyptian, with great solemnity, “he is to drink tea at that very table. I hope you are sensible of the honour, Nanny.”

“Am I no?” said Nanny, whose education had not included sarcasm. “I’m trying to keep frae thinking o’t till he’s gone, in case I should let the teapot fall.”

“You have nothing to thank me for, Nanny,” said Gavin, “but much for which to thank this—this—”

“This haggarty-taggart Egyptian,” suggested the girl. Then, looking at Gavin curiously, she said, “But my name is Babbie.”

“That’s short for Barbara,” said Nanny; “but Babbie what?”

“Yes, Babbie Watt,” replied the gypsy, as if one name were as good as another.

“Weel, then, lift the lid off the kettle, Babbie,” said Nanny, “for it’s boiling ower.”

Gavin looked at Nanny with admiration and envy, for she had said Babbie as coolly as if it was the name of a pepper-box.

Babbie tucked up her sleeves to wash Nanny’s cups and saucers, which even in the most prosperous days of the mud house had only been in use once a week, and Gavin was so eager to help that he bumped his head on the plate-rack.

“Sit there,” said Babbie, authoritatively, pointing, with a cup in her hand, to a stool, “and don’t rise till I give you permission.”

To Nanny’s amazement, he did as he was bid.

“I got the things in the little shop you told me of,” the Egyptian continued, addressing the mistress of the house, “but the horrid man would not give them to me until he had seen my money.”

1918

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures against marine and inland transportation risk and will issue policies making loss payable in Europe and Oriental countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has

insured property to the value of....	\$30,949,773,989.00
Received premiums thereon to the extent of.....	\$312,671,550.90
Paid losses during that period.....	\$152,928,388.68
Issued certificates of profits to dealers...	\$96,523,710.00
Of which there have been re-	
deemed .....	\$90,801,110.00
Leaving outstanding at pres-	
ent time .....	\$5,722,600.00
Interest paid on certificates amounts to.....	\$24,494,668.95
On December 31, 1917, the assets of the company amounted	
to .....	\$18,041,890.25

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

"No, and for the reason he didna deny the cloak: because it's no worth his while I'll tell you wha your friend had seen. I

would be somebody that would like to be Mrs. Dishart. There's a hantle o' the kind. Ay, lassie, but wishing winna land a woman in a manse."

"It was one of the soldiers," Babbie said, "who told me about her. He said Mr. Dishart introduced her to him. I was told," Babbie went on, "that the minister's wife was rather like me."

"Heaven forbid!" ejaculated Nanny, so fervently that all three suddenly sat back from the table.

"I'm no meaning," Nanny continued, hurriedly, fearing to offend her benefactress, "but what you're the bonniest tid I ever saw out o' an almanack. But you would ken Mr. Dishart's contempt for bonny faces if you had heard his sermon against them."

"When did he preach against the wiles of women, Nanny?"

"It was long ago," said Gavin, hastily. "No so very lang syne," corrected Nanny. "It was the Sabbath after the sojers was in Thrums; the day you changed your text so hurriedly. Some thocht you wasna weel, but Lang Tammas—"

"Thomas Whamond is too officious," Gavin said, with dignity. "I forbid you, Nanny, to repeat his story."

"But what made you change your text?" asked Babbie.

"You see he winna tell," Nanny said, wistfully. "Ah, I dinna deny but what I would like richt to ken. But the session's as puzzled as yoursel', Babbie."

"Perhaps more puzzled," answered the Egyptian, with a smile that challenged Gavin's frowns to combat and overthrow them. "What surprises me, Mr. Dishart, is that such a great man can stoop to see whether women are pretty or not. It was very good of you to remember me to-day. I suppose you recognised me by my frock?"

"By your face," he replied, boldly; "by your eyes."

"Nanny," exclaimed the Egyptian, "did you hear what the minister said?"

"Woe is me," answered Nanny, "I missed it."

"He says he would know me anywhere by my eyes."

"So would I mysel'," said Nanny.

"Then what colour are they, Mr. Dishart?" demanded Babbie. "Don't speak, Nanny, for I want to expose him."

She closed her eyes tightly. Gavin was in a quandary. I suppose he had looked at her eyes too long to know much about them.

"Blue," he guessed at last.

"Na, they're black," said Nanny, who had doubtless known this for an hour. I am always marvelling over the cleverness of women, as every one must see who reads this story.

"No, but what they might be blue in some lights," Nanny added, out of respect to the minister.

"Oh, don't defend him, Nanny," said Babbie, looking reproachfully at Gavin. "I don't see that any minister has a right to denounce women, when he is so ignorant of his subject. I will say it, Nanny, and you need not kick me beneath the table."

Was not all this intoxicating to the little minister, who had never till now met a girl on equal terms? Babbie's kind-heartedness, her gaiety, her coquetry, her moments of sadness, had been a witch's fingers, and Gavin was still trembling under their touch. Even in being taken to task by her there was a charm, for every pout of her mouth, every shake of her head, said, "You like me, and therefore you have given me the right to tease you." Men sign these agreements without reading them. But, indeed, man is a stupid animal at the best, and thinks all his life that he did not propose until he blurted out, "I love you."

# A Glass of Wine with the Borgias

The youth hesitates, hand on glass. Will he obey the imperious look of command in the eyes of the beautiful Lucrezia—the magnet that has drawn him to this supper in the pontifical apartment? Will he yield to the ingratiating advances of Cæsar and partake of the proffered cup? Or will he be warned before it is too late by the sinister glance shot from the cruel eyes of the old Pontiff as he coldly calculates the destruction of the young gallant?

To comply or refuse is equally hazardous. If he decline the poisoned draught will he escape the knife of the hired assassin even now lurking in the shadows of the Papal Palace?

Rodrigo Borgia (Alexander VI), Lucrezia and Cæsar formed the diabolical trinity which sat for eleven years upon the papal throne in Rome, an impious parody of the Holy Trinity—the most perfect incarnation of evil that ever existed on earth. How many gallant lives thus darkly and without commotion passed out of sight, whirled away by the headlong torrent of the ambition of that terrible triumvirate, is told as only that great weaver of word pictures, Alexandre Dumas, could tell it in his

## THE CELEBRATED CRIMES OF HISTORY

NEVER BEFORE TRANSLATED

The millions of English readers and admirers of the works of Alexandre Dumas will hail with keen delight this, the first and absolutely the only complete and unexpurgated translation of Dumas' LES CRIMES CELEBRES, now for the first time available at a price within the reach of all readers. Printed from the same plates as the edition sold by the publisher at \$125.00 a set, which was eagerly snapped up by wealthy connoisseurs, the small edition it is our privilege to offer our patrons has all the unusual features so much appreciated by lovers of books as works of art. The eight volumes are beautifully bound in cloth, stamped with emblematic design, with monogram in gold field. The print is large and clear and the paper all that could be desired. The illustrations were made in Paris by M. Jacques Wagrez, and the specially designed Renaissance title pages are by Giralton.

### Nothing in the Whole World Like them

"Great crimes have played so large a part in the world's history that one cannot obtain a thorough knowledge of past times without the aid of such a book as this"—Says THE NEW YORK HERALD, recently, reviewing THE CELEBRATED CRIMES OF HISTORY. The lover of History is enraptured with the wealth of facts, from new authorities, brought to bear by Dumas upon the life of the charming and beautiful, but indiscreet and ill-fated, Mary Stuart as Queen of France and Scotland. Read the story of her amours, and of her barbarous imprisonment and murderous execution. There is no other work like this. None of the editions of Dumas contain these stories; and no set of Dumas is complete without them.

### A Licentious Court

Brilliantly worked into a vivid picture of the Dark Ages are the vices and crimes of that extraordinary family, the Borgias, that furnished one Pope of Rome and some of the blackest pages in history.

Here we see the whole murderous, poisonous crew with their greedy craving for debauchery, flattery, titles and gold. We watch the career of the beautiful and depraved Lucrezia, who with the head of a Madonna of Raphael had the heart of a Messalina beneath her demure exterior. We see the intrigues of the mediæval papal court—the murders, abductions, poisonings—drawn from the chronicles of eyewitnesses, those naïve accounts which, without embarrassment, call a spade a spade.

### Dumas' Masterpiece

THE CELEBRATED CRIMES OF HISTORY is considered by many in France as Dumas' masterpiece. The highest praise has been bestowed on it by Andrew Lang, Robert Louis Stevenson, and other competent judges.

Think of a fascinating new historical series by Dumas of which only the highly privileged few among English readers heretofore had any knowledge. And all yours at a really nominal price!

### SEEING IS BELIEVING

**\$1** Is all you need send now, with the coupon. But be sure to send today. We don't want to disappoint you. You will never forgive yourself if you let this opportunity pass.

We deliver the set, express prepaid. And we refund your money if you're not satisfied.

BRUNSWICK SUBSCRIPTION CO. Ind. 130 18  
1116 Brunswick Building, New York City

Enclosed is \$1.00, first payment on the 8-volume set of Dumas' "Celebrated Crimes." I agree to remit the special price, \$13.00, at the rate of \$1.00 per month following receipt of books. Otherwise I will within 10 days ask for instructions for their return, my \$1.00 to be refunded on their receipt.

# WHY

did the Kaiser and King Constantine discuss this war at a secret conference five months before the war started?

This and many other questions that have perplexed the world are now answered by Demetra Vaka in the most sensational war book of the year—an amazing record gathered first-hand from kings, ministers and generals of the trail of intrigue and corruption that stretches down the centre of Europe.

## IN THE HEART OF GERMAN INTRIGUE

By Demetra Vaka

Author of "Haremlik," etc.

THE INDEPENDENT, 119 West 40th St., New York

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Patriotism and Loyalty.

1. Every American is eager to speak convincingly in the interests of the United States. From "America's First Year of War" prepare yourself to speak definitely on the following subjects: The Permanent Aims of the United States; The Attitude of the United States Toward War; The Patriotism of the American People; The Ability of the American People; Reasons for Pride in American Achievements; Our Naval Work in the Great War; The Recent Growth of Our Army; The Great Cantonments; The Work of Our Training Camps; The Health of Our Soldiers; Our Army in France; The Cost of the War; Ordnance Operations; The Work of the Shipping Board; The Liberty Loans; Government Control of Food; of Railroads; of Coal.
2. Prepare a speech on the theme: The United States Stands for Freedom, Justice, and the Rights of Humankind.
3. Write an outline of "America's First Year of War."
4. Explain orally the sentence: "The public is now as much part of the Government as are the Army and Navy." Show in what ways your class in school is an important part of the Government.
5. The Third Liberty Loan is about to be launched. From the items in "Aside from Sentiment" prepare a unified speech that will lead people to buy Liberty Bonds.
6. Tell orally, from "Teaching Teachers," who may be called "teachers," and show the importance of their work now.
7. Write a paragraph explaining what is meant by "interpreting the heart of America."
8. Write a paragraph explaining what "great reconstruction" must be wrought out before democracy can be safe.
9. Write a logical brief of "What We Are Fighting For."
10. Prepare to give spirited talks on the following topics: The Reasons That Led the United States Into War; Why We Demand Changes of Territory; Why We Demand Restitution and Indemnity; What We Mean by Liberating Oppressed People; Why the War is a War to Prevent War.

##### II. Important News of the Week.

1. THE UNITED STATES. Write or speak on the following topics: Coördination of War Activities; In Congress; Daylight Saving; Prohibition Progress.
2. RUSSIA. Write or speak on the following topics: Definite Grounds for Condemning the Russian Peace; German Distrust of German Honesty in the Russian Peace Treaty; The Present Government of Russia; Should the Present Russian Government Endure? The Attitude of the Present Russian Government Toward the United States as Seen in the Message of the Soviets; The German Invasion of Russia.

##### III. Literature.

1. "The Little Minister Dines Out." Prepare answers on the following topics: A Comparison of "As You Like It" and "The Little Minister"; The Story of "The Little Minister"; The Situation at the Moment when the Selection Begins; The Character of Nanny Webster; The Appearance of Nanny Webster; Nanny's Home; The Character of the Gypsy; The Appearance of the Gypsy; Nanny's Treatment of the Minister Contrasted with the Gypsy's; The Minister's Feeling for Nanny Contrasted with His Feeling for the Gypsy; The Gypsy's Feeling for the Minister Contrasted with Her Feeling for Nanny; The Minister's Boyishness; Babby's Treatment of the Minister Compared with Rosalind's Treatment of Orlando; Babby's Spirit of Mischief; How Babby Tormented the Minister; Barrie's Method of Story Telling; The Selection as Realism; as Romance; as Humorous Story Telling; as a Story of Good Cheer; Barrie's Literary Work.
2. Write an original story in which you present a girl mischievously teasing and embarrassing a young man. Give your story sufficient plot to make it slowly but surely increase in interest. Use a great deal of conversation. Imitate Barrie's methods.
3. THE NEW BOOKS. Explain the following terms: meticulous care; scenario; the art of the lapidary; theme; touch of the supernatural; artistic triumph; coherently inchoate.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. Our War Aims—"What We Are Fighting For," "America's First Year of War."

1. "The aims of the United States in declaring war were strictly defensive. Summarize the history of our relations with Germany up to April, 1917. Do the facts justify President Lowell's statement?"
2. What changes in our aims have come about during this first year of our participation in the war?
3. Tabulate the things which we have undertaken during the first year of the war. Check those which you think we have done satisfactorily; cross those in which you think we might improve.
4. What arm of the service—the army or the navy—has made the best showing thus far?
5. Compare the work of the following agencies in terms of achievements: (a) the Shipping Board, (b) the Food Administration, (c) the Railroad Board, (d) the Fuel Administration.

##### II. Financing the War—"America's First Year of the War," "Aside From Sentiment."

1. Select from the first article the financial facts there presented. Compare these figures with similar figures for 1916.
2. "The credit of any nation . . . [is] determined by three leading considerations," etc. Compare these considerations with those which govern individual credit.
3. Considering the facts given, justify the statement that a United States Government bond is the best investment in the world.
4. "The debt history of the United States is exclusively a record of good faith." How far was Alexander Hamilton responsible for this fact?

##### III. The Changing Map of Europe—"Propaganda and Projectiles."

1. "Historic names missing from the map for centuries again appear upon it." Locate some of the peoples referred to and give such historic facts about them as you can.
2. "Nationalism and class consciousness cut athwart one another," etc. What does this mean?
3. "The Quadruple Alliance is visibly consolidating in the *Mitteleuropa* of Naumann's dream." What is the Quadruple Alliance? *Mitteleuropa*?
4. In what sense are the continents commingling?
5. "Propaganda has accomplished more than projectiles." Explain.

##### IV. A German "Peace"—"The Duchy of Courland," "The Germans on the Black Sea," "Allies Condemn Russian Peace," "The Peace Treaty in the Reichstag."

1. What methods are being used by Germany to restore peace in (a) Courland, (b) Livonia and Esthonia, (c) Lithuania, (d) Rumania, (e) in the regions bordering on the Black Sea?
2. Do the facts justify the statement of the Supreme War Council, "Peace treaties such as these we do not and cannot acknowledge"?
3. Contrast the above with the statements of the German Chancellor about the treaty of Brest-Litovsk and the settlements with the border states.

##### V. Fighting Further East—"On the Indian Frontier."

1. "We can now perceive that the defection of Russia did not obliterate the eastern front. It merely moved it 2500 miles further east." Explain to what territory this refers. Describe the conditions there that make the situation alarming for the Allies.
2. "India is encircled on the north, northwest and west by disturbances. . . . In ordinary times they meant at most a border war." Review the history of border wars and uprisings in India under British control. Describe the reasons for the titles "Lord Roberts of Kandahar and Lord Kitchener of Khartum."
3. "The call at the time seemed to fall upon deaf ears." Describe the propaganda this refers to and show how Germany could make of it a dangerous weapon against the Allies. Recall incidents in Mohammedan history, if you can, to give some ground for the claim, "How often have the savage Russian, the traitorous English, the Frenchmen of impure parentage, planted their unclean flags upon your holy mountains."

# Earns \$30,000 a Year Because He Never Forgets

## The Story of Two Clerks in New York City Who Started Together, Side by Side, at Twelve Dollars a Week

ONE had developed an accurate memory—the other was always forgetting. The man with the accurate memory proved himself invaluable to his employers. Facts and figures he had at his finger tips. He could always be counted on to do anything he was told because his employers found that they could always count on him—that he always remembered.

The other man was never sure of anything. He always "guessed" or "thought," but never seemed to know.

The man with the memory is now, a few years later, the head of a giant publishing enterprise with an interest in the business and a salary of \$30,000 a year.

The man who could not remember has never been able to earn a salary of more than \$20 a week.

As the executive who employed these two men when they started in—and who knows them both well, says: "The success of one and the failure of the other is largely due to one's remarkable memory and the other's inability to remember."

"And this is absolutely typical of thousands of cases—the men who are holding big executive jobs—the men who have charge of big affairs—the men whose judgments must be relied upon for momentous decisions involving thousands of dollars, are the men who have air tight memories. It is said that Judge Gary has one of the most marvelous memories of any man in America, and if you interviewed one big executive after another you would find one of the predominating characteristics a keen, dependable memory. There is no attribute of success more important."

\* \* \* \*

### A Good Memory Is Not a Gift

A great many people have the idea that the ability to remember a large number of faces, facts and figures is a gift—that you have to come by it naturally. Nothing could be further from the truth. Any man, woman or child of average intelligence can easily and quickly acquire a dependable memory.

When David M. Roth, the famous memory expert, first determined to cultivate his memory he did it because he had probably the poorest memory of any man he ever knew. He actually couldn't remember a man's name twenty seconds. He forgot so many things that he knew he couldn't succeed unless he did learn to remember.

Today there are over ten thousand people in the United States whom Mr. Roth has met at different times—most of them only once—whom he can instantly name on sight.

Mr. Roth can, and has, hundreds of times at dinners and lectures asked fifty or sixty people to tell him their names and telephone numbers, and then, after turning his back while they changed seats, has picked each one out by name and told him his telephone number and business connection.

These are only a few of the scores of other equally "impossible" things that Mr. Roth can do—and yet years ago he couldn't remember a man's name twenty seconds.

### Have Downright Fun While Learning

Mr. Roth's system which he has developed through years of study, and which he

has taught in class to hundreds of business men and others throughout the country in person, is so easy that a twelve-year-old child can learn it, and it is more real fun than any game you play solely for pleasure.

Not only will you enjoy every moment you spend on the Course but so will your entire family—even small children can join in the fun.

### A Better Memory in One Evening

You get results in the first few moments. Fifteen minutes after you start the first lesson you will see a decided difference in your power to remember. No other course in any subject has ever been devised that accomplishes such quick, tangible results.

And a single evening spent on the first lesson will absolutely double your memory power—and may do even more just as it has for thousands of others.

Just think what this will mean to you—to have twice as good a memory—to have a memory that will enable you instantly to see a new world of facts, figures, faces, addresses, phone numbers, selling points, data and all kinds of mental pictures with less than one hundredth of the effort you now spend in trying to remember without success.

The reason Mr. Roth can guarantee to double your memory in one evening is because he gives you the boiled down, crystallized secret right at the start—then how far you care to go in further multiplying your ability to remember will depend simply on how far you want to go—you can easily and quickly develop your memory to such an extent, that you can do everything Mr. Roth can do. He makes the act of remembering an easy, natural, automatic process of the mind.

### You Need Never Forget Again

Thousands of sales have been lost because the salesman forgot some selling point that would have closed the order. Many men when they are called upon to speak, fail to put over their message or to make a good impression because they have been unable to remember just what they wanted to say.

Many decisions involving thousands of dollars have been made unwisely because the man responsible didn't remember all the facts bearing on the situation, and thus used poor judgment. In fact, there isn't a day but that the average business man forgets to do from one to a dozen things that would have increased his profits. There are no greater words in the English language descriptive of business inefficiency than the two little words, "I forgot."

After a few hours spent with Mr. Roth's Course the fear as well as the tragedy of forgetting will have passed forever. You will be fairly amazed and fascinated at the new sense of confidence and power that will be yours.

Not only that, but you will have a sense of freedom that you never felt before. You will be forever freed of the memorandum pad, the notebook, and other artificial helps to which most of us are slaves.

### Evidence

C. Louis Allen, President of the Pyrene Manufacturing Company, says of Mr. Roth's Course:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been nothing but pure pleasure all the way through. I have derived much benefit from taking the course of instruction and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

Fifty other letters like this are in our booklet, "How to Improve the Memory." Sent free with the Course.

### Try Before You Buy

So confident are the publishers, the Independent Corporation, of the remarkable value of the Roth Memory Course to every reader of this magazine that they want you to test out his system in your own home before you decide to buy. The Course must sell itself to you by actually increasing your memory before you obligate yourself to spend a penny.

### Only \$5 If You Keep It

Mr. Roth's fee for personal instruction to classes limited to fifty members is \$1,000, but in order to secure nation-wide distribution for the Roth Memory Mail Course in a single season the publishers have put the price at only \$5—a lower figure than any course of its kind has ever been sold for before and which contains the very same material in permanent form as is given in the personal \$1,000 Course.

And bear in mind—you don't have to pay even the small fee asked unless after a test in your own home you decide that you want to keep it.

### Send No Money

Don't send a single penny. Merely fill out and mail the coupon. By return post, all charges prepaid, the complete Roth Memory Course will be sent to your home.

Study it one evening—more if you like—then if you feel that you can not afford to keep this great aid to more dollars—to bigger responsibilities—to fullest success in life, mail it back to the publishers within five days and you will owe nothing.

If a better memory means only one-tenth as much to you as it has to thousands of other business men and women, mail the coupon today—NOW—but don't put it off and forget—as those who need the Course the very worst are apt to do. Send the coupon in or write a letter now before the low introductory price is withdrawn.

## J U S T A W O R D

The War Emergency Section of the United States Department of Labor, formerly conducted by Miss Marie Obenhauer, which was referred to in The Independent of March 16, 1918, has been merged with the newly created United States Employment Service with Mrs. Hilda M. Richards as chief of the Woman's Division. Correspondence about this service should be addressed to Mrs. Richards, Woman's Division, United States Employment Service, Washington, D. C.

The Independent last December made the suggestion that a star of gold replace the star of blue on our service flags to memorialize a man whose life was given for his country in the war. This suggestion, in common with several others such as a black star on the flag or a different emblem, has been widely discussed in the last few months. The following press dispatch from Washington gives semiofficial backing to The Independent's suggestion:

Washington, March 22.—A gold star on a service flag will be the mark that shows a son or brother has made the utmost sacrifice for the country.

Tho there has been no official action, the suggestion has been accepted generally, and army officers and War Department officials indorse the idea.

## C A P I T A L C O P Y

Nearly 4400 boys to help in war emergency production this year are needed by farmers in thirty counties in Indiana.

Twelve thousand acres of irrigation land will be thrown open to development in two beautiful valleys in Colorado by public drawings on March 29 and April 16. Crops for this year are expected therefrom.

The Senate has received petitions signed by 75,000 citizens of Michigan, Louisiana and North Dakota asking the enactment of drastic laws for persons and organizations dealing in pro-German or disloyal propaganda.

A great many persons do not realize that a possible fine of \$10,000 or two years imprisonment awaits those who ship goods abroad by parcel post without a license. The Committee on Public Information wants this warning published broadcast.

The Bureau of Internal Revenue, Treasury Department, has issued the following: "Tax slackers will be prosecuted as vigorously and relentlessly under the war revenue act as draft slackers were prosecuted under the selective service act. The aid of all good citizens is invoked in bringing to justice the man who deliberately seeks to evade his just share of the war burden."

The Foreign Relations Committee has recently considered the treaty negotiated between the United States and Great Britain under which men of military age of either country residing in the other may be subjected to the draft. No conclusion was reached, but it was intimated that the treaty probably will be favorably reported by a practically unanimous vote of the committee.

## REMARKABLE REMARKS

**RICHMOND PEARSON HOBSON**—I am a political suicide.

**AUGUSTINE BIBBELL**—The world is sick of autocratic monarchs.

**GERALD STANLEY LEE**—It was halfness that brought on the war.

**JULIAN STREET**—If Hamlet is unbalanced so also is Pollyanna.

**W. J. BRYAN**—The Lord made me for utility rather than for beauty.

**SIR JOSEPH COMPTON-RICKETT**—The essence of modern war is surprise.

**PRIMA DONNA GALLI-CURCI**—I do not think I shall ever have the perfect voice.

**PRESIDENT CHANG**—I am guilty of ignorance of men, I am lacking in foresight.

**HILAIRE BELLOC**—The Polish nation will either be the check or the prey of Germany.

**DR. FRANK CRANE**—Privilege is ugly anywhere, but among children it is bitter.

**UPTON SINCLAIR**—There are thousands of people all over the country who read what I write.

**CORRA HARRIS**—The world does come to an end every hundred years or so and history proves it.

**HON. ELIHU ROOT**—The controlling idea is that what we want for Congress is the quality of loyalty.

**DOROTHY MASON**—A hall to be impressive should contain at least one distinctive piece of furniture.

**SECRETARY MCADOO**—I want the railroad officers and employees to get the spirit of this new era.

**MAJOR-GEN. H. A. GREEN**—The Germans may bend our line, but, by Heaven, they can never break it.

**OSWALD GARRISON VILLARD**—To deny a man the right to his conscience is the highest form of treason to the American state.

**EZRA POUND**—I dreamt that I was God Himself whom heavenly joy immerses, and all the angels sat about and praised my verses.

**CARL W. ACKERMAN**—Until today Germany has not been fighting the Allies. Germany has been attacking each nation separately.

**DR. PAUL LENSCH**—Germany will have won the war if she does not lose it, but England will have lost the war if she does not win it.

**COLONEL ROOSEVELT**—I wish our people would understand what a dreadful misfortune it has been for the whole world to have had America for the last three and a half years carrying on the "Let-George-Do-It" policy.

**SIR STEPHEN KENT**—If Great Britain had had one eighth of the great labor troubles in the past two years that the United States has had the country would have had to conclude a disgraceful peace with Germany by this time.

**COL. W. B. THOMPSON**—The United States was founded by men who came from relatively free countries. The men and women who constitute the backbone of the Russian revolutionary movement come out of prisons, out of dungeons, out of exile in Siberia.

# Great Factory Installations Bear the Name "Standard"

IN the large industrial centers throughout the country—in cities and towns—wherever numbers of men and women are employed and where sanitary plumbing conditions are therefore most essential—"Standard" fixtures are found in

factories and plants of all kinds. Our ability to produce goods in large quantities makes it possible for us to meet emergencies in quick time. *Your* factory sanitation problems, if referred to us, will have speedy and intelligent handling.

## "Standard" Plumbing Fixtures

### "Standard" Wholesale Houses

In the cities marked thus (\*) at the bottom of this page there are "Standard" Wholesale Houses carrying in stock complete lines of **Supplies and Tools** for Mills, Mines and Factories—also the Water, Gas, Steam and Oil Industries. Write to, or call upon the nearest wholesale house.

for industrial plants represent a wide variety—a readiness to supply any requirement. Our free book—"Factory Sanitation"—contains advice that should be of great help in improving your own plant and increasing the efficiency of your employes. Write Dept. M for a copy of it.

"Standard" Plumbing Fixtures for the Home represent the same high standards of quality and service and are shown in a special booklet which you are invited to write for.

## UNITE AND WIN

This is the eighth message from the United States Government to the American people. Presented each week in The Independent by George Creel, Chairman of Committee on Public Information, appointed by President Wilson

**T**HE German drive on the western front was forced upon the German high command by the German people. They were tired of victories that meant nothing. They had refused to be cheered by the success in northern Italy. They had not taken heart from the collapse of Russia. They wanted a victory that would seem final. And it could be obtained only in France.

Having decided to make the attack in France, the Kaiser and his generals had to enhearten the German people and the German army to the effort. A new Verdun was to be assaulted, but the supply of silent confidence had been exhausted. The Verdun drive had been launched as a surprise with every advantage of military secrecy. Those days are past in Germany. There was not the necessary morale for another such campaign. That morale had to be produced by a sort of public inflation of popular hope.

Hence all the official announcements of a supreme effort that was to carry Germany to victory. Hence the advertisement of preparation, the invitation to newspaper correspondents to see the show, the announcement that Hindenburg and Ludendorff and the Kaiser and the Crown Prince would be personally on the ground. Hence also the new uniforms for the troops, and even the long distance gun to bombard Paris with ridiculously inadequate small shells.

That gun is what the Allies call a "propaganda gun." It is used to carry home the boast to Germany: "We are bombarding Paris." It was designed to make the neutrals cry: "A gun that carries seventy-six miles! Wonderful! Terrifying! Let us be careful!" And it was planned to frighten the weak-hearted among the Allies into saying: "The Germans can do anything! Seventy-six miles! What's the use?"

After the first alarm in Paris, the nursemaids refused to leave the Bois with their charges when the shells began to fall.

At the beginning of the war, the French had a saying: "It is merely a question of killing enough Germans." And the French have never changed their opinion on that point. They welcome this new German attack as an opportunity to kill more Germans. The British receive it in the same spirit. They are not considering the territory lost or won. They are counting only the casualties. They are giving ground, but exacting payment for it. They are not asking for victories. They are willing to let the Germans take what they please in that line as long as the Germans pay too much for it. They are satisfied if the Germans will only continue to come on, in their famous mass formations against the guns of the Allies. The British first line, before St. Quentin, was held only by outposts. The point where

the drive would strike was known and the British had orders to inflict all possible punishment but to save themselves—to fight a retiring battle and slaughter the enemy as he advanced.

From that point of view, the new German drive is "just what we want," as the French Premier says.

It has other aspects for America. It means an increased effort and greater burden for the United States. Even if the Germans are beaten disastrously, the losses will not be all on the German side, and the Allied losses in men and material and fighting power will have to be made up by us. The conflict will be brought just so much nearer to us. It will have to be taken just so much more seriously by us. It will have to be met with a proportionately stiffer resistance and a more compact unity.

The German sympathizers in America have been taking advantage of every class quarrel and religious dissension and racial problem and political quarrel, in order to divide and disunite us. They are encouraging the campaign against price-fixing and persuading the farmer that he has a grievance in his \$2.20 wheat. They have thousands of propagandists among the negroes, exciting them with stories of impossible atrocities committed against the colored people in the South. They are equally busy with attempts to incite the whites to negro lynchings, even while they are assuring the negro that under the Kaiser the colored race will have social equality with the whites. They are circulating anti-Catholic literature on the one hand, and, on the other, spreading circumstantial stories of Government discrimination against Catholics in the army camps. Men like Walter Woolke in the *Sunset Magazine* of San Francisco are exasperating the labor problem by attacking the workingmen with charges of disloyalty, and by misrepresenting conditions in the shipyards. German agents are at work inciting the I. W. W., organizing leagues of conscientious objectors, and preaching violence in the West, while other German agents are leading mobs to tar and feather the victims of this German propaganda of social unrest. Every sort of lie about the Government and its war measures is being circulated for the purpose of weakening the faith of the people in the men who are conducting the war—lies about the Food Administration, the Fuel Administration, the War Department, the Navy, the Shipping Board, the Red Cross and all else. By such means, the unity with which we entered the conflict has been disintegrated. The menace of the German drive on the western front should solidify us.

It is a drive against us. It has been undertaken, now, to destroy our Allies before our strength can reach the battle-

field. If the Germans could win, the defeat would be our defeat and the consequences as terrible for us as for any country that is opposed to German domination. There can no longer be any doubt of German purpose. That has been settled by the terms of peace offered to Russia and by the invasion of Russia that has continued since the peace was signed. It was "Downfall or World Dominion" for the German Empire when the war began. It is only "World Dominion" that the Imperial German Government plans now

—dominion not merely over Russia and Belgium and Rumania and Serbia, but over France and Italy and Great Britain, too, and over America. If we cannot unite in opposition to the German drive in France as the Italians were united by the German drive in the North, we cannot succeed in defending ourselves. It is, so far, the most serious hour of the war for us. "Divide and conquer" is the maxim of the German army and the German propagandist. "Unite and win" must be ours.

---

*For what avail the plough or sail,  
Or land or life, if freedom fail?*

---

## FIVE MILLION MEN!

THE Great Battle has for the American nation one supremely vital lesson. Success in the Great War demands men. It is because Germany has the manpower in overflowing measure that Hindenburg has been able to launch his terrific drive with such promise of success. When the German drive is stopped, it will be by men. The greatest battle of all history resolves itself at the last into a naked struggle between two masses of men. Other things being equal, man power will win.

A battle may be lost because of weakness in other directions. Disaster may flow from lack of munitions, from deficiencies in communications, in strategy, in leadership. But no battle can be won without men.

If the Allies had been able to confront the onrushing Germans with equal forces, there need never have been a moment's question of the outcome. In a modern attack against a highly organized system of cunningly planned and strongly fortified trenches, supported by heavy masses of artillery, the odds are all against the offensive. One man with rifle or machine gun behind a parapet is worth several coming unprotected across the pitiless spaces of No Man's Land. But the preponderance of attacking forces can become too great for even the most strongly entrenched defenders to withstand. Without enough men, no trenches or guns will stem the tide.

As we scan with anxious eyes the news reports of the Great Battle, and study on the map the slowly backward shifting line that marks the fateful recoil of the forces that fight for democracy and humanity, we can only regret with bitterness and humility that America's contribution to that heroically resisting line is practically negligible. There may be a handful of Americans fighting shoulder to shoulder with their brothers of England and France. There can be no more than that. What would Americans not give if our share in the resistance to that demoniac onrush were commensurate with our national greatness and proportioned to what we have at stake?

In the midst of the terrible battle two messages come to us from across the seas, to which we must harken with attentive minds. The Premier of England sends to the people of America a word of urgency and forcefulness:

*"In war, time is vital. It is impossible to exaggerate the importance of getting American reinforcements across the Atlantic in the shortest possible space of time."*

To this appeal from the leader of the nation whose invincible navy has kept our shores inviolate for three years and a half and whose men have poured out their blood in torrents in the cause that we now recognize to be our own, we cannot turn a deaf or an unheeding ear. Men we must send, with all the speed we may and in numbers limited only by the means of transport.

The other message comes from one of our own. General

Leonard Wood, senior Major General of the United States Army and former Chief of its General Staff, comes back from France to tell us that we should have two million men in France this year, and a further force of three million men behind them here if Germany is to be defeated.

General Wood is an experienced, skilled and able soldier. His judgment on a matter of military policy is beyond question sound. His counsel is not to be lightly weighed nor wantonly cast aside.

How near are we to the mark set by General Wood? In his article in *The Independent* last week Mr. George Creel told the facts:

The Regular Army, from a scant 128,000, has grown to 513,000; the National Guard in Federal Service has expanded from 80,446 to 450,000; and a half million young Americans are in the National Army. That is to say, within a year the army of the United States has grown from 9524 officers and 202,510 men to 123,801 officers and 1,528,924 men.

We have then one million and a half in all. We should have five million—more than three times as many. Secretary Baker has said that we are to have half a million men in France early this year. We should have three times as many more before the year is out.

We are not getting men, training men, sending men fast enough. We must have a new plan on a more extended scale with a greater impetus. We must get men into training camps in numbers that exceed anything we have yet attempted. We must put them thru the mill of preparation with vigor and speed. We must get them over to France, to complete their training there and then to fling the implacable defiance of America into the teeth of the Kaiser's men.

Objections will be raised to such a program. There is no objection that cannot be met if we are sufficiently determined to accomplish the result.

It will be said that we have not the training camps to hold the men. But Mr. Creel last week told us how cantonments can be built and camps prepared when America wants to do it:

For the training of these men there had to be provided almost instantly sixteen cantonments, great cities of wood and steel complete in every municipal detail. On May 7 the order to select sites was given; on June 15 building began; and within ninety days after the driving of the first nail the first selected men entered the cantonments.

It will be said that we have not the uniforms, the blankets, and the other equipment. They can be manufactured. There is plenty of wool now going into civilians' clothing, plenty of machinery now being used to make clothes for men and women in civil life, that could be spared for military purpose the minute we make up our minds that a great army shall be raised and clothed.

It will be said that we lack the ships. They are being built. Chairman Hurley, in an address in New York last week, told of the splendid progress that is being made with our shipbuilding program. If he is right, before the year is out we shall have the ships.

It will be said that to take the young men from our industries in the necessary numbers and keep them in training for the long time until they could be sent across would be a deplorable blow to our industrial effectiveness. But we have not yet scratched the surface of the woman power of America. Just as fast as it is needed it will flow into whatever channels open to it with the call of imperative need. We have not yet begun to realize that what is now done by men we can do in some other way or do without. A visitor to Paris more than two years ago saw shop after shop boarded up and decorated with the simple legend, "Closed on account of mobilization." Where, in this country, has anything yet been "closed on account of the selective draft"?

It will be said—but what may not be said.

There is but one thing to say.

The cause needs men. England asks for men. France asks for men. Victory demands men.

We will send men.

"We are coming, brothers in arms, five million Americans strong."

## MILITARISM NAKED AND UNASHAMED

IN the midst of the great battle the German Emperor is said to have been deeply impressed by the terrible devastation in the battle area. He is reported to have said to General von Ludendorff:

How glad we should be that our country has been spared such terrible things. Why did we succeed in keeping the fighting beyond our frontiers? Because before the war we always urged the need of armaments. When mankind changes these things also will change, but first mankind must begin to change.

The Kaiser is doing his best to convince us that militarism will not be eliminated from the world with the consent of the present rulers of Germany. They must be defeated by force of arms first. German militarism wears no mask. It is time that we began to believe the evidence of our eyes and ears.

## IN A DARK HOUR

ONCE more, as in the dark days of August, 1914, the cause of freedom and democracy, justice and humanity, faces a supreme trial. Then we were spectators; now we are partakers of the peril. With what mind and with what heart shall we meet this hour?

Our first emotion must be one of humility. Because we were slow to see this fight as ours, because we were long in recognizing the reality of the German menace to all that we hold most sacred, our gallant allies must meet this greatest assault with but little of immediate help from the man power of America.

We must shake ourselves free from careless optimism. It is the greatest war machine the world has ever seen that launches its augmented strength against the devoted ranks of our allies. We can only pray that the lines will hold. The event is still shrouded in the mists.

We must clear our minds no less of black pessimism. The world has never beheld purer consecration and more heroic determination than infuses the souls of the men who "stand at Armageddon and battle for the Lord." What man can do, the bulldog breed of Britain and the fine flower of France will achieve. It may even be that America's "first hundred thousand" will have its opportunity to show the American "fighting edge" before this grim matter has been played out. With such champions, fighting in so good a cause, it were craven to despair.

But what can we others do, standing impotent half a world away? We can "here highly resolve that these dead shall not have died in vain." We can tune our hearts anew to the determination that, come what may come, we shall go thru to the end. We can multiply and accelerate our preparations as tho it were to be our lot at the last to fight the German horror single handed and alone. We can reconsecrate ourselves to the conviction that the world cannot endure permanently half German and half free.

## DISINTERESTED DEVILS

MANY modern people are inclined to fight shy of the old theological term "sin" and substitute some word or phrase supposed to be equivalent, such as "selfishness," "anti-social conduct" or "arrested development of the moral consciousness." Since sin by any other name is just as bad, there is no reason to fear that the rapid disappearance of the word from sermons and articles is any sign of growing insensitiveness to the presence of evil. But there is reason to regret that the new terms which have displaced "sin" are so inadequate.

Selfishness, for example, is often described as the sole cause of all moral evil. The good man, we hear, sacrifices himself for others; the bad man seeks his own immediate profit. It may be conceded that most wicked acts have been performed for the benefit of the person committing them, but, on the other hand, some of the most appalling acts of devilishness ever committed were as little calculated to profit the evil-doer as to benefit his victims. Many crimes find an easy explanation in the love of money, of comfort, of beauty, of pleasure, or in the satisfaction of hate or jealousy. These may be called the personal or selfish sins. But there is a dreadful list of impersonal crimes; whose origin must be sought in the abstract love of power, in the bullying instinct which delights in cruelty for its own sake, or in the fanatical devotion to the interests of others which will lead men to do for the sake of Fatherland, of Holy Church, of a business corporation, of a labor union, of a political party or even of a college football team what nothing could have induced them to do for their own profit. There is an altruism of evil as well as an altruism of good. We may illustrate this by two brief pictures, not of individuals but of well-known types.

The scene is Spain in the sixteenth century. An Inquisitor has just entrapped a heretic by an elaborate series of deceits ending in a broken pledge of safe-conduct. The Inquisitor is about to question his victim by means of the rack, preparatory to roasting him at the stake. The Inquisitor is a bad man, if perfidy and cruelty are evils, but he is not a selfish man. He sleeps in a stone cell, wears a hair shirt, lives on bread and water, spends his nights in prayer and vigil and inflicts more savage tortures on his own body than on that of any heretic he ever examined.

The scene is Germany in the twentieth century. A diplomat has just concluded a treaty devoting (as he well knows) several hundred thousand Christians to Turkish massacre. He has supervised the distribution among various neutral nations of every weapon of demoralization from lying propaganda to bombs and poison; he has tricked nations into war by forged documents; he has decreed that the women and children of one province shall be enslaved to work under the lash in the munitions factories of their conquerors and that the women and children of another province shall be robbed of their gathered crops and left to starve. This diplomat, like the Spanish Inquisitor, is a bad but not a selfish man. He lives within a very modest salary from the State and has resisted every temptation to enrich himself by graft. He is austere in his personal habits and strictly honorable in his personal relations. He has sent his own sons forth to die in the war which he provoked and

FIELD MARSHAL HAIG

has himself been under fire while inspecting the front. Ambition is his strongest selfish motive, and yet he has more than once sacrificed honors, office and reputation to shield the blunders of his official superiors. Apart from his self-sacrificing devotion to the Fatherland, in whose service he has grown gray with incessant toil, he would be a very fine fellow. He does the Devil's work with the same single-minded loyalty that a saint brings to the work of God.

## SHOPPING TIME SAVING

**N**OW that we have artificial-light-saving—curiously miscalled “daylight saving”—added to the coal-saving, wheat-saving, meat-saving, paper-saving, and freight-saving, it seems appropriate to call attention to an ingenious device of an early American economist, Joseph Warren, for reducing and fairly apportioning the time spent in shopping. The “time stores” that he started in the Socialist communities at New Harmony, Indiana, and Modern Times—now Brentwood—Long Island, were equipt with clocks to measure the number of minutes absorbed in making each sale. When the clerk started to wait on a customer he set the dial and when he had finished he noted the elapsed time. He then added to the bill such part of his day's wages as corresponded to the fraction of his day that he had consumed in attending upon the customer.

This system if introduced into our department stores would speed up purchasing marvelously for the bargain hunter. On the other hand, the ladies who enjoy shopping could spend all the time they liked at the amusement, only they would pay for it by the hour as for a taxicab instead of throwing the cost of it, as now, upon the store or rather upon those who dash in, buy something and out again. The customer with a conscience would not as now be worried or hurried into an inconsiderate purchase by the thought that she was too slow in making up her mind, for she would find it worth her while to pay the extra twenty or fifty cents an hour to get just what she wanted. On the other hand, the shopgirl would cease to be impatient and snippish. It would indeed be “no trouble to show goods” if she knew she was being paid for every minute she so spent.

Which of our enterprising department stores will be the first to introduce the taximeter shopgirl?

Ille ne passeront pas! They shall not pass!

How do you like that extra hour of daylight? What do you do with it, now you have it?

South Dakota has ratified the Federal prohibition amendment without a dissenting vote in either chamber of the legislature. This is the tenth state to ratify. The legislators in the ten states stand five to one against the liquor traffic. There can be but one outcome.

Another American amusement, besides skating, feasting or theatergoing, has been banned by the war. The interpretation of prophecy, in which our forefathers took such delight, is now prohibited—that is if the interpretation points toward pacifism. Pastor Russell's posthumous work on “The Finished Mystery,” dealing, we are told—for we disclaim having a copy—with the Books of Revelation, has been confiscated in Canada and United States.

German engineers have begun the construction of a tunnel connecting Europe and Asia according to plans previously prepared. This ought not to prove a formidable undertaking since the Strait of the Dardanelles is only 1475 yards across at its narrowest point. The Hudson tunnels are 2000 yards long. The Germans have also prepared plans for a Dover-Calais tunnel but have not yet begun work on it owing to unexpected difficulty in acquiring possession of the terminals.

# THE MESSAGE OF THE HOUR

## From the British Government to the American People

### PRESENTED BY THE EARL OF READING

BRITISH AMBASSADOR TO THE  
UNITED STATES

*Taken from a speech delivered at the Lotos  
Club, New York, March 27*

**W**E have now been engaged in war for a long period. We have struggled ever since August of 1914. We are still struggling and we shall continue to struggle until the end has come.

It is well that we should face facts. I do not believe that either you in this country or we in ours are ever the worse off for knowing the facts, even tho they may be unpalatable. We have had during the last few days conflicting currents of anxiety which have no doubt stirred you, as they have stirred our people, to the depths. We have had an enemy who has concentrated his attacks upon our forces with the object of driving us to a surrender of large bodies of our troops and to break our lines so as to compel on our part the acceptance of a peace at the dictation of Germany.

The attacks have been heavy; we have been driven from positions which we held. The enemy has been enabled to do this by withdrawing masses of troops from Russia, assisted by the artillery which he has got, not only from there but also from Austria, all flung upon the part of the line which was held by the British troops. Deeds of valor have been done; acts of prodigious valor have been accomplished daily. Many of them, alas, must remain unsung; but in the end the epic will be written which will, I verily believe, prove the record of one of the glorious chapters of British arms. Our men have been compelled to give ground in consequence of sheer weight of numbers of men and guns. If you read the stories that are daily appearing in your press you will know some of the deeds which our people have been called upon to perform. I am not going to enumerate them, for the best of all reasons, that I know not the details; they have not yet been chronicled. But I do know this, and I have no hesitation in saying it to you, speaking, as I do, as an Englishman and as the representative of my nation, that we have withstood the attacks of the enemy; that we have held our line under circumstances which may well redound to the credit of any nation which may be called upon to submit to like attacks. In particular, what has held our people together is the dogged determination, the grim tenacity of our people. When speaking of it I will, if I may, give you a message which I have received by cable today from Mr. Lloyd George, our Prime Minister. He says:

**“W**E are at the crisis of the war. Attacked by an immense superiority of German troops, our army has been forced to retire. The retirement has been carried out methodically before the pressure of a steady succession of fresh German reserves, which are suffering enormous losses. The situation is being faced with splendid courage and resolution. The dogged pluck of our troops has for the moment checked the ceaseless onrush of the enemy, and the French have now joined in the struggle. But this battle, the greatest and most momentous in the history of the world, is only just beginning. Throught it French and British are buoyed up with the knowledge that the great Republic to the West will neglect no effort which can hasten its troops and its ships to Europe. In war, time is vital. It is impossible to exaggerate the importance of getting American reinforcements across the Atlantic in the shortest possible space of time.”

Possibly it is difficult for the American people—with all your sympathy and with all your sensitiveness—to understand exactly the feelings of us who have been in this war so long; who have lost so many; who have all suffered in the same way, and who are all anxious at the present moment as to the lives of those who are doing battle on the front at this moment. It is difficult indeed to picture to yourselves what all this means to us; but you are about to learn it. You have your troops now in France, you are sending constantly more and more troops, you are taking your part in the line. You are preparing now for any onslaught which may be made upon you. You will have to go thru the same kind of suffering which we have had to endure. You will not shrink from it, as we have not shrunk from it; you will not flinch from sacrifice, as we have not flinched from it. You will do your duty—I believe in my innermost heart—as we have tried to do ours.

These are the days of realities. They are the days of grim earnestness. They are the moments when men realize that life is something real, and that there can be no play. They are moments when we are becoming impressed more and more that ideals are worth striving for, that they are worth sacrifices, that lives must be cheerfully spent if they end in the realization of those great ideals which tend to make humanity noble.

**A**ND now, as this fight continues, let me remind you that there is that in the British people which you know so well, having, if I may be permitted for once to remind you, had common ancestors of British stock—that when once they had made up their minds, when once they had set their will and purpose, that they will hold on to the end, that they will never give way, and that in this particular instance there is the added force, the strength of which it is difficult for man to gauge—that is, that they know that their cause is just.

Our men are like yours, in the main not trained soldiers—men who were civilians, just as yours were, only a little while ago and who did not think that they would ever be called upon to don a military uniform. All sections of the community joined with us originally in volunteering their services, for it was only at a late stage that we had to have recourse to conscription. All sections of the community are now soldiers doing their share, and it is indeed one of the marvels of the day at which I never cease myself to wonder, that there should be so many men who do deeds which at one time were thought to be associated with the few, but which, nevertheless, are the proud heritage, I believe, of our common stock—deeds which are the result of an inborn

**It is impossible to exaggerate the importance of getting American reinforcements across the Atlantic in the shortest possible space of time.—Premier Lloyd George.**

valor and of a fixed determination which knows not the meaning of giving in.

I think now of the efforts that will be required before this struggle is ended. Do let us remember, as we have tried to remember it in my country, that it is not only courage and enthusiasm for the war that are required, it is the effort of every single man and woman in the country. Everything that human ingenuity can bring to bear in this struggle must be accomplished. All the resources which can be organized and mustered for the common purpose must be brought together and must be used. All that men can do must be done. That is the lesson which we have learned. It is the lesson we are trying to teach our people. It is the lesson, I believe, which must be learned everywhere where there is war, for this war is a war in which it is idle to speak of nations being involved—it is a war in which the very sacred principles upon which humanity is based are at stake.

It is incalculable what the result would be if, indeed, we were to fail. We cannot fail, because if we did humanity would stagger and be crushed. But I do not for one moment contemplate a possible failure. I see before me in you, my countrymen and our Allies, the assistance which is being given, and will continue in ever-increasing magnitude to be afforded us by this great republic.

I speak for my country when I say to you in conclusion that we have no fear, we have no doubt, we are not shaken in our faith, we are as resolute as ever, we are determined that, come what may, we will fight on as we are fighting for liberty—that which is dearer even than life itself.

Together you in America and we of Great Britain and the Allies can do so much, now that we are together, that no human being, however great his foresight, can, in my judgment, measure it. I have stood from the first moment, staggered at the immensity of the problem when striving to picture to myself what you and we together can accomplish—you with your ideals, with your great traditions of liberty, with your battles ever for liberty and for liberty alone—we with our traditions, with our past history, with our clarified visions, with our ideals, the same as yours. We can now walk with you in the path which all humans with great ideals would wish to tread.

**T**OGETHER we can secure almost all that is worth having; together we can accomplish much that hitherto seemed impossible. Together we can work for liberty, for democracy; together we can always manage to maintain the peace of the world. In my view there is nothing greater in the world's vision at the present moment than your great nation and mine assembled together, fighting for the common cause, shedding our blood together for the common ideal, determined, as we are, together to win a common victory, all struggling and striving with all our might and main, not for aggression of any country, not for any dynastic victory, not for one sovereignty being greater than another, but in order that we may still continue together to pursue the path of peace, of justice, of liberty, that in the end it may be said that we with our allies have done that which seemed impossible—that is, we managed to secure peace for humanity and for the world.

# THE STORY OF THE WEEK

## Hindenburg's Drive

The big offensive for which the Germans for months have been openly preparing and boasting about was started on the morning of March 21. It was directed against the southern end of the British front between Arras and La Fère, an extent of about fifty miles. The artillery preparation was brief, but intense. Guns of all sizes were used on the front, including some Austrian howitzers carrying up to twenty-eight miles, and guns of a new design that shelled Paris. Gas shells were also employed, but owing to the wind did little damage. After a few hours of bombardment the infantry moved across the open ground against the British trenches, in mass formation as at the beginning of the war. The British batteries cut them down by thousands; sometimes half of them fell, but the rest pushed on. Even their enemies were compelled to admire the coolness with which they stood under fire of the British machine guns while they cut the barbed wire with their shears. On the other hand, the German reports give full credit to the courage of the defenders, but say that they were poorly handled.

The British troops at the front were outnumbered and not being adequately supported were forced to withdraw when they were exhausted. The German line, on the other hand, was constantly replenished by fresh forces as the troops in front were used up. The German soldiers were replaced every two days, while many of the British had to fight all the week. At Ervillers nine German divisions with a thousand cannon were brought against three British divisions; before Cambrai they were eight to two. One gun to every twelve or fifteen yards is said to have been the average for most of the German line.

According to British estimates the enemy had eighty-five divisions of reserves on the western front. Of these thirty-three were brought into action on the first day, ten on the second and ten on the third. A division is now counted as 14,000 men.

During the first five days the Germans claimed the capture of about 50,000 men and a thousand guns. This is not surprising considering the extent of the ground covered and tends to confirm the British reports that no

large bodies of their troops were cut off, but that the withdrawal was conducted to an orderly manner. Isolated detachments of British troops stuck desperately to their posts and inflicted terrible slaughter upon the enemy. The British military authorities estimated their total losses for the week at 100,000 and the enemy's at 600,000.

The tanks that were first employed by the British on this front a year ago have now been adopted by the Germans. Their tanks, said to be of a new and swifter type, were introduced in the present drive and proved useful in dislodging the British batteries which the infantry could not reach. The Germans claim the capture of more than a hundred of the British tanks, some of which are now being employed against their former owners. The Germans claim to have brought down ninety-three airplanes and six captive balloons. On the other hand, at least twice as many enemy machines were lost and the British aviators did valiant service in peppering the advancing columns with their machine guns in low flights.

## The Movements of the Armies

The right or northern wing was under the command of the Bavarian Crown Prince Rupprecht and Generals von Bulow and von der Marwitz. Their attack was directed at Bapaume, one of the towns evacuated by the Germans a year ago and seven miles in front of the Hindenburg line.

The German Crown Prince with General von Hutier commanded the left or southern wing, which, starting from St. Quentin, crossed the Somme River at Ham. The Emperor William with Field Marshal von Hindenburg and General von Ludendorff established his headquarters at St. Quentin, close behind and in the middle of the German front. He went forward and visited Péronne in person as soon as it was taken. Altogether fourteen generals are named in the German despatches as commanding armies engaged in this drive.

The Germans had made no secret of their intention of putting all their power into a great and, as they hoped, a decisive drive against the British line, and their elaborate preparations have been repeatedly reported. The Allied airplanes have been active in observing and impeding the progress of these preparations. In February the British correspondents announced that the Germans were laying new roads to the front and practising the tactics of open warfare which they expected to have an opportunity to display. Models of the British positions with trenches, barricades and mimic canals were laid out and the German shock troops drilled in taking them in cooperation with the new tanks. Yet the actual attack took the British by surprise, for they were not aware that such large numbers of troops had been concentrated on this sector. This was due to the fact that the Germans had detrained their reserves in Belgium and brought them to the front in six night marches.

The German advance is essentially a swing of a fifty mile line, hinged in the north of Arras, while the southern end has moved twenty miles down the Oise River. The right or north wing, moving forward below Arras, which the English hold, took by hard fighting the villages of Croisilles and Ervillers, three or four miles in front of the German line. The next column, coming from Cambrai, took the railroad town of

THE SECOND BATTLE OF THE SOMME

The German offensive, starting from the Hindenburg line (broad solid line) between Douai and La Fère had by the end of a week reached the limit indicated by the dotted line. This, as will be seen, coincides closely with the front (thin solid line) held by the British and French before they began to drive the Germans back in the first battle of the Somme, July to November, 1916. Bapaume, Péronne, Ham and Noyon, which were the objectives of the French and British in 1916, were spontaneously evacuated in February of 1917 when the Germans withdrew to the Hindenburg line, laying waste the country in between over which they have now swept. The Germans seem to be directing their drive at Amiens and they have taken Albert. The French are holding the territory south of the Oise and Ailette rivers and some Americans are reported here. The "mystery gun" bombarding Paris is supposed to be located at St. Gobain, south of La Fère

Bapaume, which the British fought so hard for in 1916 and which was evacuated by the Germans in the beginning of 1917. Further south the columns from St. Quentin captured Péronne, the ancient fortress in the bend of the river which was the objective of the French and British in the first battle of the Somme two years ago. The columns from Bapaume then converged upon Albert, in the direction of Amiens.

At Ham the Germans crossed the Somme on pontoons in face of a heavy fire. The British, finding themselves unable to hold the line here, called upon their allies for help, and in response the French took over the southern sector of the threatened line from Roye to Noyon on the Oise River. But they were not able to hold these towns against the advance of the Germans from La Fère, and were compelled to retire down stream toward Paris. On the left or southern side of the Oise the French are still steadfast.

The end of the week found the German front just about where it was fixed in the fall of 1914 when the armies became immobilized. That is to say, the Germans have regained about all the ground they had lost in three and a half years of trench fighting.

Their advance in the first three days took them substantially over the strip which Hindenburg evacuated in February, last year. Then they entered upon the old battlefield of the Somme from which they had been driven back by the French and British during the preceding year. Now they stand on the edge of new territory which they have not seen since they first swept over it in the summer of 1914.

#### The Mystery Guns

It has been the habit of the Germans to introduce a new invention in each one of their offensives, largely for the psychological effect, because all of the belligerents have been nervous lest some novel device should give them an

advantage sufficient to compensate for courage and numbers. In their attack upon the Belgian fortresses in 1914 the Germans produced the forty-two centimeter gun of unprecedented range and power. In the battle of Ypres they inaugurated gas attacks, notwithstanding the prohibition against them in the Hague rules of warfare. At Verdun they brought out the flame-throwers. Not long ago the Allies were surprised to find that a German airplane which had fallen behind their lines was equipped with Diesel engines which burn crude oil and are much more efficient than the gasoline engines.

The innovation of the present campaign is a big gun which apparently has a range of seventy-five miles. When the news first arrived that shells were being fired into the city of Paris, it was received with incredulity by the experts and with amazement by the public, for the German lines before the recent drive were sixty-two miles away from the French capital, and no gun was known which could shoot half that distance. But later reports confirm the report and shows that there were at least two such guns engaged in the regular bombardment of Paris and its suburbs. Beginning at eight o'clock on Saturday, the shells fell at intervals of twenty minutes. This was reduced to fifteen minutes on Sunday and later to nine minutes. Occasionally the shells fell one or two minutes apart, proving that there were at least two guns. Their caliber is 8.8 inches and their length 20 inches. They weigh 200 pounds, but contain less than 20 pounds of explosives. According to a late dispatch the guns were manufactured at the

Krupp munition works in Essen. The shells do not do nearly as much damage when they explode as the bombs dropped from airplanes which were raiding Paris at the same time. Ten persons were reported killed and fifteen wounded the first day by the gunfire. In many cases the only damage done was a hole four or five feet in diameter blown in a building or the pavement. The Paris populace on Palm Sunday seemed less alarmed over the bombardment than amused at the attempts of the police to play the drums which had been given them as a new warning signal.

**Americans in the Fight** For knowledge of American participation in the great battle we are confined to the German, British and French reports for nothing from Pershing has so far been made public. German military correspondents say that "the undoubted bravery of the Americans proved no match for the *furor Teutonicus* and that they got "a severe lesson" is "especially gratifying to us." The correspondent of the socialist daily *Vorwärts* says:

Attacks of combined allied forces yesterday against the pivot of the German attacking front near La Fère were particularly heavy. These counterattacks did not find us unprepared. It testifies to the superior foresight of the German command that these attacks, in which American troops certainly participated only symbolically, were not only beaten off, but were thrown back on the Oise Canal by an energetic blow.

The Americans who "symbolically participated" are surmised to be 27,000 and it appears that they are stationed near the juncture of the French and British forces on the north side of the Oise. Two regiments of American railway engineers are known to be on the British front.

Meanwhile the artillery has been active on both sides of the American sector in front of Toul. Two of the French towns back of the German

Central News

#### PARIS UNDER FIRE

Parisians lately have been getting used to air raids; they met with similar calmness last week the bombardment of the city by a mysterious long-range gun. Part of Paris took to cellars and public shelters, but most of Paris went about the usual occupations. The city is plentifully posted with signs like those in the photographs at left and right above. The one at the left shows a street map with directions to the nearest "abri" or shelter; the one at the right shows the subway entrance placarded as a place of refuge. In the center is a refuge cellar where the people are waiting the end of an air raid. The more cautious wear gas masks, but that is unusual

Brown in Chicago Daily News

### THE BURDEN

line, have been so heavily bombarded with gas bombs that one of them, Richecourt, had to be evacuated. An American gun of 37 millimeter caliber has done effective service in knocking out enemy observation posts and batteries.

**British Opinion** How the British military authorities regard the situation may be seen from a statement given out on March 27 by General Maurice, Chief Director of Military Affairs at the War Office:

The opposing forces on the whole front are as nearly equal as possible. The enemy, being on the offensive, gets his reserves on the scene first. What we require is time to get up our forces to the right place. Every day the enemy is held is a tremendous advantage to us.

The battle is far from over, and I would not like to say we are not likely to be faced with another crisis, but time is on our side. The enemy is getting further from his railheads and the area behind the line is getting more congested. His supply of men also is wearing down. Thus far the Germans have kept their troops in echelon, throwing in fresh men from the rear echelons as fast as the front line is exhausted. Meanwhile the men carry full equipment and exist on iron rations. This process of handling troops is now growing difficult, and meanwhile Anglo-French reserves are getting nearer the battle front. The situation today is less critical than it has been in the last few days.

**German Opinion** How the Somme battle looks thru enemy eyes may best be learned from General von Ludendorff, chief aid to Hindenburg and reputed to be Germany's greatest strategist. In an interview on March 27 he said:

A great battle has been fought and victory has been won, but nobody can foresee what will result from it. The course of the battle goes exactly as it was planned, and as it was hoped it would go. The infantry has completely maintained the spirit with which it entered the war in 1914, and this will bring further successes, altho the enemy is still strong and fights with determination.

We have succeeded in changing the fighting from position warfare to warfare of movement, altho the attacker had everything against him and the defender had strong defensive means in his favor.

The British believed they could rely on the strength of machinery. The employment of tanks and great numbers of machine-guns is typical of their methods of warfare. Undoubtedly the British use machine guns with much skill. For instance, they construct subterranean corridors, starting from trenches, in which machine guns are

planted. Such installations cannot be observed by our artillery, and in foggy weather especially cannot be reached. Our infantry had to take all these machine gun nests, scattered everywhere over the battlefield.

Our men advanced with great élan so that it was difficult to follow them with tired horses and damaged carts, but the spirit of the men is splendid.

The preparations for the battle meant two months of strenuous labor. In the beginning of February the order was given, and on the night of March 20-21 the attack was begun, right to the minute. Everything was ready. We see the result.

### The First Phase of the Battle

The end of the week after the drive began found the Germans occupying substantially a right-angled triangle of which the hypotenuse was the old Hindenburg line. The base from La Fère to Montdidier was about thirty-seven miles and the height, from Montdidier to Arras, was about fifty miles. The French at the end of the week struck at the middle section of the base line between Lassigny and Noyon, and drove the Germans back more than a mile on a six mile front. The British have not yet delivered their counter attack in force.

The western side of the German triangle is still sixteen miles east of Amiens, and, since it would be dangerous to advance a sharper salient, the Germans have decided to raise the altitude of their triangle by extending the line of attack north of Arras. Accordingly, on the morning of the 28th the enemy bombarded the British line east of Arras and then, under cover of a cloud of smoke, launched fresh troops at the British trenches both on the north and the south of the Scarpe River, which runs thru Arras. They gained some of the hills east of Arras from which they had been driven a year ago.

So far as can be gathered from the dispatches, the number of troops actively engaged in the first week of the battle was about as follows:

German .....	800,000
British .....	400,000
French .....	140,000

Besides these some American soldiers were involved, but their number is purely a matter of conjecture. The British estimates of enemy losses range from 30 to 60 per cent. The German report, on the other hand,

states that: "Our losses have been generally kept within normal limits, altho at some of the most vital points they were heavier. Of every hundred wounded 60 or 70 per cent received slight wounds."

**General Wood on America's Duty** Major General Leonard Wood, who has just returned from France, appeared before the Senate Committee on Military Affairs last week and told the members what he had observed and learned "over there." It was a secret session in which he spoke, but very definite and apparently accurate reports of what he said found their way into the public prints, presumably thru members of the committee.

General Wood reported that France and Great Britain are disappointed at the slowness with which the United States is bringing its war preparations to fruition. The Allied nations had believed that this country, once in the conflict, would display much greater force than had actually been shown. The failure to supply adequate tonnage to make up for the losses caused by the submarine warfare had seriously upset the Allied calculations.

General Wood asserted, from his study of the situation on the spot, that the United States should have 2,000,000 men in France this year. To accomplish this, and to have a sufficient reserve behind them on this side, we should begin to train 5,000,000 men at once. There should be no hesitancy in calling out sufficient men to reach that aggregate without delay. The necessity for greatly increased forces of Americans in France will grow continuously until the war ends. General Wood expressed deep admiration for the National Army; and urged that the units composing it be sent over just as rapidly as possible, the training of the men to be completed behind the lines in France.

General Wood's assertion that not a single American fighting airplane was in use by the American forces in France was a tremendous shock to members of the committee, as it must be to every American. The Germans have the ascendancy in the air over the American lines, the General said, since the Amer-

### THE GREAT WAR

March 22—Germans attacking British line on fifty mile front between Arras and La Fère.

March 23—Germans take Péronne. Paris bombarded by gun seventy-five miles away.

March 24—Germans take Ham, Chauny and Bapaume. Somme River crost.

March 25—Germans take Nesle and Noyon. Bolsheviki drive Germans from Odessa.

March 26—Germans take Roye and Chaulnes. British destroy Turkish force in Hit region, Mesopotamia.

March 27—Germans take Albert and Montdidier. British Admiralty reports loss of sixteen ships over 1600 tons and thirteen smaller.

March 28—Germans attack at Arras. French counter attack north of the Oise.

icans are entirely dependent upon whatever aid in the way of machines the French are able to give them. The French airmen on either side of the American sector give what assistance they can; but they are often too closely occupied over their own trenches to afford adequate protection. At such times the German airmen fly at will over the American forces; sometimes coming down so low that our men fire at them with revolvers.

Men, ships, airplanes and artillery, General Wood said, were the principal military needs of the Allies from the United States, and in the order named.

**An Explosion in the Senate** The disturbing report of General Wood as to the lack of actual achievement by the United States during its first year in the war was followed by an explosive debate in the Senate on the same theme. The attack upon the record of the Administration was led by Senator Henry Cabot Lodge. His strictures were concurred in by Senator Poindexter of Washington and Senator Johnson of California. Senator Lodge declared that the United States has no fighting aeroplanes in France and no gun except a few old coast defense guns, for which the French are making carriages. In the matter of ships, he asserted that we have turned out exactly two American ships in the past twelve months as a part of our ambitious war program of shipbuilding.

On the subject of our failure in the field of aeroplane production Mr. Lodge spoke with the heaviest emphasis. He said:

We know here and we have known for weeks, as the Germans have known, that we have no fighting airplanes in France. The Secretary of War spoke a short time ago of our beginning to send fighting airplanes to France. He said the number was small, but we had begun to send them. We returned at that time the two French models which we had here. Since then, I believe, one American airplane has gone; it may be on the water now, it may have been landed.

The heavy Liberty motor, according to the best information I can get, may be developed so as to furnish adequate power for bombing airplanes. The light motor does not show capacity for fighting airplanes. We have not a fighting airplane in France. The front where our men are is not defended in the air. The French and the English have use for every airplane they can bring up, and our men are not defended at all.

We have spent \$840,000,000 for airplanes in the last year, and we have not a fighting airplane in France.

On the matter of our manufacture of artillery, the Senator from Massachusetts had equally discouraging facts.

We have no guns in France except a few old coast guns which we sent out early, and for which the French are making carriages. We are using French guns. That is the hard fact. We decided to make 75-millimeter guns. We got the French plans; they gave us everything, including the secret of the recoil, and six months were wasted while we were trying to improve the best recoil of the best gun in the world, and now we have no guns. We have gone back to the French plans, with six golden, wasted months behind us.

His statement of the shipbuilding situation disclosed nothing of adequate achievement:

We have turned out two American ships,

according to the best information I can get. The country is told about twenty-six, or whatever the number is. We have been finishing some commandeered foreign ships; we have commandeered other ships, but we have got only two American ships, and yet the Shipping Board has been in existence since September, 1916. Two American ordered and built ships is our whole contribution to the new tonnage of the world.

In conclusion Senator Lodge made an appeal for taking the people into the Government's confidence.

The world looked to us a year ago and said we had come to the rescue of the situation. If the situation is ultimately to be saved, it can only be saved by the resources and the man-power of the United States. We have a good draft law; it has been well administered. We got the men; we can get more men; but, apart from that, what have we to show in accomplishment? A wasted year!

The only relief that I can see is to appeal to the spirit of the American people. You cannot do that if you deceive them. Tell them the truth. Let them know the dangers and the perils in which they are; that we are fighting for freedom, for civilization, for all that makes life worth living, and that we may be fighting before very long for our very existence as an independent nation.

It is no time to deceive ourselves. Let us look facts in the face. I for one have held my peace a long time, but the day has gone by when it is right to hold our peace.

**The Airplane Situation** Further light was thrown upon the airplane situation by Senator Hitchcock of Nebraska and Senator New of Indiana. Mr. Hitchcock, who is a Democrat of an unusually independent turn of mind, attempted to meet the vehement charges of Mr. Lodge and Mr. Poindexter in relation to the deficiency in aircraft. He declared that the President had appointed a committee to investigate the matter and that a report was to be made by the committee within a few days. He said that the Aircraft Production Board had given every assurance that a certain number of combat or battle planes of the highest type would be ready by July 1. He added, however, "Last summer the Aircraft Production Board, in an excess of sanguine expectation, promised the country an enormous number of combat planes for a certain date of this year. There were to be 20,000 of them early in 1918. Later this contemplated output was reduced to 17,000, then 15,000, and now it is 2000 by July 1." Later in the day, in response to an inquiry from Senator Johnson, Senator New, a member of the Military Affairs

"FIVE MILLION MEN IN ARMS"

Major General Leonard Wood, just back from a tour of the battlefield in France, brings a stern call to America to speed up every phase of war activity. Two and a half million men in France by 1919, five million men in training, more ships, more airplanes, more ordnance were General Wood's chief recommendations before the Senate Committee on Military Affairs. He told the committee that France and Great Britain were disappointed at America's slowness in war preparations and that the Allies had counted on America for enough tonnage to offset the submarine losses. This photograph of General Wood talking with Colonel Roosevelt was taken before America entered the war when Colonel Roosevelt addressed the men at Plattsburg on our need of preparedness.

Committee, gave additional information in regard to the matter. He said that the original program called for delivering in France 12,000 combat planes by the first of next July. When the Senator from California asked further how many would actually be delivered in France by that date, Mr. New replied, "Thirty-seven." Mr. Johnson proceeded: "One of the statements made today is that it is in testimony before the Military Affairs Committee that the condition of our boys in the trenches today is such that, without let or hindrance, German planes are flying over them, and flying so low that our boys are shooting at them with revolvers." He demanded whether that was the testimony before the committee. Mr. New replied that it was.

**Silence Versus Publicity** In the course of the debate a spirited interchange took place between Senator Overman of North Carolina and Senator Poindexter of Washington. Mr. Poindexter had severely criticized the methods of the Aircraft Production and Shipping Boards. As he declared that "in September, 1916, men who were authorized to produce ships quibbled about preparations; they wasted month after month in quibbling," Senator Overman, who is recognized in the Senate as a kind of unofficial spokesman for the Administration, sprang to his feet, and the following colloquy occurred:

Senator Overman: Does the Senator think this is the proper time, admitting everything he says is true, to discourage the American people in the saddest hour of our history during the war? Does he think it the proper course to take on the floor of the Senate? Sometimes silence is golden.

Senator Poindexter: I infer from what the Senator says that if these things are true we should remain silent. I remained silent a long time.

Senator Overman: But the Senator is taking this opportunity when I say we are in great distress to discourage the American people, when we need to be encouraged instead of disheartened.

Senator Poindexter: This isn't going to discourage the American people.

Senator Overman: It discourages everybody. Now is the time for all men to be true and to be silent about these matters that we admit to be true.

Senator Poindexter: I don't agree with the Senator. I think there comes a time, after a while, when silence and forbearance are a fault. I will tell you that it is the

Fire and explosion, cause unknown, destroyed the Jarvis Warehouses last week at Jersey City, causing the loss of \$2,000,000 worth of war supplies

duty of the Senator from North Carolina and of every other patriotic citizen not to be silent, but to exert ourselves to improve the administration and the efforts of the Government in this war.

Senator Overman: The Senator is here criticizing the Administration for its mistakes while it is doing the best it can to carry on the war.

Senator Poindexter: I am here to point out what the Senator is seeking to cover up—an undisputed and scandalous failure of the Administration.

Senator Overman: I admitted that what the Senator had said was true, but I asked the Senator, admitting it to be true, if this was the proper time for the Senate to be throwing it out to the American people when they ought to be enthused. I say we ought to correct these mistakes, but in the proper way. Every man on the floor wants to correct them. Every man here, I think, is a patriot. Why does the Senator stand here at this time, when we are in a serious condition, to make the people of America unhappy and discourage them? This is not the time.

Senator Poindexter: How can everybody get together and correct the errors, if everybody does not know about the errors?

Senator Overman: The point I make is that the Senator from Washington is stirring up trouble in the country.

Senator Poindexter: If it stirs up trou-

ble, in order to point out the actual situation we are in, with a view of remedying that situation, with a view to remedying this policy of nonproduction and removing the secret influences and mysterious blight that have thwarted the efforts of the Administration, when it is time to understand that situation in order that everybody, as the Senator from North Carolina says, may unite to bring about a successful issue at the war.

This policy of silence, at this critical time, about the failures in our program of war preparations, has been also recommended by newspapers who are thick-and-thin supporters of the Administration. But there are other leaders of public opinion who believe that the American people do not need to be kept in ignorance even at a moment of dire crisis. They are convinced that the national fiber is strong enough to bear the truth, even when it is disagreeable and disheartening.

#### Our Shipbuilding Progress

In a frank and comprehensive speech last week in New York Mr. Edward N. Hurley, Chairman of the United States Shipping Board, presented the facts in regard to the country's shipbuilding program, its present status, and the hope for the future. Mr. Hurley portrayed the tremendous need for ships thus:

If by the exercise of magic a bridge could be thrown across the Atlantic over which our armies, their artillery and supply trains could move rapidly and unhampered to the battle lines in France, would any military man in Berlin, Vienna, Rome, Paris, London or Washington have any doubt but that the world would be made safe for democracy before the year goes out? We have the men, we have the guns, we have the supplies. But without means of getting them to the front we might as well be without them. And unless we get our men to the battle line we will not win this war.

So it all comes back to ocean transportation—to the vital need of ships. Fail there and we fail utterly.

He declared that the responsibility for supplying this need had devolved upon the Shipping Board—

under the most extraordinary conditions that ever existed—supplying it at the most crucial period of the war's history, at a time when every other industry is being taxed to its utmost capacity in the matter of materials and labor to provide war necessities. The problem of providing tonnage, such as is required by the exigencies of the existing situation, would in itself be an enormous task, even in normal peace times.

#### WHERE AMERICA HOLDS THE LINE

It is not an inspiring photograph, until you realize that this desolate stretch is the American sector of the frontier of freedom, where our "boys" are doing their part to help win the war. This photograph was taken between the front lines and Toul. The trenches are in the background.

#### THE FIRST AMERICANS GIVEN THE FRENCH WAR MEDAL

Six of the soldiers fighting on the American front were decorated recently by the French Government for bravery under fire. This ceremony took place behind the lines during Premier Clemenceau's visit to the American sector. The Premier is second from the left in this photograph. General Debeney, commander of the French Army Corps, is pinning the medal on one of the Americans.

The difficulties are quadrupled when all branches of the military service are struggling for enlargement, struggling for the same materials and labor, and when we must, at the same time, give unprecedented aid to the Allies, both in furnishing labor to them for the manufacture of what they need in this country, and in furnishing them materials.

When the Board took hold of the task of shipbuilding, said Mr. Hurley, there was no shipyard in existence with which an order could be placed. The old yards were full to capacity with naval and merchant shipping orders. A new industry had to be created. New shipyards had to be built, shipbuilders to be secured to take charge of them, and men trained to build the ships. There were 37 steel shipyards in America when we entered the war. There are now 81 additional steel and wood shipyards, and 18 others have been expanded.

We are building 235 new steel shipways or 26 more than exist in all of the steel shipyards of England today.

On March 1, Mr. Hurley explained, there were under construction by the Shipping Board eight million tons of steel shipping; five million tons of this were being built for the Emergency Fleet Corporation, and three million tons consisted of uncompleted ships that had been requisitioned by the Government from private owners. Of this total steel construction, two million tons had been completed.

This statement of course does not mean that ships representing that amount of tonnage had been finished, launched and put into service; but that that proportion, or about 28 per cent. of all the work on the ships included in the whole eight million ton total had been completed. On March 1, Mr. Hurley said, 650,000 tons, or about eight per cent of the contracted and requisitioned ships, had been completed—an amount of floating tonnage exceeding our total output in 1916, including steel, wooden, and sailing vessels, by about 50 per cent. Mr. Hurley did not attempt to reconcile these figures with the statement of Senator Lodge that only two American ships had been completed

within the year except by quoting a couplet from Kipling's "If":

If you can keep your head when all about you

Are losing theirs, and blaming it on you.

He did, however, offer the suggestion that there are two methods of computing the construction of tonnage to show what is accomplished. One is by showing the tonnage in the water. That is presumably the method employed by Senator Lodge, who doubtless also excluded in his computation any requisitioned ships that have been completed. The other way is to show the tonnage under construction, and to report how near the entire program is to completion. This is the method adopted by Mr. Hurley, who also grouped together the requisitioned tonnage and the new tonnage begun and carried forward by the Shipping Board itself.

On the subject of wooden shipbuilding, the chairman of the Shipping Board had this to report:

Our program for building wooden ships has been beset with many difficulties and handicaps which could not well be foreseen. A year ago, wooden shipbuilding in the United States was almost a lost art. We found twenty-four old wooden shipyards, with seventy-three ship ways. The capacity for wooden shipbuilding has been increased until we now have eighty-one wooden shipbuilding yards, with 332 ways completed or nearing completion. Assuming that these ways will each produce two standard ships per year we should turn out about 2,300,000 deadweight tons of wooden ships annually.

He summed up the matter of increased facilities for shipbuilding thus:

These 332 wooden shipbuilding ways, now nearing completion, added to our 398 steel building ways, will give us a total of 730 berths upon which to build steel and wooden vessels. When you consider that we had only 162 steel building ways a few months ago and 73 wooden shipbuilding ways—a total of 235—an increase is shown of 495 wooden and steel berths on which we can build ships. With our total of 730 wooden and steel ways, we will have 521 more berths than Sir Eric Geddes in his recent speech stated England has now.

The New Liberty Loan The third Liberty Loan, the drive for which is to open on the anniversary of the entrance of the United States into the Great War, will be for \$3,000,000,000. The interest

rate will be 4¼ per cent. Provision is made for a 5 per cent sinking fund during the period of the war and for one year thereafter, by means of which the bonds of those who are compelled to sell may be purchased. The new issue of bonds will not, as was the case with the first two issues, be convertible into bonds of any later issue bearing a higher rate of interest. Bonds of the first and second Liberty Loans, however, may be exchanged for those of the third loan. Both the amount of the new loan and the rate of interest are smaller than was expected. The explanation of the Secretary of the Treasury is that "the rate now proposed is sufficient and that by restricting unnecessary capital issues, and by inducing the people who subscribe for Liberty Bonds to save and to keep them for investment, and by purchases with the sinking fund from those who find themselves compelled to sell, future increases in the interest rate may be avoided." Mr. McAdoo, in issuing his statement in regard to the new loan, added this appeal: "I am sure that the people will respond to the third Liberty Loan with the same loyalty and enthusiasm that characterized the first two loans. The great events now happening in France must fire the soul of every American with a new determination to furnish all the dollars and all the material resources of America that are needed to put an end to the execrable atrocities of German militarism. Defeat faces the Kaiser. Let us hasten it by asserting America's might with increased vigor in concert with our gallant comrades."

The first Liberty Loan was put out in June of last year. Two billion dollars were asked for and over three billion were subscribed. But none of the oversubscriptions were accepted. The interest rate was 3½ per cent. The second Liberty Loan was issued in October. The request for \$3,000,000,000 was met by subscriptions of four and a half billion dollars. Fifty per cent of the oversubscriptions were accepted. The interest rate was 4 per cent.

# THE DECIDING FACTOR

## An Analysis of Air Fighting in the Somme Offensive

"HAD the Allies one thousand more aeroplanes, we could have easily defeated the Germans."

This is the general expression that one hears as the German offensive is raging. It is an official as well as a public expression, and everybody scans the reports to find out what the aeroplanes are doing and whether the Allies have sufficient aeroplanes to maintain that supremacy in the air which is necessary to decide the war in favor of the Allies.

In the intense engagement that is now raging in France, one fact stands out clearly above all others and that is that if the British are enabled to hold the German offensive and roll back the Teuton wave, it will be due to a certain degree of superiority of the Allied air service.

The Allied aviators, and balloon pilots who watch the movements of the enemy from day to day, began working to prevent disaster many months ago. Hidden among a mass of other matter in the dispatches a few days ago was a small paragraph, the significance of which was doubtless lost on many readers. It stated that the Intelligence Corps of the British Army knew that the attack was coming and so General Haig was able to prepare to resist it and bring up reserve divisions in advance of the attack to those places where they would eventually be most sorely needed. This information was secured mainly by the airmen, who, flying low over the German lines, were enabled to make observations that have proved invaluable to the British and the Allies.

Had we had one thousand more bombing and fighting aeroplanes in service, they could have prepared the way to victory. They could have done more than five hundred thousand additional soldiers, or anything else that the Allies could have had.

With one thousand additional warplanes, the Allies would have been able to completely prevent German aviators from mapping the Allied positions; and could have destroyed the military bases, munition dumps, gun emplacements, the railroads upon which the troops, munitions and supplies were transported. In short, they could have prevented the massing of such a huge body of troops as the Germans massed for this drive.

Aeroplanes are the only things that can pass the German lines. They can

BY HENRY WOODHOUSE

VICE-PRESIDENT OF THE AERIAL LEAGUE OF AMERICA

fly over the German lines and they can do so at night, when neither the anti-aircraft guns nor the German aeroplanes can see them.

Unfortunately, the Allies did not have this additional aerial force. To keep one thousand well trained aviators on the fighting fronts, employing them daily, involves about forty per cent replacements in aviators, and from one hundred to three hundred per cent replacements in machines per month. In other words, it takes six hundred aviators per month to keep one thousand fighting continuously, operating day and night. Not all of these aviators are killed or hurt. A large number just "wear out" after a few weeks or months of intensive service, and cannot continue. They must be sent back to rest or to be employed in other work.

As for machines, they are used fast and in large numbers. The anti-aircraft guns are quite accurate at heights of fifteen thousand feet; and speeds up to one hundred forty miles are necessary to maintain supremacy in the air.

From Official Pictures Post

Aviator Nungesser, who succeeds Guynemer as the "Ace of Aces" on the western front. He has more detected German planes to his credit than any other aviator

Landing such fast machines in small fields leads to damaging a great many.

However, when we consider the tremendous value of each aviator, we find that the air service is the most important and economic branch of the fighting forces.

The dispatches give the number of German aeroplanes brought down by the British aviators in the first three days of the offensive as ninety-four. This is one of the evidences that the Germans have a substantial air service.

One of the dispatches dated March 24 summarized some of the activities of the aviators as follows:

"In moonlight of sufficient brilliance to permit the reading of a newspaper, bombing planes and warplanes swarm out, carrying high explosives, far behind the battle zone. They broaden the area of death scores of miles, few villages escaping.

"When the sun rises, the bombers, like prowling night birds, return to their roost; ground fighting speeds up, and scout fleets, succeeding the bombers, fly low over the clashing infantry, harassing enemy columns and observing for the artillery."

The official report on the aerial operations, also dated March 24, read as follows:

"The enemy's low-flying aeroplanes were most persistent in their attack on our infantry in the forward areas. Many of these machines were attacked and brought down by our pilots. A total of twenty-nine hostile machines were brought down and twenty-five others were driven down out of control. Two enemy balloons were also destroyed. Nine of our machines are missing.

"Our machines on Saturday carried out another successful raid on factories in Mannheim. Nearly one and a half tons of bombs were dropt, and bursts were seen on a soda factory, the railway and docks.

"Several fires were started, one of which was of great size, with flames reaching to a height of 200 feet and smoke to 5000 feet. The conflagration was visible for a distance of thirty-five miles.

"The weather Saturday again favored operations, and our aeroplanes were constantly employed in reconnoitering positions of troops, in photography and bombing and in reporting suitable targets for our artillery. Many thousands of [Continued on page 48]

## THE BIGGEST BATTLE IN HISTORY

BY THE MILITARY CRITIC  
OF THE INDEPENDENT

**T**HE long expected blow has fallen. As the sun rose on Thursday, March 21, the field-gray hordes swarmed out of the trenches of the Hindenburg line and advanced in solid masses along a fifty mile front into the land that a year before they had desolated. By Wednesday the Germans had gained some twenty miles and the battle line was back about to where it was in June, 1916.

As was pointed out last week in *The Independent*, Hindenburg "has the move" this year as formerly and can choose his own time and place for the spring campaign. It now appears that he not only picked the battlefield but prepared it for his purposes more than a year ago. The ground over which he has advanced is the same that he relinquished to the British without a struggle in February, 1917. The British laughed at Hindenburg for calling it "a strategical retreat," but now we see that is just what it was.

It will be remembered that the summer of 1916 ended with appearances very favorable to the Allies. The French had successfully stood off the German attack on Verdun and inflicted upon the enemy a loss of half a million men. The British, attacking the German front on the Somme July 1 in order to draw fire from Verdun, had by the middle of November taken 38,000 prisoners and 125 guns and 514 machine guns. They had fought their way to within gunshot of Péronne and Bapaume and were sure of getting these fortified cities in the spring.

The plans for the spring campaign were made in November, 1916, by representatives of all the Allies meeting at the French General Headquarters. Here it was agreed for the first time that attacks should be made in force on all fronts of the enemy at the same date so as to prevent the shifting of troops as in former campaigns. But these well laid plans were never carried out. By the time spring came Russia was out of the war. Italy was dilatory.

The Salonica army made no movement. Even the French and British failed to coöperate. According to the November agreement between Field Marshal Sir Douglas Haig and Marshal Joffre, the British were first to take Vimy Ridge overlooking the Lens coal region and then to concentrate their troops on the north end of the line for an offensive on the Flanders front in May. Joffre was to strike on the southern side of the Laon salient, a hundred and twenty miles away. But in December Joffre was removed and General Nivelle, who replaced him, threw over the plans of his predecessor and proposed one of his own. This was that instead of the British attacking in Flanders and the French on the Aisne as had been arranged, they should fight side by side in Artois and direct a joint offensive against the Hindenburg line between Cambrai and Laon. Nivelle's plan was substituted for Joffre's in January and preparations made to attack the Hindenburg line. But on the 24th of February the British discovered that the Hindenburg line was no longer there. It had been secretly moved a dozen miles east and the strip between converted into a desert so chaotic that the Allies were not able to get at the new Hindenburg line until too late in the fall to accomplish anything.

In order not to waste the spring altogether the British and French struck at the ends of the line which had not been shifted. General Allenby, who has since distinguished himself in Palestine, stormed Vimy Ridge as planned, but this brilliant exploit, being now unconnected with other operations, led to nothing further. Nivelle on his part took the ridge of the Chemin des Dames, north of the Aisne, but the Germans being prepared for him inflicted such terrible losses that the offensive was abandoned. Whether this was because the parliamentarians who came out

from Paris to witness the victory turned sick at the sight of such slaughter or whether Nivelle himself recognized its futility is still in dispute. Anyhow, Nivelle was removed and Pétain, who took his place, decided to wait for the Americans before undertaking a general offensive.

We have all seen and been horrified by the pictures of devastation of the region behind Péronne and Bapaume evacuated by the Germans; the orchards cut down, the churches desecrated, the tombs despoiled, the ancient castle of Coucy razed to the ground, the wells poisoned, the villages demolished, the towns looted, the homes defiled. The viciousness and wanton cruelty there displayed can never be explained away but will remain an indelible disgrace to the German name. But apart from such manifestations of malignity the devastation of the abandoned zone was not objectless. The Russians and Rumanians as they retreated laid waste their own country in similar manner, tho of course without such spitefulness. The Germans seem to have had three objects in mind:

First, terrorism; to prove to the French and Belgians that if they drove the Germans back foot by foot the country would be left ruined and uninhabitable, whereas if they would negotiate a peace as the Germans proposed the country might be left intact. The effect of the destruction, however, appears to have been quite the contrary of what the Germans intended, for even the exiled owners of property in the towns in the German rear demanded the expulsion of the invader regardless of the ruin he might leave in his train.

The second object of this devastation was to hinder the advance of the Allies and this, as we have seen, it accomplished.

The third object became apparent only this last week, the preparation for the present German offensive. The ground was so thoroly laid waste that

### HINDENBURG'S DRIVE TOWARD THE SEA

This birdseye view of the western front shows the relation of the new movement to the earlier operations of the war. First came the great sweep of the Germans thru Belgium almost to Paris. Then, on September 5, 1914, General Joffre struck the blow at First Champsé on the Marne that threw the Germans back on the western side to the Somme and the Aisne. Here they stuck until July, 1916, when the British and French attack dislodged them and compelled them to retreat back to the English Channel. From this line the Germans have now advanced and regained the ground they lost between July, 1916, and February, 1917. Their objective seems to be Amiens, which, if attained, would pretty nearly cut off the British from the French and force the former back to Boulogne and Calais with the Channel behind them. Once on the coast they could play havoc with British shipping or bombard England with the 75-mile gun. The Germans seem to have exhausted their momentum and are now liable to attack from the British on the north and the French on the south.

have now advanced and regained the ground they lost between July, 1916, and February, 1917. Their objective seems to be Amiens, which, if attained, would pretty nearly cut off the British from the French and force the former back to Boulogne and Calais with the Channel behind them. Once on the coast they could play havoc with British shipping or bombard England with the 75-mile gun. The Germans seem to have exhausted their momentum and are now liable to attack from the British on the north and the French on the south.

all last year it could not be made available for a successful offensive and even this year it seems unsuitable for a successful defensive. The devastated strip formed the glacis to Hindenburg's new fortress. The British found here an insecure foothold and have lost within four days what it took them four months to gain.

Besides clearing a space a dozen miles wide in front of his new position Hindenburg adopted last year a new system of entrenchments. The experience of the preceding years had proved that no fortifications could be constructed of sufficient strength to withstand the high explosives and that any position could be taken if the enemy could concentrate his artillery fire upon it. So the Germans ceased the attempt to make the first line impregnable and instead held it with a comparatively small force while the bulk of the troops are kept in reserve in the rear, ready to be rushed to any point threatened. Behind the front trenches is a wide zone of semi-isolated fortifications so that after an attacking force has broken thru the first line its advance becomes increasingly difficult and dangerous until it is finally brought to a halt.

In the old barrier system of defense which prevailed up to the end of 1916 the front barrier consisted of three parallel lines of trenches about 200 yards apart, each protected by barbed wire entanglements and provided with bomb-proof shelters. About two miles behind this was a second barrier of triple entrenchments and then a third barrier at a similar distance. But since all three lines were within five miles they could all be bombarded at once by the enemy guns.

In the new system of cushion defense introduced by Hindenburg in 1917 there are three zones of fortifications, each consisting of a dozen trenches or more. These are placed about five miles instead of two hundred yards apart and the space between filled with "pill-boxes," concrete redoubts, traps, ambushes, tunnels, cross-trenches, concealed artillery, contact mines and all sorts of devices to impede and destroy advancing troops. This intermediate zone is of course marked, measured and mapped so that when it is occupied by an invading force any particular spot in it may be bombarded from the second and third lines, which are out of the effective range of the enemy guns. Each successive zone of defense has, therefore, to be subjected to siege just like the first and cannot usually be carried by assault until the ground between has been cleared up and the heavy guns moved forward.

As will be seen, this change in the method of fortification corresponds to the change in artillery due to the introduction of recoil absorbers. Since the momentum of the cannon is equal to the momentum of the ball, it became harder with each increase in caliber to hold the gun in place. Attempts to keep it stationary by anchoring it to the earth or embedding it in concrete were bound to fail because only

an infinite force could stop the recoil instantly. So the elastic cushion device was adopted by which the recoiling gun meets a resistance slight at first but steadily increasing until the gun is brought to a standstill and then returned to its original position. The Hindenburg cushion is a modern adaptation of Andrew Jackson's idea of stopping cannon balls with cotton bales instead of stone walls.

Whether the Hindenburg system of depth defense is as wonderful a discovery as the Germans make out or not, it certainly sufficed to protect them against the French and British attacks all last year and it is to be hoped that the Allies, who are said to have adopted it, will find it equally effective. It is this change of trench tactics that accounts for the reports during the past year that the British or French at various points had broken thru the Hindenburg line and made a gain of three or four miles at various points, then for no apparent reason the offensive petered out and instead of a victorious advance we heard no more about it. It accounts for the reports that when American troops have entered the enemy's trenches they have sometimes found them absolutely deserted—but this does not mean that they were undefended.

To overcome this new formation of fortification it was necessary to get at the rear lines, ten or more miles back, where the real strength lay. To do this the moving fortresses, the tanks, were brought into use. These pushed thru barbed wire barricades and roamed around the intermediate zones indifferent to rifle or machine gun fire even from the rear. The airplanes, too, are now employed in bombarding the emplacements, cantonments and communications too far in the rear to be reached by guns from the front.

It was by such means that Field Marshal Sir Douglas Haig hoped to break thru the Hindenburg line when he launched his attack toward Cambrai at 6:30 on the morning of November 20, 1917. His plan, as he frankly explains it in his official report of the campaign issued a few weeks ago, is worth noting now, for it shows that he tried to do last fall what Hindenburg is trying to do this spring on the same front, altho in the reverse direction:

The infantry, the tanks and the artillery, working in combination, were to endeavor to break thru all the enemy's lines of defense on the first day. If this were successfully accomplished and the situation developed favorably, cavalry were then to be passed thru to raid the enemy's communications, disorganize his system of command, damage his railways and interfere as much as possible with the arrival of reinforcements.

It was explained to all the commanders that everything depended upon secrecy up to the moment of starting, and after that on bold, determined, rapid action. Unless the opposition could be beaten down quickly no great results could be looked for.

My intentions as regards subsequent exploitation were to push westward and northwestward, taking the Hindenburg line in the reverse from Menin to the River Scarpe and capturing all the enemy's defenses. . . . I am of the opinion that on the 20th and 21st of November we went very near to success, sufficiently complete

to bring the realization of our full program within our power.

Haig had reason to feel encouraged at the end of the second day, but at the end of the month he knew that he had his last chance of breaking thru the Hindenburg line before the winter came. His right wing had, for some reason not yet explained to the public, been left unsupported and the Germans breaking thru here got even behind the line from which the British had started their advance on November 20. This compelled Haig to relinquish a large part of the ground he had gained in the previous ten days.

So we can get encouragement from the British failure at Cambrai in the present crisis, for in spite of the initial reverses the counter-attack may turn tables on the enemy. The Allies are better prepared to deliver such a counter-attack than ever before, for the last session of the Supreme War Council at Versailles decided to hold a joint army in reserve to be sent without delay to any threatened point. This army is supposed to include an American contingent as well as British and French. This action of the Versailles Council aroused heated opposition in England. It was contrary to British traditions and a shock to British pride to place their troops under foreign command, and none of the French generals had shown such marked military genius as to make his choice as generalissimo acceptable. The French felt the same way about the British commanders. So the proposal—said to have been supported by the American representatives—to place one man in supreme command of the Allied armies on all fronts, as in Germany, failed of adoption and even the compromise plan to set aside an independent army under joint control for emergency use came near being repudiated by Parliament. General Sir William Robertson resigned his position as Chief of the Imperial Staff rather than submit to such limitation of his authority as the Versailles plan required. But Premier Lloyd George, with his accustomed oratorical skill, quieted the opposition in the House of Commons and presumably the reserve army was organized, altho the plan was decided upon only a month before the need came.

It will be seen by reference to the passages quoted above that Haig was hoping to break thru the Hindenburg line at Cambrai, then swinging rapidly to the north to take the rest of the line in the rear. For this purpose he had brought up large forces of cavalry to be used as soon as his advance guard had reached the open country behind the trenches. But the open country was not reached, so the cavalry had to be sent back to their posts in the rear, where for more than three years they have remained almost idle.

Hindenburg is presumably bent on the same strategy and we already hear that Uhlans are riding thru the conquered territory. Both parties have been praying for open warfare because a decision can never [Continued on page 55]

# WHILE THE BATTLE RAGES

STAFF CORRESPONDENT FROM WASHINGTON

THE news that the Great Battle had at last begun came to Washington in the middle of an afternoon. The shock of it temporarily halted the Government's vast war machinery. That this tremendous thing which so vitally affects the United States — which, if disastrously concluded, will change the cur-

rent of every present endeavor—should be occurring across an ocean which for generations has been held our best defense, but which now is in peril of German domination; that no specific deed or purpose now in hand could affect the issue; that once again, as at the beginning of the war, the United States must stand idly by and watch and wait—these thoughts struck every one simultaneously and paralyzed action.

In one Government building a conference was in process of putting the final touches to a piece of legislation to be introduced into Congress as an Administration measure. A secretary brought in the news bulletins. The lawyer checked himself in the midst of an analysis of a clause; the chief dropt his papers. The others crowded around. Finally one broke the silence. "Whichever way this breaks, it means work for us. Let's go back to the job."

Washington even in war time is a curiously quiet place. Detached is the word. In spite of the fact that here are assembled the best brains in the United States, and in spite of the fact that today Washington is the organizing and administering center of the civilian and military resources of the United States, it still possesses something of that village quality which used to be one of its great charms.

Outwardly, except for the nightly guard of soldiers with bayonets fixed around the White House and the speeding cars carrying uniformed men and officers about the city, Washington thru these terrible days has been much like every normal American city. Outwardly, be it emphasized. Inwardly—who can tell the whole story?

Yet it may be told in part.

Washington today is like a volcano which has long been quiet. Ever since the outburst against Secretary Baker in the Senate, the work of the war has been progressing at good pace and with little friction. The criticism that Mr. Baker welcomed was given him and much benefit resulted, not the least of which was to the critics. The century-old antagonism between Congress and the departments was apparently break-

ing down. Conferences took the place of conflict, and members of Congress sat at council table with representatives of the Administration, talking things over man to man, working things out in honest human fashion. Into this situation, so favorable to workmanlike results, burst the news of the Great Battle. And having burst, it found its first and easy outlet in Congress.

Roughly speaking, Congress has split into four divisions. These divisions are not sharply marked off from each other, and their lines, like the battle lines in France, are sure to shift back and forth. At a certain point, which will probably come when some decision has been reached in France, the lines will probably merge and the leadership of the Administration will again become paramount. At the moment, however, and holding grave possibilities both for the present situation and for the not too remote future of the Republic, this regrouping of law-makers is of outstanding interest. Its prime importance arises, of course, from the fact that the members of Congress are the elected representatives of the people, and thus, broadly speaking, reflect at the central point of the Nation the currents of opinion from every quarter. Whatever may be said against Congress as an institution, this great fact should never be forgotten. The mails and the wires daily maintain close contact between members of both Houses and the people.

The reaction on Congress of the news of the Great Battle has been to cut it into four parts. One is obviously the Republicans who have been criticizing the conduct of the war partly for sincerely patriotic reasons and partly for partizan reasons. A second is composed of those Democrats who for a variety of causes have been against the Administration, and who now, naturally sought out by the newspaper correspondents, give voice to anti-Administration views. A third are the out-and-out Administration Democrats. The worst epithet to describe them is "defenders" of the Administration. The fourth group, by far the largest, is the silent ones of both parties.

Senator Lodge represents the first

group. He represented it admirably on Tuesday when he shouted, "How many more bitter lessons must we have before we learn the necessity of preparation to meet the terrible situation now upon us?" Senator Hitchcock represents the second group. He represented it admirably when he characterized the number of airplanes estimated for delivery on

July 1 as "ridiculously small." Senator Overman, of North Carolina, represents the third group. "Does the Senator," he inquired of Poindexter, of Washington, "think this is a proper time to admit everything he thinks to be true to discourage the American people in the saddest hour of our history during the war?"

The fourth group, representing the majority of both Houses and therefore the majority of the people, is silent. It is not, however, indifferent. It is not picturesque; it is probably not extravagant to say that it typifies the intelligent spirit of this country today, willing to do the right thing, patiently trying to find out what is the right thing, ready to learn the truth, not prone to jump too soon, solid, perhaps a little slow, but substantial.

Congress is not Washington and Washington is not Congress, but you cannot describe Washington without realizing that when all is said and done upon Congress depends finally the granting of the money and the power by which alone the Government can act. Congress is the vent of the volcano. Up to the time of the Great Battle Congress has been doing what it was asked. Now, however, with the immensity of an immeasurable black future staring every loyal man and woman of the allied countries in the face, there are signs that Congress is on the verge of a cleavage which may make the war. For aside from the sensationalism of it, there is nothing better than a bout of recrimination. If the air needs clearing, such a bout will clear it. If not, it will merely relieve overstrained nerves.

Overhead the skies of Washington are blue and the grass in the parks is green and the magnolia trees are blossoming. This, as the old comic opera song puts it, has nothing to do with the case—except this: There are certain permanent, pervading things which go on while Great Battles are being fought. The slow, sure processes of nature and the steady, sure concentration of the energies of this hundred million people are both visible here and now in this center of democracy.

# THE STRANGER WITHIN OUR GATES

Sixth Message from the National Security League, Committee on Patriotism through Education, of which The Independent is the official publication

**I**N every training camp in this country, in every army corps in France, there are thousands of men whose parents came from almost every country in Europe. These men are all loyal Americans; they have heard the call of democracy and are fighting its battles without thought of the flags under which their fathers were born. Their eager, unselfish response to the call of their country is the most hopeful sign in American history. In Europe nothing like it could ever occur. To this day, even in a country like France, there is a recognized difference between Provençal, Breton and Picard, while in the empires of Germany, Austria and Turkey, men are held together under a common ruler only by the rule of fear and of force.

National ideals, as we understand them, were practically unknown on the continent of Europe till the beginning of the nineteenth century; even a common language was not enough to bring the people of Italy together till the middle of the century; the people of southern Germany entered into a federation with the conquering Prussian as late as 1870; while the Bohemians and Poles in Austria, the Finns and Ukrainians in Russia have waited for centuries for release from the rule of a foreign king.

To the native born American this deep-seated pride of race, these violent antagonisms between peoples, are almost incomprehensible. He has never known the iron heel of an oppressor; he has never witnessed the effect of the conquest of one people by another. Under our system of government he has become accustomed to thinking of the descendants of Englishmen, Frenchmen and Germans, of Russians, Poles and Bohemians, as Americans only, because they share equally in our system of public education, because they mingle freely in their business and social relations, because they intermarry at the end of one generation, because they all look forward to a common future under the protection of the American flag.

This process of race amalgamation began early in the history of this country. It goes back to the very beginnings of many of the English colonies in America. Frenchmen, Germans and Scotchmen were given opportunities equal to those of the original settlers, so that by the beginning of the Revolution race distinctions in the

BY ARTHUR M. WOLFSON

PRINCIPAL OF THE HIGH SCHOOL  
OF COMMERCE, NEW YORK CITY

colonies had practically disappeared. George Washington, Philip Schuyler, Peter Mühlenthal and Henry Laurens were companions in arms in the struggle for political freedom; sons of Irishmen and of Scotchmen, as well as descendants of Englishmen, signed the Declaration of Independence; and the Constitution was adopted by men of almost every European race.

The policy adopted by the people of the colonies has never been abandoned. The sympathy of this country has regularly gone out to the oppressed races of Europe. We welcomed Kossuth and Carl Schurz in the middle of the nineteenth century; we sheltered Fenian refugees from Ireland; we found homes for thousands of Russian Jews who fled from the fury of pogroms. From one end of Europe to the other the United States has always been heralded as the land of opportunity. Immigrants, first by the thousands, later on by the millions, have landed at the ports of this country and taken up their residence in all parts of the United States.

The great tide of Irish immigration continued for two or three generations. At the same time thousands of Germans crossed the ocean and settled in the Middle West. It was they who saved Missouri for the Union when the older American-born population threatened to carry it into the camps of the Confederacy. Of their loyalty and their devotion to the land of their adoption there never was any question. They remembered the way their efforts to establish free institutions had been defeated by the force of German autocracy. They gave of their lives and their wealth without question in the struggle for the preservation of the Union. They and their descendants are among the most loyal citizens of the United States.

After the Germans and the Irish came the sturdy, freedom-loving, land-hungry men of Scandinavia. The farms of Wisconsin and the Dakotas are the visual evidences of what they contributed to the welfare of this country. They, too, are among the most loyal citizens of the United States.

Last of all, in the past generation, Russian Jews and Italians, and the men from southeastern Europe have poured into this country. These men, like the others, have come to escape political, social and economic oppression, but unlike the immigrants of an earlier generation they have not as yet arrived at an understanding of what the institutions of this country mean. They live herded together in the tenements of our industrial communities. They are restless because they find insufficient sympathy with their struggle for existence. They need help; they need education; they need sympathy. It is our duty to give of these freely. Otherwise thru our impatience we shall destroy one of the very foundations upon which this republic was built. If this war is to engage their energies, we must make plain to them that we are fighting in the same cause as their brothers in Russia, only in a way that is much more likely to succeed.

"This is the only country in the world," said President Wilson, "which experiences a constant and repeated rebirth. . . . This country is constantly drinking strength out of new sources by volunteer association with it of great bodies of strong men and forward looking women." The true American who remembers these words of the President will endeavor to understand and to sympathize with the newer elements of our population. He will rid himself of his prejudices and his scorn for these "outlandish" people. He will do his best to hasten their understanding of American ideals. He will remember the Chinese proverb: "Among truly educated people there are no distinctions of race."

The persistence of racial characteristics and of European antagonisms is today the greatest menace to our unity of purpose. For generations we successfully assimilated thousands of immigrants because we offered them equal economic opportunity and full rights as American citizens. If today our experiment is threatened with failure, it [Continued on page 46]

Representing five nationalities, these loyal Americans are candidates at the Officers' Training Camp at Schofield Barracks, Oahu, Hawaii. From left to right at bayonet practise are General Sam Johnson, Russian; Louis F. Pagel, American; Alvin H. Robinson, Hawaiian; Anthony Y. Sato, Chinese; Kinieli Sika, Japanese.

*This type of furniture, built into the thickness of the wall, claims an honorable ancestry in the Renaissance period*

## BUILT-IN FURNITURE

Built-in furniture is BY ABBOT McCLURE AND HAROLD DONALDSON EBERLEIN

not to be regarded as a cheap substitute to take the place of more eligible movable furniture. It may be either permissible or positively preferable (1) when it is expedient to economize space or to utilize space that otherwise must be wasted; (2) when architectural conditions either invite or require it; (3) and, finally, when considerations of permanent placement or the necessity of dispensing, so far as may be, with movable equipment are to be taken into account.

In examining anything with a view to putting it to some constructive use, especially anything connected with the art or practise of interior decoration, it is always advisable to take a brief survey of its historical antecedents. By so doing we acquire a clear insight into its nature and gain a fresh ground of appreciation for applying it to our own occasions. In the late middle ages—we need look no farther back—much of the better furniture was ecclesiastical or semi-ecclesiastical and nearly all of it was of a distinctly architectural character. In fact, it was often an inseparable part of the interior architecture. Of this furniture, not a little was *built* in place—seating pieces such as choir stalls, state seats in baronial halls, aumbries or cupboards filling niches or recesses in the wall, credences, and some of the great bedsteads. In the Renaissance period, especially in Italy, some of the aumbries or cupboards, built into the thickness of the wall and closed in with doors flush with the wall surface, were objects

*An unproductive space filled usefully and attractively*

of admirable decorative effort and dignity of aspect. Coming down to a later date, there were in England during the Queen Anne and Early Georgian period the built-in cupboards and buffets, both for the side-wall and the corner, which were highly elaborated and of conspicuous decorative quality. In France, empaneled cupboards, *armoires* and in-built consoles were recognized features during the reign of Louis XV. Both in England and in our own country, during the eighteenth century, another phase was marked by the cupboards with doors, coved or arched tops and shaped shelves, or by the New England buffets, in some cases without doors but with shaped

borders at the sides and head, and occasionally further ornamented with color and gilt, all of which were built into the paneling beside fireplaces or in corners and are still to be seen in old houses. These are a few of the historic instances of built-in furniture—enough, however, to establish its claims to an honorable ancestry.

Unfortunately, the average modern conception pictures built-in furniture as a cheap, brummagem affair, oftentimes a makeshift or fantastic “stunts,” of mischievous tendency and poverty-stricken invention. Built-in furniture, properly designed, and executed with due reference to its architectural environment and the concomitant movable equipment with which it is to be associated, is a dignified and worthy accessory and entitled to respectful consideration as a legitimate utilitarian and decorative resource. If it is not possible to have the *right* kind of built-in furniture, designed with the aforesaid due regard for the character of the architectural setting, and contrived to accord with the composition of the movable equipment, *do not have it at all*. It is *not* essential that the built-in piece or pieces be elaborate; it is most essential that it or they be well and consistently devised.

The *proper designing* of built-in furniture requires care and thought quite as much as do the selection and purchase and disposal of movable furniture: the *execution* demands skill and calculating precision, and such outlay as may be commensurate with the degree of elaboration in-

*Built-in furniture, properly designed and executed with due reference to its architectural environment and the movable equipment with which it is to be associated, is a dignified accessory and entitled to consideration as a utilitarian and decorative resource*

*A well devised piece of built-in furniture, in keeping with the character of the room*

volved. If built-in furniture is to be reckoned merely an home-made, "do-it-yourself" kind of production, a cheap makeshift in lieu of some more desirable and not immediately obtainable article, it is almost certain to be reprehensible. If we wished a room well furnished with movable furniture, we should not set out to accomplish the end in view by fitting it with chance-gotten "junk" that cost neither effort of selection nor reasonable cash outlay; no more may we, if we wish decent built-in furniture, withhold thought and a fair expenditure. To do so is to derogate from its dignity as a reputable and legitimate decorative resource.

Built-in furniture may be adapted to almost any mode of interior decorative treatment, to a greater or less extent, some modes giving more scope for its employment than others. Remembering this, let us first enumerate the capacities in which it may appear and then examine the methods of introducing it to good purpose according to the threefold category noted at the outset. From the very nature of things, built-in furniture falls chiefly into the classification of what we commonly designate as *wall furniture*, to borrow the familiar terminology applied to movables. That means to say that, as the building-in of furniture is especially germane to incorporation in the fixed architectural setting, cupboards, closets, cabinets, bookcases, buffets and such kindred articles as are always set against a wall offer the most varied possibilities. Besides the articles just enumerated, we may add to the list presses, wardrobes, chests of drawers, chests, sideboards, dressers and bureaux of divers sorts. Seating furniture, such as settees and benches, may be devised in numerous acceptable forms and several kinds of tables and desks also are susceptible of satisfactory construction.

Without going to such lengths of space economy as did the New England housewife who

is said to have had some of the treads of her stairs hinged so that she might stow sundry small articles within the steps, we may often profitably avail ourselves of space habitually neglected and allowed to go to waste. Along the sloping sides of attic walls, for example, where it is impossible for any one to stand upright or to place a piece of movable furniture to advantage, it is the truest kind of economy to build in drawers or cupboards. At the same time, by so doing, the room may be made more symmetrical, without lessening the really usable floor space, and given a dignity and interest it did not before possess, provided the built-in cupboards or drawers be acceptably designed.

Again, it not infrequently happens that rooms and, even more so, halls contain offsets and alcoves that both present difficulties of furnishing and impair architectural symmetry. Here a piece of built-in furniture would oftentimes save the day. Remember, however, "in filling such an unproductive space with a piece of built-in furniture that the cue for its treatment in design and color must be taken for the best note in its surroundings." Many a time the end of a hall or passageway contains unproductive space, where the construction of permanent drawers or cupboards would be a boon to the housekeeper and might be made to supply a feature of appreciable decorative interest. Even when such a hall-end contains a window, the building-in may

*A Georgian paneled room where the built-in cupboard enters into the original scheme*

be so done around it that it is merely embasured and neither its usefulness nor aspect impaired. The space under a window seat or any stationary bench or settle can nearly always be used for a built-in chest or set of drawers.

One of the accompanying illustrations shows how an alcove in a small bedroom was turned to good account. The offset was too shallow to hold a chest of drawers or a dresser of ordinary dimensions, without its projecting too much, and longer than was necessary for either. The difficulty was settled by building in a set of drawers to fill the whole length and only the depth of the offset and by using the top for a dresser

with a mirror hung on the wall above. It is in just such ways as this and by utilizing spaces of awkward dimensions that the building-in of furniture may not only contribute materially to the capacity of a small room, without intrenching appreciably upon its dimensions, but may also help its appearance and even give it a certain distinction. For any one with an eye quick to see and initiative to seize upon such opportunities for practising a most commendable kind of economy and space utilization, built-in furniture becomes almost plastic in its adaptability. The only danger in such cases is the occasional temptation to regard it as merely a bit of expedient and utilitarian carpentry and to forget that, as furniture, it is entitled to consideration on decorative

grounds. The design must be true and just. Otherwise a lasting injustice is done both to the piece itself and to the eye of those who see it daily. The degree of decorative elaboration bestowed will depend upon the character of the room and the sense and good taste of the owner.

Under certain conditions, the architectural ensemble may either invite or, indeed, almost require one or more pieces of built-in furniture. An admirable instance of this is to [Continued on page 47]

# CHINTZES AND CRETONNES

BY GEORGE LELAND HUNTER

**C**HINTZES and cretonnes, like wall paper, are in their origin merely printed imitations of paintings, just as our modern books and magazines, are printed imitations of writing. In memory of this, the French still use the phrase "papiers peints" (painted papers) for wall papers, and "toilet peintes" (painted cloths) for cloth prints.

Very properly did Pliny, writing at the time of Christ, classify the Egyptian chintzes of the period under the head of painting. The process, which he describes in detail, was similar to that still employed sixteen hundred years later by the Indians and the Persians who inspired France and England of the seventeenth and eighteenth centuries to imitation. Of the process, Dr. Havart wrote in 1693: "The painting of chintzes proceeds in the most leisurely manner in the world, in a manner similar to the crawling of snails, which appear to make no headway. Anybody wanting to present a vivid picture of Patience, would find one of the chintz painters of Palicol a perfect model."

This slow painting process by no means harmonized with European ideas. The rapid development in Europe, after the middle of the fifteenth century, of the printing of illustrations from engraved blocks, and of the printing of text from type, had made printing almost as much second nature to the European as painting was to the Oriental. In imitating Oriental painted cloths, Europeans therefore substituted press for hand, printing the patterns rapidly from wooden blocks or copper plates instead of applying them slowly with brush or pencil.

Finally in the nineteenth century, block-printing having itself come to seem slow, European inventive genius found a way to

Lecturer on Tapestries  
at Metropolitan Art  
Museum in New York

Reading from top to bottom are Numbers 4, 5 and 6. Below on the left are Numbers 7 and 8 and on the right are Numbers 9 and 10

mount a series of rollers around a huge circular drum, so that as the cloth-covered drum revolved, the cloth was printed almost simultaneously with all the different colors, instead of having to wait as in block printing for the drying of each color before the next could be applied. The employment of water or steam or electric power to turn the drum made the speed of roller printing almost incredibly great, and the cost almost incredibly small.

But the repeat of the patterns has to be small, and the impression of the colors is far inferior. So that for the better trade, the hand block still holds its own, and with enthusiasm we unearth and use again today French and English blocks that were made over a century ago.

Chintz is the English word. Cretonne is the French word. Consequently we Americans use both. In the eighteenth century, the French called them "indiennes" or "persiennes" (Indians or Persians), whether imported from the Orient or imitated in France. The English in the seventeenth century already called them "chints," a word derived from the Sanscrit

"chitra," meaning many-colored. Pepys in his famous diary under date of September 5, 1663, wrote:

"Bought my wife a chint, that is, a painted calico, for to line her study."

Among the most famous European makers of chintzes and cretonnes have been Oberkampf, whose works at Jouy, near Versailles, made "Jouy prints" famous, and William Morris whose tapestry and print works at Merton, near London, inspired all Europe to better art. Illustrations Nos. 13, 14, 15, 16 are of designs by William Morris, originally executed under his personal direction, but still produced by his successors at the same place in exactly the same manner, and sold in America thru their New York agents. Nos. 11 and 12 are Jouy prints from copperplate, which permits great delicacy of line but restricts the number of colors because of the difficulty of registration. No. 17 is a European print made in Germany from tiny blocks, in black on linen, in the fourteenth century, long before the Oriental prints were known in the west. The design is certainly pleasing and easy for roller reproduction.

No. 18 is a modern American "Chinoiserie," roller-printed on cotton but arranged in such a way as to prevent the smallness of the repeat from being obvious. All of the fabrics on page A (Nos. 1-10) are also modern American and mark a distinct advance not only over ten years ago, but even over two years ago. Nos. 1, 2, 3 illustrate three of the numerous varieties of weave used to print upon, these three having been selected for illustration because their pronounced texture makes distinctions obvious. No. 1 has tiny broché figures on a coarse taffeta ground; No. 2 has a surface of uncut loops like a Turkish towel; No. 3 is a repp

Number 11, a Jouy print

with unusually wide ribs. Among the many textures not illustrated is "linette," which imitates the yarn as well as the weave of linen, and thus helps to produce the effect of dollars at the cost of dimes, which indeed is the purpose of most printed goods as compared with damasks, velvets, and brocades which are figured on the loom, and made in silk instead of the less expensive linen or cotton.

No. 4 is a very daring attempt, but for some reason the hammer of the repeat is not oppressive, any more than it is in the charming trellis No. 6, or the delightful bird and flower composition No. 5. Nos. 8 and 10 both take us back to Egypt, the latter to the Egypt pictured on the inner walls of ancient mastabas like the mastaba of Perneb at the Metropolitan Museum, the former to modern Mohammedan Egypt and the mysteries of the desert.

The most obvious difference between hand-made foreign prints (Nos. 11 to 16) and American machine-made prints, is in the price. The former are much more expensive than the latter, even when the greater width of 50 inches as compared with 36 inches is taken into consideration. But they possess qualities which cause them to more than hold their own in the smarter shops.

In the first place, the repeat of the machine-made goods is necessarily so small (18 inches square or less) that the production of picture effects is exceedingly difficult. Even in No. 18 the scenes line up diagonally, while it is obvious that few de-

signs arranged like No. 4 would be pleasing. The machine is at its best in the production of tiny diaper patterns where the repeat is too weak to hammer. But, of course, our American makers are always aiming at the unattainable, and by hitching their wagons to stars, have accomplished results of splendid excellence, especially since the war has restricted importations and crowded us back on our own resources.

Again, the colors and impression of the hand prints are uniformly far better. The colors of the machine cloths being overprinted while still wet, do not blend together with the vivacity that is characteristic of the hand cloths. Especially delightful in the latter are the "smudge" effects that distinguish so many of the ancient English wooden blocks still used to print all-over florals. Then, the machine prints

Number 12, a Jouy print

other furnishings, the clash is more violent than in the case of the smaller patterns of machine-made.

The most serious danger in the use of chintzes and cretonnes, as in the use of wall papers, results from their cheapness as compared with damasks and brocades and velvets. The tendency is to use too much, and because printed patterns cost little, to overlay with it walls and furniture as well as windows and doors. Nothing is more objectionable than a room where the eye can find no escape from the same chintz eternally repeated from floor to ceiling. And if wall paper in the same pattern, or in patterns to match, takes the place of chintz on the wall, the combination is almost equally displeasing. Rooms are made to live in, which means that space should be left for those who are to occupy them. On the other hand chintzes and cretonnes introduce cheer and comfort at a minimum of expense, and are distinctly more summery and more suitable for country houses and chambers than stuffs figured in the weave. And especially in their color effects, chintzes and cretonnes have no need to apologize either to the loom or the brush. The gradations of tone and contrasts of hue secured by printing on cloth have a distinctive charm which has won for them an individual and distinctive place in interior decoration.

Of course, foreign as well as domestic chintzes and cretonnes come in a range of colorings, so that if you don't like those your dealer has, it is probably his fault for selecting wrong.

At the top, Number 13; below on the left, Number 14; on the right, Number 15; at the bottom, Number 16: All designs by William Morris

are usually on cotton, while the hand prints are on linen, which in itself makes a radical distinction of quality, as regards not only appearance when new, but especially as regards wear, and permanence of colors.

The curse of the American industry is the constant output of "new lines" each season, which makes it certain that no design, however good, will last long, and that no design, however bad, will fail to reach some homes. Designs like those of the Jouy prints, Nos. 11 and 12, and of William Morris, Nos. 13 to 16, never grow old. Who could fail to appreciate the charm of "Brer Rabbit," No. 14, or "Strawberry Thief," No. 15?

However, hand-made chintzes and cretonnes in use require quite as much taste and judgment as their machine-made sisters. Their greater possibilities render serious mistakes easy. When the larger patterns of hand-made are not appropriate to the interior, or not in keeping with the

# These Will Help You Keep Your Cook

The casserole and baking dishes on the left are made of non-breakable glass. Clean, good looking, direct from oven to table

Make your own butter—just enough. You can use this handy little glass churn for other purposes, too. It comes in one, two, three and four quart sizes

A sanitary greaser for bread pans, and other tins. Nickel plated frame. Cost, 75 cents

An efficient, modern canner 14 inches high, 12½ inches in diameter, \$6.50; Queen pint jars cost \$1.50 a dozen; the quart \$1.75

This white enamel, handsome, sanitary table top can be placed quickly on your old kitchen table. It fastens firmly

Four knives come with each of these food choppers. Using the finest you can make your own nut butter. 2 lb. size \$1.75

An oven thermometer like the one below may prevent bothersome losses. When it is hot you can lift it out by a fork thrust into the top holes

Here is a glass bottle French dressing mixer. It show how much vinegar and oil to use

Save your hands—and don't drop the pan! Use a safe, sure lifter to take things out of the oven

Hands and fingers suffer from some can-openers. Try this one, which is easily used and is safe

Ice cream made at home without turning a crank! The vacuum freezer at the left is a real hot-weather comfort. 2 quart size \$4

A fireless stove cooks while you sleep or entertain. This one at the right has a capacity of 14 quarts

# TAKING EFFICIENCY INTO THE KITCHEN

BY MILDRED MADDOCKS

DIRECTOR OF THE GOOD HOUSEKEEPING INSTITUTE

**E**FFICIENT household management is as necessary and important to the individual and to the nation as efficient business methods. Why, then, has efficiency made greater strides in commerce than in home life? The condition appears to be largely due to the fact that the business man is more accessible for the demonstration of the efficiency method and devices in his work than is the housewife in her work. For as an actual fact there are relatively as many devices and methods for promoting efficiency in the kitchen as there are for the office or factory and, as many as is individually possible every woman should know and put into use.

Because in the kitchen more steps are wasted, more time is lost, and more effort is fruitless, efficient housekeeping centers around a well planned kitchen. It should tell a story of efficiency in planning, of logical placement of all installations, so that work can be properly routed toward their final destination, and lastly, it should indicate a wise selection of appliances that there may be a tool for every need, and yet not one that cannot be used often enough to warrant its purchase.

An efficient kitchen should satisfy the eye as a picture in which every principle of practical art is made use of and every

principle of efficiency that a factory manager might install is yet especially adapted to the varied operations of work in the home. The question is often raised if the efficient kitchen, well planned and thoroly equipt, is a constructive move for the woman who is blessed or unblessed with service in the home. The answer "yes" cannot be sufficiently strong. That servants as a class will refuse to use an untried device is too true. But how often does the woman who bought that device first learn how to use it before she attempts to teach another? Ask yourself if constructive teaching is a possibility unless there be first a

thoro familiarity with the subject matter.

I have yet to find that servant who does not respond to the proper hight of sinks—a hight that relieves strain on back muscles, or one who objects seriously to a logical placement of equipment that inevitably must save her steps.

Today architects are giving the kitchen fully as much thought as any room in the house and very often the kitchen and dining room are the most carefully planned portion of the house. An ideal location is on the north with windows to the east and west, allowing for sun in the room a portion of the day, without permitting it to linger in summer months long enough to

make the kitchen breathless with sultry heat.

In every case an oblong rather than a square room is suggested, and working operations should be so far as possible across the shorter dimension of the room. A space 11 by 14 feet furnishes ample room for one worker. The extra length of the one dimension is utilized to secure additional ventilation and a rest corner where the housekeeper may have her shelf of books on home economics, cooking, etc., and a comfortable chair in which to enjoy them. This floor area is larger than many so-called efficiency [Continued on page 54]

*An oblong room is suggested with working operations across the shorter dimensions*

*Install a kitchen cabinet flanked by shallow cabinets 12 to 14 in*

*extending to a hight that makes each shelf accessible*

# MY PATCH OF PEAS

BY H. W. DARR

THERE is no vegetable so eagerly purchased or so tempting to the epicure as the first "home grown peas." Pea growing has just enough of the element of uncertainty about its proper development and bearing to add zest to its culture for the true gardener, or to one who is not content to just throw seeds into the ground and expect nature, or someone else to do the rest.

At the old home on the farm in Illinois we used to raise lots of peas. While it was part of my "chore" to care for the garden when I was a boy, I do not remember that we gave any particular attention to the selection of varieties of peas raised. I do remember that the old Marrowfat and Tom Thumb peas were grown. Compared to some of the grand varieties that may now be planted, those two are absolutely not worth space it takes to grow them.

Years after leaving the farm I tried again to grow peas, but for several seasons without success. Finally I discovered I had been planting the wrinkled varieties too early and too thinly. While peas may be planted early, it is the better plan to defer putting the seed into the ground until the weather has had time to warm the soil so that the seed will begin to germinate as soon as planted, in order that the young plant may shoot thru the ground and develop its growth rapidly.

In 1915 I had a patch of peas 60 by 150 feet from which I picked over seventy bushels of fancy pods. The first plantings were made April 24. The soil was in fine shape, having been plowed late the preceding fall just before the ground froze. A day or two before seeding, it had been disced both ways and harrowed. The rows were laid out by the aid of ruler and line. I used a "Warren" hoe to plow out the furrow to a depth of 4 inches. The drill was set to plant the seed 2 inches below the bottom of the trench. This method enabled me to get the seed 6 inches below the surface of the ground and still provide for a shallow covering so the plants could easily come thru. As they grew the soil was plowed into the trench gradually until the ground was level again. To provide against possible drouth it is quite necessary to use some such care in getting peas deep into the ground where the soil is cool and moist. Peas like cool, moist feet. That explains why plantings made in midsummer usually are unsatisfactory.

Peas can stand a slight frost and the smooth varieties quite a freeze, but such weather conditions are by no means helpful. Unless the ground is warm enough to germinate the seeds within a few days after planting the wrinkled varieties will rot in the ground. April 24 is the earliest planting I have made. The latest first planting I have made has been May 17. The average is about May 1 to 6.

On April 24, 1915, the temperature averaged about 74, tho we had several days of warmer weather of 80 or over and high drying winds. That day I planted Little Marvel, Best Early, British Wonder, Prolific, Dwarf Champion and Senator varieties. They were planted under what may be termed the double row system. The rows to be thrown together were 15 inches apart. Then a space of 24 inches was allowed between the double row. For convenience in picking and also for beauty of arrangement and growth I planted alternate double rows of the dwarf and tall varieties. I prefer the tall peas; of course it requires a lot more work to take care of them, but the yield is, as a rule, enough greater to justify the extra cost in time and material.

July 1 we picked the first mess of peas

Teddy Roosevelt...	6 ft.	July 18	10

from Best Early, sixty-seven days from time of planting. This variety bore continuously for two weeks. It is a beautiful, vigorous pea but the pods are quite small tho an immense yielder. July 5 the Prolifics were ready and three days later the Little Marvels had matured. The Little Marvel is the most satisfactory dwarf variety I have grown.

April 28 I planted Senators, Prosperity, Marrowfat, Telephone, Alderman and Teddy Roosevelt. Alderman, Senator and Prosperity were the most satisfactory of the tall growing kind. The Prosperity is nearly as early as the smooth-seeded sort and it has every other quality desirable—size, productivity, quality and appearance. Seventy-three days after planting we picked

A half bushel of magnificent pods off a row 150 feet long 73 days after planting

a half bushel of magnificent pods off a row 150 feet long. Some pods were 5 inches long. Tho not so productive as other tall growing peas, it is within five days as early as the first dwarf wrinkled kinds.

There are many ways of supporting the tall growing vines. My garden, being in a beautiful part of the city, was designed to be as attractive as possible. So I chose not to use brush for supports, which are probably about the best. I bought from a lumber yard pine strips ¾ inch by 2 inches by 12 feet. They were sawed in two and sharpened and driven a foot into the ground between each double row and about 15 feet apart. Ordinary binder twine was strung on these posts, beginning about 8 inches from the ground and a line added about every 10 inches up the post. The twine was put on as the tops of the vines reached a few inches above the strings already in place. The only objection to this method of holding up the vines is that after each rain the cord must be pulled up tight again or the rows will not be so prim and straight on account of the vines lopping over on the loosened supports. If a small wire were to be used as the top and bottom cables and the twine woven up and down between these, the trellis would be more satisfactory but the cost of material would be considerably more.

The season was rainy and the soil wet a good share of the time. No working of the ground was permitted when it was too wet to break up nicely. By the use of a double wheel garden cultivator, the patch could be plowed over in a short time. When possible it was cultivated after every rain as soon as the soil was dry enough. In this way the patch was kept entirely free of weeds and grass and the ground never became crusted over.

After the vines were too large to pass under the cultivator it was not possible to plow except in the 24-inch space between rows. About the time the tall varieties were in blossom it turned off dry and the crop was in danger of being cut short on account of the ground drying out and baking. To prevent that I went up and down between the rows with my cultivator until I had made a dust mulch. Then I changed the regular plows to the larger ones with the mold board and turned the loose soil high up against the rows. Some of it, of course, found its way thru the row and covered the space in the center between the narrow rows. This dust mulch conserved the moisture in the ground and kept the vines green and thrifty until after the peas had matured.

Our success in 1915 prompted us to put in a larger crop of peas in 1916. We planted nineteen varieties.

The entire planting was made May 8, temperature being around 80 that day. Two rows 15 inches apart were planted of each variety. Between each double row I left a space of 24 inches. I have found that this arrangement gives plenty of room for the plants to develop and also affords enough space between rows for working the ground and picking the pods.

The first peas were picked from the Marchioness July 4, sixty days after planting. This variety is a very satisfactory one to plant. I was so impressed with its quality and quantity that I am going to plant it again this year. I appreciate the fact that peas like other crops vary on account of conditions from year to year. But out of the nineteen varieties planted last year I am replanting this year not more than five. Listed in order of rank they are Prosperity, Little Marvel, Marchioness, Quite Content and Roosevelt.

# PLANTING YOUR POTATOES

BY HUGH FINDLAY

**I**T is not practical to try to raise potatoes in some of the city lots, where the soil might be put to a more intensive culture of the root crops that may be planted close together. Potatoes usually sell at a reasonable price in the fall, and it is generally advised that the city gardener buy his potatoes, while the suburban and farm gardeners may raise them, providing they

*Shallow box divided into compartments with pasteboard. Seed ready to cover*

follow the fundamental principles of culture that result in success. Plant only good seed, treated before planting to prevent disease, in a cool, well-drained, deeply pulverized soil. The soil should be rich in potash incorporated with humus, and should be in a physical condition to retain moisture. There should be frequent level cultivation to keep down weeds and form a dust mulch to conserve moisture, and the foliage should be protected from disease and insects by spraying.

Good seed should be the first consideration of every grower. The seed should be free from scab, and while not necessarily large should never be small. To pick out the medium sized potatoes for table use and keep the marbles for seed is a great mistake. It is good practise to buy the seed from a reliable party because the change of location, soil, etc., influence the crop. Where the grower selects his seed year after year from his own garden, the potatoes have a tendency to rot.

The seed should always be treated before cutting the tuber by placing the potatoes in a sack and submerging it in a solution of one ounce of powdered corrosive sublimate poison to eight gallons of water. Dissolve the corrosive sublimate in one quart of hot water before adding it to the cold water. Soak the tubers in this solution for one and one-half hours, after which the tubers should be dried and cut.

Putting the seed potatoes in the sun for three weeks before planting will aid in de-

stroying the scab bacterium. Care should be exercised in applying fresh horse manure, wood ashes, lime or any alkaline-producing fertilizer where it comes in contact with the maturing tuber, thus preventing the danger of scab.

After you have selected the medium sized potatoes, cut them in such a way as to have from one to three eyes to each piece. It is to the advantage of the crop to allow the seed to be exposed to the air but not to the sun, for a few days after cutting the tuber. The wounded surface dries and the root system is immediately encouraged when the seed comes in contact with the moist soil.

The selection of varieties is important and should be done with the utmost care with reference to time of maturity, resistance to disease and productivity.

The varieties are arranged according to the time of ripening. Extra early, Beats They All (Mitchell's), Beauty of Hebron, Bliss Triumph, Early Ohio, Early Rose, and Irish Cobbler. The first five varieties are especially adapted to the North, while the Irish Cobbler does well both North and South. In the northern part of the United States such varieties as Green Mountain, Rural New Yorker, Carman and State of Maine are grown, while in the South, White Star, McCormick and Sir Walter Raleigh are prolific producers. It is nevertheless advisable to plant two early varieties and one late variety.

Potatoes thrive best on a rich sandy loam containing plant food, moisture and humus. If the soil is very sandy apply a heavy application of manure to the surface and plow it under in the fall. In the spring stir the surface of the soil and make furrows from twenty-four to thirty-six inches apart and from three to five inches in depth, and drop the tubers nine to fifteen inches apart. Cover the seed and one week after planting cultivate the surface with a Norcross weeder, wheel cultivator or spike tooth harrow. This stirring of the soil will destroy the first crop of early weeds. If a heavy rain should pack the soil and it should begin to crack a little before the tops appear, stir the surface again, but very lightly so as not to disturb the growing shoots. A large part of the success in growing potatoes depends on the amount of moisture available throughout the season, therefore cultivate with the view of keeping the surface covered with a thick coating of dust mulch. The potato should be cultivated from six to eight times during the season. "Hilling up" should be practised only where the soil is stiff and the tubers are planted near the surface.

The early crop may be started in a warm, light cellar by cutting the seed and

spreading it out on the floor. A temperature of about sixty degrees should be maintained and sufficient light to prevent the shoots from becoming spindly and weak. This may also be done in the hotbed, but usually the hotbed may be put to a little better purpose early in the spring. Plant the sprouted seed carefully in a well prepared and rich soil as soon as all danger of frost has passed. If the seed is given from four to five weeks to sprout and cultivated frequently after planting, a crop of fairly good sized tubers may be harvested in from seven to eight weeks.

A still better way to gain time in the spring is to section off a shallow box with pasteboard, making each compartment about three inches square. Have the bottom of the box well drained and put into it about one and one-half inches of rich soil. Place the tuber in the center of the compartment and cover it with soil. Place the box where it has heat and water when necessary. The soil should be kept moist but not wet. The sprouts appear in about nine days. They may be kept growing until they reach a height of four inches. Remove the pasteboard, carefully lift out the block of soil and plant it so that about one inch of the garden soil is added to the surface of the square on

*Potato plants ready to transplant. The crop is hurried forward from three to four weeks*

planting it in the garden. Start to cultivate the first week after planting and keep the shoots growing vigorously. Small, new potatoes may be harvested from five to six weeks after planting in the garden.

Planting the seed two inches in depth very early and mulching the surface of the soil with two inches of straw as soon as the tops appear, is a method used more in Europe than in this country to hasten the production of an early crop.

The late varieties may be planted in June or as late as July 5 in the vicinity of New York. They should be planted a little deeper than the early varieties, from four to five inches, providing the soil is a light loam.

If the soil is light apply a liberal amount of well decayed manure and plow it under two or three weeks before planting. Fresh manure should never be used just before planting but it may be applied to a stiff soil which should be plowed in the fall, and left in the rough. In the spring, stir the soil to a depth of five to six inches and plant the seed. If stable manure is used it should always be well decayed and well incorporated into the soil before planting the seed.

Stable manure in the decayed form is not always available to the small gardener, so that it is neces- [Continued on page 51]

*At the left A—1.1 pounds from a single seed potato of a poor type. At the right B—11.1 pounds from a single tuber from a fine type of seed and a productive hill. A would yield 56 bushels per acre, while B would yield 560 bushels per acre*

# What to Do in April

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## FLOWER GARDEN

**Gladiolus** Before planting out gladiolus the last of the month, the soil should be made rich with decayed stable manure for 12 inches in depth. Large bulbs should be planted 6 inches deep and small ones only 4 inches. Never use fresh manure.

**Dahlias** Before separating the dahlia roots, make sure that you leave part of the crown stem. A little bone meal should be added to the decayed manure before digging it into the soil. Mix a little sand with the garden loam and decayed sod for covering the bulbs.

**Sweetpeas** Before sowing the seed or transplanting the potted plants to the garden, dig a trench 12 inches deep. Fill it with decayed manure, decayed sod chopped up fine, and garden loam. Draw the furrow about 6 inches deep and cover the seed to a depth of 3 inches. Place the supports, brush or wire, as soon as the seed is planted. As the vines grow, the soil will fill in the trench after a few cultivations. Sweetpeas require a deep, rich loam.

**Carnations** The plants for next year may be planted to the open as soon as all danger of frost has passed.

**Roses** Less hardy roses, including the everbloomers, should be pruned.

All winter protection should be removed. In order to keep in check fungus diseases, spray with Bordeaux mixture even before the buds appear.

In planting out new roses, be sure to pack the soil firmly about the roots.

**Seedage** Seed of pansies and other such hardy plants may be sown in the open. Pansy and hardy aster plants may be planted out after all danger of severe frost has passed.

**Fertilizer** Wherever you have highly colored flowering plants, dig into the soil a free application of decayed stable manure mixt with a little fine bone meal and nitrate of soda. If chicken manure is used, apply it sparingly.

**Bird Houses and Baths** Early this month, prepare for the birds and attract them to your garden by placing bird houses and bird baths out of reach of cats and other enemies.

## GREENHOUSE

**Cuttings** Continue to put in a few cuttings of coleus, antirrhinum, geranium, abutilon, fuchsia and other bedding and fall blooming plants. Shade all cutting beds and ventilate the greenhouse freely on bright days. Remove all shade at sundown. The late varieties of chrysanthemums should be propagated now.

**Cyclamen** Shift the cyclamens to the cold frames and shade them. Make a floor of about 3 inches of ashes mixt with a little lime. This will not only insure proper drainage, but also check the work of earthworms and snails. Set the pots level and never allow them to dry out.

**Shading** The best mixture for shading the glass over the fern and palm house is a mixture of clay with a very little lime and water. It should rub off easily after drying, so that there will be little or no difficulty in removing it in the fall. Shade the glass over highly colored flowers.

**Cucumbers** A light application of pulverized sheep manure worked into the surface soil of the cucumber bed will give immediate results. If the fruit is crooked, apply nitrate of soda in liquid form, 3 pound to 7 gallons of water. After applying this solution, water the plants thoroly. A hive of bees in

the cucumber house will aid in the fertilization of the fruit flowers.

**Roses** Rose plants that are to be held over for another year may be given a rest now. Allow the bed to dry down. Remove and burn all leaves after the plants have become defoliated. Do not prune the roses back until after their period of rest.

**Palms** This is a good month to wash palms with whale oil soap to destroy the young scale insects. Use a sponge that is free from grit. Do not crack or scratch the foliage. Never use oil to make the foliage shine. The oil stops up the breathing parts of the leaf (Stomata) and smothers the plant.

**Melons** If muskmelon seed is planted under glass now, the fruit will be ripe two months earlier than from seed sown in the garden.

**Cut Flowers** Cut roses, snapdragons, carnations and other flowers early in the morning. Plunge the stems in cold water and allow them to stand in the dark for a few hours. If given this treatment, they will last much longer.

**Diseases** Carnation leaf-spot. This is known by round, grayish spots on the stem and leaves. Spray with copper sulfate, 1 pound to 20 gallons of water.

Chrysanthemum leaf-spot. Watch for small round spots appearing on the leaves. Spray with Bordeaux mixture.

**Easter Plants** Rush Easter lilies, pot roses, genistas, azaleas, etc., by increasing the heat. Keep the house more or less moist. If the plants are a little too far advanced, increase the ventilation, keep the temperature low, and a few days before Easter place the plants in the dark.

## VEGETABLE GARDEN

**Early Start** About April 15, start cucumbers, sweet corn, string beans and summer squash in paper boxes or strawberry baskets, in the hotbed to be planted out later in the garden.

**Hotbed** Ventilate with care. On cold, dull days, ventilate only enough to allow the foul air to escape. Never allow the hotbed to become overheated.

Cucumber seed may be sown among the seedlings. The seedlings will be removed before the cucumber vines need the room. Much time is gained in realizing a crop of cucumbers and the hotbeds are in use during the summer.

**Seedage** The seed of all hardy types of vegetables may be sown this month; celery, carrots, beets, endive, lettuce, leek, onions, parsley, parsnips, radish, salsify, spinach, smooth peas, cauliflower, Swiss chard and turnips.

**Planting** Plant out as soon as the soil is in good condition rhubarb, horseradish, asparagus, Jerusalem artichokes and chives. Manure heavily and cultivate thoroly if you want good results from old beds. If stable manure is not available, apply fine bone meal.

**Cultivation** Keep the Norcross weeder busy in order not only to keep in check the weeds, but to supply air to the roots.

The scuffle hoe is a fine weapon to use on very young weeds. Do not use it too close to the root crops such as beets and carrots.

**Intercropping** After the potatoes are planted, sow the seed of dwarf peas, radish or early beets between the rows. Lettuce, beet plants or early cabbage may also be planted. Care should be exercised in the cultivation of these catch crops, so as not to disturb the potatoes.

## FRUIT AND BERRIES

**Spray** Spray the apple trees, just as the buds show pink, with one part lime sulfur to forty parts water, and add to this solution 3 pounds arsenate of lead. The apple scab is held in check by the lime sulfur, and the codling moth and tent caterpillar are destroyed by the poison.

Remove all spray apparatus and poisons from the orchard. Clean out spray machine after using. Do not allow stock in the orchard for from three to five days after spraying. It is not a good practise to keep stock in a fruit orchard.

**Scale Insects** If your fruit trees are troubled with scale insects, such as the San Jose, destroy or spray all bushes of Hawthorn, Japanese quince, wild plums and wild roses. Get all of your community fighting insects, and know where to find them and how to destroy them, and in a few years you would be freed from these pests.

**Planting** It is not too late to set out young fruit trees and berry bushes. Prune back the tops vigorously after planting.

**Cover Crops** Plow under the cover crops among the fruit trees and give the surface a thoro harrowing. Grub all grass and weeds about the tree. Care should be taken not to injure the roots. Use some slow acting fertilizer like coarse bone meal about the trees. Never use nitrate of soda.

**Cleaning** With the rush of spring work don't neglect to clean up all prunings from the orchard and berry patch and bunch them. Brush left in piles is, or makes, only harboring places for insects later.

**Intercropping** If the orchard is young, it may be intercropped with vegetables.

## GARDEN ENEMIES

**Maggots** The onion, turnip and radish are subject to the attack of root maggots. Before sowing the seed, scatter a little air slacked lime and tobacco dust in the trench.

**Sparrow** With the coming of the tender shoots of the peas, the sparrows visit the garden and pick these off close to the surface soil. Sprinkle the young pea vines early in the morning when the dew is on them with tobacco dust.

**Carnation Stem-rot** The soft rot of the stem just below the surface of the soil destroys many plants at transplanting. Change the field location of the plants annually.

**Apple Casebearers** This caterpillar in its case, works on the young leaves and buds. Poison leaves with arsenate of lead.

**Bud Moth** The caterpillar is brownish in color, and works on the buds. Use poison.

**Tent Caterpillar** Early in the spring this enemy appears with the coming of the first leaves. He builds large nets in the crotches of the branches. Poison by spraying.

**Cut Worms** If this pest cuts off the cabbage plants close to the surface, wrap a little paper about the stem on transplanting to the open. Make a bran mash mixt with molasses and Paris green. Scatter this about where the worms may find it. Poison.

**Slugs** If late in April slugs appear on the lettuce leaves, sprinkle a board with corn meal and place it meal side down in the garden. After the sun has been up a few hours, lift the board and the slugs will be found on the underside of it. Destroy with scalding water.

## A Simplex Will Keep Your Help Contented

**I**F you have a maid or laundress to do your ironing, it will be to your advantage to provide her with a **SIMPLEX**. It will save her time and keep her contented. The housewife who owns a "**SIMPLEX IRONER**" and other labor-saving appliances has no servant problem.

Besides, the **SIMPLEX IRONER** will show a substantial saving on your fuel bills and greatly increase the life of your clothes. You will be surprised at the amount of work turned out in a single hour and delighted with the perfect edges and glossy finish.

# SIMPLEX IRONER

"THE BEST IRONER"

*Saves Time—Saves Money—Saves Clothes—Saves Health*

Irons in addition to flat work, curtains, lingerie, aprons, men's shirts, children's play clothes, etc.

Electric Drive **SIMPLEX** for home with electric current. Power Ironer for the farm or washing machine user. Hand Power **SIMPLEX** for the home without gas or electricity. Various prices.

Can be had on Easy Payments and on approval. Durably made to last a lifetime. Write for our book "Clean Linen in Abundance." Also our illustrated story "Aunt Eliza from Boston."

Consult our Service Department in planning and arranging your home laundry—no obligation.

**AMERICAN IRONING MACHINE CO., 508, 168 N. Michigan Ave. CHICAGO**

We also make Ironing Machines and Equipment for the Small or Home Laundry, Hotel, Institution, Etc. Write for catalog.

New York business men en the way to work. "Patriotism should prompt the use of more rather than less gasoline, if coal is conserved"

# THE PATRIOT WHO OWNS A CAR

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

**D**ESPITE the fact that the automobile is now an all-year vehicle and there is no longer a general laying up of cars over the winter season, yet springtime, and especially the month of April, seems to inaugurate the motoring year. Consequently now is the time that the passenger car owner is making his or her plans for the coming season, in so far as the use of an automobile is concerned.

Judging from talks I have had recently with a number of motorists it seems that there is a certain reluctance to use passenger cars as freely this season as heretofore. The reasons given, of course, are those prompted by patriotism. According to their belief gasoline and rubber supplies should be conserved for military uses, and among the sacrifices that must be made to win the war are included the pleasures and much of the convenience of motor travel. It is not strange that such beliefs exist, because certain interests and individuals have been to considerable pains to influence the public along these lines, altho their real motives have been no part of their propaganda.

However, let us consider the facts in the case.

There are now in the United States a million more gallons of gasoline produced daily than are consumed or exported, and the storage of this surplus is one of the problems perplexing the oil industry. Production of gasoline cannot be curtailed, because the fuel oil remaining after it is taken from the crude is needed for the many oil-burning naval and merchant vessels and for many other uses directly connected with the war. Gasoline is therefore a byproduct in the production of fuel oil. Today there is a full two years' supply of gasoline for the United States and its allies above ground, as the oil men term storage, the limitations of trans-Atlantic shipping being considered. In addition there are actually thousands of oil wells in this country drilled, tested and plugged until they are needed. In fields already discovered and proved there is gasoline enough to last two hundred years. I have before me many more facts of a similar nature, supplied by experts in the oil industry and employed by the Government, but the foregoing should suffice.

Then why, you ask, has there been so much talk about the need of conserving our supplies of gasoline, why the sensational appeal made last fall by the oil committee of the Council of National Defense, given out with all the prestige of Washington behind it? I have heard it asserted that the motive was to maintain the prevailing high prices of gasoline, or at least to furnish an excuse. If this is so and people, motorists in particular, materially reduced their consumption of gasoline, what a boomerang this propaganda would be. The case of England, where private motoring is taboo,

was and is one of the arguments. Of course, no mention was made of the fact that there being no oil wells or pipe lines running into the British Isles, all gasoline and other oil supplies were received via steamship.

Thus patriotism should prompt the use of more rather than less gasoline, especially if coal is conserved thereby, as is the case when one travels by automobile instead of railroad or trolley. And as to rubber the supply of crude is as plentiful and somewhat cheaper than it has been for several years.

**T**HE motorist who feels that by eliminating or restricting the use of his or her passenger car help is given in winning the war is either a member of that minute minority of merely joy-riders, or else, as is generally the case, does not appreciate what an automobile really is. And they can hardly be blamed, because these vehicles have been exploited so long under the name of pleasure cars, and luxury emphasized at the expense of utility, that even the all-wise members of Congress last fall classed motor trucks as luxuries, along with jeweled earrings and perfumery. However, Congress knows better now, and seems inclined to class even the passenger car as a utility and the motorist surely will do likewise. As a utility the passenger automobile is in a class with the railroad and the railroad was never considered a non-essential because people sometimes used it when purely pleasure bent.

Apropos the enlightenment of official Washington as to the utilitarian value of the passenger car, a group of Michigan bankers visited Fuel Administrator Garfield at a time last fall when the advisability of prohibiting the use of railroad freight cars for the shipment of automobiles was being considered. After some discussion one of the bankers asked Mr. Garfield if he used an automobile. Receiving an affirmative answer the banker said: "I will give you a thousand dollars more for your car than you paid for it, provided you will not buy or use another."

"No, no," quickly replied Mr. Garfield, "I need the car in my work here. It is indispensable in getting around and in going to and from my office."

It behooves us all, from official Washington to the humblest patriot, to increase business and personal efficiency as a means of winning the war. Economy of time is important in this respect and the automobile is perhaps the greatest saver of time that was ever invented. A thousand cars in a community, saving an average of an hour a day to their owners engaged in any line of manufacturing, business or in the pro-

fessions, save for that community daily 125 business days. Again, intense application to business cannot be kept up without some relaxation, some

change of environment, and a few breaths of good fresh air. The passenger automobile is the ideal means by which to secure a maximum of these benefits in a minimum time. About the only recreation President Wilson gets in these trying days is his afternoon automobile ride.

Is it not then a false conception of patriotism to restrict the use of passenger automobiles? One might just as logically curtail one's telephone service or walk less for exercise in order to save shoe leather.

And if one can afford it there should be no hesitancy about buying a new car. Replacing old machinery with new and improved machinery is one of the first steps in increasing efficiency in a factory. You will help the Government just as much as tho you bought additional Liberty Bonds with the purchase price. It only means that others will be able to buy the bonds. By purchasing a new car you are helping the third largest industry in the United States to keep going, one on which five per cent of the people depend for a living. And your old car is resold at a price permitting, perhaps, some mechanic to secure and use it for traveling to and from his work, so he can move his family out into the country, where they have a garden and help increase food production.

**I**N using their passenger cars this season, however, there are several ways in which motorists can serve the common cause. Driving at conservative speeds will reduce the wear and tear on the roads, which are now so essential for inter-city freight hauling by motor trucks. Incidentally when you meet motor trucks remember the great part they are playing in helping out the railroads and give them the right of way. Because of scarcity of labor and high cost of materials country highways and city streets, especially the former, are not being maintained as they should. This coupled with the heavy motor haulage will soon have the roads in bad condition, which will tend to make touring less desirable. Conservative driving will also save tires and fuel to the benefit of your pocketbook. Quick starting and stopping is not only hard on the car but hard on the road surface also. Giving a "lift" to the workman on foot whom you meet may increase the output that day of some munition factory. It is the multiplication of these little things that means, so much in our national effort. And to the average motorist many other things will occur whereby material help can be extended, while he or she is gaining health and recreation or saving time and otherwise promoting efficiency thru traveling by automobile.

## DREER'S

### "GOLD MEDAL" GLADIOLUS

We grow this magnificent strain for the express purpose of being able to supply those who want the very best mixture possible.

When Gladioli are grown in mixture they are liable to deteriorate rapidly and finally contain but a few colors. To avoid this we grow small blocks of a large number of exquisite high-grade sorts from which this mixture is made and which embraces all colors from the richest reds through all the intermediate tones of pink, rose, salmon, blush, white, yellow to the new blue, heliotrope and "pansy colors." Indeed so great is the diversity of colors that there is little risk of any two being exactly alike.

Having a large stock of splendid bulbs, we are able to offer them at a very reasonable price, viz. 60 cts. per doz., \$4.00 per 100, \$35.00 per 1000. If wanted by Parcel Post add 6 cts. per doz. for postage.

The above is but one of our Specialties. For complete list send for

## THE POULTRY YARD IN APRIL

BY E. I. FARRINGTON

*In quarters like these and with good feed  
a hen soon gets over her broodiness*

WHEN Mr. Hoover gave notice to the poultry keepers of the country that no more hens or pullets should be drest for market for a period of ten weeks, the fact that poultry keeping was on a war time basis was brought home to thousands of people for the first time. Mr. Hoover's purpose was, of course, to increase the production of eggs, and undoubtedly the order was needed. Yet it put many poultrymen in a peculiar situation, for they could not obtain sufficient grain to feed their hens except at an exorbitant price, and yet they had to keep them.

It is being discovered, in consequence, that practically as many eggs can be obtained by quite different feeding methods from those formerly employed. Edward S. Brown, the leading poultry expert of Great Britain, who has been sent to this country to arrange for shipping breeding stock to English poultrymen after the war, says that it has been found across the water that poultry will do very well on green feeds, potatoes, turnips and the like, with much less grain than was once considered indispensable.

Since the new flour orders went into effect American poultrymen are discovering that the bran which they buy has changed remarkably in substance and appearance. It has become more like meal, and is difficult to mix with water or milk. If fed dry, however, with twenty per cent of beef scraps, it makes a very good mash.

In parts of New England poultrymen are being refused oats, this grain being held wholly for horses. Oats are valuable as a substitute for wheat, but can be dispensed with. In the egg laying contest at Leavenworth, Kansas, the following very simple ration has given good results:

Scratch feed—400 pounds of cracked corn.

Dry mash—150 pounds of wheat bran, 150 pounds of wheat shorts, 100 pounds of beef scraps, 4 pounds of fine charcoal and 3 pounds of salt.

This ration can be improved by feeding either sprouted oats or sprouted barley, a bushel being fed for every one hundred pounds of corn.

Of course the orders from Washington, designed to promote the egg yield, were issued with the full knowledge of the fact that the spring months are the months in which the greatest number of eggs are produced. If as hoped the total number can be increased by five million, the egg supply of the country will begin to approach normal.

With plenty of eggs coming in, the small

## To the people of New York City and vicinity

Within 100 miles of New York City  
our motor truck deliveries will bring you  
freshly dug trees, shrubs, fruits and flow-  
ers of the best quality. For some of your  
needs the Hicks Nurseries is the best  
source of supply.

I Send for Home Landscapes. Landscape  
Architecture, Inc., the official organ of  
the American Society of Landscape  
Architects, has prepared a series of beau-  
tiful groups, and illustrated them by  
plans and perspectives. Some of these  
groups will probably fit your needs.

II Call at the Hicks Nurseries and see  
what beautiful plants you can have.  
Some of them save you 10 years. The  
big fruit trees will bear earlier than usual.  
New and beautiful plants from the  
famous collections at Highland Park,  
Rochester, have been described in Gar-  
den Magazine by the Superintendent,  
John Dunbar, one of the foremost  
authorities in this country. At the  
Hicks Nurseries you can get some of  
them for your garden.

III Ask your neighbor how they like Hicks  
stock and service, and the guarantee  
to replace free what does not grow  
satisfactorily.

These are only a few of the subjects and the 370 authors represented in this great work which is in this complete library now yours for only 3 cents a day. Mail coupon.

THE cream of 560 of the world's greatest books by 300 of the world's greatest authors—Thackeray, Tolstoy, Dickens, Hugo, Shakespeare, Moliere, Sophocles, Tasso, etc., etc.—each the foremost intellect of his generation. Just the collection boiled down for quick reading that a millionaire lover of books would buy to make his library of classics complete. 560 of the world's greatest books selected and condensed by two of the world's foremost editors—Lord Northcliffe of England and S. S. McClure of America. \$2,000 worth of books (if bought in the original form) now yours for 3¢ a day for only a few months, through a truly remarkable publishing feat.

## Condensed to 20 Volumes

No longer do you have to wade through the dull parts of literature to get the brilliant spots—no longer do you have to spend years in becoming familiar with great authors—no longer do you have to solve the problem of where to begin, of deciding what is worth-while and what is waste of time in reading.

All of this has now been done for you. These two great editors have selected the books and their great editorial staffs have cut out the dull, unessential parts with which even the world's greatest literature abounds—and they have condensed all of these writings into twenty beautiful volumes containing all the gold but none of the dross. These are not extracts—they are condensations, yet every word is the word of the author. Never has there been such an opportunity to gain the riches in knowledge, riches in inspiration, in incentive, in self-confidence—to strengthen your mental power and infuse new spirit into every faculty and function of your brain. Never have the riches in entertainment, in wisdom been so easily within your grasp.

## Only 3 Cents a Day

Which way is your way? To purchase outright, without the privilege of return. The complete volumes at a cost of about \$200 and spend months and years getting out of them what you want. Or—  
—is this to be your way, or—to accept

our free inspection offer and, if pleased, to secure these same 560 Books, each edited and condensed to half an hour's reading, for less than 3¢ a day and to get the real substance of the wisdom and entertainment of the world by spending only 15 minutes or less a day? Which way for you—the old or the new?

## No Money in Advance

Thousands of sets have already been sold in England, and now these great books are ready for America. Realizing that these books, containing all the essence of a millionaire booklover's library, must be seen to be fully appreciated; realizing that their value to you grows each day that they are in your hands—we have decided to distribute a few introductory sets at a greatly reduced price on little payment, terms. Send the coupon—no money. It brings the complete set of 20 volumes, charges prepaid, on approval. If you don't find in them Inspiration, Pleasure, Knowledge—send them back at our expense. Otherwise 3 cents a day pays for them—pays the half price that you get on this introductory edition.

**DEVORE & RAYNOLDS CO., Inc.**

101 Fulton Street, New York

poultry keeper should lose no time in putting down many dozen to be kept until next winter. The plan of preserving eggs in water glass is entirely feasible if the eggs are fresh and clean. Sometimes complaints are heard that the eggs taste musty after they have been put down a few months. The reason is almost invariably that the eggs were not fresh enough when put down. Many city residents buy eggs by the case to be preserved, ordering them from some country town. If these eggs have been gathered up from farmers about the neighborhood, the chances are that many of them will be from one to three weeks old. Water glass can be purchased at any drug store and must be diluted in the proportion of one part to nine parts of water. Altho not necessary, it is wise to boil the water and allow it to cool. A stone crock is the best container, and should be half filled with the solution, the eggs being placed in the container carefully in order that they may not be cracked. Eggs can be added from time to time until the container is full, but there should always be two inches of water glass above the eggs. Keep the crock covered and in a cool place, occasionally adding water if evaporation makes this necessary.

**A**PRIL is the great hatching month, and it is important that the chickens receive the best of care. When a chicken dies, the loss involves not only a potential supply of meat, but also the loss of an egg which might have been used for food. Of course there is danger of too much coddling, but such matters as protecting the youngsters from rats, cats, lice, drafts and dampness must not be overlooked.

Many complex feeding rules have been laid down, but it is not necessary to follow them. There is no better starting food than stale bread soaked in milk, but with the milk partly squeezed out. Rolled oats, oatmeal and hard boiled eggs are also excellent for small chickens. After a few days, however, there is no reason why the chicks should not be gradually accustomed to regular feedings of finely cracked grain.

It is best for the amateur to use a commercial chick feed. At the end of a week a chicken mash or bran alone may be kept before the chickens at all times, ten per cent of beet scraps being added after ten days. If the chicks are not overfed and have plenty of water, with frequent extras in the way of lettuce or sprouted oats, they will make rapid growth, even when fed in the simple manner described.

Broody hens will begin to appear this month. Some of them may be needed, but they are likely to prove a nuisance and should be broken up as quickly as possible. The best way to break them up is to place them in a small cage or coop elevated on posts or fastened to the side of the house. It should be made of chicken wire, with a slatted floor, the boards being narrow and placed far enough apart to admit the air freely. In such quarters and with plenty of good feed a hen soon gets over her attack of broodiness, especially if she is incarcerated as soon as discovered. A hen has been allowed to sit on a nest for several days, breaking her up becoming a hard task. Of course no modern poultryman thinks of ducking his broody hens in a horse trough or slamming them on the floor after the manner followed by fowling in other days.

Tam—What sort o' meenister haonths in noo, Sandy?

### THE HOUSEKEEPER'S HANDY BOOK By Lucia Millet Baxter

Packed with the lore of generations of accomplished housewives, this volume contains just the things that the mistress of every well-ordered home must know. It includes 18 full-page illustrations, and is composed of enlightening chapters on the laundry, home sanitation, foreign cooking, toilet suggestions, needlework, accidents, minor illnesses—in fact, everything from cleanliness and health to the latest thing in knitting stitches.

### THE NUTRITION OF A HOUSEHOLD By Edwin T. and Lilian Brewster

The cheering sub-title of this invaluable book is "Better Food at Lower Cost." In these days of conservation and soaring prices, what subject is more important to the home? And as for the country, the government says, "Food will win the war." The authors have not written a dry treatise on proteins and calories, but an interesting, practical, common-sense discussion of the economic preparation of three wholesome meals a day.

### LETTERS TO A YOUNG HOUSEKEEPER By Jane Prince

A book that is crammed with helpful suggestions on the family budget, economy in the home, servants, the weekly cleaning, the serving of meals, and other vital branches of the great profession of modern housekeeping. These pages are devoted particularly to the larger problems of efficient home management, which mean so much to the housekeeper, and upon the shoals of which many domestic boats are wrecked.

### THE CARE OF A HOUSE By Theodore M. Clark

Written by a noted architect, this book is a thorough-going discussion of the treatment of furnaces, fireplaces, stoves, water-pipes, chimneys, woodwork, floors, plumbing, lighting fixtures, and all the other physical features of a house. The author recognizes the importance to happy family life of a comfortable, wholesome dwelling, and the distress, anxiety and expense often caused by defects which, if understood in season, may be easily remedied. This remarkably useful volume is a certain money-and-trouble-saver for any householder.

## A PRACTICAL BIRD MAN And the Houses He Builds

GO to the woodpecker if you would learn to make satisfactory homes for birds. The busy little fellow who sounds his cheery tattoo on the dried trunks of trees is the very best architect in all birddom, and his reputation is sustained by hundreds of satisfied tenants who occupy his dwellings.

It took many years for Edwin H. Reiber, of West Webster, to find out this truth, and from the knowledge he has set himself up as rival to the woodpecker and to-day is turning out almost as many bird homes as his feathered competitor. That his efforts are appreciated is testified to by hundreds of tenants of his houses.

Mr. Reiber, or "The Bird Man," as he is more often known, has been a companion of the birds since his early boyhood. His chief delight has been to see the birds at their daily tasks of food hunting, nest building and the rearing of their young. Perhaps that is why he began to notice years ago that the clearing of timber, brush patches and wild fields was daily depriving the birds of their natural nesting places and forcing them to nest where they were more and more at the mercy of their natural enemies.

Then birds began to grow less and less in number, the whole country awoke to the danger that bird life might disappear as had the passenger pigeon and the buffalo.

Laws were enacted to protect birds from the guns and nets. "These laws are good," argued the Bird Man, "but they do not strike at the root of the trouble. What the birds need are food and safe nesting places." Then began his long patient study of nesting and bird housekeeping, experiments with artificial homes for birds and feeding stations for them.

His whole aim was to reproduce artificially the natural conditions under which the wild bird nests and rears its young.

These studies and experiments led him from the Valley of the Rio Grande to the pines of the Adirondacks. Summer and winter he followed the birds in their migrations, offering the shelter of his bird homes, until he had found a construction that not only gave the natural nesting conditions but was attractive to the birds and attractive to the eye as well, or as he says so often, "a home that pleases the birds and pleases the giver."

One of the greatest obstacles the Bird Man had to overcome in interesting those who were genuinely in sympathy with the movement for bird preservation was the popular fallacy that "a box with a hole in it," no matter how prettily it might be painted and decorated on the outside, was of any value as a saver of bird life. His earliest investigations had taught him that such a device was only a death trap for young birds, for they do not reproduce the natural conditions under which birds hatch their eggs and rear their young.

He has invented a system of bird hous-

### Move Your Poultry Yard When and Where You Want it by Using "Buffalo" Portable Poultry Runways

This new fencing system enables you to make any size yard desired and move it to other locations at will. To erect simply push legs into the ground.

Substantially constructed from 1 1/2 inch Diamond mesh heavy galvanized wire fabric and galvanized round iron frames with one inch galvanized Hexagon Netting along the bottom, twelve inches high. Strong and durable and its portable feature makes it readily adaptable for fencing in young chicks or ducklings, as well as grown chickens, ducks, geese, etc. Also used to advantage for enclosing small vegetable garden plots, dog runways, etc.

Made in standard size sections as follows:

7 ft. long by 5 ft. high.....	\$3.75 per section
2 ft. 6 in. long by 5 ft. high (gate)...	1.60 " "
8 ft. long by 2 ft. high.....	2.00 " "
6 ft. long by 2 ft. high.....	1.60 " "

PLUS 10% TO THE ABOVE PRICES.  
F. O. B. Buffalo.

The prices are effective April 1st, 1918, and are for orders consisting of six sections or more. Above sizes can be shipped from stock immediately. Special sizes made to order on short notice. Send money order, check, New York Draft or currency by registered mail NOW! Don't delay, freight conditions are bad and delay in ordering may disappoint you in delivery.

Our booklet No. 67 BR will be sent upon request with six cents to cover postage. A trial order will convince you of the merits of this system.

KEYSTONE COPPER STEEL Roofing Tin Plates are unequalled. Sold by leading dealers. Look for the Keystone added below regular brands. Shall we send our "Better Buildings" booklet?

**AMERICAN SHEET AND TIN PLATE COMPANY, Frick Bldg., Pittsburgh, Pa.**

ing that protects and conserves bird life. This is the way he explains it:

"In nature the woodpeckers peck out a nesting cavity in branches where the fibers of the wood are completely destroyed by decay, caused by excessive moisture, leaving the interior of the branch in a spongy, moist, cool condition. This condition is absolutely necessary to the birds of the house nesting varieties and insures perfect incubation of the eggs. This moisture has always been omitted in man-made bird houses, and our birds have been deprived of the condition upon which their lives actually depend.

"In bird eggs there is an amount of free albumen; a thin, watery substance which does not enter into the young bird during incubation, but remains and insures perfect hatching and makes it possible for the young birds to leave the shell easily and in perfect condition to reach maturity. In the ordinary one-wall bird houses this free albumen soon dries up from excessive heat, and when hatching time arrives the skin of the bird adheres to the inner shell membrane, is torn and much bird life is destroyed.

"As it is natural for the woodpecker to seek a new decayed branch each year for its home, so the old deserted cavities are taken possession of by the other house nesting birds that do not peck out cavities. Nature has supplied numerous woodpeckers that vary in size and peck out different sized cavities. These cavities become homes for the various birds that nest in deserted cavities.

"The deserted cavity of the hairy woodpecker makes a home for the bluebird; the red-headed woodpecker's cavity makes a home for the crested fly-catcher, and the flicker or golden-winged woodpecker makes a home for the sparrow hawk and screech owl. So if we are to construct a successful home for bluebirds, we go to the deserted hairy woodpecker's home and copy the natural conditions, the size and shape of entrance, the depth of the cavity from the entrance, the diameter of the cavity, and the moist, cool conditions of the cavity. If we should make the cavity too deep the young would be unable to reach the entrance; if too shallow the young would leave the nest before they were sufficiently strong to take care of themselves; so every detail has to be worked out minutely.

"I make my houses of sassafras and red cedar woods. The oils of both woods eliminate the possibility of vermin accumulating. As the bark of the sassafras is a nonconductor of heat, it also helps to keep the nesting chamber cool. Both woods are very durable, a necessity to man-made houses, as birds once established return year after year to the same house.

## CON-SER-TEX

THE IDEAL  
COVERING FOR

SLEEPING BALCONIES  
PORCH FLOORS  
AND ROOFS

Save Money, Secure Satisfaction,  
Avoid Future Expense

## Use Con-Ser-Tex Canvas Roofing

It makes a neat, attractive, durable surface which will last as long as the house itself.

This roofing material costs less than most others, is inexpensive to lay. For years has been giving satisfactory service.

Wherever a neat, artistic waterproof surface is wanted CON-SER-TEX should be used. It will not leak, buckle, crack, stretch, peel or rot.

CON-SER-TEX is a canvas roofing chemically treated to protect the fiber from mildew and the detrimental action of the oil in paint.

### Water-proof, Weather-proof Wear-proof

CON-SER-TEX is a perfect material for a roof, porch covering, or porch floor; on sleeping balconies, garage roofs, etc. In the suburban sections of the towns and cities throughout the United States, you will find hundreds of attractive and artistic homes where CON-SER-TEX is largely used—it renders continued satisfaction.

Investigate its merits. Send us the dimensions of your roof, porch floors, sleeping balcony, or the surface you want covered. We will mail you samples showing quality, width, weight, and free illustrated copy of "Roofing Facts and Figures."

## THE STRANGER WITHIN OUR GATES

(Continued from page 25)

is because recently we have neglected our obligations to the strangers within our gates. The fault lies in our lack of adequate provisions for their education. Race antagonisms have persisted for centuries in Europe because autocratic governments have regularly attempted to suppress all the racial and national aspirations of weaker and subject peoples instead of building upon them newer and broader federal ideals. In this country in the past we succeeded in assimilating our immigrants because men landed in this country resolved to become American citizens as soon as possible. Today, the newer elements in our population are left to themselves in colonies and communities in the heart of our great cities. We have our ghettos, our Little Italies and our Little Hungaries in which immigrants are abandoned to their own devices. When they ask us for explanations of the meaning of our democracy they are often met with expressions of impatience; the honesty of their motives is doubted; their sons are branded as slackers because they have no understanding of the cause for which we are fighting and therefore have no desire to enlist.

Our duty is plain if we will see it. We have invited the oppressed and downtrodden of all countries to come to this country; we have used their strength to assist us in developing our economic resources; but we have forgotten our obligation to arouse in them faith, trust and hope in our American ideals.

America is still the land of opportunity. There is still room in this country for the men and women who shall come to us from Europe by the millions, bringing with them their ideals and their hopes for the future, but the safety of the republic is conditioned upon our building up its structure upon American rather than European ideals. Each new wave of immigration must be assimilated; each must be speedily educated so that men, women and children will become true Americans.

For generations we have been trying an experiment in internationalism within our own borders. We have succeeded in breaking down the race antagonisms which interfered with internationalism in Europe. We have given to men whose ancestors for centuries were bound down by the narrow conception of race loyalty a vision as broad as the limits of humanity. If in the future we are to become leaders in a world-wide internationalism based upon a strong democratic nationalism, we must not abandon the ideals of our fathers; we must carry on our experiment in internationalism thru immigration with increasing success.

"Waiter, how can I tell if this is a ham sandwich?"

## DeLue's GOLDEN GIANT SWEET CORN

New Early  
Hybrid

Furnishes the sweetest and most luscious creamy nutriment you can imagine. Acclaimed the most important horticultural acquisition of recent years. Awarded the only medal given for sweet corn by the Mass. Horticultural Society in nearly 100 years.

DeLue's Golden Giant is the result of 12 years' selection from the product of Howling Mob crossed with Golden Bantam and combines all the good points of both parents—and then some.

Stalks very short and stout near the ground. Two to three ears; 8 to 9 inches long; cob of small diameter, carrying from 12 to 18 rows of long, thick kernels of deep orange color. Remains tender until nearly ready for seed.

It excels all other early varieties in size, productiveness and quality, and all the late varieties in quality and early maturity while equalling them in size.

It is the one corn for the home or market gardener who wants the greatest amount of highest quality corn in the shortest period of time from the smallest piece of land. Illustrated booklet, "How to Know and How to Grow Medal Sweet Corn," sent with order. Price 35c per 1/2 oz.; 50c per oz. (about 120 to 130 seeds).

Beware of substitutes. The genuine seeds are for sale only by the originator.

## BUILT-IN FURNITURE

(Continued from page 28)

be seen in many a Queen Anne or early Georgian panelled room where a built-in cupboard definitely enters into the original scheme as an essential item of decorative effect. If the room exhibited rich detail of carving, as many of them did, great care was bestowed upon the ornamentation of the cupboard both in respect of carved detail and, if a room was painted, in respect of color and gilding as well. The inside was no less conscientiously finished than the exterior, decorative painted devices often appearing in the coved or scalloped top, and carving at the edges of the shaped shelves. The example illustrated will convey an adequate idea of representative treatment. Less ornate but not less striking and worthy of emulation as a legitimate type of built-in furniture were the cupboards in corners and beside fireplaces in the panelled room ends of our own simpler American Georgian houses such as we see in another illustration. That the cupboard or closet is really a piece of built-in furniture—few people seem to realize it—one may be convinced "by removing a closet opening and leaving a bare, plastered, unadorned wall surface instead." Why not, then, make the closet or cupboard a real decorative factor in the room's composition? In placing it, endeavor to make its position balance some other architectural feature.

A useful and ingenious variant to the cupboard may be contrived by hinging the door of the upper portion at the bottom so that it will let down to form a desk or table, the central stile between the panels being also hinged, at the top, so that it may be dropt to form a leg. While speaking of built-in furniture invited by architectural conditions, the reader is reminded of the Renaissance Italian cupboards with decorated doors mentioned in a preceding paragraph. Bookcases or book shelves occupy an equally important place in the realm of built-in furniture with cupboards and closets and offer as great a range of opportunities for diversity of design and decorative treatment. Whatever fashion may most commend itself, remember that it is advisable to have movable shelves. If the shelves are not movable, be sure to have them spaced for volumes of standard sizes. The fireplace, under certain conditions, invites built-in seats or settles, either beside it or standing out into the room. Likewise, entrance halls and the sides of staircases or stair landings often present suitable opportunities for the construction of built-in seats.

Last of all we come to the cases where it is desirable, so far as possible, to dispense with movable furniture. Such conditions often obtain in bungalows or cottages to be used during only a few months in the year and to which it is inconvenient to transport any considerable amount of movable appointments. Under such circumstances, with the few suggestions already offered, a little ingenuity will devise numerous appropriate adaptations of built-in precedents for wall, table and seating furniture, which may be installed either when the bungalow or cottage is built or afterward. In a dwelling for all-the-year-round occupancy, such an amount of fixed equipment, of course, would savor of affectation, be uncomfortably suggestive of furniture paralysis and soon become monotonous, but under the conditions alluded to it is justifiable and usually preferable to what one too often finds in the way of broken or shabby odds and ends discarded from the furnishings of the family's more permanent abode. In any case, whether in cottage or

## Dreer's Famous American Asters

Asters are now the leading late Summer and Autumn flower both for cutting and for effect in the garden, and every flower lover should make a generous planting.

We offer this season over sixty kinds and colors, all "Made in America" and of the highest quality.

We especially recommend our collection of *Six Famous American* varieties containing a liberal packet each of Peerless Pink, Crimson King, Crego's Giant Pink, Crego's Giant White, Rose King and Violet King. Price for any of the sorts 15 cts. per packet, or the entire collection for 65 cts. postpaid.

CHAMBERLIN METAL WEATHER STRIP CO.  
Headquarters: 119 Dinan Bldg., Detroit, Mich.

larger dwelling and whether simple or elaborate in fashion, a sense of fitness and good judgment must determine the amount of built-in furniture to be used. A care to be invariably observed in every instance, for simple and ornate pieces alike, is to choose hardware of good design, for this item has more to do with the general aspect than a good many seem to realize. In a very small apartment, where all movables not vitally necessary must be eliminated, a bit of built-in furniture is sometimes a boon. As an instance—dozens of others might be adduced—one may suggest a combination piece whose lower part might conceal a kitchenette "while the upper part with glazed doors, curtained inside, might contain cooking utensils, kitchen supplies or dishes."

As a final bit of advice—keeping always in mind the fact that built-in furniture is not merely a clever space-saving "stunt" nor a handy makeshift but has its own real decorative value as well—let us set forth one guiding principle to observe in devising any piece, large or small: "Let it have a reason, either necessity or convenience, and let it be in keeping with the style of its surroundings."

## THE DECIDING FACTOR

(Continued from page 16)

rounds were fired by our pilots from low altitudes on hostile troops massed in villages and in the open continuously thruout the day.

"More than fourteen tons of bombs were dropt on enemy billets, on his high velocity guns and on railroad stations in the battle area.

"Our bombing aeroplanes were attacked by thirty-two hostile machines, and a fierce fight ensued. One of the enemy's aeroplanes was brought down in flames and another was downed, and fell in the center of Mannheim. Five others were driven down out of control.

"Despite this severe combat and the enemy's heavy anti-aircraft gunfire all our machines returned except two. During the night ten heavy bombs were dropt on an important railways bridge and works at Konz, just south of Treves, in Germany. Eight of these bombs were clearly seen to be bursting among the railways works.

"Nearly two tons of bombs were dropt from low hights on a hostile aerodrome south of Metz. Six bombs were seen to burst among the hangars and to set fire to some of the huts of the aerodrome. All our machines returned.

"From nightfall until early morning our night flying squadrons bombed areas on the battlefield in which hostile troops were concentrated, as well as enemy ammunition dumps and large guns. More than fourteen tons of bombs were again dropt by our machines, two and a half tons of which were loosed on the docks of Bruges. All our machines returned."

It is stated officially that this is only the beginning of the intensive warfare that is to follow, one of the great drives that are to follow each other in quick succession hereafter. We must, therefore, concentrate efforts on our aircraft program and put all the manufacturing facilities now standing practically idle in the United States to turn out aircraft and parts.

Consideration on an extended aircraft program must be delayed no longer.

The executive committee of the Aero Club of America, which has given thoro consideration to the situation, has made the following report, and presented the following recommendations:

"The situation must be considered from the standpoint of whether we as a nation

## SIGNET THE PERMANENT INK

are today going as far and as fast as we can with the aircraft program, and whether the present program is sufficient to insure the constant production of aeroplanes in sufficient number to supply the American aviators in France, train and equip the thousands of aviators under training and to be trained, and contribute to the building of the Allies' forces, so as to gain and maintain the Allies' supremacy in the air.

"If we look at the situation from this standpoint, we find that we are only doing one fifth of what we should do and the main reason is that there are no funds with which to do more. The Government aeronautics organization today is unable to go further essentially because it lacks funds.

"The present aircraft program was made at the time when Italy was victorious and Russia was still fighting energetically. The \$640,000,000 appropriations represented the rock bottom cost for the smallest plan that could be made to meet the situation successfully then. It did not allow a margin to take care of changing conditions, and meet unforeseen needs.

"The Italian reverses and the Russian collapse created new conditions, to meet which, we should immediately have tripled our aircraft program. The club officials consulted some of the authorities about it and found that they felt the same way. But Congress was not in session, and nothing could be done, outside of making plans.

"These plans were made public in part when the War Department made public the fact that the estimates include an item for pay of 11,041 aviation officers and 153,945 enlisted men for the Aviation Section of the Signal Corps. As it takes an average of two aeroplanes to train each aviator to the high point of efficiency required today and then it takes a minimum of six aeroplanes per aviator to keep him fighting for a year and it takes a spare motor for every motor used, there would be required 80,000 aeroplanes and more than twice that number of motors. Also a much larger number of schools for aviators and mechanics than there are now.

"To carry out this program would take an appropriation of about \$3,000,000,000, or about five times the amount the authorities have had to work with.

"This is a large sum, but it is small compared with the cost of the war, which is about \$500,000,000 a day, including economic loss due to cessation of commerce, and the enormous destruction of life and property.

"The Aero Club of America officials went over these figures with different Government officials and they agreed that such a program was necessary—and they felt that Congress would give the necessary appropriations soon after convening.

"This has not yet been done and the Government aeronautic organization's hands are tied until Congress allows further appropriations.

"Provided ample funds are allowed, the situation can be saved even at this late hour and the production of aircraft motors, and equipment quadrupled in the coming few months—there being a substantial foundation to build on."

No time should be lost in adopting the plan which is to give the Allies the supremacy in the air, which is so vital, as it will decide the war in favor of the Allies.

A big-hearted gentleman with a deep insight into human nature remarked during one of the recent sieges of below-zero weather:

"God pity the rich these cold nights. The poor can sleep with their windows shut."—*New York Post*.

The maker's name tells who made the lamp; the mark MAZDA tells what standards of excellence governed its making :: :: :: ::

**MAZDA**

*"Not the name of a thing,  
but the mark of a service"*

**The Meaning of MAZDA**

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

## THE AMERICAN YEAR BOOK

**IS AT YOUR SERVICE**

It is made for busy men, editors, contributors, professional men, teachers, scientific workers, and every one who wishes to verify or confirm questions that arise in his mind. It is a short cut to accurate knowledge of current events and the progress of the world. Here you will find everything worth knowing that has happened during 1917. The Greatest Year in History. It covers every department of learning and human affairs, yet with all its comprehensiveness *The American Year Book* is far from being a mere collection of dry facts and statistics. It is neither an almanac nor an encyclopedia. It is absolutely unique. You need *The American Year Book* as a supplement to your encyclopedia. *Not Only a Reference Book But a Fascinating Story of the Progress of Civilization.*

The American Year Book is a wonderfully interesting inspiring narrative, written by more than one hundred of the most eminent men in America—men who know—men who do. Each of

these men is a specialist in some important subject, in many cases the greatest living authority in his field. One by one these men take up all the great departments of learning and human activity—history, politics, government, legislation, industry, science, the arts, the professions, the trades, foreign relations, literature, education and many others. In each sphere they show just what has been accomplished during 1917. It is more interesting than any novel you ever read. How can the creation of one man's imagination approach in intensity of interest the facts of human achievement during the past year?

## Every Busy Man and Woman Needs The American Year Book

From no other source can you get the information you ought to have with no waste of time and effort as from *The American Year Book*. In order to get the information that is packed into this handy volume of 900 pages you would have to read hundreds of books, magazines and newspapers.

Think of the time this book will save you. No other book in your library contains the information. You need *The American Year Book*. The analytic index containing 6,000 subjects will enable you to find easily just the subject on which you wish to be posted.

*The American Year Book* can be obtained from no other source for no less than the regular price of Three Dollars. The yearly subscription price of *THE INDEPENDENT* is Four Dollars. However while our supply lasts we will renew your subscription to *THE INDEPENDENT* for one year (provided you reside in the United States) from present date of expiration and deliver to your address, charges prepaid, a copy of the 1918 edition of *The American Year Book* for FIVE DOLLARS. *THE INDEPENDENT* may be sent to one address and the Year Book to another address (both must be in the United States) in case you wish to use either as a gift to a friend.

This offer also applies to new subscriptions.

## PLANTING YOUR POTATOES

(Continued from page 35)

sary to resort to specially prepared commercial fertilizers.

A commercial fertilizer having from three to five per cent of nitrogen, from six to eight per cent of phosphoric acid, and from eight to ten per cent of potash should be combined in such a way as to supply the necessary plant food. This fertilizer may be applied at the rate of about one-half when the soil is cultivated, and the remaining half in the furrows three or four days before planting.

It should always be understood that commercial fertilizers alone will not raise potatoes. The physical condition of the soil must be right, having considerable humus in it so as to retain the moisture and make the fertilizer available.

The following tables may aid the gardener who cannot secure sufficient decayed manure. Plot 30 by 80 feet, one and one-half bushels of potatoes planted. Possible harvest of ten to twelve bushels. Mixture No. 1. Clay soil. Dried blood, 30 pounds; acid phosphate, 50 pounds; sulphate of potash, 20 pounds. Mixture No. 2. Light garden loam. Sulphate of ammonia, 10 pounds; dried fish scrap, 30 pounds; acid phosphate, 45 pounds; sulphate of potash, 25 pounds. Mixture No. 3. Sandy loam. Nitrate of soda, 15 pounds; cotton seed meal, 30 pounds; acid phosphate, 40 pounds; sulphate of potash, 18 pounds.

The Colorado potato beetle or the potato bug, as it is incorrectly called, is a common enemy of the potato patch. It may be destroyed by spraying the foliage with one-quarter pound of Paris green to seven gallons of water. This will cover your plot of 30 by 80 feet. As the potatoes reach maturity it might require a little more, but usually if the first beetles are destroyed here is seldom a second attack. Keep the solution continually agitated because the Paris green does not dissolve in water. London purple, or powdered arsenate of lead dusted on the vines as soon as the beetles appear will easily destroy them.

The flea beetle is common wherever the potato is grown. It riddles the foliage full of tiny holes and is checked only by the spray of Bordeaux mixture which is applied before the blight.

The late blight appears from two to four weeks after the first potato beetles appear and especially during a rainy period. Spray several times during the season with Bordeaux. The disease attacks the leaf causing dark, water-soaked areas which are covered with white mildew in a few days after the disease first puts in its appearance. The leaves close to the soil where there is considerable moisture are usually the first to show signs of the disease. Spray thoroughly before the disease appears, for the disease can only be prevented, not cured.

The early varieties may be dug whenever they are large enough to use, but the late varieties should be matured before they are moved from the soil. The plant should be left growing until the leaves begin to fall, the stems will then naturally turn yellow and ripen and this is the right time to harvest the crop. Use a broad-tined fork or a sub rake and do not dig too close to the roots. If any of the potatoes are injured by digging use them first, do not store these injured tubers with the perfect ones.

Do not expose the potato to the sun and for long. The tubers should be dry before packing, but if they are left out for several days, or exposed to the sun for any length of time, they shrink, are subject to disease and may manufacture a poison in the tissue.

# OSTERMOOR

## Are you ashamed of your beds?

Afraid to ask a friend to stay over night—knowing that your beds are not comfortable? Don't apologize for your beds. Fit them with Ostermoor Mattresses, the best in mattress comfort, though not the most expensive.

Ostermoor Mattresses are built (not stuffed) for physical comfort; elastic, giving and taking to the curves of the body, inducing relaxation of the muscles and rest. Built layer by layer, an Ostermoor will never get out of shape or uneven. Make your bed on an Ostermoor.

For sale at the best stores. Write for our 144-page catalog, "The Test of Time," and samples of ticking—sent Free. If your dealer cannot supply you, we will ship direct to your home by express prepaid. Mattress securely packed in leatherette paper and burlap. Safe delivery guaranteed. Price \$30 up.

This sanitary poultry house is an egg record breaker for 12 hens. The setting coops keep the hens by themselves while setting. The pigeon house (with its flight cage) is fitted complete for 10 nests. Hodgson poultry and pet stock houses are the most scientifically constructed on the market. Made of painted sections that can be easily bolted together by anyone. Send for illustrated booklet.

# Saves Coal

## Why It Does and How It Does

IT is easy enough to *claim* that the Kelsey Health Heat *saves* coal. Anybody can make claims. But it takes facts; two kinds of facts—cold facts and coal facts—to prove heating economy claims.

So let's understand each other. Our claim is: that the Kelsey will burn *less* coal and give *more* heat than any furnace; any steam system; any vacuum system; or any hot water system, regardless of what it costs. Bearing in mind last winter's experience, send for our Saving Sense Booklet. Make us *prove*, to your entire satisfaction, the Kelsey Coal Saving claim.

## The New Books

### Pelle The Conqueror

WHEN a child possesses the humor and philosophy that were Pelle's it takes either a very stupid person who is unable to do anything more than record his sayings, or a very clever person who can put him unchanged into a story, to write about him at all successfully. Martin Andersen Nexö is Pelle himself become a Danish novelist—there could be nothing better to say of him than this—and so he has been able to make of his chapters on "Boyhood," unalloyed delight. Quoting at random which may be done quite safely, as there is scarcely a page which does not tempt one, Pelle soliloquizes:

God . . . well, He had a long white beard like the farmer at Kassé Farm; but who kept house for Him now He was old? Saint Peter was His bailiff, of course. . . . How could the old dry crows have just as young calves as the young ones? And so on and so on. Far out in the misty mass, invisible worlds floated by that had nothing to do with his own. A sound coming out of the unknown created them in a twinkling. They came into existence in the same way that the land had done that morning he had stood upon the deck of the steamer, and heard voices and noise thru the fog, thick and big, with forms that looked like huge gloves without fingers.

This first part, "Boyhood," appeared in 1906 as the work of an author then practically unknown even in his own country, and we can easily understand the instant acclamation with which it was received. Now with three sections, Apprenticeship, The Great Struggle and Victory, added, we have it in the translation. Mr. Nexö has kept our unfailing interest thru Pelle's apprenticeship in a shoemaker's shop, his later life in Copenhagen, his love, sorrow, and his gradual growth until we leave him after the Great Struggle, a labor leader, establishing a garden-city for employees. His message is from the very heart of the poor and he spares us none of the sordid horror yet never loses the essential beauty. He says:

Money to these folk consists not of those round, indifferent objects which people in the upper strata of human society piled up in whole heaps. Here every shilling meant so much suffering or happiness. Widow Hoest gave him a ten-öre piece, and he could not help reflecting that she had given him her midday meal for two days to come.

Martin Andersen Nexö, the Danish peasant writer, who has given us a really great book

126 West 42nd Street, New York City

Telephone: Bryant 4360

And of Pelle's experiences in prison he gives us descriptions, vividly horrible, and unutterably pathetic, as the following of a thrashing:

Fire's nothing: I'd rather be burnt alive than have it again. The fellow doesn't beat: he's not the least angry with you; nobody's angry with you; they're all so seriously grieved on your account. Do you know what the devilish part of corporal punishment is? It's not the bodily pain that they inflict upon the culprit; it's his inner man they thrash—his soul. While I lay there brooding over my mutilated spirit, left to lick my wounds like a wounded animal, I realized that I had been in an encounter with the evil conscience of society, the victim of their hatred of those who suffer.

Altogether *Pelle The Conqueror* proves one of the most significant contributions to modern fiction, one which cannot be disregarded. The superiority of this to most novels dealing with labor problems is that here the variety of interest is so great that one never feels overfed with its main issue. Nexö has too much to talk about—too many people to make live for us—and above all, too keen a sense of the humor of life itself to admit of this.

*Pelle the Conqueror*, by Martin Andersen Nexö. Henry Holt & Co. 2 vols., each \$2.

### The Long Trick

Much of what you have done, as far as the public eye is concerned, may almost be said to have been done in the twilight.

These words of the British Premier in an address on board the flagship of the British fleet in August, 1915, which are quoted on the title page of this book, express rather well the secondary importance which most people attach to the navy and its work in winning the war. The dearth of books on the naval activities of the war as compared to the many books of all sorts and kinds on the army is quite typical of the popular attitude of mind.

One of the splendid qualities of *The Long Trick* is the fact that after we finish reading it, we can't help realizing the navy. The sense of its importance is brought home to us with tremendous force. Naval man that he is, the author thinks that the navy is the biggest thing in the war and he succeeds in making us think so too. And withal, he writes a pleasant tale, a good story from start to finish, told for the sake of the telling and only now and then striking the serious vein and that chiefly in passing. War is a sport to be gone thru with in true sportsmanlike spirit. The end of it all is—well as the India-rubber man says, puffing his pipe as he sits in the peace of a summer evening, home on furlough after the battle of the wests:

Any price we can pay, any amount of sacrifice, hardship, discomfort—is nothing as long as we keep this quiet peace undisturbed. . . . Even dying is a little thing as long as all this is undefiled.

Told in vividly concentrated fashion, with a nonchalant brevity of style quite nautical in flavor, *The Long Trick* is a true picture of modern naval life as it is actually lived today and that is something of interest to all of us.

*The Long Trick*, by Bartimeus. Doran Company. \$1.35.

### The U. P. Trail

This new book by the popular author, Zane Grey, is a long and fascinating tale of the building of the Union Pacific Railroad, back in the '60's when our frontiers were at the Missouri and the Great West was a wilderness to be tamed with civilization thru the medium of the iron rails. Here are all the elements of

sudden death and terrible lust and alluring gold . . . the labor of giants, the heroism and sacrifice of this wildest time in the opening of the West,

that unforgettable epoch in our national life which will never lose its thrill for those who love the romance of the frontier days. (Harper's, \$1.50.)

## City Light For Country Homes At Low Cost

**T**HE HEALTH of your family demands that oil lamps be discarded. They are unhealthy, unsightly, odorous and hard to keep clean. Tests prove that eleven people use less oxygen than one large lamp. Lamps, too, are dangerous.

WITH ELECTRICITY you simply screw a bulb into an electric light socket and instantly a brilliant, restful light is available. No lamps to clean, gas tanks to explode or danger from fire. One or a dozen lights may burn any time you choose.

WHEREAS AN OIL LAMP needs attention daily, an electric light bulb will last for months without attention. Then only a few seconds are required to make the change to a new one.

THE SAME POWER PLANT used for lighting purposes will supply current for fans, vacuum cleaners, washing machines, sewing machines, etc., as well as run the farm machinery and pump water anywhere you want it.

## Fairbanks-Morse Electric Light and Power Plant

1 to 200 H. P. for Cottage, Mansion or Town

IT GIVES a powerful current at half the cost of city electricity. Burns cheap kerosene, requires little attention and stays in order.

PLAN NOW for a brighter, healthier, more comfortable home. Take the first step today and write at once for our catalog 403E.

## TAKING EFFICIENCY INTO THE KITCHEN

(Continued from page 33)

kitchens, but I believe that in planning any kitchen for convenience in work it must not be forgotten that unlike factory motions, kitchen operations are not uniform, and that it is of the utmost importance to secure an efficiency of the mind, when efficiency of the hand will inevitably follow. It is for this reason that in all plans endorsed by me all equipment and utensils are enclosed in convenient cupboards and kitchen cabinets rather than hung against the wall. Thus while steps are minimized by the proper placement of equipment the mind is never irritated by too close quarters and a "cluttered" room.

Again, I do not believe in "pantries" into which the housekeeper or maid retires to mix the cake or mold the bread. In their place I counsel a storage cabinet, planned at the outside entrance to the kitchen. In place of the pantry install a kitchen cabinet flanked by shallow cabinets 12 to 14 inches in depth (inside dimension), extending upward to a height that makes each shelf accessible to the user. These cabinets may be purchased in metal as a unit system or they may be made by a carpenter and finished in gloss enamel paint, waxed so that they will prove easy to clean. Equip each shelf with wire racks protecting the paint from any scarring due to careless handling of the utensils.

In planning the lighting for your kitchen provide for an overhead light for general illumination and side lights that will serve every working equipment. I am convinced that the first cost of installation will be more than offset in the cost of operation because of the saving in current possible from the use of lamps of low wattage at the particular place required. And this is without reference to the lessened eye strain and increased comfort on the part of the worker.

Kitchen floor coverings are a mooted point but in my judgment there has been no development that will prove better in the long run than linoleum cemented fast to the floor. The rounding corners favored by sanitary engineers can be obtained even with linoleum by a skilful operator in cement. The linoleum should be first laid, allowed to stretch for a couple of weeks, then cemented firmly to the floor. Then it is given a thoro coating of paste wax so that every pore of the linoleum is so filled with wax that there can be no possibility of cracking from drying. This linoleum can be easily cared for by washing it when needed, then wiping and finishing with a liquid wax preparation. A linoleum thus treated and cared for will last indefinitely and you need have no hesitation in scrubbing it. Replace the wax and the water can do no damage to the linoleum, but if wax or oil are not used the linoleum will gradually dry out and crack. Moreover, with the wax treated floor the soil remains more or less on the surface while it sinks deep into the untreated linoleum; which is the most difficult kind to scrub and clean.

Possibly the best and most attractive kitchen color scheme is the buff and yellow combination.

Wherever possible the window should be of the square, high type, so that equipment, as the sink, bookshelf, tables, etc., can be placed beneath them. This method secures a maximum of wall space that can always be utilized to advantage and at the same time secures an excellent lighting with no direct rays cast on the eyes.

## CHALFONTE

Atlantic City, N. J.

The South Jersey Coast is delightful at this season. Chalfonte appeals to cultivated, interesting people seeking rest and recreation. Modern, 10-story, fireproof. Right on the beach and boardwalk. All sports and pastimes. Golf club privileges. American Plan Always Open

## THE BIGGEST BATTLE IN HISTORY

(Continued from page 19)

be reached so long as the troops remain in the trenches. The Germans are confident of their superiority in field fighting, for their officers were trained in grand maneuvers every year before the war, while the officers of the new British army know nothing but trench fighting. Haig, on the other hand, is a brilliant cavalry officer of the type of Sheridan and Custer. He made his reputation by a daring charge against a Boer battery and he longs for such an opportunity to come again. But this is a war of chemists and mechanics and altho spurs are still worn by officers even when on board ship or airplane, they are retained more for their honorific significance than for practical use; they are the vestigial emblems of a vanished knighthood.

The desire of both sides for mobile maneuvers seems likely to be gratified. At any rate the advance of the Germans down the right bank of the Oise from La Fere to Noyon, twenty miles in five days, is something that we have not seen in France for three years and a half. This drives a wedge between the British on the north of the Oise and the French on the south and leaves Hindenburg free to attack whichever party he deems the weaker. If he turns to the right against the British and goes down the Somme he may reach Amiens, thirty miles west of Péronne. If he turns to the left and goes down the Oise he may reach Paris, sixty miles southwest of Noyon. But if he advances toward either objective his flanks are exposed to attack from both sides, by the British on the north and by the French on the south. Every mile he advances lengthens his front nearly two miles and if, as we have been assured, the Allies outnumber the Germans by more than two to one they ought to be able to inflict a fatal blow upon his exposed deployment. The farther and the faster he goes the weaker he gets because he is losing men, expending ammunition and lengthening his lines of communication. The ground he has gained, the old battleground of the Somme, thrice fought over, is the least valuable land in France. Any new entrenchments he may construct will be weaker than those he left on the old Hindenburg line. The prisoners he has taken, the guns he has captured, the casualties he has inflicted, will not compensate him for the lives he has lost. What he has gained by his victory is the initiative and what he can make of it remains to be seen. He has at one blow disconcerted whatever plans the Allies may have laid for the summer campaign. He has secured a position that enables him to attack either of his enemies separately upon an unfortified flank. Whether he has the power to avail himself of these advantages no one knows, not Haig nor Hindenburg. It must be decided by the ordeal of battle. The present situation is much the same as on the first of September, 1914, just before Joffre came back. The Germans now acknowledge that they lost the battle of the Marne because they had been too successful in the weeks before. They had lost their breath in their mad rush upon Paris. It all depends now on whether we have a Joffre waiting behind the Marne—or the Oise or the Somme.

Barber—'Air's gettin' very thin on the top, sir.

Crusty Customer—Bit personal, aren't you?

Barber (hurt)—Why, 'ave I so much as mentioned the squint you've got in yer left eye? Now, 'ave I?—*Passing Show.*

**I**f you have studied the problem of redecorating that room you have already decided that the only thing to do to make it satisfactory is to use flat color.

Panel it perhaps; but use over it all a very quiet neutral shade. Ivory? Light Gray? Cream? Or, any other in harmony with your furnishings.

Then your next question is *what material*. Water colors are beautiful because they are flat, but they are also extremely perishable. LIQUID VELVET combines the beauty of water colors with the durability of enamel.

Liquid Velvet shades—there are twenty-four and white—were selected by a great color artist with careful discrimination, and are absolutely pleasing.

Liquid Velvet may be washed with soap and water—perfect cleanliness is assured.

## This New Range Is A Wonder For Cooking

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

There is absolutely no danger in this combination, as the gas section is as entirely separate from the coal section as if placed in another part of the kitchen.

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

Gold Medal

**Glenwood**

The large oven below has the Indicator and is heated by coal or wood.

See the cooking surface when you want to rush things—five burners for gas and four covers for coal.

When in a hurry both coal and gas ovens can be operated at the same time, using one for meats and the other for pastry—It

G. D. MILNE, Treasurer.

### UNITED FRUIT COMPANY

#### DIVIDEND NO. 75

A quarterly dividend of two per cent (two dollars per share) on the capital stock of this Company has been declared, payable on April 15, 1918, to stockholders of record at the close of business March 20, 1918.

JOHN W. DAMON, Treasurer.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

1. Patriotism and Loyalty.
1. Prepare oral or written paragraphs on the following topics drawn from "The Stranger Within Our Gates": The Single Purpose that Unites All Americans; The Ideals that Make America; Why Americans are the Most Loyal of All People; America as the Land of Opportunity; Influences that Help to Make Americans; America as the Creation of Many Races; Famous Americans of Different Racial Origins; How We Can Help to Make Immigrants into Americans; Why Racial Persistence is a Menace to Americanism; The Danger of Racial Colonies; Should Foreign Language Papers be Permitted in America? What is Meant by Democratic Nationalism?
2. Read "The Patriot Who Owns a Car." Sum up the ways in which an automobile owner may give patriotic service.
3. Write a brief of the "Message from the American Government," writing it in such a way that the principal thought of the article will be made emphatic.
4. You hear several people speaking in a somewhat pessimistic way concerning the war. Give them facts, drawn from the "Message from the American Government," that will lead them to look upon the war in a new light.
5. Read the various editorial articles in The Independent this week, and then write a short composition on "The Spirit That Should Characterize the American People at This Time"
6. Draw from this week's number of The Independent a series of at least ten short paragraphs that will aid in the development of patriotism and loyalty.
7. Select from some patriotic article a passage that you think worthy of being memorized. Read, or recite, the passage effectively.
- II. The News of the Week.
1. Make a blackboard diagram of the recent movements on the Western Front, and give to your class a clear explanation of the great events that have taken place.
2. You are a Four Minute Speaker. Give a patriotic talk based on the recent battles along the Western Front, making your talk such that it will encourage the fighting spirit of any American.
- III. Special Articles.
1. Condense into a single paragraph what is told concerning the history of Chintzes and Cretonnes.
2. Write a paragraph of exposition, explaining the process of making chintzes and cretonnes.
3. Write explanatory notes concerning "The Diary of Samuel Pepys" and "The Art Work of William Morris," mentioned in "Chintzes and Cretonnes."
4. Give a short talk on the history of Built-In Furniture.
5. You are an architect planning a house for a wealthy client. Tell him how he may employ Built-In Furniture in order to make his house attractive and economical.
6. Write a clear description of some one example of satisfactory Built-In Furniture.
7. Your parents are about to build a new house. From "So Much Depends on the Kitchen" tell them what principles should guide them in planning for a comfortable and useful kitchen.
8. Write an argumentative brief based on "The Deciding Factor."
9. What is the principal point made in "The Deciding Factor"? By what methods does Mr. Woodhouse establish the point?
- IV. The New Books.
1. "Martin Anderson Nexø, the Danish peasant writer, has given us a really great book." From the review of "Pelle, the Conqueror," describe as many as you can of the characteristics that warrant calling it a really great book.
2. What is the significance of "Pelle, the Conqueror," in relation to modern American novels?
3. Does the review of "The Long Trick" suggest to you any points of comparison between it and Rudyard Kipling's sea stories? Name some of them.
4. Read the review of "The U. P. Trail" by Zane Grey, and write a fifty word advertisement of it suitable for publication on the jacket of the book.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

In the news of this week all other events are overshadowed by the fighting on the western front. We are therefore confining the questions of this lesson plan to the various aspects of the Somme offensive.

1. The Battle Lines—"The Biggest Battle in History," "Hindenburg's Drive," "The Movements of the Army," "The Mystery Guns."
1. "It will be remembered that the summer of 1916 ended with appearances very favorable to the Allies." Summarize the situation then.
2. On the map of the western front published on page 18 compare the line of the present German drive with the British line of 1916. Point out the places of strategic importance and give reasons in each case.
3. "The plans for the spring campaign were made in November, 1916 by representatives of all the Allies meeting at the French General Headquarters. But these well laid plans were never carried out." Show the situation on each front that hindered or prevented these plans.
4. "The Germans had made no secret of their intention of putting all their power into a great and, as they hoped, a decisive drive against the British line." Why was this drive necessary?
5. "The Germans seem to have had three objects in mind" in making their present drive. What are these three objects and what seem to you the reasons for each?
6. Explain the system of the Hindenburg defense. How does it differ from the former trench tactics?
7. "The desire of both sides for mobile maneuvers seems likely to be gratified." Show the basis in this battle for the prophecy that open warfare may again be used instead of trench fighting.
8. "The present situation is much the same as on the 1st of September, 1914, just before Joffre came back. The Germans now acknowledge that they lost the battle of the Marne because they had been too successful in the weeks before." Show that the Somme offensive may have the same result.
- II. Air Fighting—"The Deciding Factor," "The Airplane Situation."
1. "Had the Allies one thousand more aeroplanes, we could have easily defeated the Germans." Give as many reasons as you can to substantiate this statement.
2. "We find that the air service is the most importance force in trench fighting." Illustrate this statement by the news of recent fighting on the western front.
- III. Great Britain's Message—"The Message of the Hour," "British Opinion."
1. "Together we can always manage to maintain the peace of the world." Show how Great Britain and America as allies more than double the strength of each.
2. "Our men are like yours, in the main not trained soldiers." Compare the methods used to raise Great Britain's army in this war with the course adopted by the United States. To what degree, in your estimation, did the British experience influence our attitude toward conscription?
- IV. "America's Reaction," "Unite and Win," "Five Million Men," "In a Dark Hour," "While the Battle Rages," "General Wood on America's Duty," "An Explosion in the Senate," "Silence Versus Publicity," "Our Shipbuilding Progress."
1. "The Great Battle has for the American nation one supremely vital lesson." What is that lesson. Show how we must meet it.
2. "It is a drive against us." German propaganda paved the way for the psychological effect in the United States of this "spring drive." Discuss some of the methods used and how we can make them ineffective.
3. "Congress has split into four divisions." What are they? Do you think any one will dominate? Which, and why?
4. Compare the relationship between Congress and the Administration now with that during the Civil War.
5. Give the main points of Senator Lodge's speech before the Senate. Compare it with General Wood's report to the Senate Committee on Military Affairs and show where in the two coincide.
6. Give an account of our shipbuilding progress based on the facts presented in Chairman Hurley's recent speech.

## Delivery Costs in this Country Equal its Total Freight Bill

**A**UTHORITIES estimate that the American people pay as much for carting and delivering merchandise in towns and cities as they do for freight charges earned by all the railroads combined. This is a tremendous factor in the high cost of living.

Cartage from freight car to store door is an expensive item. There is no schedule about it. Consignees go for their freight whenever they get ready and often spend hours in getting it, due to congestion, and then carry away only part of a load.

### CONSUMER PAYS OVER SIX CENTS OUT OF EVERY \$1

An interesting investigation has been made recently by the Department of Commerce to determine the cost of retail delivery in the city of Washington. Figures obtained from 128 concerns doing one-third of the total retail business showed an average delivery cost of 6.2% of gross sales. Out of every dollar spent for merchandise *more than six cents was paid for delivering it.*

The actual cost, in different lines of business, ranged from 1½% to 45%. It totaled \$8,000,000, as against \$7,250,000 for inbound freight. Each

family in Washington thus paid on an average \$101.26 for retail delivery during the year 1916.

### A SIGNIFICANT FEATURE

Costs varied widely for concerns in the same line of business. While individual conditions, volume of trade, etc., were factors, *inefficiency* and *waste* played a large part in this variation. Some concerns used horses for delivery; others used inferior trucks; and still others, including some of the foremost and largest concerns, used the *best grade* of trucks, whose operating efficiency is high and whose operating cost is correspondingly low.

### THE REAL SOLUTION

War-time pressure now and peace competition after the war will inevitably force merchants and manufacturers to use the best trucks which can be built. They are the cheapest. True economy lies in the volume of performance steadily maintained over a long period of time. The investment charge is relatively small. Labor, fuel, depreciation, overshadow it. Any increase of the former which will decrease the latter effects a very substantial saving.

THE WHITE COMPANY  
CLEVELAND

# Nervous Americans

by

PAUL VON BOECKMANN

Master of Philosophy of Health

**W**E are the most "high strung" people on earth. The restless energy of Americans is proverbial. The average American is a bundle of nerves; ever ready to spring into action mentally and physically.

This alertness of nerve force is a high tribute to our state of civilization, as a highly organized nervous system is the most precious gift of Nature. To be dull nerved means to be dull brained; incapable of experiencing the higher emotions of Life—Love, Ambition and Courage. It means force of character.

But there is a great danger that this high nerve tension may evolve into a national weakness. Neurologists the world over agree that we suffer from nervous disorders more than any other nation; hence refer to us as "nervous Americans." We are deteriorating into a nation of neurasthenics (nerve bankrupts). This is because of our mile-a-minute life, which tears our nerves to shreds.

The vast opportunities open to us in every field; our freedom of government, which prevents no one from reaching the highest goal, economically, politically and socially, is the incentive which drives us into this break-neck speed of living.

Our high-strung nerves also make us very sensitive to worry, grief, and other emotions that wreck our nerves. Hence few people are free from the long train of evils that result from nerve strain.

Unfortunately, most people will not believe that their nerves are depleted and weak. So long as their hands and knees do not tremble, they cling to the belief that their nerves are strong and sound, which is a dangerous assumption.

The symptoms of nerve-exhaustion vary according to individual characteristics, but the development is usually as follows:

**First Stage:** Lack of energy, endurance and strength; "that tired feeling;" drowsiness; brain fog; sluggishness of the vital organs; poor blood circulation, etc., etc.

**Second Stage:** Nervous indigestion, belching, gas, sour stomach, heartburn, constipation, auto-intoxication, biliousness, gaspy and difficult breathing, irregular heart action, loss of hair, decline in sex force, lack of mental endurance and concentration, dizziness, headache, irritability, super-sensitive-ness, loss in weight, sleeplessness, and scores of other symptoms.

**Third Stage:** Serious mental disturbances, fear, undue worry, melancholia, dangerous organic disturbances, hallucinations, suicidal tendencies; and, in extreme cases, insanity.

If only a few of the symptoms mentioned apply to you, especially those indicating mental uncertainty, you may be sure your nerves are at fault—that you have partially exhausted your previous Nerve Force.

I have written a 64-page book on the Nerves which is of the utmost importance to every brain worker and those who have abused their nerves through over-work, worry, hurry, grief, and other strains.

It teaches you how to soothe, calm and care for the Nerves and how to increase your Nerve Capital. It is especially valuable to women, because of their highly organized and sensitive Nerves.

Send for the book today. It will be a revelation to you, and if you do not agree that it teaches the most important lesson on Health and Mental Efficiency you have ever read, return the book and your money will be refunded without question. The cost of the book, postpaid, is 25 cents (coin or stamps).

I have advertised in THE INDEPENDENT constantly for 15 years, which is ample evidence of my responsibility and integrity. The following are extracts from letters written by grateful people who have read my book:

"I have gained 12 lbs. since reading your book, and I feel so energetic. I had about given up hope of ever finding the cause of my low weight."

"Your book did more for me for indigestion than two courses in dieting."

A woman in Rochester, N. Y., writes: "I must tell you what your book has done for my daughter. After the death of her father she had been a nervous and physical wreck. We thought she had consumption. Then we sent for your book, and five days after reading it her health began to return, her terrible indigestion stopped and she began to gain weight. Today she is cheerful and strong."

"The advice given in your book on relaxation and calming my nerves has cleared my brain. Before I was half dizzy all the time."

A physician says: "Your book shows you have a scientific and profound knowledge of the nerves and nervous people. I am recommending your book to my patients."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of abused nerves. I have re-read your book at least ten times."

A prominent lawyer in Ansonia, Conn., says: "Your book saved me from a nervous collapse, such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."

"My nervous headaches disappeared as if by magic. I never knew until I read your book that I had nerves and had been abusing them."

## Pebbles

Daughter—Oh, Daddy, buy me that knitting bag! It's the dearest thing I ever saw.  
Daddy—Looking at the price tag—You're right.—*Froth.*

Society Editor—What's the latest news from Russia?

Telegraph Ditto—I can't tell you. It's simply revolting!—*Gargoyle.*

Witness—Yer Honour, would it be contempt of Court if I was to call you an old 'umbug?

Judge—Most decidedly.

Witness—Then I won't!

"Our child is backward. Four years old and takes no interest in Shakespeare."

"That does not necessarily indicate that the child is backward. He may believe that Bacon wrote the plays."—*Kansas City Journal.*

Colonel—Well, what do you want?

Hobo—Colonel, believe me, I am no ordinary beggar. I was at the front.

Colonel—You were?

Hobo—Yes, sir; but I couldn't make 'em hear, so I came round to the back.—*Puck.*

Wife (to enlisted college professor)—Promise me, Edwin, that you won't lose your head and do something rash.

Professor (grimly)—No danger, darling, your former supposition effectually disposes of the latter.—*Puck.*

Captain—Wuffo' did yo' desert the army when Ah o'dered a charge?

Private—Wal, yo' said 'strike fo' yo' country an' yo' home,' so while de other fellahs was strikin' fo' dar country. Ah struck fo' home.—*Zip.*

"Do you understand the Russian situation?"

"No," replied Senator Sorghum. "But that doesn't matter. Nobody else understands it sufficiently to prevent my assuming all kinds of superior knowledge, if I choose."—*Washington Star.*

In a recent examination paper for a boy clerk's post was this question:

"If the Premier and all the members of the Cabinet should die, who would officiate?"

Robert, a boy of fourteen, thought for a time, trying in vain to recall who came next in succession. At last a happy inspiration came to him, and he answered: "The undertaker."—*Vancouver Province.*

A gentleman was making an address in which he was trying to impress upon his hearers the fact that they would get more satisfaction out of life if they looked upon the bright side of things.

"And laugh whenever the chance comes?" said he. "Why, my dear friends, there is humor all about us. There are funny things before us all the time."

"So I see," said an attentive fellow on a front seat.—*New York Globe.*

Mr. Oldboy had engaged a new office boy. He had not been there a week before some money was missing from the cash box. Calling the new boy into his room, Mr. Oldboy said quietly:

"There are 5 shillings missing from the cash box Jones. Now, you and I are the only people who have the keys to that box."

"Well," said the boy, "s'pose we each pay half a crown, and both say no more about it?"—*New York Globe.*

The difference, not merely of degree but of kind, which is supposed to separate the rector from the inferior order of curates is exemplified in the following:

Returning to his parish after his autumn holiday, a dignified country clergyman, noticing a woman at her cottage-door, with a baby in her arms, asked: "Has that baby been baptized?"

"Well sir," replied the curtsying mother, "I shouldn't like to say as much as that, but your young man came and did what he could."—*Passing Show.*

Paul von Boeckmann, Studio 43, 110 West 40th St., New York

You can't bend a store cigar like you can Roberts' fresh Havanas. Store cigars are dried out. The leaf oil has evaporated and with it the original Havana flavor and aroma.

A Roberts Cigar

A Store Cigar

# New Kind of Havana

What a difference between the cigars you smoke and my **freshly made** Havanas! Cuban cigar-makers know—for when they want a smoke they roll themselves a cigar of the moist Havana leaf. That's the kind of a smoke I want to send you—a mild Havana that is shipped the day it is rolled. A cigar with all the richness of the oil **still** in the leaf. A full-flavored Havana that will give you a new conception of Havana taste and aroma. Such cigars I make here in Tampa and send out daily to my customers throughout the country.

## Try Before You Buy

No retailer can give you cigars like mine. The retailer's cigars have been made long before he puts them on his shelves to dry some more. Much of the fine natural leaf oil has escaped from the cigar. Humidors may moisten the dealer's cigars—but **only with water!** There is no way of restoring the exquisite Havana bouquet that has escaped with the evaporated oil. Store cigars will taste "flat" to you compared with the fine, full Havana flavor of my freshly made, freshly shipped Havanas. I don't ask you to accept my word for this. I say, "**Try my cigars before you buy.**"

## SEND NO MONEY

Don't send me a cent. Simply mail me your name and address and I will send you postpaid a box of fifty of my Roberts' Havana Perfectos. Smoke ten and if you are not more than delighted, return balance at my expense and you won't be out one cent. If you like my cigars, send me your check or money order for \$5.50. Selling as I do, direct from my factory to you, you get a 15c cigar that is **really fresh** at 11c postpaid. Write to me today and please enclose your card or your business letterhead.

**J. W. ROBERTS & SON**  
229 Roberts Street, Tampa, Fla.

*Roberts* of TAMPA, FLORIDA

ACTUAL SIZE  
Roberts' fresh  
Havana Perfectos,  
Havana,  
hand-made, 5 in.  
long. Smoke 10  
on free trial.

Attached herewith is my business card or letterhead. Please send me postpaid a box of 50 fresh Roberts' Havana Perfectos. If, after smoking ten, I find that I like your cigars, I'll send you \$5.50 for the box. Otherwise, I agree to return the balance of the cigars at your expense.

## REMARKABLE REMARKS

**JOHN GALSWORTHY**—We mistake "life" for living.

**EDNA FERBER**—Writers are not supposed to talk about themselves.

**PRESIDENT CHANG**—I cannot make others believe in my spirit.

**W. R. HEARST**—Eventually the world will come to total abstinence.

**ED. HOWE**—I know of many useful men who are hampered by matrimony.

**RUDYARD KIPLING**—There is no half-way house between victory and defeat.

**BERNARD SHAW**—If you only knew all the things I think and dare not say.

**SIR WILLIAM CROOKES**—Starvation can only be averted thru the laboratory.

**LORD NORTHCLIFFE**—Sympathy toward Russia is the right policy for the Allies.

**GERALD STANLEY LEE**—If Germany will not remove her appendix herself, we will.

**REV. T. W. McELVEEN**—Too many of us have ambitions, too few of us aspirations.

**PRIMA DONNA GALLI-CURCI**—I have so little interest in clothes. Singing is everything to me.

**W. J. BRYAN**—The Lord gave me ears that stuck out a good deal more than artistic standards require.

**THEODORE ROOSEVELT**—Remember, that what the Germans respect is the way we shoot—not the way we shout.

**LEON TROTZKY**—If we were really logical we would declare war on England now, for the sake of India, Egypt and Ireland.

**AL WOODS**—I would rather talk to George Cohan for ten minutes than to any other person in the world for three hours.

**SENATOR McCUMBER**—Unless conditions change only a collapse of the Central Powers can save the Allies from defeat.

**SENATOR NELSON**—One great thing we have accomplished by this war has been stopping the great flow of tourists to Europe.

**H. G. WELLS**—Our Tories would rather make the most abject surrender to the Kaiser than deal with a renascent republican Germany.

**CARDINAL GIBBONS**—More perhaps than any other single individual, our Holy Father, Pope Benedict XV, has suffered in this tragedy.

**EDWARD A. FILFNE**—There is one sure way for losing the war—and our business executives hold the power that can prevent its fulfillment.

**THEODORE P. SHONTS**—Probably no other one factor has contributed more to the comfort and relief of American life than the street railway.

**EMPEROR WILLIAM**—Germany desires peace, but before it can be attained her enemies must recognize that Germany has been victorious.

**BILLY SUNDAY**—Nell (Mrs. Sunday) would grab prizes at a beauty show, but she's got any woman I ever saw backed off the board and fanning for air, when it comes to horse sense.

**ECONOMIST BERTHA N. NIENBURG**—There will never be less drinking at the Chicago stock-yards until the men work

shorter hours and are not so worn out at the end of the day that they are forced to seek relief by using alcoholic stimulants.

**HERR BARTHELME**—America is now conducting this frivolous war with all the superficiality and absence of expert knowledge of which this utterly unmilitary people is capable.

**WOODROW WILSON**—Every sign of these terrible days of war and revolutionary change bids us search our hearts thru and thru and make them ready for the birth of a new day.

## J U S T A W O R D

"Damn the Torpedoes! Go Ahead," to be published soon in The Independent, is a graphic story of the American fleet in the war zone, written by Herman Whitaker from first hand experience aboard one of our destroyers. His story presents the thrill of adventure as well as the serious purpose of war on the sea—take these paragraphs, for instance:

The boat on which I cruised was once out for nine days in a howling gale, and the chief executive officer gave me the following description of it: "You could neither lie down, sit up, stand, walk nor sleep. I was thrown off the ward room transom eight times one night. She was going over on her beam ends at each roll, and every time I dropt almost plumb for twelve feet and hit the opposite locker. It was dangerous. I might just as well have fallen down a well. I was so bruised, after a while, that I gave it up tho I was dying to sleep. There was nothing to do but hang on to a stanchion and stick it out.

"By day, the seas were a wonderful sight. The boat would rear up under a charging wave and stand on her heel as it passed on with two thirds of her length exposed. It was a wonder that she didn't break her back. And when she fell—the thousand tons of her would strike the water a tremendous blow. She'd quiver like a shaken lance; tremble like a frightened horse for ten minutes afterward. The waves were enormous; bases dark green, tips light jade against the sky and so clear that we could often see porpoises shooting thru like fish behind the plate glass of an aquarium. We couldn't take any sights; had to run by dead reckoning thru four and five knot tides. Often we were practically lost; had to hail a lightship to find out where we were 'at.' We couldn't even signal each other. We'd perhaps get a couple of letters from a destroyer only two or three hundred yards away, then down she would go, even the tips of her masts out of sight in the trough of a wave. It made a fellow feel mighty small to be tucked away, like that, in a little crevice of that roaring ocean. After nine days of it we were completely exhausted."

Here is another vivid bit:

Out of the thick pea soup fog, a huge black freighter suddenly rose on our bows. As we swung on our heel with one screw reversed a destroyer came shooting at us from the opposite quarter. Avoiding her, we almost ran down another steamer. I tell you for a while gray hell was loose there on a black sea.

Herman Whitaker writes out of a full experience his stories of action and adventure. He ran away from his home in California to serve three years in the British army, became a lumberjack in Ontario, pioneered in the Hudson Bay country, went to El Paso with General Pershing, joined Villa's Saltillo campaign against Huerta. He is at the battle front now as war correspondent of The Independent.

# NEW BOOKS

## Army French

Bound in stiff paper, rounded corners; 40 cents (postpaid 44 cents).

By ERNEST H. WILKINS and ALGERNON COLEMAN, of the University of Chicago.

Many camp educational workers say that, for their purposes, this is the best book they have seen. Prepared as the result of six months' experience by the authors in the teaching of military French, supplemented by reports from many other teachers who have been using the previous books:

*First Lessons in Spoken French for Men in Military Service;*  
*First Lessons in Spoken French for Doctors and Nurses;*  
*Le Soldat Américain en France.*

## The Dramatization of Bible Stories

Illustrated, \$1.00, postage extra.

By ELIZABETH E. MILLER, of the University of Chicago.

An invaluable book for teachers of children in day kindergartens and Sunday schools.

## The Greek Theater and Its Drama

Illustrated. \$3.00, postage extra.

By ROY C. FLICKINGER, of Northwestern University.

An important volume by an authority on the subject. It will appeal to all persons interested in the classics, archæology, or the history of the drama.

## What Is Christianity?

\$1.00, postage extra.

By GEORGE CROSS, of the Rochester Theological Seminary.

A unique survey of the rival interpretations of Christianity. The book covers the six great outstanding types—Apocalypticism, Catholicism, Mysticism, Protestantism, Rationalism, and Evangelicism.

## Matthew's Sayings of Jesus

\$1.25, postage extra (weight 1 lb. 5 oz.)

By GEORGE D. CASTOR.

This volume will appeal to all readers interested in the first three gospels as historical sources of information about Jesus. The reconstructed document at the end of the book gives the earliest version of the teachings of Jesus.

## The Third and Fourth Generation;

An Introduction to Heredity

\$1.00, postage extra (weight 1 lb. 2 oz.)

By ELLIOT R. DOWNING, of the University of Chicago.

This book explains the application of the principles of heredity to human parenthood and the problems of racial betterment. Suitable for general reading and for young people's classes in Sunday schools, high schools, and colleges.

## The Polish Peasant in Europe and America:

VOLS. I AND II. PRIMARY GROUP ORGANIZATION

[Not sold separately.]

\$5.50, postage extra (weight 4 lb. 10 oz.)

By WILLIAM I. THOMAS and FLORIAN ZNANIECKI, of the University of Chicago.

The series will consist of five volumes. Materials for Vols. I and II are selected from about 15,000 peasant letters.

## Social Control

\$1.50, postage extra.

Vol. XII of the Publications of the American Sociological Society.

# NEW IMPRESSIONS

**The Millennial Hope; A Phase of War-Time Thinking.** By SHIRLEY J. CASE, of the University of Chicago. \$1.25, postage extra (weight 1 lb. 2 oz.).

**The Story of the New Testament.** By EDGAR J. GOODSPEED, of the University of Chicago. \$1.00, postage extra (weight 1 lb.).

**English Poems: The Nineteenth Century.** Edited by WALTER C. BRONSON, of Brown University. \$1.00, postage extra (weight 1 lb. 14 oz.).

**Questions on Shakespeare: First Histories, Poems, Comedies.** By ALBERT H. TOLMAN, of the University of Chicago. \$1.00, postage extra (weight 1 lb. 2 oz.).

**Elements of Debating.** By LEVERETT S. LYON, of the University of Chicago. \$1.00, postage extra (weight 14 oz.).

**The Syntax of High-School Latin.** By LEE BYRNE, of the Mobile High School. 75 cents, postage extra (weight 1 lb.).

## ONE HAND AT THE HELM

“NAPOLEON wasn't much of a general,” said Premier Clemenceau. “He had only to fight a coalition.” The same might have been said of Frederick the Great and many another commander who owed his reputation to following the maxim of Louis XI, *Divide et impera*. It was the first lesson learned by young America. “We must all hang together,” said one of the signers to the rest in 1776. “Yes, or we will all hang separately,” responded Franklin.

Every one of the five campaigns of the present war has shown the advantage of the Quadruple Alliance in having their power in one man's hand and the weakness of the Entente Alliance in having their power divided between as many men as there are nations—and more, in most cases. The Kaiser may not be much of a military genius, but it is safe to say that he is better than the entire dozen commanders who have been pitted against him—simply because there is only one of him. Two heads are better than one, and a dozen better than two, and a million better than a dozen. This is the principle of democracy. But this refers to thinking heads. When it comes to acting heads, the fewer the better. The possibilities to be taken under consideration are many; the resulting action can be but one. Progress in the development of governmental machinery tends continually

toward the centralization of authority and the imposition of responsibility upon a single executive.

So we rejoice that the French, British and American armies in France are now under the command of General Foch. None of the military leaders of the Allies is regarded with more respect than the general who broke the force of the German invasion at La Fère Champenoise on the Marne, in September, 1914. He is a strategist of proven ability, a soldier with the mind of a mathematician who nevertheless lays the first emphasis on the moral element in the affairs of war. The cardinal principle of his strategy he has expressed something like this: “Find out the weak point of your enemy and deliver your blow there. If he has no weak point, make one.” When he was in command of the Ecole de Guerre, he used to quote Joseph de Maistre's maxim, “A battle lost is a battle which one believes to have been lost, for battles are not lost materially.” To this Foch used to add, “Battles are therefore lost morally, and it is therefore morally that they are won.” This is the kind of leadership the Allied cause above all needs.

The greatest battle of all time has come to a temporary halt. When it begins again, it will be of incalculable value to have the Allied strategy planned by a single mind, the Allied forces obeying a single will.

## THE SUPER-LACHRYMATOR

OUR boys in Lorraine do not appear to mind the shells and shrapnel so much as they do what they call “mustard gas.” It really is not our familiar oil of mustard, tho that is not to be sneezed at, but something vastly more irritating. When it was first discovered in Kekulé's laboratory years ago it proved too strong even for the toughened mucous membrane of German chemists and they abandoned the research as too dangerous. Now, however, they have taken up the investigation with fresh enthusiasm, for they have a lot of new subjects to experiment upon, several millions of them, brought from England, Australia, America and elsewhere at great expense and conveniently arranged before them in trenches. So they are manufacturing the villainous stuff wholesale and firing it into our camps.

The soldiers have named it “mustard gas” because of its blistering ability, but the chemist calls it di-chlor-di-ethyl-sulfide and he pictures it to himself in this fashion:

The Germans began their gas campaign at Ypres three years ago this April with simple elements, chlorine and bromine. But the cloud could be seen coming in the daytime, the hiss of the gases escaping from the cylinder could sometimes be heard in the dark. In any case the first whiff

was a signal to put on the gas masks and within ten or fifteen minutes the danger had blown over. But the new gas—which we suggest might be named “niobine”—gives little warning at first and it hangs around longer. It smells like garlic, an odor not noticeable in the French atmosphere. But a few hours after exposure the eyes begin to blister and the nose and lungs become inflamed, causing intense pain. A drop of the liquid on the skin produces ulceration. Clothing is little protection, for the vapor goes thru. A dugout or trench in which a gas shell has burst is uninhabitable until it all evaporates.

The use of gas is contrary to the Hague rules, but when the Germans began it of course their opponents had to follow suit. The American representatives at the Hague conference opposed the prohibition clause because they thought that it was not likely to be practicable to prevent the use of a weapon which tho cruel was nevertheless effective and not more fatal than those allowed by custom. The “sneezing gases,” the “weeping gases” and the “sleeping gases” will temporarily demoralize the troops manning a battery or trench without in most cases causing death or permanent injury, and it is easier to guard against gas by masks than to protect from projectiles by armor. So all the belligerents have turned their attention to the methods of molecular bombardment. Our American chemists have been working at the problem for a year and are now able to give the enemy doses of his own medicine—and something worse.

# CARTOON COMMENT

## THE GREAT BATTLE

### LET 'EM COME!

John Bull stands steadfast against the German onslaught. Cartoon by Rollin Kirby published in the "New York World"

### THE PRUSSIAN FLOOD

The cartoon at the right, drawn by Vasek in the "Chicago Herald," pictures the German drive as a sacrificial flood of men inspired by the head devil of militarism

### THEY SHALL NOT PASS

The spirit of the Allies, fighting stubbornly to hold their line against tremendous odds, is forcefully portrayed in this cartoon drawn by Stinson in the "Dayton Daily News." American troops belong in the picture now, too, for our men have taken an active part in fighting the German offensive since this cartoon was published

### "SHALL NOT HAVE DIED IN VAIN"

America's high resolve on the battle field: "Their Work Is Ended — Ours Is Just Begun." Darling in the "New York Tribune"

### STEADY IN THE REAR RANKS

A lesson for those at home is graphically presented in this cartoon drawn by Nelson Harding in the "Brooklyn Daily Eagle"

## THE BIGLOW PAPERS ON THE PRESENT CONFLICT

**A**NCIENTEST tradition has made Poet the equivalent of Prophet, and thumbing over our well-worn copy of Lowell we find ample confirmation. Who could better phrase the sort of "self-determination" which Germany has granted to the little nationalities of eastern Europe now brought within her borders:

I've chose my side, an' 't ain't no odds  
Ef I wuz drawed with magnets,  
Or ef I thought it prudenter  
To jine the nighes' bagnets.

Or, again:

We've a war, an' a debt, an' a flag; an' ef this  
Ain't ter be independunt, why, wut on airth is?

There are descriptions of the major belligerents as well. Would not the Kaiser heartily endorse this sentiment:

I'd gladly take all of our other resks on me  
To be rid of this low-lived politikle 'conomy.

Changing one proper name, this is timely advice for ourselves:

Thet's wut we want—we want to know  
The folks on our side hez the bravery  
To b'lieve ez hard, come weal, come woe,  
In Freedom ez Bill doos in Slavery.

Our best military experts must at times have felt:

Ef you read hist'ry, all runs smooth as grease,  
Coz there the men ain't nothin' more'n idees—  
But come to make it, ez we must today,  
Th' idees hev arms an' legs an' stop the way!

Finally, that noblest tribute to Peace with Victory ever written by an American poet:

Come, Peace! not like a mourner bowed  
For honor lost an' dear ones wasted,  
But proud, to meet a people proud,  
With eyes thet tell o' triumph tasted!  
Come, with han' grippin' on the hilt,  
An' step thet proves ye victory's daughter;  
Longin' for you, our spirits wilt  
Like shipwrecked men's on rafts for water . . .

Come, sech ez mothers prayed for, when  
They kissed their cross with lips thet quivered,  
An' bring fair wages for brave men,  
A nation saved, a race delivered!

## THE LOST HOUR

**I**N the days when journalists used moralities for fillers instead of jokes as they do now, this advertisement used to appear occasionally:

Lost: Somewhere between sunrise and sunset a golden hour set with sixty diamond minutes. No reward is offered, for it can never be recovered in all eternity.

The hour which by act of Congress was cut out of Easter Sunday we did not miss because it was eliminated, like Adam's rib, while we were in a deep sleep. It meant at the most nothing more than the curtailment of some dream of Easter bonnets or some nightmare of the war. Besides, the Government promises to give the borrowed hour back to us in the fall. It is in fact a time loan, like the Liberty Bonds, payable in six months from date.

We lose so many hours out of our conscious lives in sleep that one more or less does not matter. However long we sleep by the clock we always wake up the next instant after we drop off. There is no lapsed time so far as we are concerned. It is merely a transformation scene like those of the theater, only quicker and noiseless. We close our eyes on darkness and when we open them a minute later the sun is shining and the clock has been set ahead six, seven or eight hours according to whether one is a man, a woman or a fool. They say that in taking photo plays it is customary to cut out certain sections of the film that have

thru some accident been left blank or spoiled and piece together what is left without a break. Our life is like that, about a third of our allotted film is reeled off in the darkness unexposed. We have not, unfortunately, the power of the motion picture man to cut out from our lives the film that we have spoiled. It is all there rolled upon the reels of the past to be released and exhibited in its entirety at the Day of Judgment.

But altho we cannot destroy an inch of our film past we can and do censor it. We have, as the Freudians tell us, an internal board of censorship continually on the watch to prevent the exhibition even at private view of those portions of our past which offend our sense of decency or present us in the character of villain or fool instead of hero. So our consciousness is not continuous.

We Americans are so fond of both legislation and rail-roading that we are less disconcerted by this sudden jump of the hour hand than other peoples. We are used to setting our watches back or forth an hour at a time whenever we travel across the continent. Some of us even have lost a day as we passed over that magic meridian that marks 180 degrees from Greenwich. The lines of longitude and latitude are called "imaginary lines" doubtless because they have so powerful an effect upon the imagination. When we cross the equator for the first time we expect at least a jounce like what we get at a trolley switch. To look at a map of Europe it seems made up of green, yellow, red and blue patches, put together like a crazy-quilt, and we are disappointed when we pass from Green-land into Red-land to find the boundary marked by nothing more than a white stone or a cross custom-house officer.

It takes us long to learn that the divisions of time and space are altogether arbitrary and mostly imaginary. The twenty-four hour day is an invention of the Babylonians, who did not know any better. They seem to have had six fingers and toes. Some time we will substitute a decimal day. Yet it is impossible to get rid of the feeling that hours, minutes and seconds have a real objective existence and we put blind confidence in our absurd calendar. When England switched over from the Julian to the Gregorian calendar it caused riots and mobs went about shouting "Give us back our eleven days!" No Czar had power enough to set the Russian calendar ahead, but the Bolsheviki knocked thirteen days out of last year without hesitation. The people had too many other things to worry about. In England the daylight saving act caused no disturbance except in ecclesiastical circles. High Churchmen have been discussing whether the service which is set for noon by canon law may properly be held at twelve of the civil law clock, which is eleven by the sun. But it is pointed out by others that since the Anglican churches in going by Greenwich time in the past have been from five minutes too late to twenty minutes too early, so there is no reason to think that the divine blessing would be withheld if the Parliamentary regulation were followed.

It does us all good to drop an hour or have two Sundays come together. It shakes our superstition of the actuality of these temporal conventionalities. For, as Bergson points out, what we know is not time but duration, and this cannot be measured off in numbered intervals as tho it were spatial. It is not one instant following another like the ticks of a clock or the dots on the dial. "Duration is the continuous progress of the past which eats up the future and grows as it advances." It is not a straight road stretching backward and forward as far as eye can reach, but a rolling snowball englobing all that it has gone over.

And after Bergson has enlarged our minds a bit we can take up Einstein and the Relativists and learn from them that there is no such thing as absolute time and that simultaneity is an absurdity. So it seems that time like the tariff is a local question and quite as susceptible of legislative management.

## THE CITADEL OF CHRISTIANITY IN ASIA

**S**WIFTLY the Ottoman hordes are swarming over Armenia, from which they were lately driven. Their path is marked with ruin, as it ever has been. Such of the Christian population as were not slaughtered, kidnapped, starved or transported when the Turks retreated two years ago, are being exterminated as the Turks advance. The affrighted population flee before them to the mountains for refuge as their ancestors have fled for two thousand years. But will they find safety in the Caucasus today? The Russians, who used to protect them against Moslem fury, have given way to the Germans, who have turned them over to the Turks. Baku, the Sacred Land of the Fire Worshipers, which Peter the Great took a hundred years ago, has been ignominiously surrendered to the Kaiser, who connived at it if he did not encourage the massacre of the Armenians. The stricken Christians are hemmed in between Turk and Teuton. Their friends are far away and very busy. The Pope is pleading for them in vain. They have nobody to rely upon but themselves.

So they are relying upon themselves. The Christians of the Caucasus have taken up arms—such arms as they can get—in self defense. The Armenians and the Georgians, forgetting that they are alien in race, oblivious of their differences in religion but remembering their common Christian faith, have united to hold this historic stronghold against the enemies who besiege it from every side. There were before the war in Caucasia a million and a half Georgians and more than a million Armenians. The latter have been indefinitely augmented by refugees from Turkey. The Georgians are Greek Orthodox, like the Russians. The Armenians are Gregorians. Both are ancient and honorable races with histories running back two thousand years. They garrison a fortress whose walls are mountain ranges 10,000 to 18,000 feet high, impregnable even against 42-centimeter guns. In these fastnesses during the nineteenth century the Lesghians under the leadership of High Priest Samuel, held out for twenty years against all the power that mighty Russia could bring against them. There is no better ground on which to make a last stand. There is no better reason for making such a stand, since what they face if they surrender is not merely subjection but extinction.

Caucasia has declared her independence. None of the new nationalities makes a stronger appeal to Americans. We have educated the Armenians in our schools. We have cured them in our hospitals. We have granted them refuge when they fled from the bloody scimitar. We have sent them food when they were starving. But now the best kind of "Armenian relief" is machine guns. British officers are said to have been sent to the Caucasus to organize the defense. But the British army on the Tigris is still four hundred miles away. Arms can be landed at the head of the Persian Gulf, but this is seven hundred miles away. There is nothing but a caravan road leading from there to the Caucasus and a camel train taking munitions seven hundred miles thru a country beset by Kurds, Turks and Persians can hardly compete with the Berlin-Baku railroad in the hands of our enemies. Still if we can only give them a little something to shoot with they may hold out till the war is decided in the west.

We now know why the British embarked upon that ill-fated enterprize of the Dardanelles. On January 2, 1915, a telegram was received by the British Foreign Office from Petrograd asking for a demonstration to draw off the Turks from the Caucasus. When Mr. Churchill asked Lord Kitchener what he could do he answered: "I do not see that we can do anything that will seriously help the Russians in the Caucasus. The only place that a demonstration might have some effect would be the Dardanelles." So England's newest superdreadnought "Queen Elizabeth," was despatched to the Dardanelles and followed by the Anzacs.

The sands of Gallipoli were strewn with the bodies of brave boys from Australia and New Zealand, but the Turks did withdraw from the Caucasus.

The Caucasian territory which the Turks were then trying to conquer has now been given to them by the Kaiser. All they have to do is to go up and occupy the land. To adopt the phrase of the Russian conqueror of Armenia they "want Armenia but no Armenians." Beyond the Caucasus lies Tartary. These Christian races stand in the way of the union of Turks and Tartars. The dispatches from Russia have lately told us of the formation of an independent state of the Bashkirs of the Urals. That is another link in the chain of Yeni-Turan, the All-Turanian federation that aims at an empire as wide as that of Genghis Khan. But the bond connecting the northern and southern Turanians is the isthmus between the Black and Caspian seas. Here the Caucasian race, like Prometheus of old, is lying bound and tortured on the mountaintop.

## ANOTHER RUSSIAN REFORMATION

**T**HERE seems to be no end to the daring and enterprize of the Russian revolutionists. They are making up for lost time and evidently aim not merely to catch up with the other nations but to get ahead of all of them. First, they reformed the Government and turned the rascals out. That's easy. We do it ourselves every few years. Next they reformed the Church, which is not so easy, but can be done. Then they reformed the calendar by dropping out thirteen days. Fourthly, they reformed the land tenure, which even Lloyd George had to give up as too hard a job for him. And finally, with unparalleled courage, the Bolsheviki have undertaken to reform the spelling. This is the stoutest citadel of conservatism, the sanctum sanctorum of the standpatters in all countries, and an anxious world will watch to see if the silent letters are swept away like the sinecure officials of the old régime.

So far the Bolshevik Minister of Education proposes merely to abolish three letters which it seems have not been doing any work for some centuries that others could not do as well. Since there are thirty-seven letters in the Russian alphabet one would think that the staff might be cut down a bit in the interests of economy and efficiency. At any rate, it is so ordered and after January 1 (N. S., mind you!) Yatt, Phita and E Minor will cease to draw their salaries and be banished from the schools.

The King's English is much worse than the Czar's Russian in the matter of orthography, but it would take more than a Bolsheviki revolution to bring its spelling into accord with its pronunciation. It took the French Revolution to introduce the metric system and it took the American Revolution to substitute dollars and cents for £ s. d. But even if we cannot expect in our lifetimes to have a spelling that will spell, could we not show our sympathy with the Russians by swearing off the use of silent letters during the war?

Nothing Bolshevikistic or Kultural about the result of the Senatorial election in Wisconsin!

Do your winter coal buying early, says Mr. Garfield. We will, sir. If you will just see that the coal is mined and brought to Ourtown, we will do the rest.

On the same day last week the Massachusetts legislature ratified the Federal prohibition amendment and Indiana adopted state prohibition. These are inclement days for the "wets."

The New York "antis" are proposing to have the state recede from its enthusiastic adoption of woman suffrage. They must have made a mistake at 2 a. m. Easter morning. The hands of the clock were to be set forward, ladies, not back.

From an afternoon paper just come to hand we see that the Germans have employed 600,000 troops in their drive. In the next column a report equally authentic gives German losses, conservatively estimated, as 525,000. It ought to be comparatively easy to clean up the remaining 75,000 men.

# THE STORY OF THE WEEK

## More Troops to France

"More troops to France" was the keynote of the deliberations of the War Council presided over by the President last week. The great German offensive, even tho it has fallen far short of its goal and seems destined to continue to do so, has convinced all the Allied governments that the imperative need of the hour is a great mass of reinforcements from the United States. The shipment of troops is to be made secondary to nothing in the joint plans of America, England and France.

Great Britain is arranging to send here for the transportation of detachments of the National Army many steamers that had been in other use elsewhere. Even food, which had been given a preferred place in the shipments to Europe, is to give place to men. Sailing vessels are to be substituted for steamers in the coast trade and on other routes, even that to Chile, where the indispensable nitrates for American farms come from. New plans for loading at American ports have cut down the "turn-around" time for steamships by twenty-five per cent.

It is evident that American troops are to go overseas at once in unprecedented numbers, and at a rate which was beyond all expectation a few months ago. They will be sent not only to France but to England, where they will go into the training camps which will be vacated by British troops ready for service at the front. It is said to be the present purpose of the Administration to have more than 1,500,000 men overseas by the end of 1918. In his review before the Senate Committee on Military Affairs in January Secretary Baker declared that that number of men would be ready to go abroad this year "if the transportation facilities are available to us." The present problem is to provide the transportation facilities. With the hearty coöperation of our allies the Seven Seas are being searched for tonnage that can be spared.

Ships, Getting troops to France is obviously a matter of ships. There are not enough to be had, no matter what sacrifices are made by our Allies. The rest must be built. They must be built fast. The United States Shipping Board reports the progress in March as follows: Twenty-one vessels of 166,700 tons delivered; six vessels of 51,650 tons, building on contract from the Emergency Fleet Corporation, launched; twenty-one vessels of 149,636 tons, requisitioned from private owners, launched; and nine others, wood and composite, of an aggregate tonnage of 31,500, launched.

Chairman Hurley expresses deep disappointment with this result. The delivery of 166,700 tons was 30,000

tons below the lowest estimate. Instead of this reduction, he declares, there should have been an increase. The estimate was made on promises of shipbuilders. Mr. Hurley has sent a telegram to the manager of every shipyard working on ships for the Shipping Board and the Emergency Fleet Corporation. It reads as follows:

We are keenly disappointed in the amount of tonnage delivered by American shipyards during month of March and the slow progress made in many yards.

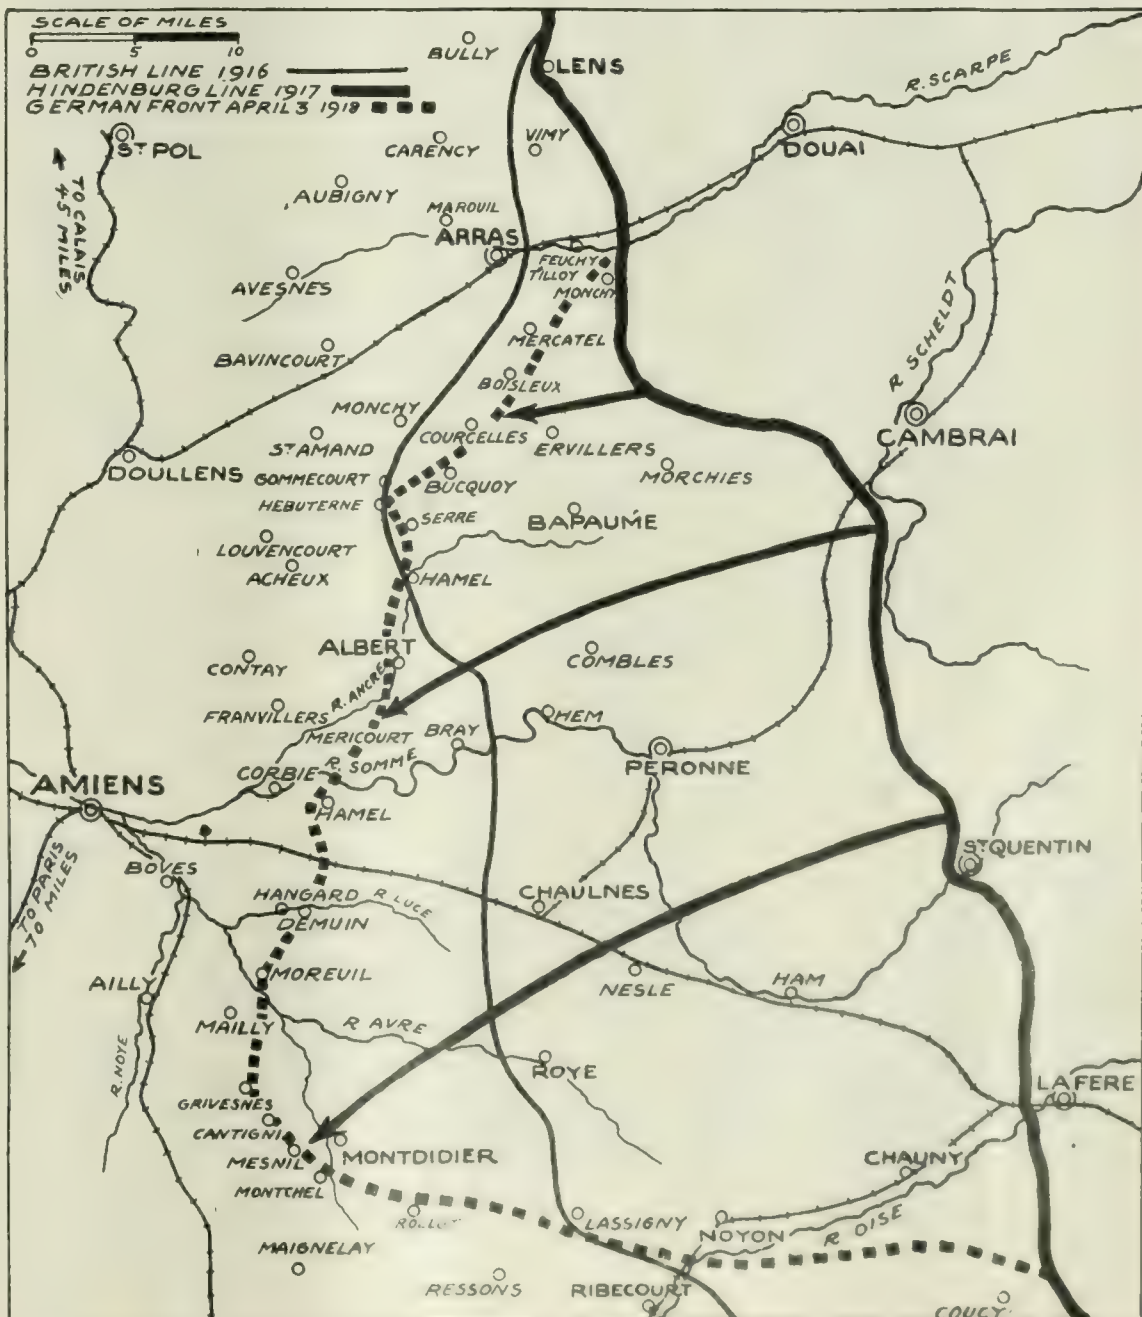

We are particularly anxious that you and your organization should put forth a special effort during the month of April. We are anxious that you should keep us fully informed concerning all causes of delay encountered in building ships during this month daily, by wire if necessary. We are concerned with the entire program, but we want April to break all records.

Are the majority of your men doing a full day's work? Are you working overtime? Are you running a night shift, or planning to do so? It is imperative that every power that can be taken advantage of be used. We want your reply promptly to this telegram, stating frankly the facts. Money, material and men have been supplied without stint by the nation. Keynote of present situation is management—lead-

ership. Emergency Fleet Corporation looks to you for team work in applying leadership to speeding up of program. We will welcome any suggestions which you wish to make, and if, in your opinion, the fault lies with the Emergency Fleet Corporation don't hesitate to advise us. What tonnage do you expect to produce during April in the way of finished ships? How many keels will you lay? How many ships will you launch? Please don't over-estimate. We are anxious to get actual facts so that our war program may be carried out.

We are holding you personally responsible for the successful management of your property. If you fail to maintain your schedule of production, which schedule the country is expecting you to meet and which we must have you meet in order to win this war, the country will charge you and us with not doing our part. Our country is holding every foreman and every workman in the shipyards, and especially every shipyard owner, stockholder and manager, as well as every officer and employee of the Emergency Fleet Corporation, responsible for the work of building ships. They are needed badly, and the American people want ships, not excuses.

Mr. Hurley is right. The dissatisfaction of the people of the nation with any failure to build ships with the greatest possible speed will be colossal.

HOW THE BATTLE GOES

The broken line shows the German front on April 3, 1918, the thin black line the British line of 1916, and the heavy black line the Hindenburg line, 1917, from which the Germans began their recent offensive. In "How the Battle Goes," published on another page, the Military Critic of The Independent sums up and explains the week's fighting on the western front.

### British Victories in Asia

While the British have received a setback in Europe they have been making great gains in Asia. The British expedition from Bagdad is following up the Tigris River. They routed the Turks at Hit and pursued them beyond Anah, 160 miles west of Bagdad. They captured 5000 prisoners and large depots of munitions. Then the British advanced seventy-three miles beyond Anah, which brings them half way toward Aleppo.

From Anah the old caravan route leads to Damascus, 300 miles west, which General Allenby is approaching from the south with the army from Egypt. If the two British forces, one from the east and the other from the west, can make a junction either at Damascus, or better at Aleppo, Turkey will be cut in two. Constantinople will lose all control over Egypt, Palestine, Arabia and Mesopotamia. From the British base at Cyprus it ought not to be difficult to land troops at Alexandria and cut the German railroad leading from Constantinople toward Bagdad. A demonstration here might check the Turkish invasion of the Caucasus, where the Armenians and Georgians have joined in a last stand.

### The Revolt of Russia

The portentous news from France has drawn attention from Russia, where nevertheless events are happening which may have an important influence upon the course of the war. As soon as the nominal peace was concluded with the Ukraine and Great Russia at Brest-Litovsk, all the German troops that could possibly be spared were sent to the western front. Those that were left were despatched in small detachments into the Ukraine and the Baltic provinces, nominally for the purpose of suppressing the Bolsheviks and restoring order, really for the purpose of gathering in foods, metals and munitions for German use. The harshness with which they have carried out these measures has aroused the resentment even of the propertied classes which welcomed them at first as their sole defense against the mob. The Ukrainian Rada which made peace at Brest-Litovsk and invited German troops to aid them against the Bolsheviks has now requested Germany to stop the advance of their troops. Germany is said to have replied that since she was invited to restore order she could not leave until this was accomplished. The demand of Germany to have 85 per cent of their grain and all their sugar except that needed for local consumption has been refused. The German commander at Kiev requested the bankers there to float a loan of \$5,000,000 on the security of German financial institutions, but they declined to comply.

The Bolshevik Rada, which was expelled from Kiev by the Germans, has set up a rival government at Ekaterinoslav, and declares its intention to fight the Germans by all possible means. In the south they seem to have obtained a considerable measure of suc-

#### A GAS MASK-HELMET-HAT

Belgian troops are the first to use this combination medieval helmet and modern mask. The visor gives extra protection to the eyes and face and the gas mask can be quickly slipped into position.

cess, for in combination with the Ukrainian troops the Bolsheviks have recaptured the ports of Kherson, Nikolayev, and Odessa on the Black Sea. These were occupied a few weeks ago by the Germans, who thereby obtained shipyards and shipping as well as large stores of grain and munitions. Unless the Germans can regain possession or control of the Black Sea ports, their ambitious plans for reaching the Caucasus, Persia and the frontiers of India are checked. Further to the east the Bashkirs and Tartars are reported to have set up an independent republic including three-fourths of a million inhabitants.

It is now recognized by the Allies that their embassies made a mistake in

attempting to leave Russia when the Government abandoned Petrograd for Moscow, and that it would have been wiser if they had followed the example of Mr. Francis and remained in the country. The French, Italian, Greek and Serbian representatives who left Petrograd to go thru Finland to Sweden were held up by the Bolsheviks at Tammerfors, Finland, where they have since remained. They have been forced into the humiliating position of having to apply thru the Danish legation to Mr. Joffe, the Bolshevik Commissioner of Foreign Affairs, whom they formerly refused to recognize, for permission to return to Petrograd and obtain a special train to Vologda, where the American Embassy now is. Mr. Joffe in granting permission said it seemed strange that Russia's allies should ask permission thru a neutral to enter a friendly country.

The Kaiser has sent his brother, Prince Henry, and one of his sons to Reval in Esthonia in order to strengthen the German influence in the Baltic Provinces. He was received enthusiastically by the Germans but the Esthonians refused to participate in the reception.

### The Question of the Crimea

The treaty with the Central Powers that established the independence of the Ukraine defined strictly its frontier on the western side but left the other three sides indefinite. On the north it will be bounded by Russia, tho perhaps in part contiguous to the proposed principality of Lithuania. On the east will also be Russian territory unless the Don Cossacks set up an independent state. To the south of Ukrainia is the peninsula of Crimea, to which apparently the Ukrainians lay no claim. The Ukrainian claim to nationality is based upon race, but they form only a small proportion of the population of Crimea, which is chiefly composed of Crimean Tartars, a people allied by race and religion to the Turks on the other side of the sea. There is, however, a strong element of Great Russians and Greeks and in the cities of Germans and Jews. The Tartars, who invaded the peninsula in the thirteenth century, set up an independent khanate, but from 1478 to 1783, when it was annexed by Russia, the Crimea acknowledged the sovereignty of the Sultan of Turkey. In 1856 the Turks, with the aid of the French and English, tried to reconquer it, but the fortress of Sevastopol held out for nearly a year and the Allies wore themselves out in the siege of it and it was restored to Russia.

Now the Turks are demanding the Crimea on the ground of nationality and of the sovereignty they exercised over it for more than three hundred years, and it is rumored that the Germans are willing to have it ceded to them. It will be remembered that in the treaty of Brest-Litovsk the Turks acquired possession of Transcaucasian provinces to which they had even less racial and historic rights. Meantime the Bolsheviks of the Crimea have set

### THE GREAT WAR

*March 29*—Germans launch attack on Arras. Paris church shelled by long range gun.

*March 30*—French attack southern side of German salient between Lassigny and Noyon. Anti-draft riots in Quebec.

*March 31*—British and French regain Moreuil, ten miles from Amiens. Australian steamer "Conargo" sunk by torpedo in Irish Sea.

*April 1*—White Star liner "Celtic" torpedoed but not sunk. Heavy shelling of American front at Toul.

*April 2*—Austrian Foreign Minister professes agreement with President's peace terms. British from Bagdad going up Euphrates are half way to Aleppo.

*April 3*—British regain Ayette, eight miles south of Arras. Americans gassed in another sector than Toul.

*April 4*—British Admiralty reports loss of six ships over 1600 tons and seven smaller; less than half of previous week's losses of large ships. Japan agrees to lend America 450,000 tons of shipping, 360,000 still to be built.

up a Soviet or Council of Workmen's and Soldiers' Delegates, and have proclaimed an independent Tauridian republic.

The world was shocked at the sweeping political and territorial demands of Germany in the Brest-Litovsk treaty, but now, it appears that the supplementary and unpublished trade treaty includes concessions of even greater value. It is announced that by this agreement Germany acquires control of the Baku oil fields on the Caspian Sea, which rival those of the United States and Mexico. Since the port of Batum, which serves as an outlet for the petroleum on the Black Sea, was by the treaty of Brest-Litovsk returned to Turkey, Germany has gained what she has long desired, a supply of oil fuel.

**Austrian Peace Talk** Count Czernin, the Austro-Hungarian Foreign Minister, in an address to the Vienna Municipal Council, said:

Recently we were almost on the point of entering into negotiations with the western powers, when the wind suddenly veered round, and, as we know with certainty, the entente decided it had better wait, as parliamentary and political events in our country justified the hope that the monarchy would soon be defenseless.

Some time before the western offensive began Premier Clemenceau address to me an inquiry whether and upon what basis I was prepared to negotiate. In agreement with Berlin, I immediately replied that I was prepared to negotiate, and that as far as France was concerned the only obstacle I could see in the way of peace was the French desire for Alsace-Lorraine. The reply from Paris was that it was impossible to negotiate on this basis. Thereupon there was no choice left.

The colossal struggle in the west has already begun, Austro-Hungarian and German troops are fighting shoulder to shoulder as they fought in Russia, Serbia, Rumania and Italy. We are fighting together for the defense of Austria-Hungary and Germany. Come what may we will not sacrifice Germany's interests any more than she will leave us in the lurch. We are not fighting for imperialistic or annexationist aims for ourselves or for Germany.

I consider the safest guarantee for the future, international agreements to prevent war. In such agreements, if they are framed

in binding form, I should see much stronger guarantees against surprise attacks by neighbors than in frontier rectifications, but thus far, except in the case of President Wilson, I have been unable to discover among any of our enemies serious inclination to accept this idea. However, despite the small degree of approval this idea receives, I consider that it will be realized.

There were rumors of preliminary peace negotiations during the winter, but this is the first time a statement in regard to it has been made by any government. Premier Clemenceau, when the Austrian statement was called to his attention, declared: "Czernin lied."

**Holland's Protest** The Dutch Government has issued a statement in the *Official Gazette* denying the allegations of President Wilson that the seizure of the Dutch shipping in American ports was justified on the ground that Holland could not make use of the ships under the conditions imposed. The Dutch Government protests that the ships could be employed in legitimate neutral commerce, but that to permit their use for the transportation of troops and war material from America thru the war zone to the European co-belligerents would be an unneutral act on the part of the Netherlands. The Netherlands could not consent to allowing the Dutch shipping to be sent by the Allies thru the danger zone unless the associated governments could guarantee the ships would not be armed and would not transport troops or war material. The statement concludes:

The Netherlands Government deems it its duty, especially in serious times such as the present, to speak with complete candor. It voices the sentiments of the entire Dutch nation, which sees in the seizure an act of violence which it will oppose with all the energy of its conviction and its wounded national feeling.

The American Government has always appealed to right and justice, has always come forward as the champion of small nations. That it now coöperates in an act diametrically opposed to those principles is a proceeding which can find no counterweight in the manifestations of friendship

or assurances of lenient application of the wrong committed.

On the other hand, the American Government holds that it would have been within the rights of the United States to take the vessels permanently, paying for them a just price, but, recognizing that Holland would be handicapped after the war by such action, it was announced that only the use of the ships would be required. After the war they will be returned to the Dutch flag in as good condition as when taken and if sunk will be replaced.

The ancient right of angary, which permits the seizure of neutral ships as well as other means of transportation by a belligerent in cases of emergency, is recognized by international law, altho American authorities have been disposed to deny its justification. It was last exercised, previous to the present war, by the Germans in 1870, when they seized and sank some British vessels in the Seine to keep the French gunboats from coming up the river. Prince Bismarck defended the action against the British protest, but consented to compensate the owners.

**Anti-Draft Riots in Quebec** There has been an outbreak in Quebec against the conscription law similar to those that took place in New York City in 1863. The compulsory service act was carried thruout Canada by large majorities except in the French provinces. When the result of the election was known threats of secession were voiced and preparations made for organized resistance to the execution of the act. The efforts of the troops to round up the slackers precipitated the outbreak. A mob of ten thousand gathered in Quebec on March 29 to storm the drill hall where the conscripts were confined. Hardware stores were looted for arms. False fire alarms from all quarters added to the confusion.

The military took prompt action by occupying the public squares while charges of cavalry swept thru the

© Committee on Public Information, from Underwood & Underwood

#### A FRENCH DIRIGIBLE GUARDING THE AMERICAN CAMP

Until we can get airplanes built and shipped overseas, we are dependent on French aircraft to fight back enemy planes attacking our lines

streets. Bricks and stones were showered upon the soldiers, and from the housetops snipers fired upon them. It was three days before the disorder was put down, and then only by the use of gunfire by the military against street crowds.

#### Paris Church Shelled

The new Krupp long-range guns continue the bombardment of Paris every day. Whether they do any military damage or not is not reported, but the number of civilians killed is considerable. The bombardment seems to have no effect upon the courage of the Parisians. On the contrary, the wantonness and brutality of it has roused a spirit of resentment that strengthens their determination to resistance. The whole civilized world was horrified at the shelling of the city during the services of Good Friday, for one of the shells struck a prominent church and exploded inside. A breach twelve feet high and twenty feet wide was made in the north end of the church and the roof at that end, falling, buried the worshipers with debris. The nave was filled with a heap of stones as high as the altar. All of the stained windows were shattered. From the debris seventy-five bodies were taken, fifty-four of them women, and many children. The wounded numbered ninety. The priests turned their attention to administering the last sacrament to the dying. Cardinal Amette arrived at the scene a few minutes after the explosion and was followed soon by President Poincaré and Premier Clemenceau. Among those killed was Counselor Stroehlin, of the Swiss Legation. The injured included Countess Morand, Viscount Molitor and other distinguished people, among them five

Americans. The Pope has addressed a protest against such sacrilege to the Catholic Emperor of Austria. The Kaiser has sent a telegram of congratulation to the Krupp works at Essen for their success in constructing the long-range gun.

According to German accounts the new gun attains its unprecedented range by rising into the rarefied air of the upper atmosphere. The highest point in the curve of its trajectory is over eighteen miles and the time of its flight is three minutes. The projectile has a caliber of 8½ inches and weighs with its internal charge of explosives 660 pounds. The gun is 65½ feet long, instead of the 90 or 150 feet that some American experts thought necessary.

It is surmized in Paris that there are four of these guns, two being used on alternate days, and that they are emplaced near Laon, eighty miles from Paris.

Of course, no particular building could be aimed at from such a distance, but with all Paris as a target every shot can take effect. None of them has so far failed to explode.

The German complaint that the French are destroying the ancient cathedral of Laon by their bombardment of that city may indicate that the French are trying to reach the site of these long-range guns.

#### To End Labor Troubles in War Work

An elaborate and thorough plan for the elimination and settlement of troubles between capital and labor has been proposed by the War Labor Conference Board, which was formed two months ago on the suggestion of the Secretary of Labor. The Conference Board consisted of five representatives

of capital, five representatives of labor, and two representatives of the public, ex-President Taft and Mr. Frank P. Walsh.

The board's plan provides for the creation of a National War Labor Board, to be made up in the same way as the Conference Board which makes the report. The War Labor Board is to have the power:

1. To settle, by mediation and conciliation, disputes between employers and workers in the field of war production and other fields closely related to it;
2. To provide local machinery for such mediation;
3. To mediate itself when local efforts have failed;
4. To appoint an umpire, when voluntary settlement has not been reached, to hear and decide the controversy finally, the umpire to be chosen by unanimous vote of the board or, failing that, by lot from a list of ten persons nominated by the President.

The action of the board is to be invoked by either side in a controversy or by the Secretary of Labor. The board and the umpire in their consideration of the controversy are to be governed by the following principles:

1. No strikes or lockouts during the war;
2. The right of the workers to organize and to bargain collectively through chosen representatives;
3. The right of employers to do the same;
4. No discrimination against workers because of trade union membership or activities;
5. No exercise by workers of coercive measures to induce others to join their unions or to compel employers to deal with them;
6. Union shops to continue union shops, and in the case of other shops the continuance of them as open shops not to be considered a grievance by the workers;
7. No relaxation of established safeguards of health and safety;
8. For women doing work ordinarily done by men, equal pay for equal work;
9. Maximum production of all war industries to be maintained;
10. Living wage to be guaranteed.

When the report of the Conference Board had been made public, the following statement was made by Mr. Walsh, the representative of the public who had been selected by labor, as Mr. Taft had been by capital:

The plan submitted represents the best thought of capital and labor as to what the policy of our Government with respect to industrial relations during the war ought to be. Representing capital were five of the largest employers in the nation, but one of whom had ever dealt with trade unions, advised and counseled by ex-President Taft, one of the world's proven great administrators and of the very highest American type of manhood. The representatives of the unions upon the board were the national officers of unions engaged in war production and numbering in their ranks considerably over one million men and women.

The principles declared might be called an industrial chart for the Government securing to the employer maximum production, and to the worker the strongest guar-

THE FRENCH FOR FANS

At home, folks spend some time learning whether there is a war going on or not. These marines at training camp are taking a special lesson in the French phrases they will need to help the "home boys" win if they get an incidental game over there. "Kill the umpire," for instance, becomes "A bas l'arbitre." "A la Maison" cheers on a home run.

anty of his right to organization and the health growth of the principles of democracy as applied to industry, as economic welfare while the war for human liberty everywhere is being waged. If the plan is adopted by the Government, I am satisfied that there will be a ready and hearty acquiescence therein by the employers and workers of the country so that the volume of production may flow with the maximum of fruitfulness and speed. This is absolutely essential to an early victory. The industrial army, both planners and workers, which are but other names for employers and employees, is second only in importance and necessity to our forces in the theater of war. Their loyal coöperation and enthusiastic effort will win the war.

**Standard Oil Invites Employees to Confer** The Standard Oil Company of New Jersey has adopted a new plan to promote better relations between the company and its employees. Conferences in which officers of the company participate with representatives elected by the workers are to take place at regular intervals. The plan was announced to the workers at the company's refineries by the following notice:

This company invites the coöperation of every employee in seeing to it that its long-established policy for fair treatment of all employees in matters pertaining to wages and working conditions is maintained, and the company, on its part, desires to coöperate as far as may be helpful with each employee in his plans to provide satisfactory living and social conditions for himself and family.

In order that each employee may be enabled to thus coöperate most effectively, the company invites employees to elect from their own number, by secret ballot, men in whom they have confidence, who shall represent them in dealing with officers and other representatives of the company in matters of mutual interest, this election to be on the general basis of one representative to 150 employees, with at least two representatives in each division of the works.

The persons thus selected by the employees will be their duly accredited representatives at a joint meeting with the representatives of the company, which it is proposed to hold at 26 Broadway, New York, April 1, 1918, for the purpose of getting better acquainted and of discussing matters of mutual concern. They will also be the accredited representatives of the employees at all subsequent meetings and in all matters of coöperation between the company and its employees, until the employees shall designate some other person to represent them.

The representatives of the men are to be encouraged to take part freely in the conferences, presenting the side of the workers with frankness and vigor. It is hoped by the company's officers that serious troubles between the employers and the employees may be prevented by these conferences, at which incipient differences may be opened up and eliminated before they grow to the proportions of acute grievances. It is intended that this plan shall be the beginning of a permanent policy.

The first conference was held on April 1 at the office of the company in the famous building at 26 Broadway, New York. The seventy-five representatives who had been elected by secret ballot by the company's workers at its three plants sat down to dinner with seventy-five of the company's executives.

The principal after-dinner speech was made by Walter C. Teagle, pres-

THE YANKS ARE COMING

General Pershing's proposal on March 29 that the American troops in France be sent forward at once to fight side by side with the Allies wherever they were most needed was followed by an announcement from Washington that every sacrifice will be made to increase the number of troops we are sending overseas. Trained regiments that cannot be used immediately in the formation of American divisions are to be brigaded temporarily under French and British units. The troops disembarked and lined up for inspection in this photograph are part of an American division now probably fighting at the front.

ident of the New Jersey company. He announced a ten per cent increase in the wages for all the company's workers with the exception of a small class for whom an increase has already been put into effect and another small group who get five per cent. Mr. Teagle declared that the two fundamental principles of the Standard's policy toward its employees were to be: first, assurance of fair treatment and fair working conditions; and, second, the consideration of the new program of welfare work which the company has in mind for its employees as in no sense a substitute for fair wages.

The welfare plans were laid before the workers by other speakers. They included the presentation to each employee after one year's service of a life insurance policy paid for entirely by the company; annuities for employees reaching the age of sixty-five years, and for all younger employees after twenty years of service; sick and accident benefits; establishment of an employment department, which will act as the intermediary between the company and the employees, and serve as a court of appeal in the case of dismissal; participation of the company in the Bayonne Housing Corporation, which proposes the creation of model housing conditions for employees of the Standard's Bayonne plant and other neighboring corporations; and enlargement by gifts from Mr. John D. Rockefeller of the service of the Y. M. C. A. as a community center.

The enthusiasm with which the announcements were received by the representatives of the workers is a favorable augury for the future of the Standard's new policy.

**Loyalty's Victory in Wisconsin** Congressman Lenroot was elected United States Senator from Wisconsin last week to fill the vacancy caused by the death of Senator Husting. He defeated Joseph E. Davies, the Democratic candidate, by a plurality of something over 10,000, and former Congressman Victor Berger, the Socialist candidate, by about 46,000. Mr. Berger received a little more than one-quarter of the total vote cast in the state.

Mr. Davies was the Administration's candidate. He resigned from the office of chairman of the Federal Trade Commission to make the fight in Wisconsin, and his candidacy received the endorsement of a letter from the President, in which Mr. Wilson said:

May I also add a word of thanks to you for your steadfast loyalty and patriotism during that trying period before we were thrust into the war, while to avoid becoming involved therein every effort was being made aggressively to assert and fearlessly to maintain American rights?

The McLemore resolution, the embargo issue, and the armed neutrality measure presented the first opportunities to apply the acid test in our country to disclose true loyalty and genuine Americanism. It should always be a source of much satisfaction to you that on these crucial propositions you proved true.

On the three measures mentioned by the President, Congressman Lenroot was opposed to the position taken by the Administration. The implication of Mr. Wilson's "acid test" is therefore obvious.

The election had been awaited with some trepidation thruout the country. Because of the pacifist, Socialist, and pro-German sentiment that has been supposed to make the state of Wisconsin the one weak point in America's

determination to fight the war thru to a triumphant conclusion. The attitude of Senator La Follette in the Senate and out has had much to do with this suspicion of Wisconsin's loyalty. The numbers of German-American inhabitants of the state and the strength of the Socialist movement there have been other disturbing elements in the situation.

But now the people of Wisconsin have emphatically repudiated the thought that they are not loyal to the purposes of the rest of the United States in relation to Prussian militarism. Mr. Lenroot's Americanism and devotion to the vigorous prosecution of the war are beyond question. Before the declaration of war, he was reluctant to have the United States go in. But he voted for the declaration of war and, once we were in, he has supported the war preparations and activities of the nation without reservation.

The issue in Wisconsin between the Republicans and the Democrats was not distinct. The victory of Mr. Lenroot is probably partly an endorsement for a tried and able legislator of progressive spirit; partly an indication of the natural swing of the pendulum away from the party in power; partly an expression of critical feeling toward the Administration because of imputed mistakes and failures; partly the expression of a desire to rebuke the President for taking a hand in a partizan fight.

Mr. Lenroot's election should add strength to the Senate. It should reinforce the Republican forces there. It will, incidentally, add a much-needed vote to the ranks of the woman suffrage supporters. Mr. Lenroot voted in the House in favor of the Federal woman suffrage amendment, and will doubtless do the same in the Senate when opportunity offers.

**I. W. W.** One hundred and twelve members of the Industrial Workers of the World were put on trial last week in Chicago charged with conspiracy to impede the prosecution of the war. Among the defendants were William O. Haywood, the general secretary-treasurer of the I. W. W. and a labor leader of extremely radical propensities for the past twenty-five years; Vincent St. John, Haywood's predecessor in office; Elizabeth Gurley Flynn, one of the most picturesque figures in the radical labor movement, and Arturo Giovannitti, one of the leaders of the I. W. W. strike at Lawrence, Massachusetts, several years ago.

Mr. Giovannitti, however, who will be remembered by Independent readers as the author of an article on "Syndicalism—the Creed of Force," published in its pages in 1913, was promptly discharged, the indictment against him having been withdrawn by the prosecution.

The charges against the defendants include allegations of sabotage in the slowing down of production and the wanton spoiling of material, incitement to strikes in order to delay the output of munitions of war, and intrigue against

military service. The indictment charges violation of five Federal laws: the espionage act, the section of the criminal code prohibiting interference with the civil rights of citizens, the selective draft act, the conspiracy statute and the postal laws.

Paul Thompson

**RED CROSS WORKROOMS PLEASE COPY** This suggestion for efficiency in making surgical dressings has been tried out successfully at the Red Cross headquarters in Cincinnati. The wheel carries eight bolts of gauze at once, stretching the material smooth so that it can be accurately cut to any measurement. This does away with the old necessity of drawing threads by hand and makes it possible for two women to do as much work in ten minutes as six formerly did in an hour.

controversy last fall over the leader of the Boston orchestra and his attitude toward the United States. At a concert in Providence late in October he refused to have the orchestra play "The Star Spangled Banner." This action roused a storm of protest, culminating in demands for Dr. Muck's internment as a "dangerous enemy alien." Major Henry Lee Higginson, the founder and financial backer of the orchestra, strongly defended its leader and denied that the failure to play the National Anthem had been due to Dr. Muck's refusal to conduct it. At subsequent concerts of the Boston Symphony, one of which, in New York, was given under police guard, the National Anthem was played. Dr. Muck has from the first maintained a severe silence in regard to the whole matter. It is contended on his behalf that he is a Swiss citizen, his father, a Bavarian, having become naturalized in Switzerland when his son was six years old. All loyal Americans who have rejoiced in wonderful musical accomplishments of the Boston Symphony will await the outcome of the investigation of Dr. Muck's relationships with conflicting feelings.

**To Save More Wheat** The Food Administrator has declared that, if we are to furnish our Allies with the necessary supply of wheat to maintain their war bread on a proper basis from now until the next harvest, we must reduce our monthly consumption of wheat from its normal figure of 42,000,000 bushels to one-half that amount. Reserving a certain necessary portion for the use of the army, and for a margin to cover exceptional cases, this will leave one and one-half pounds of wheat products weekly per person.

To effect the needed saving of wheat Mr. Hoover asks that the following rules be observed:

1. Householders not to use more than one and one-half pounds of wheat products a week per person;
2. Public eating places and clubs to continue to observe Mondays and Wednesdays as wheatless days;
3. Retailers to sell not more than one-eighth of a barrel of wheat flour to any customer in a town or city, or twice as much to a country customer; and to sell no wheat products without an equal weight of other cereals.

The Food Administrator supplemented the new rules, which he announced, with this statement:

Many thousand families throughout the land are now using no wheat products whatever, except a very small amount for cooking purposes, and are doing so in perfect health and satisfaction. There is no reason why all the American people who are able to cook in their own households can not subsist perfectly well with the use of less wheat products than 1½ pounds a week, and we specially ask the well-to-do households in the country to follow this additional program in order that we may provide the necessary marginal supplies for those parts of the community less able to adapt themselves to so large a proportion of substitutes.

In order that we shall be able to make the wheat exports that are absolutely demanded of us to maintain the civil population and soldiers of the Allies and our own army, we propose to supplement the voluntary coöperation of the public by a further limitation of distribution and we shall place at once restrictions on distribution which will be adjusted from time to time to secure as nearly equitable distribution as possible. With the arrival of harvest we should be able to relax such restrictions; until then we ask for the necessary patience, sacrifice and coöperation of the distributing trades.

**Limitations of Parcels to France** After April 15 the sending of unlimited quantities of things to individual soldiers abroad by parcel post and express will no longer be permitted. The War Department has issued an order providing that parents and friends may send over only articles for which a definite request has come from the man overseas, the request bearing the approval of the commanding officer of his regiment or other military unit. The purpose of the order is obviously to save precious shipping space. The more soldiers we have in France, the more parcels will naturally be sent over by the folks at home. The new restriction will be irksome to the many who want to keep in touch with their boys over there with substantial evidences of thoughtfulness, but it seems to be a military necessity.

# ROTTING AT THE CORE

## The Amazing Facts of Germany's Internal Breakdown

This is the ninth message from the United States Government to the American people. Presented each week in The Independent by George Creel, Chairman of Committee on Public Information, appointed by President Wilson

**F**OR some time there have been symptoms of a systemic breakdown in the body of the German state. It has been apparent not in the labor troubles only—the peace strikes which the military authorities have so thoroly repressed. And it was not indicated merely by the loss of morale in the army, where the mutinies have been put down as successfully as the strikes were. It was shown, most clearly, in the reports of the illicit trade in food that was continuing throughout Germany in spite of every effort of food regulation and distribution. And it has come suddenly to the surface, now, in an epidemic of crime, in an exposure of commercial scandals, in proofs of the wholesale corruption of the German civil service, in the discovery of a complete loss of security in the mails, and in evidences of all manner of profiteering not only in civilian business but in contracts for the government and supplies for the fighting line.

It is as if all classes of the German people had at last realized that they were not supporting a "holy war of self-defense," but a piratical war of aggression for imperial conquest and trade expansion; and as if, with that realization, they had turned their minds to making for themselves whatever profit they could take out of the general pillage.

The workingman struck first and was clubbed into subjection, but he is evidently looting. The news dispatches report that the suburbs of Berlin are being terrorized by "bands" of criminals. The companies that insure against theft are threatened with bankruptcy, so numerous are the cases of house-breaking. "A wagon cannot stand on the street or the railroad track, unguarded," says the *Volksblatt* of the manufacturing town of Bochum. "Parcels of food, fuel and similar scarce necessities of life are regarded as outside the protection of the law. The worst part of it is that the abuses have extended to the officials. Who should wonder, then, when post parcels are 'lost' and rail shipments reach their destination with but half their contents?"

Food cards are stolen all over the country. There have been such wholesale infringements of the food regulations that the newspapers have reported the

arrival of carloads of illicit food supplies in the larger cities. I do not want to generalize nor above all to cast aspersions on the mass of regular officials," writes the *Volksblatt*, but the supervising staff has not held its own against the temptations offered by the war, and it is of no use to shut one's eyes to the fact. Any one who is engaged in business and wants an order from the authorities to get his raw material and fuel, or to prevent his railroad shipments being delayed or to insure that his bill is approved and paid without delay—he does well when he puts a few greenbacks in his pockets to stir up the zeal of the necessary officials. This is not limited to subordinate positions, but extends to circles of whose 'unimpeachability' we Germans have been justly proud. There has arisen, in fact, a state of affairs that bears a desperate resemblance to so-called Russian conditions."

The outbreaks of larceny and burglary and crimes against life and property certainly resemble the Russian disorders. The German papers explain that these crimes are due to "jailbirds and deserters" who take advantage of the fact that there are no able-bodied men left as watchmen. The word "deserters" is significant. But the extraordinary number of cases reported shows that neither army deserters nor criminal classes could be responsible for them all. The whole people have become cor-

rupted and the lower classes steal because it is the only way in which they can prey upon the state as the others are preying.

The *Volksblatt* makes that plain in a long article upon "The Decline of Economic Morals."

"The opportunity for gain," it says, "has promoted a feature of business ethics that not only disgusts the person who is yet free of it, but even makes him despair, considering the extent to which it has spread during this war. The lust for wealth has simply destroyed all business ethics and even the appearance of manners. Even the church has no longer the slightest influence on the masses.

"Whoever is caught in this profiteering makes all sorts of daring vindications and excuses. The small dealer, without much money or influence, ultimately accepts punishment as unavoidable, promising himself that next time he will go about it differently. But the rich dealer and manufacturer avails himself of all government organizations, chambers of commerce, trade unions, etc., in order to protect himself from punishment. In all fairness, it might be expected that the organizations of the middle classes, of industry and wholesale dealers, chambers of commerce, retail dealers' associations, manufacturers' associations, etc., would exhort and warn their members to refrain from such courses of action and

be of loyal assistance to the Fatherland. Yet, no one hears of anything like that. On the contrary these institutions give protection to such people instead of expelling them and letting them bear the responsibilities of their dirty tricks.

"We hear of some of the wildest kind of court decisions which declare that a profit of 25 per cent or even more is only normal and customary in business. We learned it in the 'Schondorf' case. In that case a half a dozen decisions were cited, all of which were of course favorable to the offenders. The profit which originally came to 34 per cent was cut down to 23.44 per cent, and this rate was not considered as usury. Herr Schondorf pocketed his enormous profit while posing as a Red Cross benefactor. It is a fact that he was fully aware that his way of transacting business was not legitimate, for he [Continued on page 103

"Germany still stands, like a tree decayed at the heart, supported by the strength of that outer shell which is the army." On that strength Prussian militarism stakes its last hope. # THE LUCKY MEN IN CAMP

BY HAMILTON HOLT

The editor of The Independent is now in Europe, presumably "taking a squint at the Boches from the front line trenches." These impressions of the army camps in the United States, written just before he sailed, are based on visits to six of the Eastern camps

**W**HEN I received an invitation the other day to go "over there" as the guest of the British Government and take a squint at the Boches thru a periscope from the front line trenches—the invitation didn't read quite that way, but that's how I took it—it was obvious that the first thing for me to do in preparation for such a great adventure was to get a glimpse of the boys training in the camps at home. For it would never do to call upon the Tommy Atkins without being able to bring them a first hand message from the Yanks "over here," and I thereupon wrote to my friend the Y. M. C. A. Secretary saying that I would accept his kind invitation and make a few speeches on "The Autocrat William versus the Democrat Wilson" at some of the army camps. Accordingly I have just made flying visits to Camp Upton, New York, Camp Gordon, Georgia, and Camps Lee, Stuart Hill, Langley and Morrison, Virginia. As they all looked alike to me, except that some were located on black mud and some on red mud, I shall only set down here a few of the general impressions I received.

I had always imagined that a military camp consisted of rows of white tents with sentries walking up and down between, and tethered horses with their ears back trying to kick each other, multitudes of soldiers squatting on the ground polishing their guns and officers sitting on camp stools studying maps.

Instead, I found six enormous cities rising raw and ugly out of the open fields or forest, but with all the modern conveniences—miles of macadam roads, multitudes of office buildings, barracks, mess halls, stables, garages, storehouses, hotels, clubs, theaters, auditoriums, libraries, Y. M. C. A. buildings, churches, and all supplied with telephones, electric lights, hot and cold water, modern plumbing—and as spotlessly clean and well ordered as an endowed hospital for millionaires or a battleship deck. These camps will each hold thirty thousand men or more. They are usually built in the shape of a horseshoe around a great central flat

or undulating area which is used as a drill ground or miniature battle field. From a hill or an aeroplane the camp with its big, low, oblong, unpainted white pine buildings about the size of a prosperous hay barn looks for all the world like the typical Western boom town of the movies, only forty times as

Thrusting with grim vigor a bayonet into dummies suspended from a "gallows"

large. The camps not only look good, but they smell good. The odor of fresh earth and unseasoned pine boards is not spoiled by open drains and uncovered garbage cans. The camps are laid out on generous proportions. From end to end of the horseshoe is usually a good six or seven miles. The buildings are generally constructed to get the sun. The avenues are broad and well paved, and up and down them continually flow from sunrise to sunset a stream of khaki-clad clean-cut lads, starchy-looking officers, fleets of motor trucks, teams of well groomed horses and mules and an occasional motor-cycle or horseback rider.

But the life of the camps is to be found in the great central field where for eight solid hours every day our boys are drilling, drilling and ceaselessly drilling. One morning in Camp Lee I sauntered over the field, moving about as the spirit seized me. This great field

—perhaps a thousand acres in extent—was everywhere alive with marching and counter marching men. They were in groups of all sizes and formations from the awkward squad still in civilian clothes to the full battalion with colors and band. In the middle of the field a giant battleplane had just alighted from Camp Langley forty miles away. A great crowd of soldiers was pressing so close about the strange bird that four armed guards had to circle about holding them back. Not far off, a handsome English officer was instructing American officers in the five distinct motions required when the gas mask is put on, I heard him say that the masks must always be ready for instant use when within two miles of the front trenches. He also tested the American officers' capacity to hold their breath while adjusting the masks. The men varied all the way from twenty to seventy seconds at the first trial.

I walked over a hill and watched a young lieutenant drilling half a dozen non-commissioned officers in bayonet charging. It was a more than realistic spectacle to see the grim vigor with which they plunged forward at the word of command, driving their bayonets deep into the earth where a crouching German was supposed to be and then with a yell darting forward to thrust the bayonet again into dummies suspended from a "gallows" who were supposed to be Germans coming to the support of their comrades.

On the next hill, twenty boys all masked and armored like the pictures of Japanese fencers were fighting each other two by two with wooden guns padded at the end, while down in the hollow a group of machine gunners was firing incessant rounds at targets made to look like German heads sticking out of an evergreen camouflaged embankment. In the valley to the left, a band was playing "Pop Goes the Weasel" to the double quick accompaniment of the bass drum, while all the troupes accelerated their pace and dog-trotted around the field. Just then a group of officers with field glasses came walking along trying to detect hidden

machine guns that had been planted somewhere ahead. I followed their searching glances with my eyes but could not see anything suspicious except a clump of bushes not a hundred feet away, when all of a sudden a whole blue-overalled gun crew jumped before our eyes out of the grass to our left. They had completely concealed themselves behind stones and tussocks.

It is drill, drill, drill and little else but drill. But the boys seem to like it for I saw nowhere a sour or sullen face. They thrive under the rigor of this regime, and they grow straight and clear-eyed and the courage and spirit they soon acquire bodes ill for the men across on the other side of "No Man's Land," when they receive the order to go over the top.

As far as I could see our troops were adequately clad and equipt. I heard no complaints as to any dereliction on the part of the War Department in the matter of equipment or care of the men. The English and French instructors, to be sure, hold up their hands in horror at hot and cold water and electric lights and talk of the danger of mollycoddling the men. But the American officers good naturedly laugh and go on giving the men the best that is to be had in the way of comfort, food and care. They feel confident the men can endure more hardships when the actual crisis comes the better cared for they have been. The meals are good enough for a king. The first breakfast which I took with the men consisted of oatmeal, milk, sugar, baked potatoes, gravy, hamburger steak, bread and coffee. There were no napkins and we

had to bring our dishes up afterwards to the hot water tub where they were washed and wiped, but I never enjoyed a meal more. No wonder the fellows living on them come in a short time to feel like fighting cocks, and develop all the ebullition of a young bull or a Yale sophomore. Yet the spirits of the men do not degenerate into brutality or viciousness. I was told there is little or no drinking or debauchery of any kind in the American cantonments and very little without. The saloons in the neighboring towns are all under the jurisdiction of the military authorities and are rigorously suppress if they are found selling liquor to men in uniform. While prostitution has not been so completely eliminated in the cities near the camps, my college classmate, now a major in the medical corps of one of the camps, told me that less than 200 men out of 40,000 in camps were in the base hospital with venereal diseases and these diseases were mostly contracted before the men arrived in camp. Probably no army ever before could boast of such a record.

One would think that hiking twenty miles a day or drilling eight hours on the parade ground and in the practise trenches would give enough exercise to the average soldier. But such evidently

is not the case, for they are all as ardent for athletics as any freshwater collegian. The athletic spirit is fostered largely by the Y. M. C. A., whose huts dot every half mile or less of the camps. Each Y. M. C. A. hut has an athletic director who trains the boys in baseball, football, boxing, etc., and it is needless to say they take to

it like ducks to water. I saw a meet in one of the auditoriums one evening that embraced a basket ball match, a boxing bout that ended in a knockout, and a wrestling match that sent two regiments nearly crazy with excitement.

The Y. M. C. A. huts are worth a whole article to themselves. They certainly are the most popular institution in the camp. Any man who should make a sneering remark about them today would be in for real trouble. Each one consists of a long hall, which is used for games and entertainments to which is joined a small group of rooms where men may bring their friends, including women, and sit around the great fireplaces and read, play games, and write home. A favorite sign that adorns the living room of almost every hut is "Write to Mother." There is a secretary always in charge, and he has a wonderful opportunity to get in touch with the men. Tho the huts are open all day long and there are always men using them at all hours, it is in the evening when they are in all their glory. Something goes on every single night. There are two movies each week, a stunt and athletic night, two lectures, and a religious meeting. The men are usually so tired [Continued on page 92]

# WELDING THE FORCES OF LABOR

BY WILLIAM LEAVITT STODDARD

WITH a bare announcement of their departure in the press shortly before they sailed, a delegation of American men and women representing the organized labor movement of the United States left a certain Atlantic port for Europe. The nation has grown so used to the arrival and departure of delegations and commissions and famous individuals representing vast interests that it may be pardoned for not having inquired too closely into the purpose of this mission. But there is a purpose and a story behind the trip of an importance far greater than that of merely bearing a message of cheer, of merely being fêted and fed on war rations.

This purpose reaches into the very heart of the successful prosecution of the war and the attainment of a lasting and democratic peace.

"In a short time," wrote William H. Johnston, international president of the International Association of Machinists, to his fellow members, "I shall leave the United States on an exceptionally important mission to our brothers and fellow trade unionists 'over there.'"

"Our mission is to carry a message of good will, of fraternity and coöperation from the labor movement of America to the workers and the people generally of the British Isles and of France. We shall do our utmost to impart to them the spirit both of our American trade unionists and of all the people of our republic in this critical period of struggle by civilized nations to preserve liberty, justice, democracy and government by law rather than government by an autocracy or dynasty."

In company with Mr. Johnston on this mission are James Wilson of the Pattern Makers' League, John P. Frey of the Iron Molders, Martin Ryan of the Railway Carmen, Agnes Nestor of the Glove Workers, Melinda Scott of the Straw Hat Trimmers, Chester A. Wright of the Typographic Union, William Short of the Washington State Federation of Labor, and George L. Berry of the Printing Pressmen. It is a representative trade union group. It is a group, moreover, skilled not only in national and international trades-unionism, but one of men and women broadly representative of wider interests than those alone of organized labor. It will take to the Allies something more than any ordinary group could, and it will beyond question bring back home facts and inspiration which will make for a better understanding and for more permanent good relations between the peoples of the United States, England and France.

While this mission is not an official

Government mission, it is the next best thing to it. The position of Mr. Gompers in the Council of National Defense makes this certain. The further fact that no one may obtain a passport from the State Department unless his going is approved by the Government makes this certainty doubly sure.

In order to gather the real purport of this mission it is well to go back to a declaration of the American Federation of Labor which was made before the Congress of the United States declared that a state of war existed between the United States and Germany. The date is March 9, 1917. Some of the more significant sentences are these:

"In no previous war has the organized labor movement taken a directing part. Labor has now reached an understanding of its rights, of its power and resources, of its value and contributions to society, and must make definite constructive proposals. . . . The present war discloses a struggle between the institutions of democracy and those of autocracy. As a nation we should profit from the experiences of other nations. Democracy cannot be established by patches upon an autocratic system."

Here is the deliberated statement of the American labor movement made previous to our entering the war. In common with the vast majority of thinking Americans, these men foresaw our participation in the war and made preparation so that their attitude might be sound and right. Thanks to this preparation and to the prompt recognition by the Administration that labor is a part of the nation and hence should be a part of the Government, we on this side of the Atlantic have avoided many

of the risks and disasters which befell Great Britain.

Labor today in England is in a condition of unrest. This condition is, of course, chronic with labor everywhere, but the problems peculiar to a war of such duration and intensity as the present one have made this unrest disturbing—disturbing not only to the Empire, but disturbing to the leaders of labor. Labor in England has sacrificed greatly for the war. In common with every one, labor has sacrificed men and money—freely, as all free men sacrifice themselves today. But, more than that, labor in England has sacrificed the fruits of a century of dearly won rights and liberties. It is not necessary to enumerate these, but it is necessary, to realize that in England the labor movement has, thru a long series of decades, been fighting for democracy—fighting to fashion a constitutional monarchy to the needs of a people.

Now with the active military entrance of this Democracy into the struggle, now that American labor also has

begun to sacrifice rights and liberties which have been gained by it, it is fitting and proper that this mission shall bear to the workers of England and France this message: We are one with you. We know what you have given up. We are ready to give up as much. We pledge ourselves to this, and we carry with us the pledge of a hundred million people. You are weary of war. We are fresh. We will give of our strength. Our hands are in yours. It is our common fight.

The American labor mission goes to England and France at almost the identical moment that the American armed forces are joining those of England and France in the Great Battle. The symbolism is far from superficial. "It will be my purpose," wrote Johnston, speaking no doubt of the common purpose of the group, "to observe how government officials function with the responsible executives of the trade unions; how the standards of health, safety and education are being maintained during the war; what the prospects are to return to old trade ethics after the war; what is being done or contemplated on the question of so-called 'dilution of labor,' and what steps are being taken to protect women workers from undue hardship, overexertion or possible exploitation."

This mission will have every opportunity to perform its function. But this function cannot be performed fully unless the American public, in addition to American organized labor, shall appreciate that it is necessary, and shall realize that it is one with the function of the entire nation in this hour.

## HOW THE BATTLE GOES

By the Military Critic of The Independent

**I**N the first week the point of the German wedge was driven forward a distance of thirty-five miles. By this drive the Germans regained possession of about 900 square miles of territory, practically all, in some places more, than they had lost in this quarter since 1914.

But the ground gained by the Germans is the least valuable in Europe since it has been fought over for nearly four years and deliberately devastated. The new German lines are sixty per cent longer and no stronger than those they left. They have captured many guns but they have expended an enormous amount of ammunition. They have taken many prisoners but they have sacrificed an appalling number of men.

The Allies have been forced back but their lines are still unbroken. None of their armies has been cut off. None of their commanders has been captured. No cities of great importance have been lost.

On the map the Germans have won a great victory, but if on the map they do not win more it will be counted as a defeat because it has cost more than it in itself is worth. Its value lies in its vantage. The Germans are now in a position to strike a heavier blow than ever before—if they have the strength. But so also are the Allies—if they have the strength. Breaking the deadlock has

weakened the defensive of both parties and given an unprecedented opportunity for an offensive to whichever party is able to make use of it. The Germans do not seem to have exhausted their strength, and the Allies have not yet shown their strength. Until then the outcome is a matter of speculation.

The strategic advantage of the German drive is that it has brought them within striking distance of Amiens. As every American tourist knows, the shortest route from Calais to Paris runs thru Amiens. Beyond Amiens the railroad divides into three, one running up the Avre River, the second up the Noye, and the third up the Celle. The first of these was cut by the Germans when they took Moreuil on the Avre. The second is only five miles away, and Amiens itself, the junction of all the railroads of this region, is within ten miles of the German front. From this front the German artillery could of course make the town too hot to hold the British, and so weaken the main link connecting them with the French. Amiens has been one of the chief British bases all thru the war, and it would seriously discommoded them to have to evacuate the city even tho the Germans did not take it.

For that reason the British and French are making desperate efforts to hold back the German movement

toward Amiens. During the second week both sides concentrated their forces upon this point. The Germans realized that their acute salient at Montdidier could not be held unless they extended their holdings beyond and above it. So they attacked the British line to the north and took a chain of villages southeast of Amiens, Pierrepont, Moreuil, Hangard, Demuin, Marcelcave, lying in the angle between the Avre and the Luce Rivers. The British and French joined here in vigorous counter-attacks and regained much of the ground. Some of these villages changed hands two or three times during the week. The Canadian and French soldiers were mingled in the attack on Moreuil. Twice they entered the village and twice the Germans drove them out. On the third charge of the day they took Moreuil and held it.

On the south the German front is limited by the Oise. The bridges across the river have been destroyed and the French hold the hills upon the southern side in force.

On the north the German right wing is held back by Arras. The Germans cannot widen their front unless they can break the grip of the British on this ancient stronghold. A year ago the British strengthened their position here by taking Vimy ridge and other heights northeast of the town as far as Lens.

IN THE CHAMPAGNE SECTOR BY A FRENCH AIR OBSERVER FOR THE USE OF THE FRENCH GENERAL STAFF

Yet the British line on the southeast is only three miles from Arras.

It is against this quarter that the Germans directed their attack at the end of the week when their advance toward Amiens began to slacken. They are said to have thrown eleven divisions against the Arras front without so far making any deep impression upon it.

The Germans are supposed to have employed about 600,000 at the start of their drive, but have gradually increased the number to a million or more. Half of these are in the field north of the Somme and the other half south.

The astonishing rapidity of the German movement was accomplished by means of new tactics and equipment. A French report based on the orders found on prisoners describes the German formation as follows:

The division advances in two regimental groups progressing side by side. The first line of each group consists, first, of one regiment of three battalions of infantry, whose task is to advance straight upon their objectives, regardless of losses, leaving the work of reducing our centers of resistance to specialist detachments following them.

These consist, first, of one company of storm troops, one and one-half machine gun company, a half company of sappers, one detachment of liquid flame throwers, half a heavy trench mortar company, one battery of light trench mortars and two batteries of what is called infantry guns.

In reserve come the third infantry regiment and a division of five tanks of British

origin and an independent group consisting of two cyclist companies and one company of storm troops.

This division is supported by twelve batteries of field guns and six of heavy artillery, including a battery of 8-inch howitzers.

According to prisoners, a number of enemy battalions have now got special light trench mortar detachments, known as infantry artillery, equipt with two light trench mortars of a new model, mounted on high wheels, supposed to be capable of firing twenty rounds a minute against tanks or other obstacles. The personnel of each detachment comprizes two officers and forty men.

The point of the German wedge was driven between the British and French forces, showing that Hindenburg was determined to take the fullest advantage, as he always has, of the division of his opponents. From the beginning of the war to the present this has been the chief weakness of the Allies, as it is of all alliances. In the battle of Mons the British and French armies got out of touch with each other, and each side blames the other for the disaster. Every year since there have been failures and friction due to imperfect coördination of effort and mutual misunderstanding. This difficulty has been fully realized by the civilians at the head of the belligerent governments, but they have never been able to get their military leaders to subordinate themselves to a foreign commander. Premier Lloyd George has from the start felt that unity of command was necessary to win the war, and he has made every effort to bring

it about, hitherto without success. In November, 1917, he went to Italy and held a conference with the French and Italian leaders at Raffalo. It was agreed there to establish an Inter-Allied General Staff, at the head of which should be General Cadorna with General Foch as the French representative and General Sir Henry Wilson as the British. Mr. Lloyd George then tried to procure parliamentary support for the Raffalo plan by what he called a "brutally frank" speech in which he said that the failure of the Allies to secure any important victories in Europe had been due to diversity of administration. But the hostility aroused in England at the very idea of even a partial alienation of the supreme command of British forces compelled him to attenuate the achievement and to explain that the Supreme War Council "was to have no executive power whatever, was to be merely advisory, that decisions in the matter of strategy and the distribution and movement of the various armies in the field would rest with the several governments of the Allies." In February, 1918, at the conference at Versailles he tried again, with the support of President Wilson, to make the so-called Supreme War Council really supreme and actually effective. This time he almost lost his position as Prime Minister, but finally quelled the storm by informing Parliament that General Haig would remain in independent command of the British forces as formerly, but that the Supreme War Council would [Continued on page 87]

# THE TALK'S THE THING

BY JANET PAYNE WHITNEY

THE first few moments of a dinner beside a perfect stranger, of whose very name you have only caught a hazy impression, are shy ones to the average human being. But when that stranger turns upon you and cuts short the little social preliminaries by which you are about to warm yourself up to conversational pitch, and says without preface, "Let's talk about something interesting," a feeling of unexpected dislike begins to arise within your soul. You feel as if they had blown out the only match you had to light the fire of social intercourse. You wait, in dumb resentment, for them to provide another—if they can. And when they follow up the attack by the suggestion, "Let's discuss the merits of Realism and Romanticism, or something of that kind," you have a sudden revelation of the capacity of the erring human heart to fall in hate at first sight. You either weakly and bashfully murmur, "You begin!" or you take the bull by the horns, and disguising your gall in sweetness, falsely declare that you hate both of them, that you never read any books, that the doctor says it is bad for your brain to think, and that the only thing you live for is outdoor exercise. Meanwhile your mind is grumbling to you inside that you have got a partner who talks like a book, and you wish he was just in a book and you could shut it up and go away.

It is a curious thing that we almost all hate people who talk like books, and hate books which don't talk like people. But it is probably in both cases the same quality that puts our backs up. When we say a person talks like a book, we mean he talks self-consciously and pedantically. But we also mean just that of a book in which the dialog seems to us untrue to life.

We can all stand a good deal of the "Pish, zounds, man, do you take me for a rabbit for your skewering? I have some pretty skill with the skewer myself, and if you impinge mine honor, faith, one of us will rue the day, and that not I," etc., school of writing, if the action is lively, because we are innocently prepared to take it on trust that people really did talk like that "in those days." But when it comes to stories of our own times we demand that the talk shall present a rather lightened picture of the conversation of people we know, at their best and liveliest, or most characteristic moments. A clever writer like Shaw can shift our sympathy from a righteous character to an unrighteous one by playing upon this instinctive dislike of pedantry or bookishness, and uncontrollable leaning toward naturalness and human nature. Take that little scene in "Misalliance" where Tarleton discovers the man in his new Turkish bath:

The Man (coming out of the bath, pistol in hand)—Another word, and you're a dead man.

Tarleton (braced)—Am I? Well, you're a live one; that's one comfort. I thought you were a ghost. (He sits down, quite un-

disturbed by the pistol.) Who are you, and what the devil were you doing in my new Turkish bath?

The Man (with tragic intensity)—I am the son of Lucinda Titmus.

Tarleton (the name conveying nothing to him)—Indeed? And how is she? Quite well, I hope?

The Man—She is dead. Dead, my God, and you're alive.

Tarleton (unimpressed by the tragedy, but sympathetic)—Oh! Lost your mother? That's sad. I'm sorry. But we can't all have the luck to survive our mothers.

The Man—Much you care, damn you.

Tarleton—Oh, don't cut up rough. Face it like a man. You see, I didn't know your mother.

The Man—Not know her? Do you dare to stand there by her open grave and deny that you knew her?

Tarleton—You read a good deal, don't you?

The Man—What if I do? What has that to do with your infamy and my mother's doom?

Tarleton—There, you see. Doom. That's not good sense; but its literature. Now it happens that I'm a tremendous reader; always was. When I was your age I read books of that sort by the bushel; the Doom sort, you know.

Our sympathies ought to be with the man, but we are lured into laughter at his stage-avenger air, and irresistibly attracted by Tarleton's cool, easy good-nature, which covers an absence of conscience that in the hands of a moralist would be truly appalling.

Human conversation is an extraordinary thing. We are normally talking for more of our lives than we are doing any other thing except sleeping, and yet we do not get tired of it. We are always pleased to meet a new person, and get some slightly varied talk, or to see an old friend and go over, with unabated zeal, the old familiar subjects. Like the jolly things of Nature, endlessly monotonous, and forever varied—dawn and sunset and the bonny midday heaven—it is never twice the same. Only the people to whom talk is no interchange, bore and are bored by it.

I remember reading a story about a

Dickens and Thackeray struggled to make live an ideally human young woman

man who was terrified to get married because of the endless vista of conversation that he saw stretching before him and the chosen lady. He had no gifts that way, and the prospect appalled him. The wedding-day happened because, having started the ball rolling he was too inarticulate to stop it, and the story leaves him, sweating with panic, shut up alone in a railway carriage with his bride, wondering how to begin the interminable conversation of wedded life. It seems rather serious that they have not learned to talk to each other before, and, on the lowest ground, they have lost lots of fun that they can never make up. But there is a gleam of hope in the lady's sense of humor. She begins to laugh. And the author at once retires.

In a short story such a situation can be amusingly and artistically treated, tho even then it does not quite convince, and several pages on the funky hero's mental struggles do not make him such a living figure as the laughing heroine becomes in her single appearance. But in a novel it would be impossible. We can bear an occasional strong, silent hero, if his author is strong in plot, and can put him smartly thru his paces in the field of action; but too much of him palls, and we cannot remember about him afterward. He was just a big, handsome puppet, who turned up at the right nicks of time, and foiled the wiles of the wicked (by never talking to them) and married the heroine in the last chapter.

But good talk is as necessary to a good novel as is an interesting plot, and if one of them must be missing, some novelists have proved that they can at least present living and likable human beings as characters by a minimum of plot and a maximum of lively conversation.

The best books, after all, are those which leave on our minds the impression that we have been mixing with real people, whose personalities will remain vivid and definite to us like friends long after we have forgotten the bulk of their adventures or misfortunes.

Not many people could pass an examination on the manifold events in "Pickwick Papers," but we could all write character sketches of Sam Weller or Mr. Snodgrass or the Fat Boy or the dangerous widow or good old Mr. Pickwick, or any of the rest. Who doesn't feel as if Mr. Pickwick were an uncle of his own?

When we turn to Dickens, we turn to a master-wizard. And it is as hard not to turn to him as it was to keep King Charles's head out of Mr. Dick's essay. There are a good many books about now on "How to write fiction," explaining and analyzing the arrangement of plot, cultivation of style, contrasting and development of character, use of conversation in evolving plot and character, and so forth; part of the passion for analysis that was characteristic of the twentieth century pre-war period, when there was time for it. To glance at [Continued on page 93]

## “I would like to go there, Joe, but there’s no place to live”

**Y**OU cannot expect to attract the better class of skilled workmen unless you can provide homes for them. Labor, today, has its choice of where it will work and where it will not. Besides, top-notch production depends on top-notch men—men who are satisfied and contented. A force of such men means expansion. Dissatisfied men, “floaters,” inefficient workers means lower and lesser production.

### Lewis Machine Cut Houses

have solved the housing problem for many of America’s leading industries. These houses are planned, designed, constructed and priced to meet today’s conditions—when speed and economy are essential. Houses of all the year around construction—substantial, practical, attractive homes, that can be erected in the shortest possible time. Over 100 designs to meet all conditions and requirements, or our engineers and architects will work in conjunction with yours.

The low prices of Lewis Machine Cut Houses is due to absolute standardization to the most minute detail—practically all waste is eliminated—every piece cut by machinery to actual accurate measure—and because of quantity production.

#### 24 to 48 Hour Shipments

Shipments of standard designs can be made in 24 to 48 hours, and a regular schedule maintained until

contract is completed. Each house shipped complete in a car.

#### Among Our Customers

Among the 1917 buyers of Lewis Machine Cut Houses who have purchased in quantity are such concerns as

The Goodyear Tire & Rubber Co.	Michigan Central Railroad
The Hercules Powder Co.	American Plate Glass Co.
The Bessemer Coal & Coke Co.	Inland Steel Co.
Eastern Michigan Power Co.	Thompson-Starrett Co.
Tennessee Copper Company	U. S. Government

#### For Industrial House Builders, Government Officials, Contractors and Builders

Our facilities are such that we can start immediate shipment for the building of whole towns or communities. No contract is too large for us to guarantee record-breaking time.

Wire or write for full details.

# IF YOU ARE A JEW

Seventh message from the National Security League, Committee on Patriotism through Education, of which The Independent is the official publication

**I**N the early part of the year 1896 I represented the *London Jewish World* in Berlin. I was assigned to secure interviews with German leaders of thought. I went to Treitschke, the historian. For a moment he listened to me, and then glaring at me, he shouted in that harsh voice of his: "No! You are doubly damned. You are a Jew and you come from England." I beat a hasty retreat.

It is well for all liberal-minded people to understand the principles for which Treitschke stood, for they reflect the fundamentals upon which Teutonism rests. Treitschke, a favorite of the court, was intolerant of every foreigner, and a Jew was his special *bête noir*.

When the present war broke out, the position of the Jews, especially that of the six millions living in Eastern Europe, was most pitiable. At that time, Jewish sentiment was distinctly anti-Russian—not pro-German. Surprise and chagrin were expressed that liberal countries should ally themselves with the government of Czar Nicholas II. Scarcely one in a thousand knew which way to turn.

The Russian Revolution a year ago produced a complete change of sentiment. For the time being, it is true, the Russian Revolution has become abortive, for the strangle hold of Germany upon Russia has complicated the state of affairs, but it is advisable that Gentiles and Jews alike should know what may be expected if German domination in Russia prevails. The liberal world must awake to the situation because it affects millions of human beings, Jews and Gentiles alike. Jews are particularly interested in this question, since it concerns intimately the fate of six millions of their coreligionists in Russia.

**W**HAT has been Germany's attitude toward the Jew? To know this gives us an insight into the German mind and helps us understand what may be expected if Germany is allowed untrammelled sway in the future.

There are a little over six hundred thousand Jews in the German Empire, the total population of which is about sixty-five million. The Jews of Germany have again and again demonstrated their loyalty, yet Germany is the home and the fountainhead of anti-Semitism.

Jews could not be officers in the German army, and altho today, as a result of the heroism and martyrdom of German-Jewish soldiers, some have been elevated to the rank of officers, there has been an outcry against that.

No Jew could become a full professor of any German university and remain Jew. There have been only a few exceptions, and when the incumbents either retired or died, no other Jews were appointed.

BY I. L. BRIL

MANAGING EDITOR OF  
THE "JEWISH FORUM"

Foreign-born Jews could not become naturalized subjects of the German Empire, and in the middle eighties there were wholesale expulsions of these foreign-born Jews, altho large numbers of them had resided in Germany for twenty years or more and their children had been born in the country.

German scholars wrote books in which they attempted to show that the Jew did not even give a religion to the world. The famous Bible-Babel controversy will be recalled in this connection. Professor Delitzsch and Houston Chamberlain, a renegade Englishman, the son-in-law of Richard Wagner, are the chief exponents of this theory of the inferiority of the Jewish people.

Anti-Semitism was officially recognized in court circles. Bismarck, it is true, appointed Jews to positions in the foreign office, but he advanced only those who agreed to become converts to Christianity. Indeed, official Germany has regularly promoted baptism among Jews. The notorious Pastor Stoecker was court chaplain and the confidant of Emperor William II. His influence was most pernicious and he was never checked. The historian Treitschke, to whom reference has already been made, was another favorite at court. From his platform at the University of Berlin, Treitschke openly insulted Jews and impressed the students with the inferiority and unworthiness of the Jewish race.

Germany, official as well as unofficial, has given credence to the shameful blood accusation. A Jewish butcher in Konitz was arrested and actually convicted upon the charge that he had killed a Christian boy and used the blood for Passover. Tho it was conclusively established that the man had never committed the deed, and that the Jews have no such heinous practise, the German press, with a very few exceptions, raised the cry against Jews.

Germany has fostered anti-Semitism in other countries. Back in the late nineties, Ahlwardt, another notorious anti-Semitic leader, came to this country and began an anti-Semitic agitation here. He addressed at Cooper Union a meeting largely attended by Germans. Colonel Roosevelt, at that time Police Commissioner, detailed policemen who were Jews to guard the meeting against any disturbance, and incidentally to protect Ahlwardt.

Germany, in establishing colonies in Palestine in the Lebanon region, harassed the Jewish colonies in the Holy Land and endeavored to prevent the settlement of Jews in the ancient homeland of their people.

Recently there has been a decided recrudescence of anti-Jewishness. This is

by no means surprising. The governing element in Germany is inspired by anti-Jewish sentiment and this feeling has been fostered among all sections of the population. At this very moment, the *German People's Gazette*, the official organ of the anti-Semite movement in Germany, has begun a campaign against German Jews. The *Gazette* states that the time has come when Germany must declare open warfare against the Jews for fostering a spirit of revolt, and for being opposed to the war. This assertion borders upon the ridiculous because the six hundred thousand Jews of Germany have contributed more than their quota to the German army. Leaders like Ballin, Rathenau and Loewy have given themselves unstintingly to the service of their country, and yet the campaign of the *Gazette* has the approval of the rulers of the land.

**L**ET us pull the curtain down over this unpleasant picture and turn to a brighter one.

The United States has never closed its doors against Jews. The Government as well as the people of this country have at all times protested against their oppression in Russia under the old regime.

Theodore Roosevelt while President intervened on behalf of the Jews of Russia. In 1905, when Count Witte was in this country for the purpose of concluding peace with Japan, Mr. Roosevelt arranged for a deputation consisting of Jacob H. Schiff, Oscar S. Straus, Isaac M. Seligman, Louis Marshall and Leo N. Levi, to present a memorandum in favor of their coreligionists to the Russian statesman. This was a most unusual procedure, but the world accepted it because it realized the good intention back of the deed.

Prior to that, John Hay, then Secretary of State in President Roosevelt's Cabinet, issued a note to Rumania, protesting against that country's violation of the Berlin treaty of 1878 which distinctly stipulated that the Jews of Rumania should be granted full and equal rights. No other Government ever did that.

The abrogation of the treaty with Russia by President Taft stands forth in striking contrast to the attitude of the Kaiser and his advisers toward the Jewish people. While they were working in full accord with the forces of reaction in Russia, supporting by their hostile demonstrations their policy of repression and openly approving of the pogroms, the United States thru its President was opposing the autocratic forces in Russia. When it is remembered that war between the United States and Russia might have resulted, the full weight of our policy will be understood.

The United States was the first country in the

[Continued on page 92]

## Words of the Week

**"BITTER ENDERS"**—A term applied to Englishmen, Frenchmen and Americans who advocate carrying on the war until the allies "can dictate terms of peace in Berlin."

**CASUALS**—Members of the army who have been detached from the units to which they regularly belong because they have been temporarily detailed to special service or because they are ill.

**FABRICATED SHIPS**—Ships of which the parts are manufactured according to standard models at various mills thruout the country and assembled for launching at the shipyards along the coast.

**AMERICAN EXPEDITIONARY FORCE**—A term adopted officially by the United States in imitation of Great Britain (British Expeditionary Force) to designate the troops which have been sent overseas.

**TERRAIN** (Te rain')—A French word little used in English except as a technical military term to describe a portion of the earth's surface from the point of view of its fitness for purposes of defense or attack.

**INTERALLIED WAR COUNCIL**—A council of representatives of the four great western belligerents, England, France, Italy and the United States, which meets at Versailles from time to time to direct the general conduct of the war.

**HOSTESS HOUSES**—Houses maintained by Young Women's Christian Association at the entrance to a number of American training camps where mothers, wives and sweethearts can meet their soldier boys in quiet and comfort.

**FATHERLAND PARTY**—The extreme reactionary Junker and military group in Germany who are opposed to all internal reforms and who are advocating an extreme imperialistic program as the best method of winning the war.

**Y. M. C. A. HUTS**—Buildings, often with a capacity of several thousand people, maintained by the Young Men's Christian Association in training camps, prison camps and rest stations in Europe for the convenience and entertainment of soldiers.

**LAFAYETTE ESCADRILLE** (Es ca dreel)—A body of American volunteers who formed themselves into an aviation squadron under the French Government in 1915. They were the first to raise the Stars and Stripes on the battle front after our declaration of war.

**"STRAFE"** (Straf)—A slang word adopted by the English soldiers from the German word meaning to punish. "*Gott Strafe England*" (God punish England) was the battle cry of the Germans in 1914 and 1915. "Tommy's" adoption of the word "strafe" as a slang term was his way of showing his derision of the "Hun."

**ALAND ISLANDS**—A group of islands which are at the entrance to the Gulf of Bothnia, half way between Sweden and Finland. The population is chiefly Swedish in descent. The islands were ceded by Sweden to Russia in 1809. The German fleet has recently occupied them as part of the "peaceful" settlement of the revolution in Finland.

**CHAIRMAN REPUBLICAN NATIONAL COMMITTEE**—The National Committee of each party consists of one delegate from each state. These delegates are chosen by the delegates to the National Convention. The Republican National Committee at a recent meeting chose Mr. Will H. Hays of Indiana as chairman. Mr. Hays is attempting to harmonize all factions of the party with a view to winning the Congressional elections next fall.

The ARCO WAND is accepted as the standard sanitary cleaning equipment for the best hospitals—where quick, noiseless, and thorough cleaning is The law. You should have this benefit and labor-saving feature in your own home by installing the ARCO WAND.

## A war-time necessity

The buying of labor-saving devices for the home or other building is just now the very best economy. Every woman wants to accomplish more these days and with the ARCO WAND she makes house-cleaning an easy matter of a few minutes, thus gaining time and freedom for other things.

## ARCO WAND VACUUM CLEANER

quick strokes of the ARCO WAND cleaner. Your household cleaning will never again be a worry or a task to you.

**Our monthly payment plan a desirable way to buy**

Go to your dealer and ask him to submit an estimate on equipping your home or other building with an ARCO WAND cleaner. He will be glad to explain our plan of easy buying.

**SEND TODAY FOR COPY OF FREE CATALOG the "ARCO WAND," which explains and illustrates its many labor-saving uses—you will never regret your investment in an ARCO WAND.**

## HAVE YOU A SWEETHEART,

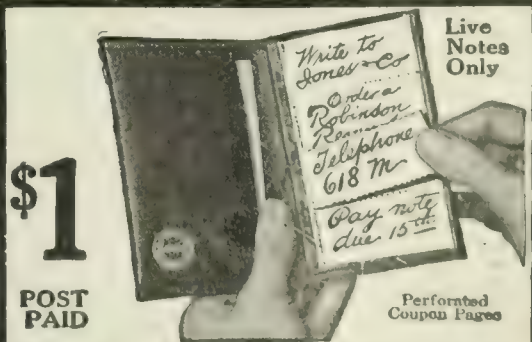

Soldiers use  
Foot-Ease

Son or Brother in training camps in the American Army or Navy? If so, mail him a package of **ALLEN'S FOOT-EASE**, the anti-septic powder to be shaken into the shoes and sprinkled in the foot-bath. The American, British and French troops use Allen's Foot-Ease, because it takes the Friction from the Shoe and freshens the feet. It is the greatest comforter for tired, aching, tender, swollen feet, and gives relief to corns and bunions.

The Plattsburg Camp Manual advises men in training to shake Foot-Ease in their shoes each morning. Ask your dealer today for a 25c. box of Allen's Foot-Ease, and for a 2c. stamp he will mail it for you. What remembrance could be so acceptable?

# PERSONAL

A Confidential Question Box  
Conducted by Edward Earle  
Purinton, Director of The  
Independent Efficiency Service, 119  
West Fortieth Street, New York

# EFFICIENCY

For Men, Women and the Young  
Folks, Who Are Invited to Consult  
Mr. Purinton Personally by Mail on  
Their Problems of Health, Work,  
Self Culture and Personal Efficiency

Mr. F. G. M., Massachusetts. "I desire to obtain data concerning a budget for a family of eight in Massachusetts. Can you direct me to the source?"

Budgets prepared by Earl G. Manning of Boston should be available at any large public library. A list of books might be had on application to the Department of Economics or of Domestic Science of Boston University, Boston; or Harvard University, Cambridge; or Massachusetts Agricultural College, Amherst, Massachusetts. A popular book on the subject is "The Minimum Cost of Living," by Winifred Stuart Gibbs, published by Macmillan; another is "Reducing the Cost of Living," by Scott Nearing, published by George W. Jacobs & Company, Philadelphia.

Mr. N. S. C., Ohio. "The problem of daily exercise for a business man of middle age puzzles me considerably. I was brought up on a farm, lived outdoors most of my life, but am now confined to a desk and am losing the old-time health and vigor. Do you know of any system of exercise in tabloid form that would keep me physically well and strong?"

Your physician is the man to consult first. He should ascertain the condition of your heart, lungs, kidneys, and blood pressure. If the diagnosis proves organs sound, functions normal, you can then learn by mail a system of concentrated exercise for daily use. Among the well known teachers of gymnastics are Alois P. Swoboda, Berkeley Building, New York; Lionel Strongfort, Park Building, Newark, New Jersey; Anthony Barker, 127 West Forty-second street, New York; Paul Von Boeckmann, 110 West Fortieth street, New York. Implements, games, and machines for home exercise, with instructions for use, may be had from A. G. Spalding & Brothers, 126 Nassau street, New York; or from S. B. Davega Company, 831 Broadway, New York; or by cooperation of the athletic instructor of any good college or Y. M. C. A.

Rev. E. S. P., Georgia. "Some of the most active members of my congregation are beginning to feel, as I have felt for some time, that our church, and every church, has a war duty to fulfil that no other organization can perform. We have a large membership in a thriving, good sized community, but no scientific plan or method of setting our members to work. Is there literature available that would show us what to do and how to do it?"

There is. A remarkable document along this line has been published by the Federal Council of Churches in America, headquarters 105 East Twenty-second street, New York. The document is entitled "Report of the Committee on War Time Local Inter-Church Work," and may doubtless be had from the chairman of the committee, Mr. E. L. Shuey, of Dayton, Ohio, or from the Federal Council in New York. We would commend this pamphlet to the immediate consideration of every pastor in the United States. The suggestions offered in this publication, which is unsectarian and interdenominational, would if carried out fully make every church organization as practical and powerful as a battalion of soldiers!

A Reader from Massachusetts. "I am a retired physician 88 years of age, sound in body and as I think, in mind. I have a pension not sufficient to support my family, with a small amount of real estate that I can't sell. I can write for the papers of my profession but they do not pay. I do not wish to ask my friends for help nor live by assistance of friends. What can I do?"

There is a city with a population of almost 100,000. There should be many opportunities for you to sell your wisdom and experience in ways outside of active professional duties.

Examine all your local newspapers; one or more will certainly be found to conduct a health

column of some kind, with articles and questions and answers by a capable physician; you might take charge of such a department, weekly or daily. There are mothers' clubs, professional and business men's organizations, other societies, in your community that certainly need, and probably would pay for, a course of health talks or lectures on appropriate subjects. There may also be factories and corporations desiring for their employees a consulting physician only. Some of the current magazines publish and pay for health articles of a popular nature; look thru magazines in a public library.

I know a doctor who at 90 years of age wrote a book on how to keep young. I know another who at 93 came to New York City and founded a health and longevity club that flourished and grew famous. Why not send out invitations for a series of monthly or weekly health and efficiency talks in your own home?

Ask the Simplex Service Company, 1123 Broadway, New York, how to sell your real estate.

A Subscriber from Minnesota. "I am an interested reader and student of your Efficiency column. Am engaged in ministerial work in a small town lacking educational advantages. I notice that I have great difficulty in clearly expressing my ideas in speeches or sermons. I read much, but somehow do not seem to improve. Have commenced to learn six new phrases every day. How can I acquire a vocabulary and learn to use the right word and phrase at the right time? Am discouraged because people with much less education than myself express their ideas in plainer, better language."

You need a home study course in good English and public speaking; courses are given by Grenville Kleiser, 354 Fourth avenue, New York; by La Salle Extension University, Chicago; by International Correspondence Schools, Scranton, Pennsylvania; by North American Institute, Manhattan Building, Chicago. Get literature describing all courses, make your selection.

Books and magazines that aid literary workers have been named recently in these columns. Go over back files of Question Box for answers along your line.

We think you are dwelling too much on the form of your message—not enough on the spirit, meaning and purpose. A tongue on fire with a burning truth has no business and no need to coat itself with polish. Go straight to the hearts of your people. A man's great eloquence is not of language, but of life, thought and feeling.

Miss P. S., Georgia. "I have written a number of special articles for magazines, but am not familiar with the literary market and do not know where to take manuscripts. Where can I obtain addresses of all the magazines publishing articles of a certain kind?"

We do not know of any complete directory such as you desire. But the Writer Publishing Company, P. O. Box 1905, Boston, Massachusetts, prints a Directory of Periodicals as a department of the magazine called *The Writer*; back numbers would probably include the information you seek. A topical index of all kinds of publications may be found in the Newspaper Annual and Directory published by N. W. Ayer & Son, Philadelphia.

Mrs. W. R. S., Indiana. "Should a child ever be whipped? Are there no milder ways of enforcing discipline? Our boy is subject to periods of extreme temper, waywardness and disobedience. I have tried gentle measures to improve his character, but seemingly without effect. My husband and I disagree on the matter of corporal punishment; I cannot bear to see a child whipped, but have to acknowledge that moral suasion has not worked in this case. Please give us your opinion."

When you and your husband disagree, never let the fact be known. People who really love each other cannot disagree permanently.

Whipping a child is never justifiable. It is the substitution of laziness and brutality for intelligence, conscience and moral force in the person who does the whipping. Whoever has learned either to think or to feel cannot whip a child.

But moral suasion is generally weak, unscientific, unethical. It is largely based on a woman's maternal desire to keep her child from being hurt, when the child ought to be hurt. Sin means suffering; whoever tries to shield the sinner from the suffering must be accounted guilty of impiety.

Your husband is right in refusing to allow badness in the child; you are right in refusing to sanction a bad way of treating badness. You are wrong in being unwilling to have your child hurt; your husband is wrong in being willing to have him artificially hurt. All punishment should be reflex and automatic, the deed should carry its own penalty. The boy who puts his hand on a hot stove gets burned, immediately and invariably. The boy who monkeys with a hot stove in the mental and moral realm should get burned somehow—your job is to see that he does. The law of punishment is that all retribution shall be not revenge, but reaction.

The Boy Scouts or the Big Brothers might straighten out the kinks in your boy. Address of both organizations is 200 Fifth avenue, New York. Write also Parents' Association, 449 Fourth avenue, New York.

Miss H. B., Pennsylvania. "I should be grateful for advice as to possible service to the Government during the summer vacation. I am a college professor, 38 years old, in perfect health, graduate of Mount Holyoke and a Ph. D. of Bryn Mawr. Know French, German, Italian; can use typewriter, have my own machine."

A woman of your attainments should render superior service in one of a half dozen ways. The choice must lie with you, but we are glad to suggest sources of information. Write the same letter you wrote us to each of the following organizations; join the one that appeals to you most: Woman's Committee, Council of National Defense, Chairman, Dr. Anna Howard Shaw, Washington, D. C.; National League for Woman's Service, 257 Madison avenue, New York; National Special Aid Society, 259 Fifth avenue, New York; American Red Cross, Washington, D. C.; National War Board Y. W. C. A., 600 Lexington avenue, New York; Militia of Mercy, 4 West Forty-ninth street, New York; Woman's Suffrage Party, 48 East Thirty-fourth street, New York; Department of Extension Teaching, Columbia University, Morningside Heights, New York; Columbia University Mobilization Committee on Woman's Work, 301 Philosophy Hall, Columbia University.

Miss B. E., Ohio. "I am twenty years old, graduated from High School two years ago, am now teaching. Had planned before the war to take a college course, or enter a hospital and train to be a nurse. I should like to prepare myself for real Red Cross work; would this be advisable now, and if so where? Or would I better continue teaching, or take the college course and fit myself for better teaching?"

When a young person wavers between two lines of vocational work, it is well to try a little of both in advance of selection. You have tried teaching—now try nursing. You can do this without giving up your position; a number of short preliminary courses are now given by the Red Cross, including elementary hygiene, home care of the sick, home dietetics, preparation of surgical dressings, etc. Apply for instruction or advice to Bureau of Nursing Service, American Red Cross, Washington, D. C.; also to Bureau of Supplies, American Red Cross, Washington, D. C.; also to E. T. Bicknell, Director General of Civilian Relief, American Red Cross, Washington, D. C.

## HOW THE BATTLE GOES

(Continued from page 81)

have at its disposal an independent army to be thrown at any point where it was needed. Since General Wilson was quite overshadowed by General Foch in the Council, it meant practically that the latter was Generalissimo.

Now, however, the situation is cleared up thru the decisive action of General Pershing, who as soon as the German drive developed, went to the headquarters of General Foch and said to him:

I come to say to you that the American people would hold it a great honor for our troops were they engaged in the present battle. I ask it of you in my name and in that of the American people.

There is at this moment no other question than that of fighting, infantry, artillery, aviation—all that we have are yours to dispose of them as you will. Others are coming which are as numerous as will be necessary. I have come to say to you that the American people would be proud to be engaged in the greatest battle in history.

Under pressure of the great emergency the opposition has acquiesced and Premier Lloyd George was able to announce:

The enemy has had the incalculable advantage of fighting as one army. To meet this the Allies have since the battle began taken a most important decision. With the cordial coöperation of the British and French Commanders in Chief, General Foch has been charged by the British, French and American governments to coördinate the action of the Allied armies on the western front.

Premier Clemenceau has been as insistent as Premier Lloyd George and President Wilson upon the necessity of unified command, and we may now look for more effective uses of the forces upon the French front.

The act of General Pershing in placing the American troops under the command of General Foch, for service anywhere even tho it involved scattering the force, has been received with gratitude by the French and applauded in England even by those who have hitherto resisted such action on the part of the British command. We must remember in fairness to the English who have been opposing the efforts of Lloyd George, Clemenceau and Wilson to secure unity of command that it is easier for Americans than Englishmen to make such a sacrifice for America remembers that French troops served under Washington and have never fought against the United States while the English used to regard the French as their natural enemies and as late as 1898 came near to having a war with them.

All reports from the seat of war, including the German, pay tribute to the courage and steadfastness of the English and colonial troops who not only held their positions for days without rest or reinforcement against successive waves of fresh storm troops but made independent raids into the advancing forces. At the end of the second week the Allied lines are continuous and holding on all points of the new 110 mile front.

## The New Plays

*Toot-Toot*, a military musical comedy—spontaneous and hilarious. Decidedly a hit. (George M. Cohan Theater.)

*A Pair of Petticoats*. Thoroughly delightful English comedy by Cyril Harcourt. All the parts are well played; the lines are never dull! (Forty-fourth Street Roof Theater.)

Mme. Nazimova and splendidly balanced company play Ibsen's *The Wild Duck* with ability and effectiveness. But, alas, the play is meaningless and boring. More Ibsen to follow by same players. (Plymouth Theater.)

## Women's Underwear and Corsets at McCutcheon's

Reg. Trade-Mark

A beautiful line of French Underwear, including the finest Handkerchief Linen and real Lace-trimmed Garments.

**Bridal Sets** of fine dainty materials; prices \$25.00 to \$125.00.

## EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## AN OLD FASHIONED CHRISTMAS DINNER

BY WASHINGTON IRVING

IF I can by any lucky chance, in these days of evil, rub out one wrinkle from the brow of care, or beguile the heavy hearts of one moment of sorrow; if I can now and then penetrate thru the gathering film of misanthropy, prompt a benevolent view of human nature, and make my reader more in good-humor with his fellow-beings and himself, surely, I shall not then have written entirely in vain."

Washington Irving did not write in vain. He has gone, but his kindly spirit remains. We honor the neighborhood of his New York home by the name, "Irving Place"; we respect his grave in the old Dutch cemetery at Sleepy Hollow; and we feel his presence along the mossy walks and under the cool shadows of his country residence at Sunnyside, where he died in 1859, at the good age of seventy-six—one of the most charming personalities, one of America's greatest essayists and story-tellers, one of our most noted travelers, delighted by the rich beauty of rural England, or the fanciful dreams of the Moorish Alhambra.

In a series of narrative essays in "The Sketch Book," first

Lo, now is come our joyful'st feast!  
Let every man be jolly,  
Each room with yvie leaves is drest,  
And every post with holly.  
Now all our neighbours' chimneys smoke,  
And Christmas blocks are burning;  
Their ovens they with bak't meats choke,  
And all their spits are turning.  
Without the door let sorrow lie,  
And if, for cold, it hap to die,  
Wee 'le bury 't in a Christmas pye,  
And evermore be merry.

—WITHERS'S JUVENILIA.

THE dinner was served up in the great hall where the Squire always held his Christmas banquet. A blazing, crackling fire of logs had been heaped on to warm the spacious apartment, and the flame went sparkling and wreathing up the wide-mouthed chimney. The great picture of the crusader and his white horse had been profusely decorated with greens for the occasion; and holly and ivy had likewise been wreathed round the helmet and weapons on the opposite wall. A sideboard was set out just under this chivalric trophy, on which was a display of plate that might have vied (at least in variety) with Belshazzar's parade of the vessels of the temple: "flagons, cans, cups, beakers, goblets, basins, and ewers;" the gorgeous utensils of good companionship that had gradually accumulated through many generations of jovial housekeepers. Before these stood the two Yule candles, beaming like two stars of the first magnitude; other lights were distributed in branches, and the whole array glittered like a firmament of silver.

We were ushered into this banqueting scene with the sound of minstrelsy, the old harper being seated on a stool beside the fireplace, and twanging his instrument with a vast deal more power than melody. Never did Christmas board display a more goodly and gracious assemblage of countenances; those who were not handsome were, at least, happy; and happiness is a rare improver of your hard-favored visage.

The parson said grace, which was not a short familiar one, such as is commonly addressed to the Deity. There was now a pause; when suddenly the butler entered the hall with some degree of bustle: he was attended by a servant on each side

published in 1819, Irving tells of an imaginary journey in Yorkshire by stage-coach, of his chance meeting with a former acquaintance, Frank Bracebridge, and of his subsequent holiday visit to Bracebridge Hall, where Frank's father, Squire Bracebridge, kept every good old Christmas custom, from the burning of the Yule log to the hanging of mistletoe and the singing of Christmas carols. The last essay of the series—the one from which the selections given below have been taken,—tells of the Christmas dinner at Bracebridge Hall, with all the merriment of youth and age and high spirit; a delightful old-time Christmas dinner in the great hall, with a harper to welcome the guests, with boar's head, peacock pie, and Wassail Bowl, with old songs and stories, followed by noisy games and maskings.

As we see the high festival, and hear the music and the laughter of the long ago, we realize that one way, at least, in which to be happy is to keep our reverence for things of the past, so that old customs may add to our enjoyment of things of the present.

The butler, attended by a servant on each side, entered with some degree of bustle

with a large wax-light, and bore a silver dish, on which was an enormous pig's head, decorated with rosemary, with a lemon in its mouth, which was placed with great formality at the head of the table. The moment this pageant made its appearance, the harper struck up a flourish; at the conclusion of which the young Oxonian, on receiving a hint from the Squire, gave, with an air of the most comic gravity, an old carol, the first verse of which was as follows:—

"Caput apri defero  
Reddens laudes Domino.  
The boar's head in hand bring I,  
With garlands gay and rosemary.  
I pray you all synge merrily  
Qui estis in convivio."

The table was literally loaded with good cheer and presented an epitome of country abundance, in this season of overflowing larders. A distinguished post was allotted to "ancient sirloin," as mine host termed it: being, as he added, "the standard of old English hospitality, and a joint of good-

ly presence, and full of expectation." There were several dishes quaintly decorated, and which had evidently something traditional in their embellishments; but about which, as I did not like to appear over-curious, I asked no questions.

I could not, however, but notice a pie, magnificently decorated with peacock's feathers in imitation of the tail of that bird, which overshadowed a considerable tract of the table. This, the Squire confessed, with some little hesitation, was a pheasant-pie, though a peacock-pie was certainly the most authentic; but there had been such a mortality among the peacocks this season, that he could not prevail upon himself to have one killed.

When the cloth was removed, the butler brought in a huge silver vessel of rare and curious workmanship, which he placed before the Squire. Its appearance was hailed with acclamation; being the Wassail Bowl, so renowned in Christmas festivity. The contents had been prepared by the Squire himself; for it was a beverage in the skilful mixture of which he particularly prided himself; alleging that it was too abstruse and complex for the comprehension of an ordinary servant. It was a potation, indeed, that might well make the heart of a toper leap within him; being composed of the richest and raciest wines, highly spiced and sweetened, with roasted apples bobbing about the surface.

The old gentleman's whole countenance beamed with a serene look of indwelling delight, as he stirred this mighty bowl. Having raised it to his lips, with a hearty wish of a merry Christmas to all present, he sent it brimming round the board, for every one to follow his example, according to the primitive style; pronouncing it "the ancient fountain of good feeling, where all hearts met together."

There was much laughing and rallying as the honest emblem of Christmas joviality circulated, and was kissed rather coyly by the ladies. When it reached Master Simon, he raised it in both hands, and with the air of a boon companion struck up an old Wassail chanson.

Much of the conversation during dinner turned upon family topics, to which I was a stranger. There was, however, a great deal of rallying of Master Simon about some gay widow, with whom he was accused of having a flirtation. This attack was commenced by the ladies; but it was continued throughout the dinner by the fat-headed old gentleman next the parson, with the persevering assiduity of a slow hound; being one of those long-winded jokers, who, though rather dull at starting game, are unrivalled for their talents in hunting it down. At every pause in the general conversation, he renewed his bantering in pretty much the same terms; winking hard at me with both eyes, whenever he gave Master Simon what he considered a home thrust. The latter, indeed, seemed fond of being teased on the subject, as old bachelors are apt to be; and he took occasion to inform me, in an undertone, that the lady in question was a prodigiously fine woman.

The dinner-time passed away in this flow of innocent hilarity, and, though the old hall may have resounded in its time with many a scene of broader rout and revel, yet I doubt whether it ever witnessed more honest and genuine enjoyment. How easy it is for one benevolent being to diffuse pleasure around him; and how truly is a kind heart a fountain of gladness, making everything in its vicinity to freshen into smiles! the joyous disposition of the worthy Squire was perfectly contagious; he was happy himself, and disposed to make all the world happy.

When the ladies had retired, the conversation, as usual, became still more animated. The Squire told several long stories of early college pranks and adventures, in some of which the parson had been a sharer.

I found the tide of wine and wassail fast gaining on the dry land of sober judgment. The company grew merrier and louder as their jokes grew duller. Master Simon was in as chirping a humor as a grasshopper filled with dew; his old songs grew of a warmer complexion, and he began to talk maudlin about the widow. He even gave a long song about the wooing of a widow which he informed me he had gathered from an excellent black-letter work, entitled "Cupid's Solicitor for Love."

This song inspired the fat-headed old gentleman, who made several attempts to tell a rather broad story out of Joe Miller, that was pat to the purpose; but he always stuck in the middle, everybody recollecting the latter part excepting himself. The parson, too, began to show the effects of good cheer, having gradually settled down into a doze, and his wig sitting most suspiciously on one side. Just at this juncture we were summoned to the drawing-room, and, I suspect, at the private instigation of mine host, whose joviality seemed always tempered with a proper love of decorum.

After the dinner-table was removed, the hall was given up to the younger members of the family, who, prompted to all kind of noisy mirth by the Oxonian and Master Simon, made its old walls ring with their merriment, as they played at romping games. I delight in witnessing the gambols of children, and particularly at this happy holiday season, and could not help stealing out of the drawing-room on hearing one of their peals of laughter. I found them at the game of blindman's-bluff. Master Simon, who was the leader of their revel, and seemed on all occasions to fulfil the office of that ancient potentate, the Lord of Misrule, was blinded in the midst of the hall. The little beings were as busy about him as the mock fairies about Falstaff; pinch-

# There Are Guns That Send Out Joys

There are guns in our mills which boom every minute, to send out airy grain foods which taste like bubbled nuts.

Whole grains of rice or wheat go in them. Or pellets of hominy. And they come out airy, flaky tidbits, eight times former size.

That's how Puffed Grains are made—by Prof. Anderson's process. Their flavor comes through an hour of toasting in a fearful heat. Their flimsy texture comes through steam explosion. A hundred million food cells in each kernel are thus blown to pieces.

## Why This Bubble Form?

Many people think we do this to make fascinating morsels. To make grain foods flavory, thin and flimsy so they fairly melt away. To make them food confections.

But a college professor—a scientist—invented this strange process. And the only object was to fit whole grains to easily digest.

Ordinary cooking, baking or toasting breaks part of the food cells in grain. But our method alone breaks them all.

So these are the ideal grain foods. Every granule is fitted for digestion. Every atom feeds.

That's why these three grains—which can be puffed—should be largely served in puffed form. That is their most delightful form. It is their hygienic form. Served at any time—at meals or between meals—they avoid any tax on the stomach.

If you knew Puffed Grains as experts know them you would serve them many times as often. There is nothing like them—nothing in grain food so attractive, nothing so perfectly prepared.

## The Spirit of War Service

Alone in the midst of war's desolation, the telephone lineman crawls to mend the broken wires.

On all sides the thunder of artillery; in the air bursting shrapnel.

He faces danger with that unconquerable spirit of war service which permits him to think only of maintaining the telephone connections.

The safety of the troops depends on these lines of communication, often used for the sentries' warnings, the carrying of

official commands and the summoning of reinforcements.

In a dark hole hidden among sparse brushwood are the telephone operators, some of whom have been for months in their damp cave ceaselessly swept by shells.

And they are admirable, all these heroes of the Signal Corps, whether serving in darkness or in the all too bright light of day.

The spirit of war service, over here as well as over there, furnishes the nerves, the endurance, the morale—the stuff that wins war.

ing him, plucking at the skirts of his coat, and tickling him with straws.

When I returned to the drawing-room, I found the company seated round the fire, listening to the parson, who was deeply ensconced in a high-backed oaken chair, the work of some cunning artificer of yore, which had been brought from the library for his particular accommodation. From this venerable piece of furniture, with which his shadowy figure and dark weazen face so admirably accorded, he was dealing out strange accounts of the popular superstitions and legends of the surrounding country.

He gave us several anecdotes of the fancies of the neighboring peasantry, concerning the effigy of the crusader, which lay on the tomb by the church-altar. As it was the only monument of the kind in that part of the country, it had always been regarded with feeling of superstition by the good wives of the village. It was said to get up from the tomb and walk the rounds of the churchyard in stormy nights, particularly when it thundered; and one old woman, whose cottage bordered on the church-yard, had seen it through the windows of the church, when the moon shone, slowly pacing up and down the aisles. It was the belief that some wrong had been left unredressed by the deceased, or some treasure hidden, which kept the spirit in a state of trouble and restlessness. Some talked of gold and jewels buried in the tomb, over which the spectre kept watch: and there was a story current of a sexton in old times, who endeavored to break his way to the coffin at night, but, just as he reached it, received a violent blow from the marble hand of the effigy, which stretched him senseless on the pavement. These tales were often laughed at by some of the sturdier among the rustics, yet, when night came on, there were many of the stoutest unbelievers that were shy of venturing alone in the footpath that led across the churchyard.

From these and other anecdotes that followed, the crusader appeared to be the favorite hero of ghost-stories throughout the vicinity. His picture, which hung up in the hall, was thought by the servants to have something supernatural about it; for they remarked that, in whatever part of the hall you went, the eyes of the warrior were still fixed on you. The old porter's wife, too, at the lodge, who had been born and brought up in the family, and was a great gossip among the maid-servants, affirmed, that in her young days she had often heard say, that on Midsummer eve, when it was well known all kinds of ghosts, goblins, and fairies become visible and walk abroad, the crusader used to mount his horse, come down from his picture, ride about the house, down the avenue, and so to the church to visit the tomb: on which occasion the church-door most civilly swung open of itself; not that he needed it, for he rode through closed gates and even stone walls, and had been seen by one of the dairy-maids to pass between two bars of the great park-gate, making himself as thin as a sheet of paper.

Whilst we were all attention to the parson's stories, our ears were suddenly assailed by a burst of heterogeneous sounds from the hall, in which were mingled something like the clang of rude minstrelsy, with the uproar of many small voices and girlish laughter. The door suddenly flew open, and a train came trooping into the room, that might almost have been mistaken for the breaking up of the court of Fairy. That indefatigable spirit, Master Simon, in the faithful discharge of his duties as lord of misrule, had conceived the idea of a Christmas mummary or masking;

THE INDEPENDENT WAR BUREAU  
119 West 40th Street New York City

and having called in to his assistance the Oxonian and the young officer, who were equally ripe for anything that should occasion romping and merriment, they had carried it into instant effect. The old housekeeper had been consulted; the antique clothes-presses and wardrobes rummaged, and made to yield up the relics of finery that had not seen the light for several generations; the younger part of the company had been privately convened from the parlor and hall, and the whole had been bedizened out, into a burlesque imitation of an antique mask.

Master Simon led the van, as "Ancient Christmas," quaintly appalled in a ruff, a short cloak, which had very much the aspect of one of the old housekeeper's petticoats, and a hat that might have served for a village steeple, and must indubitably have figured in the days of the Covenanters. From under this his nose curved boldly forth, flushed with a frost-bitten bloom, that seemed the very trophy of a December blast. He was accompanied by the blue-eyed romp, dished up as "Dame Mince Pie," in the venerable magnificence of a faded brocade, long stomacher, peaked hat and high-heeled shoes. The young officer appeared as Robin Hood, in a sporting dress of Kendal green, and a foraging cap with a gold tassel.

The fair Julia hung on his arm in a pretty rustic dress, as "Maid Marian." The rest of the train had been metamorphosed in various ways: the girls trussed up in the finery of the ancient belles of the Bracebridge line, and the striplings bewhiskered with burnt cork, and gravely clad in broad skirts, hanging sleeves, and full-bottomed wigs, to represent the character of Roast Beef, Plum Pudding, and other worthies celebrated in ancient maskings.

The irruption of his motley crew, with beat of drum, according to ancient custom, was the consummation of uproar and merriment. Master Simon covered himself with glory by the stateliness with which, as Ancient Christmas, he walked a minuet with the peerless, though giggling, Dame Mince Pie. It was followed by a dance of all the characters, which, from its medley of costumes, seemed as though the old family portraits had skipped down from their frames to join in the sport. Different centuries were figuring at cross hands and right and left; the dark ages were cutting pirouettes and rigadoons; and the days of Queen Bess jigging merrily down the middle, through a line of succeeding generations.

The worthy Squire contemplated these fantastic sports, and this resurrection of his old wardrobe, with the simple relish of childish delight. He stood chuckling and rubbing his hands, and scarcely hearing a word the parson said. It was inspiring to see wild-eyed frolic and warm-hearted hospitality breaking out from among the chills and glooms of winter, and old age throwing off his apathy, and catching once more the freshness of youthful enjoyment.

But enough of Christmas and its gambols. Methinks I hear the questions asked by my graver readers, "To what purpose is all this; how is the world to be made wiser by this talk?" Alas! is there not wisdom enough extant for the instruction of the world?

If, however, I can by any lucky chance, in these days of evil, rub out one wrinkle from the brow of care, or beguile the heavy heart of one moment of sorrow; if I can now and then penetrate through the gathering film of misanthropy, prompt a benevolent view of human nature, and make my reader more in good-humor with his fellow-beings and himself, surely, surely, I shall not then have written entirely in vain.

## THE LUCKY MEN IN CAMP

(Continued from page 75)

out after supper that they seldom wander far from their local huts, so that a good audience is to be found in each center. When I made my talks on the aims of the war, the men paid me as respectful attention as I have ever received anywhere, and on Sunday night when the service was principally religious there was as reverent a spirit manifest as in any church in the land. The Y. M. C. A. men tell me that the large auditorium that they have erected in each camp is not doing nearly as much good as the small neighborhood huts where the personal contact between the men and the secretaries is much closer.

All of which makes me wonder whether the Y. M. C. A.'s may not have hit upon a device which may revolutionize social conditions after the war, if adopted.

Never in my life have I come in contact with finer men than these Y. M. C. A. secretaries. By their cheerfulness, helpfulness, and manliness they are having an influence which will unquestionably raise the morale of our army.

These are but a few of the hurried impressions that I received from my tour of six American army camps. As one who for years has worked for the abolition of war and who firmly believes that Thomas Jefferson was guilty of no exaggeration when he said that "war is the greatest scourge of mankind," I wish to bear my testimony to the effect that the influences of these camps are overwhelmingly good, both morally, mentally and physically on the youth and young manhood of America, and that I could wish for no better training for my son than that he should honorably graduate from one of them.

## IF YOU ARE A JEW

(Continued from page 84)

world to appoint a Jew as Ambassador to a foreign country. Oscar S. Straus, Henry Morgenthau and Abram I. Elkus were sent as our representatives to Turkey; Nelson Morris is today upholding our interests in Sweden against the attacks of the Kaiser and his crew.

Jews are regularly elected as representatives of our people. They hold offices of trust and of honor in every state in this land. No Jew has ever been asked to give up his faith or to deny the cause of his people because he sought advancement.

Finally, on numerous occasions, the President of the United States has given voice to his sympathy for the suffering Jews in all countries. Two years ago, he issued a proclamation setting aside January 27, 1916, officially as Jewish Relief Day. No other representative of a great country has done a thing commensurate with that.

The contrast between Germany and the United States is one that should make it absolutely clear on which side the sympathies of all liberals in this country, and in all countries where freedom of opportunity is still a principle for which men are willing to offer sacrifices, should lie. This is a matter in which the interests, not alone of Jews but of all freedom-loving people, are at stake. America stands for freedom and equality. Germany stands for repression, discrimination and the fostering of race hatred.

Bad as the position of the Jews was under the old régime in Russia, it will be a thousand times worse if German influence prevails. The issue is plain—which side will the liberals of the world take?

### THE DRUID

A fine dull-rubbed-finish mahogany case with Cathedral Bell striking hours and half hours. Seven jeweled watch escapement. Four-inch silvered dial and convex beveled glass. Seven inches high and thirteen and one-quarter inch base.

## The First Seth Thomas Clock Was Made In 1813

Out of the severest tests of time, Seth Thomas Clocks have emerged with an enviable record for honest, accurate, faithful performance. The very name, Seth Thomas, symbols today the spirit of dependable time-keeping service. The quiet efficiency of Seth Thomas movements is in harmony with the dignity and artistry of the casings.

Your jeweler will be pleased to show or procure for you the DRUID, pictured here, or any of the other clocks illustrated in our new catalog.

# THE TALK'S THE THING

(Continued from page 82)

one of these books, and then to turn to Dickens is like closing a grammar-book for Shakespeare. These recipes for writing need to emulate the oldtime English cookery recipe for jugged hare, which begins—"First catch your hare." Dickens has the hare, and can cook it how he will. Many of our moderns have only the accessories and the recipe, tho we are often pleased enough to partake of their dishes, to beguile a tedious journey or an hour of weariness.

Dickens is in all things extraordinarily prolific. He has no sense of husbanding his resources. Why should he, when he has never thought of their having a limit? He writes largely and freely, like a man that revels in writing, and is not self-conscious about it. He crowds his stage with characters, he weaves plot and counter-plot with gorgeous ease, fills his pages with incident and with his own wise and humorous comments and descriptions. Who does not remember inimitable touches, like that about Scrooge's house, which lost its way when it was a young house, playing hide-and-seek with all the other houses, and so had to stay in the little back court?

But where would Dickens' magic be without the constant talk of his creations? They are a sociable, talkative crowd: even the "villains," like Sairey Gamp and Quilp and Uriah Heep and Mr. Squeers and Pecksniff, reveal their characters in talk abundantly; and all Dickens' heroes are sociable and friendly young men. Everybody indeed, in Dickens' books can entertain us with their conversation by the hour—except his young women. Both Dickens and Thackeray struggled in vain with the problem of making live so psychologically unknown a problem as an ideally human young woman. Possibly no suitable young lady had ever conversed with them; at any rate, both struggled unhappily (one hopes) with the conviction that a young lady cannot be both clever and good.

To find live young women one must go to a woman writer of past days like Jane Austen, with her delicate dialog and fine characterization, or passionate Charlotte Brontë; or come on to the modern literary world, where woman has come to almost more than her own. Writers like H. G. Wells and Arnold Bennett have woven novels in which not only is the heroine the most interesting figure, but actually the one the story is about. Ann Veronica and Hilda Lessways are very much alive, if they are not the last word in womanhood even of our day; and their dialog is never dull. They talk simply and sincerely, and they are interested in life in a way that makes them both representative human beings and excellent companions. The whole impression is one of vital humanity, struggling, suffering, enjoying, failing and hoping even as we ourselves and the people round about us.

We read books for many reasons, of which recreation is the chief. For a book really to recreate us—to renew and invigorate and enliven us—it must bring us into contact with characters that, whatever their faults or their philosophy, have an essential nobility. We want to rise from a book more in love with life, more ready to be a friendly and social human creature, looking out for the good in our fellows, than we were when we sat down to it. These are the books that we want on our shelves to keep, books that, in a happy, human way, hold converse with the best that is in us. And for this the chief requisite, in books as out of them, is sincerity.

"Who touches this book, touches a man."

## LOCKWOOD, GREENE & CO. ENGINEERS

**F**ORESIGHT is one of the chief factors for success in any industrial undertaking. And foresight is but another name for *broad fundamental knowledge* based on experience.

Lockwood, Greene & Co. are architects and engineers whose leadership in the industrial field has come through this very experience.

The service which this organization offers includes *planning* any industrial project, *designing* the plant, and *superintending* the construction.

If you have in mind a new industrial development, or contemplate the enlargement or reshaping of an existing plant, it will be to your advantage to know what Lockwood, Greene & Co. have done.

Write our nearest office for "Building with Foresight." This new book will give you facts and examples of the diversified service of our organization.

## Empey's "First Call"

A good Mason is a good man, we are told by our Masonic friends. If Sammy lives up to one half the do's and don'ts contained in *First Call*, a very average Sammy is a man with a goodness compared to which the best of men and Masons loom sinister and diabolic.

A full book on social etiquette, on cookery, on health, and even poker; with more than one reference to the ladies and how not to look upon them when they are red, is contained in this handbook for the unhappy rookie when he first gets "over there."

Many of these maxims his wise parents will have dinged into his ears for twenty odd years before he donned the khaki.

"Do not grumble, growl or grouse," many of us were told in that long ago when our play hours were shortened for our sins.

"If you must curry favor with somebody get in with the cook," is another maxim which every Sammy of them all learned long before he learned to read a primer, let alone "Guide Posts to Berlin," as the successor to "Over the Top" is described on the cover.

"Do not pester a 'non-com' with useless questions," has its paraphrase in the memory of us all. "Don't bother mama, she's busy," was the original form.

It is good to know so positively and pathetically that the "smokes" we send are a definite soul-need of Sammy's. The vignette of a wounded boy touches us, his stretcher-bearers unable to produce the smoke which might have made the stumbling march to the base hospital endurable. That night, too, he was dying. . . .

I told the nurse to look in my kit-bag. She found one, all out of shape—a Goldflake. In the morning the bed on my right was empty, and the nurses in the ward had red eyes. They had been crying.

Sammy is advised on the difference in international types.

Don't herald your arrival in Europe as a great event and say you've come over to win the war. Maybe English Tommy wonders why you happened to be so late. On the other hand, when a Frenchman shows his enthusiasm by kissing you, don't land on him but kiss him back.

The quickness, the daring, and uncountable necessary precautions which are essential for flier, bomber, trench raider, the man on the Listening Post make one a little dizzy. It is the taking for granted of so much that is not said which appals one—and a certain weariness with the way in which it is told.

Yet, there is one chapter which is a moving drama. It begins and ends "Thank God, the stretcher-bearers!" It is worth much to have read it; chapters where one wonders, pages where one doubts. It is worth vermin and poison gas and the poor pathetic trench feet which may be followed by court-martial for negligence.

The two armies on the western front are really nothing but two grindstones rubbing together. The one which wears away the first will be the vanquished.

In this grim friction is involved a vast

and hideous monotony—but in that friction, too, flash out like gems the sparks of human steadfastness and boyish courage. Perhaps that is the wherefore of those revolving, dreadful grindstones—the divine sparks which fly upward.

*First Call*, by A. G. Empey. Putnam. \$1.50.

## Dumb Heroes of War

SUSAN had tragic eyes, a kissable mouth and eloquent ears. She could dance to the pipers. She loved sugar, she led the oldest, proudest regiment in the British army.

If Susan had been a private, she wouldn't have had to fight her way into Ypres the day the Germans had turned loose their gas. But the company commanders had to ride madly to headquarters in Ypres for instructions, Susan, the pride of the Scotchmen, carried the command of D company. Her story is told by Lieutenant J. S. Smith, U. S. A., in *Over There and Back*.

Susan passed the troops, marching at the quick. She met families, running, crying to take other bent old people hobbling away, children, crying, toddling after the crowds. When she saw the city itself, the historic old city, she was terrified. It was a roaring mass of flames, gas-clouds, exploding shells that sent lurid flashes of red across the duller flames consuming the town. She saw things too horrible to

tell, things that made her snort in terror. Then she screamed and saw no more.

A flash, a blow from a hot brand that sank into her flesh and kept on burning. Then she started running. There was no hand on her bridle. She never knew when nor how her captain went. She only knew that when she looked appealingly at her soldier friends marching toward the burning city from which she had fled, they paid no heed to her. She was only a horse.

Susan says the war has taught her one thing. A brave man never abuses a dumb animal. Every captain who rode her was gentle and kind. Some of them hurt her back by bobbing all over the saddle, but she was patient with them and helped them while they learned to ride. Sometimes it was hard and strained her temper, but she bore it and never complained. She is one of the heroes of the war.

One of the heroes, I say, because there are thousands like her; dumb animals doing their work faithfully and well. They cannot comprehend it all, but they go on willingly and uncomplainingly and dying.

It was three months before she returned to her regiment. She is one of the few who have fought straight thru the war, from the first day till the last.

*Over There and Back*, by J. S. Smith. E. P. Dutton. \$1.50.

## Naval Power in the War

THERE are three men who will never be admirals. They are the one who tells his wife his client's secrets, the one who asks her what she did with his hat, the one who fails to recognize a psychological moment at first sight. For the three cornerstones to naval success are: secrecy, precision, foresight. Whatever forces control ultimately, temporary outcomes depend upon man's fallibility. Somebody tells, somebody sleeps, somebody slips.

Tolerantly, impersonally, with no intention to emphasize this fact, Charles Clifford Gill, in *Naval Power in the War*, cites one instance after another of little things that are every hour deciding the crises which make up today's titanic struggle in Europe:

If, for instance, the British admiral had postponed the engagement off Coronel till morning, when he could have been reinforced with his heaviest battleship and natural advantages, instead of making the gallant but fateful decision, "I am going to attack the enemy now," when wind, light and battle power favored the Germans, Coronel might have been a British victory.

Such are only pin-points on the whole map of the war, as they are in the book.

*Naval Power in the War*, in detail and in larger aspect, is a scientific explanation for the lay mind, by a lieutenant commander in the American navy, of past events, present lessons, future hopes.

Sea power, tho exerted behind the scenes, is more effective than land power. Power on sea surfaces is more effective than submarine power. The Allies control the surface of the seas. Therein lies our strength.

It was the pressure of naval power which compelled Germany as a last hope to undertake her lawless submarine campaign against commerce. It is the ability of the naval power of the United States to check the submarine menace in the Atlantic which has made the money, food and man-power of America transported overseas, a decisive factor of the war.

Naval power dominates the situation. Unless there is an overwhelming discrepancy, the armies of the belligerent denied the sea will surely weaken and be overcome by the armies fed and equipt and supported by means of ocean traffic.

*Naval Power in the War*, by C. C. Gill. Doran. \$1.25.

## Women Winning the War

ONE of the rich fruits of the Great War is the genuine emancipation of woman coupled with the significant part she is playing in war work. She is realizing herself—to be bigger and finer and stronger. Social barriers have broken down and the free spirit of comradeship, fair play and coöperation asserts itself.

A detachment of London police women starting on duty

The most comprehensive and readable account of the work of women and the tremendous significance it bears to the future that has come to us is *Women and War Work*, by Helen Fraser, an official of the British Treasury now lecturing in America. She cites the spirit of loyalty in the words of Dr. Elsie Inglis, who before her death was told:

"You did magnificently." With all her wonted assurance and with a touch of pride she answered, "My unit did magnificently."

In the chapter *Organization and Its Pitfalls* she holds that the motivating spirit is stronger than organization:

There are people who declare that the winning of this war depends on organization alone. That is palpably untrue. Good organization can do much. The greatest thing in all organizations is the living flame that makes grouping real is the selfless spirit of service that the fighting man possesses and that is beyond all words of praise.

Miss Fraser adequately proves her statement that:

The spirit of women in this greatest of world struggles cannot, in its essence, be differentiated from the spirit of men.

She takes us into every field that woman has entered—munitions, hospitals, police—into her successful and untiring efforts to conserve and construct. No one can read this book without acknowledging the pre-eminent services of Englishwomen leaders in resolutely grappling with and solving the war problems especially affecting their sex.

*Women and War Work*, by Helen Fraser. G. Arnold Shaw Co., \$1.50.

## Heart of German Intrigue

THIS book reads like a novel—and a very lively novel at that. The individual element is always to the fore. The persons who have had greatness thrust upon them by birth or circumstance which they were unsuited to bear in an epoch of unparalleled turbulence, are introduced to us as living human beings, whom we can blame but pity, criticize but perforce, on the whole, forgive. It is the blundering and disingenuousness of governments, as set forth in this amazing narrative of contemporary history, that make our hearts burn within us. And there is not one of the governments concerned which emerges from the author's examination into the problem of Greece and the Balkans with flying colors. The extraordinary facts displayed—and they have the ring of truth—are yet one more overwhelming indictment of secret diplomacy, leading to a lack of candor and common honor in dealings between nations which the most ordinary standards of modern morality would condemn between individuals:

We were not against (Mr. Venizelos's) policy—we were against the attitude of the Allies. We were asking for a fair deal, and it was denied us. And since they would not give us our chance, we listened to Germany. Afterwards, when the Allies refused even to guarantee our territorial integrity "because that would discourage Bulgaria," as they explained, we started our own propaganda among the people to turn them against the Entente. What else could we do? The group of nations with whom Greece's sympathies naturally lay were willing to sacrifice us to Russia, to Italy, to Bulgaria." What General Dousmanis said was in the main true.

I do not believe that any of the big men around the King were bribed by Germany. . . . I wondered whether the Greek Royalists would have committed their treachery had the rights of little nations been considered in the last hundred years. The man before me, and his accomplices, thought that they were amply justified in all they did, to safeguard the future of their little nation from the intrigues of strong and powerful nations.

America is influenced by none of the reasons which caused the others to cripple Greece; it is to our interest, as well as to others to do them justice. . . . For our own sake, for democracy's sake, for God's sake, let us help Greece.

All that is needed is bread, equipment, and friendliness.

## Appletons' Books of the Hour

The first complete account of the American army's part in the war from the time of its arrival in France until it entered the trenches.

### THE A. E. F. By HEYWOOD BROWN

The landing of America's first contingent of soldiers, their triumphant march through Paris, their amusing difficulties with a strange language in a foreign country, the work of the various branches of the army, the Americans in training, their first days in the trenches—Mr. Brown tells you about all these in an unusual book, humorous and pathetic, gripping and inspiring, always wholly American. \$1.50 net.

### Under Four Flags for France To Bagdad With the British

By GEORGE CLARKE MUSGRAVE

The only complete account of forty months of war on the Western front, written from the viewpoint of the men who have planned and directed all the great battles. It is a big human interest story besides. With many illustrations and maps. \$2.00 net.

By ARTHUR T. CLARK

The thrilling story of the war fought amid the drifting sands and burning suns of Mesopotamia. A full account of the drives against Bagdad, and their effect upon the great war as a whole.

Illustrated. \$1.50 net.

### OUT THERE By CHARLES W. WHITEHAIR

The man who every day, holds thousands of Americans spellbound with his thrilling war lectures has at last put his experiences in book form. "Out There" is a great human document telling what this famous Y. M. C. A. man saw during his three years on all the fronts.

Illustrated. \$1.50 net.

### Glorious Exploits of the Air

By EDGAR C. MIDDLETON

The most thrilling and unusual exploits of the aviators in the great war. \$1.35 net.

### From the Front An Anthology of Trench Poetry

Compiled by

LIEUT. C. E. ANDREWS, U. S. A.

Poems and verses written by the men in actual service—spirited, tender, humorous—revealing the very souls of brave men. \$1.00 net.

## AMERICAN WOMEN AND THE WORLD WAR

By IDA CLYDE CLARKE

All that women have done to help win the war, all that they can do, how the various organizations operate, what is expected of every woman—not a dry recital of facts, but a splendid human-interest story of a great work well done. \$2.00.

### Practical Gardening

By HUGH FINDLAY

How to make the garden anywhere yield abundantly in common or uncommon vegetables, berries and small fruits. A practical guidebook for the amateur gardener.

Illustrated. \$2.00 net.

### Wheatless and Meatless Days

By PAULINE D. PARTRIDGE and  
HESTER M. CONKLIN

Over 200 palatable easy-to-make recipes for wheatless and meatless days. They enable the housewife to "Hooverize" and economize without sacrificing quality or nourishment. \$1.25 net.

### The American Year Book

Edited by

FRANCIS G. WICKWARE

All that has happened during 1917 in every sphere of human activity is recorded and analyzed briefly and interestingly and arranged for instant reference. 900 pages, fully indexed. \$3.00 net.

### The Regulation of Railways

By SAMUEL O. DUNN

## THESE ARE APPLETON BOOKS

D. Appleton & Company, Publishers, New York

## When You Think Of Him —

SOMEWHERE "out there"—in training, on a battleship, or in France—do you try to imagine his surroundings? Do you wonder if he will come back the same good, true man that went away? Nothing can compensate for the loss of home environments and familiar associations. In his new life he will miss

the refining influence of his women folk. New temptations will confront him and he must find for himself a new set of pleasures.

You can see to it that these new pleasures are not demoralizing—you can make sure that sex may be a safeguard and not his undoing. You can make the home ties and the home influence stretch out to him wherever he may be—you can send him

## Personal Help for Men

By Prof. Thomas W. Shannon

This book will keep fresh in his mind memories of home—memories you want him to have—it will give him big thoughts—clean thoughts—and help to keep him morally and physically well. No more interesting, instructive and companionable book exists. Had it been written to order for "the man away from home", it could not better fulfill its purpose.

In this wonderful book, Prof. Shannon, who has spent a lifetime in the study of sex

and all its complicated problems, has lifted sex out of the mire and made it beautiful—and clean.

"Personal Help for Men", is not preachy—it is a series of heart to heart talks between a man and men. Prof. Shannon knows your soldier's surroundings and problems. Probably no man is better qualified to act as a guide, companion and friend to the man you miss. Send your soldier this book—he needs it—you want him to have it. He will be grateful to you.

**Read it yourself then send it to him.**

Send \$1.35 for "Personal Help for Men", cloth bound—Morocco Grain, \$1.90. 15 cents additional for postage. Read the book yourself. If you do not see that it will be priceless help to him, return it to us and we will send back your money. At least allow us to send you illustrated Table of Contents—free on request.

**THE S. A. MULLIKIN CO., Dept. 504 Marietta, Ohio**

By Prof. T. W. Shannon, Mrs. Louise Frances Spaller, and other eminent authors.

Personal Help for the Married. Personal Help for Men. Personal Help for Boys.  
Personal Help for Parents. Personal Help for Young Women. Personal Help for Girls.

Any Volume of the Set; Cloth bound, \$1.35 net; Morocco Grain, \$1.90 net; 15c additional for postage

Demetra Vaka (Mrs. Kenneth Brown) has rendered a marvelous service not only to Greece, but to the world, by this adventure in the cause of justice. This is a book not only to read, but to keep for reference.

In the Heart of German Intrigue, by Demetra Vaka. Houghton Mifflin Co. \$2.00 net.

## Serbia Crucified

THIS is one of the grimmest and most vivid pictures of war in an invaded country that even the literature of this war has produced. It is a book to read once, and never entirely to forget. Its impression is deep, simple and indelible.

The author has a power of expression which gives us a glimpse into the soul of Serbia—passionate, naïve, brave, religious, vibrant with that sensitiveness to impressions which we call "the artistic temperament." With these gallant, lovable Serb companions we are taken into the most savage heart of the war zone, and see, hear, and feel things beyond human endurance. The one relieving touch is the author's idealism, which gives him not only hope but faith that out of this vortex of evil and horror good will finally have glorious resurrection:

For this is the fight of the people for democracy. For this is the only way of the future, for this is the only road to the final happiness of humanity. The Spirit of this century is fighting now with the whole of History from its creation.

That is the end. And for the means:

A swarm of shells flew over our trench. It was like a whirlwind of fire; it was as if the air had become a fluid in which stones, earth, trees, leaves, clothes, guns, parts of bodies, human flesh and blood boiled and mingled, splashing from all sides those who were yet alive. We were as in a great kettle of surging horror. Our ears felt as if hot oil had been poured into them; our mouths were dry, open, and full of dirt. Our minds were stunned. Everywhere sounded a tumult of breaking bones, crashing, cracking, splitting—indescribable disorder and dreadful horror. Then above the roar of bombs, rang out heart-rending screams, shrieks of agony, calls for help, and the groans of the dying.

The book is weakened by a certain disproportion in its close, but it is one which it behooves those of us who are in comfort and safety to read and mark and inwardly digest.

Serbia Crucified, by Milutin Krunich. Houghton Mifflin Co. \$1.50.

## The Return of the Soldier

REBECCA WEST, who, it seems, lives in London and not in Rosmersholm.

## CHALFONTE

Atlantic City, N. J.

The South Jersey Coast is delightful at this season. Chalfonte appeals to cultivated, interesting people seeking rest and recreation. Modern, 10-story, fireproof. Right on the beach and boardwalk. All sports and pastimes. Golf club privileges.  
*American Plan* *Always Open*

**THE LEEDS COMPANY**

It is best to make reservation ahead for Chalfonte. Write for illustrated booklet and rates.

Rebecca West

has hitherto been known by her dramatic criticism and similar articles in British and American reviews. *The Return of the Soldier* is the first work of fiction from her pen that we have read. To say that it is unusual is not enough; it is a perfect gem. The author writes like a philosopher of the James school but more like William than Henry. The psychological problem of the soldier's return to England from the battlefields of France with fifteen years wiped from his memory, is handled in a masterly way, but the book is more than a study in divided personality; it is a noble piece of literature. The soldier has forgotten his wife, but remembers Margaret, whom he had loved in his boyhood, a girl of humble station, but the finest character in the book. The luxury of the soldier's home to which he returns to mend, if he can, his broken life; a place of gracious spaces, of exquisite surroundings, of ordered seamliness, is in sharp contrast to the abode of Margaret:

Wealdstone is not, in its way, a bad place; it lies in the lap of open country, and at the end of every street rise the green hills of Harrow and the spires of Harrow School. But all the streets are long and red and freely articulated with railway arches, and factories spoil the sky-line with red, angular chimneys, and in front of the shops stood little women with backs ridged by cheap stays, who tapped their upper lips with their forefingers and made other feeble, doubtful gestures, as though they wanted to buy something and knew that if they did they would have to starve some other appetite. When we asked them the way they turned to us faces sour with thrift. *It was a town of people who could not do as they liked.*

And here Margaret lived in a long road of red-brick boxes, flecked here and there with the pink blur of almond blossom, which debouched in a flat field where green grass rose up rank through clay mold blacked by coal-dust from the railway.

Margaret's house "did not even have an almond-tree." But her personality was sounding thru her squalor "like a beautiful voice singing in a darkened room." Kitty, the forgotten wife, is a slight, unformed girl beside her, and the cousin, who tells the tale, an unhappy ghost. All three women love "the soldier," and the terror of his lapsed memory is a very real tragedy:

Indeed, grief is not the clear melancholy the young believe it. It is like a siege in a tropical city. The skin dries and the throat parches as tho one were living in the heat of the desert: water and wine taste warm in the mouth and food is of the substance of sand; one snarls at one's company; thoughts prick one thru sleep like mosquitos.

It is a temptation to quote many of the luminous sentences lavished on this brief story. The Freudian theme is presented delicately, with the restraint of fine art and deep feeling. The outcome is as natural as the coming of a gray dawn, after the mystery of darkness. The soul of man is a strange and lonely region peopled by many fancies; only a great joy or a sharp pain may dispel them.

*The Return of the Soldier*, by Rebecca West. The Century Co. \$1.00.

## The Tree of Heaven

MAY SINCLAIR'S new novel, *The Tree of Heaven*, is one of the best novels of the year. It is the story of an English family, well-to-do, well educated, well bred, and of the life of that family as it is touched by the strong forces of modern civilization, by the woman's fight for suffrage and personal freedom, by the esthete's struggle for individual liberty in the pursuit of truth and beauty, by the several sorts of sexual emotion which modern men and women feel and seldom understand, and lastly, by the great war into whose spiritual turmoil we have all been cast.

The story begins in the garden of Anthony Harrison and his wife Frances, under the tree which Anthony calls an ash tree and Frances calls "the tree of

"It treats in fullest detail of Everything that can be Learned in Life"

NOTE this as an example of the clear, concise, comprehensive manner in which this work treats big subjects—75 pages in all upon this one topic, covering matters such as underlying causes, racial prejudices, social distinctions, national antagonisms, political rivalries and economical principles. Also the resultant developments of the War on the land, in the air, under the sea,—guns, bombs, shells, tanks, gases, ships, torpedoes, submarines, air-craft, etc. All down to the latest date.—a revised and completed volume to be given free to subscribers at the end of the war.

Today—Every Intelligent Man and Woman  
Should Have This Wonderful Work!

# THE NEW INTERNATIONAL ENCYCLOPEDIA

Latest Edition, Revised, Amplified, Modernized

The purpose of this encyclopedia is to specialize, rather than to theorize,—to state facts and conditions rather than views and opinions,—to cover every angle of every subject impartially, authoritatively and exhaustively. It presents a résumé of the world's knowledge set forth in a manner that is usable, practicable and understandable,—of unimpeachable authenticity and unquestionable accuracy. Have this work in your library. Use it. Refer to it for the same reason that you send your children to school,—it is a form of higher education.

## EDITORS:

FRANK MOORE COLBY, M. A.

TALCOTT WILLIAMS, LL. D., L. H. D., Litt. D.

Assisted by 500 Collaborators and Editorial Specialists

## More Complete

This work comprises 24 volumes, embracing 20,000 pages, and covering 80,000 subjects, with pronunciations, derivatives, cross references, relevant bibliography and a great profusion of maps, charts, diagrams and engravings in colors, together with much miscellany heretofore overlooked. So simple in arrangement that any subject may be found as readily as a word in the dictionary.

## More Modern

There is no other way, or from no other group of reference books is it possible to have so clearly classified, so comprehensive and so recently collated the vast volumes of authoritative facts and data that come to you in the New International Encyclopedia. If you would be informed and educated—if you would check yourself up to date upon any topic, any subject in which you may be interested for personal or business reasons, the possession of this thoroughly revised set of most interesting volumes is a distinct essential to your purpose. You need the New International Encyclopedia whenever you stand in need of information or explanation upon any point about which there may be any doubt or uncertainty in your mind. To have it in your

library is to have right at your elbow the latest positive fixed knowledge of the day set down in its concise, most intelligible and most thoroughly modern form.

## Reading Course

Are you interested in some special subject? Would you like to plan a course of systematic study? There is a special volume in this work devoted wholly to Courses of Reading and Study, with index, chapteral heads, biographical lists, and complete instructions for covering the matter from elementary principles to specialized treatments. A feature much prized by young and old,—a distinct advantage peculiar to The New International.

## Prize Questions

This is not merely a set of books to put in the corner and gather dust! The owners learn to use it and know it and prize it! To stimulate interest and encourage research, we mail to each subscriber each month a list of prize questions. Correct answers (gathered from the encyclopedia) entitle the subscriber to any \$1.25 book selected from the catalogue of Dodd, Mead & Company. Another reason for preferring The New International.

OUR NEW POSSESSIONS and the BRITISH ISLANDS  
By THEODORE DE BOOY and JOHN T. FARIS

Price, \$3.00 net.

Describes everything one would wish to know  
about these Islands, which were formerly the  
Danish West Indies and recently purchased by  
our Government. Special features: Five magnifi-  
cent maps made especially for this volume; over  
100 original photographs; hints and suggestions  
to investors; complete information for travellers;  
entertaining sketches and stories of the history  
and romance of the Islands.

### Over the Threshold of War

Personal Experiences of the Great European Conflict  
By NEVIL MONROE HOPKINS, Ph.D., Major,  
Ordnance Reserve Corps, United States Army.  
66 illustrations. Many from snapshots by the  
author. Drawings, documents and colored  
proclamations. Tentative price, \$5.00 net.

Written in a charming narrative style from a  
truly remarkable diary of the first few months  
of the great World War, taking the reader into  
the feverish atmosphere of England, Germany,  
Russia, France and Belgium, and back into  
Germany again during the dark days of the  
gathering war clouds, and in the early months  
of the crash which followed. . . . The proceeds  
from the sale of this book will be donated by  
the author to the fund of the Belgian Scholar-  
ship Committee, of which he is Chairman.

### Training for the Street Railway Business

By C. B. FAIRCHILD, Jr. Prepared under the  
supervision of T. E. Mitten, President of the  
Philadelphia Rapid Transit.

Illustrated. \$1.25 net.

In size and importance the street railway busi-  
ness is immense. It gives opportunities of  
employment to mechanical and electrical engi-  
neers, executives, draftsmen and many other  
workers. Mr. Fairchild presents the organiza-  
tion, the channels of advancement, the oppor-  
tunities to use one's talents, and the needs for  
men.

### The War and the Bagdad Railway

By MORRIS JASTROW, Jr., Ph.D., LL.D.  
14 illustrations and a map. Cloth, \$1.50 net.

In the words of President Wilson, the Bag-  
dad Railway is "the heart of the matter" of  
the present conflict. This is a war book of the  
utmost importance by an authority on Eastern  
civilization. It is the story of Asia Minor and  
its relation to the present conflict. Serious  
students of the problems of the war will find  
in it a complete survey of the situation in the  
Near East.

### Leadership and Military Training

By LT.-COL. L. C. ANDREWS

Cloth, \$1.00 net. Limp leather, \$2.00 net.

This new book, by the author of the great  
success, "Fundamentals of Military Service," is  
practically the only American work on the sub-  
ject. The United States army requires thousands  
of officers. Every fifth man will be a leader  
and every one of them will wish to secure and  
will prize this practical book of instruction.

PHILADELPHIA

Heaven." Anthony Harrison is complacent  
in the success of the lumber business.  
Frances is complacent in the possession of  
healthy, beautiful, clever children.

At the bottom of her mind was the convic-  
tion (profound because unconscious) that the  
affairs of the nation were not to be compared  
for interest with her own affairs.

Michael, her eldest son, was tempera-  
mental even as a boy, and had a strong  
predilection for the study of languages and  
a keen dislike for crowds and collective  
emotion. When he was sent to boarding  
school the routine tempted him to suicide  
altho the school was a good one and he was  
not unpopular with other boys. His letters  
to his family constitute one of the most  
interesting chapters in the book. Says  
Michael, commenting on school:

That's the beastly thing about this place,  
you're expected to do everything when the other  
fellows are doing it, whether you want to or  
not. . . . What I mean is it's as if their beastly  
minds kept on leaking into yours till you're all  
mixt up with them. You've got to swot every  
blessed thing the other fellows swot even if  
you can't do it, and whether it's going to be  
any good to you or not. Daddy might remember  
that it's Nicky who likes mathematics, not me.  
There are things I want to do. I want to know  
Greek and Latin and French and German and  
Italian and Spanish and Old French and Rus-  
sian and Chinese and Japanese and Provençal  
and every blessed language that has or has had  
a literature. . . . They waste your time as if it  
was theirs, not yours. How do you know I shan't  
be dead in ten or fifteen years' time. It's enough  
to make me.

Michael becomes a poet of the modern  
radical school and publishes several books  
before he goes into the Great War. . . .

Nicholas, the second son, is a plucky,  
chivalrous, light-hearted soldier from baby-  
hood. Intensely interested in mathematics  
and invention he looks forward all his life  
to a place in the army. Unfortunately his  
chivalry gets him into serious difficulties.  
The silly wife of a college professor falls  
in love with him, and, without being in the  
least to blame, he is "sent down." Then be-  
cause he is chivalrous, he makes his second  
mistake and marries an inferior woman  
of the modern individualist type because he  
learns that, as a result of her "free" life she  
is expecting a child. She does not repay  
his chivalry by setting any bounds to her  
"freedom" and therefore, before long,  
Nicky's home is broken up and he is finally  
allowed to win the woman he had always  
loved consciously or unconsciously, and to  
perfect his invention and know a few days  
of happiness before he also goes into the  
Great War. . . .

Dorothy Harrison, the only daughter, is  
an intellectual, a woman clear-eyed and  
fearlessly logical, capable of renunciation  
and achievement. Like most young women  
who are intellectual she is a radical, but  
she is not sentimental about it, and she has  
more poise than most of her radical asso-  
ciates.

Other lives are described and other per-  
sonalities enter into the story, but these  
three, Michael, Nicholas and Dorothy,  
dominate. And in the end we find Anthony  
and Frances together under the ash tree,  
the tree of Heaven, feeling that their own  
affairs do not count at all in comparison  
with the importance of the affairs of the  
nation. Their letters from their sons at  
the front are well worth reading. Here are  
quotations from one of Michael's. It tells  
how a man feels when he is charging "over  
the top":

It isn't excitement; you're not excited. It isn't  
a tingling of your nerves; they don't tingle. It's  
all curiously quiet and steady. . . . Your body  
and its nerves aren't in it at all. . . . Your  
body may be moving violently, with other bodies  
moving violently around it, but you're still. . . .  
But suppose it is your nerves. Why should they  
tingle at just that particular moment, the mo-  
ment that makes animals afraid? Why should  
you be so extraordinarily happy? Why should  
the moment of extreme danger be always the  
"exquisite" moment? Why not the moment of  
safety? Doesn't it look as if danger were the

## A Flying Fighter

REMOTE as we are from the war center, it is incumbent upon us Americans to get as much in touch with realities "over there" as we can by reading every book we can lay hands on that gives us any scraps of authentic information—if possible at first hand. As a description of what it is like to fight in the air, the book is a good one to place in the hands of embryo airmen:

When the (German) balloon was up about half way, Randie took a dive from his hiding place and made straight for it, and then pulled the plugs to release the bombs. The two Huns in the captive balloon saw it coming, but there was nothing that they could do. Randie was upon them before they knew it, and as soon as the bombs hit they both jumped. It is not the prettiest sight in the world to see two men jump out of a balloon at four thousand feet from the ground. . . . The parachute of one of the men opened after a fall of five hundred feet or so. That stopped his rapid progress through the air and he descended safely enough. But the parachute of the other Hun never opened at all and he looked like a weighted rat as he sailed earthward. A speck of dust showed where he hit. He was only a Hun, but he was game, and old Randie afterwards told me that he felt sorry for him. And Randie knew; he was an old timer, and game to the core.

Lieutenant Roberts is not troubled about war aims or wide views. But he is quite frank. He went into the army for excitement, and he found it.

*A Flying Fighter*, by Lieut. E. M. Roberts, F. F. C. Harper and Bros., \$1.50.

## Heroes of Iceland

MAURICE HEWLETT has made another tale out of the sagas of Iceland. In his introduction, he tells what he is trying to do:

I don't forget that a "saga" is history, and that these sagas in particular furnish an account of the first discovery of America, no less a thing. Nevertheless, while I have been scrupulous in leaving the related facts as I found them, I have not hesitated to dwell upon the humanity in the tales, and to develop that as seemed fitting. . . . Where heroism has been so shown on all sides of us in these three dreadful years, it is no longer possible to pick and choose heroic nations. One might otherwise have said that no such heroes were ever given to the world as the heroes of Iceland. That they are not accepted as such on all hands is no fault of the literature which presents them; for that literature, like all great art, makes demands upon its readers. It hands over the key, but if the lock is stiff it will not give you oil for the wards. That you must find for yourself. Oil for the wards is all I can pretend to here; and if I may say that I have humanized a tale of endur-

# GOOD BOOKS

WHILE spring still lingers on its way there is ample time to find pleasure and intellectual profit in the genial philosophy, the kindly humor, the stimulating fiction of the printed page. A catalog of THE ABINGDON PRESS will help you choose the most select of its recent publications. Here are a few of them.

### GIANT HOURS WITH POET-PREACHERS

By WILLIAM L. STIDGER

Brief, suggestive and inspirational studies of nine modern poets—four American and five English. The author's purpose is to interest his readers in those of whom he writes and in their ethical and spiritual messages. Mr. Stidger writes *con amore*. He knows and loves these Poet-Preachers, and would have others know and love them too. A book wholesome and tonic in quality.

12mo. 129 pages. Cloth, gold top.  
Net, \$1.00, postpaid.

### THE PSALMS AND OTHER SACRED WRITINGS

Their Origin, Contents, and Significance

By FREDERICK CARL EISELEN

A finely balanced and very valuable discussion, with all sides of the question stated, and the various schools of thought fairly and equitably represented. The book will be warmly welcomed by those who would understand the circumstances in which these books were written, their underlying theme and content, and their spiritual message.

Crown 8vo. 348 pages. Cloth.  
Net, \$1.75, postpaid.

### THE CONFESSIONS OF A BROWNING LOVER

By JOHN WALKER POWELL

A fine interpretation of the message of Browning to our time. Believing that Browning is primarily an artist, the author holds that both by intuition and inspiration he is a philosopher and a theologian and that his teachings are of the highest order. Agnosticism and materialism are met and answered. Dr. Powell's chapter on Immortality is unusually helpful.

Crown 8vo. 248 pages. Cloth.  
Net, \$1.00, postpaid.

### THE MAYFLOWER PILGRIMS

By EDMUND JAMES CARPENTER

DR. CARPENTER has given a popular and highly interesting account of early New England days. True to history, the rugged and heroic life of the Pilgrims takes new beauty and power under the author's skilful handling. In view of the Tercentenary of the landing of the Pilgrims, this volume is most timely and will surely help to an understanding of the spirit and purpose of the sturdy pioneers to whom the nation owes so much.

12mo. Illustrated. 256 pages. Cloth.  
Net, \$1.50, postpaid.

### THE OTHER SIDE OF THE HILL AND HOME AGAIN

By F. W. BOREHAM

A most suggestible person is this Tasmanian essayist. To him every event and object is suggestive; wherever his glance strikes it ricochets to something else. For suggestive, original and striking ideas and putting of ideas there is nothing better than *The Other Side of the Hill*.

12mo. Cloth. 274 pages. Net, \$1.25, postpaid.

### OUR BACKDOOR NEIGHBORS

By FRANK C. PELLETT

Charming, intimate, and true to life are these descriptions, for the author has lived in close proximity to birds and animals, and shares their secrets. The stories he tells are vivid and fascinating, and many unusual photographs add to the value of this unique nature book.

Crown 8vo. Illustrated. 210 pages.  
Cloth, gold top. Net, \$1.50, postpaid.

Jack London

ance, and clothed demigods and shadows in flesh and blood, I shall feel that I have done useful work, and bear charges of vulgarization with a philosophy which assures me that the two terms are much of a muchness . . . So much apology I feel moved to offer for having put down Exploration from the chief place in the tale, and put up a wife and mother.

Mr. Hewlett has done what he set out to do passing well.

*Gudrid the Fair*, by Maurice Hewlett, Dodd, Mead & Co. \$1.35.

A Crusader's Book

JACK LONDON left behind him a story of a dog that ought to be for the unhumanly cruel business of training animals for exhibition purposes what "Black Beauty" was in the allied field of cruelty to horses. It is a crusader's book and deliberately so. Mr. London, in his introduction, proposes a plan to his readers:

Not one-tenth of one per cent of us will join any organization for the prevention of cruelty to animals, and by our words and acts and contributions work to prevent the perpetration of cruelties on animals. This is a weakness of our own human nature. We must recognize it as we recognize heat and cold, the opaqueness of the non-transparent, and the everlasting down-pull of gravity. And still for us, for the ninety-nine and nine-tenths per cent of us, under the easy circumstance of our own weakness, remains another way most easily to express ourselves for the purpose of eliminating from the world the cruelty that is practised by some few of us, for the entertainment of the rest of us, on the trained animals, who, after all, are only lesser animals than we on the round world's surface. It is so easy. We will not have to think of dues or corresponding secretaries. We will not have to think of anything, save when, in any theatre or place of entertainment, a trained-animal turn is presented before us. Then, without premeditation, we may express our disapproval of such a turn by getting up from our seats and leaving the theatre for a promenade and a breath of fresh air outside, coming back, when the turn is over, to enjoy the rest of the program. All we have to do is just that to eliminate the trained-animal turn from all public places of entertainment. Show the management that such turns are unpopular, and in a day, in an instant, the management will cease catering such turns to its audience.

Incidentally, it is an absorbing story, much of which will delight every dog-lover that reads it, even tho the rest of it wrings his heart.

*Michael, Brother of Jerry*, by Jack London. Macmillan. \$1.50.

Verse A-Plenty

IT is the genius of the present generation in English verse to write naively and frankly. The struggle for sincerity creates the history of our poetry; it is the resurgent devotion to reality of thought and emotion that brings English poets back to splendor again and again. The fact that in a period such as ours frankness becomes vulgarly popular and small men and women

Right is Might

The Christian Science Monitor—the one great international daily newspaper, stands squarely on the platform that "right is might."

Fearless in the presentation of facts as they are, progressive in all that it advocates, universal in its appeal, and absolutely truthful, the Monitor is recognized as an authority on affairs to which it gives its attention.

It is an important channel through which to obtain reliable information of the activities that are today shaping the social, business and political life of tomorrow.

The Monitor aids the individual to lift thought from the limits of personal considerations to the greater responsibilities to country and fellow men.

The Christian Science Monitor, at 3c a copy, is on general sale throughout the world at news stands, hotels and Christian Science reading-rooms. A monthly trial subscription by mail anywhere in the world for 75c, a sample copy on request.

In Our First  
Year of War  
By Woodrow Wilson

That the public desires to possess in permanent form these important State papers is proved by the success of "Why We Are At War," and by the many requests which have come to us for a war volume of the President's messages which have appeared since the earlier book was published. The book opens with the second inaugural address and contains the President's messages and addresses in the first calendar year of the war, including the latest, "The Terms of Peace."

Portrait. \$1.00 net.

**HARPER & BROTHERS**  
Established 1817.

parade ostentatiously down its trail to the strains of fantastic music and no music at all must not be allowed to dim the bigger fact that other men and women are making poetry that is simple, uncluttered, open-hearted—more so than for a long time past.

It is the earthy quality of Mr. Masfield's words, the frankness of his statement, the sincerity of his absorption in Beauty, that help to make him the most important English poet of our generation. There are few poets now writing who reflect so profoundly the spiritual significances of the war, not by any change of mood, for Mr. Masfield was a deeply serious poet before the war, but by a preoccupation with the metaphysical problems which death and struggle on a titanic scale force into the forefront of his thinking. So that *Lollingdon Downs*, a thin volume, is partly a continuation of the sonnet sequences of "Good Friday." The sonnets wrestle with big concepts. They are ruggedly metaphorical; Mr. Masfield clings to his characteristic vocabulary and images even in metaphysics. He overstrains the adjective "red," and sometimes he attempts to crowd too much color into a homely phrase, but one finds much nobility in the best of the poems. Let this suggest them:

You are the link which binds us each to each.  
Passion, or too much thought, alone can end  
Beauty, the ghost, the spirit's common speech.  
Which man's red longing left us for our friend.

Even in the blinding war I have known this,  
That flesh is but the carrier of a ghost  
Who, through his longing, touches that which is  
Even as the sailor knows the foreign coast.

So, by the bedside of the dying black  
I felt our uncouth souls subtly made one,  
Forgiven, the meanness of each other's lack,  
Forgiven, the petty tale of ill things done.

We were but Man, who for a tale of days  
Seeks the one city by a million ways.

One of the poems in the group seems to be self-parody. But taken together they are wonderfully suggestive of the tragic inheritance of the Downs, and of the deep heart of life itself.

Austere simplicity in lyric verse is not to be had without an unusual fineness both of emotion and expression. It is unfortunate that the "short and singing love-poems" of Jessie B. Rittenhouse's *The Door of Dreams* challenge comparison with the poems of Sara Teasdale, like them in form and manner. Miss Rittenhouse does not often find that inevitableness of thought and cadence that makes Sara Teasdale's lyrics so satisfying. Yet there are poems of distinction in the little volume, particularly among the war verses.

Edna St. Vincent Millay, the author of *Renascence and Other Poems*, carries naïveté of diction to an awkward extreme now and then in the title poem, but that does not hide the genuine interest of the odd fancy which she develops very happily. Miss Millay has the fundamental gift of getting the grass and the rain and the like to work for her unaffectedly and accurately in expressing her thought. The stuff of her verse is homely, and her emotion is sincere. Her poems of grief ring true.

Thomas Walsh continues to write pleasantly in an old-fashioned strain. His verse is little touched by the war. He is a bookish poet; he titillates literary curiosities rather than grips reality. And sometimes he is not sufficiently fastidious about the words he chooses for his rimes. The South American lyrics which he includes among the poems of *Gardens Overseas* are interesting in so far as some of them show an attempt to utilize poetic stuff peculiar to their environment, but if Mr. Walsh is at all representative in his handful of lyrics they are mostly conventional enough. Jose

Russian Fighting

By MALCOLM C. GROW

The personal story of an American "fighting physician" who served in three great Russian campaigns, including both that momentous advance under Brusiloff (when the Russians, hurling back the Teuton hordes, lent support to the French struggle at Verdun) and the final effort under Kerensky. *Captain Grow, a graduate of the Jefferson Medical College in Philadelphia, went to Russia in 1915, soon becoming a Lieutenant-Colonel in the Medical Division. The simple account of what happened to him and what he saw is almost a wonder tale.* Net \$1.50.

## LETTERS TO THE MOTHER OF A SOLDIER

By RICHARDSON WRIGHT

"Richardson Wright has done a very beautiful work, caught the beauty, the vast meaning of this war as a struggle of world-liberation, and set down in things we call words the substances of mysterious lessons and noble admonitions. This book should be on a table in every home in the United States where the flag is loved."—*Samuel Abbott, in the Philadelphia Record.* Net \$1.00.

## THE WHITE MORNING

By GERTRUDE ATHERTON

"Better than Bombs!" says *Eleanor Gates, playwright and novelist, of this stirring novel of the German Revolution that may come.* "What better material for propaganda in the Kaiser's realm could the United States desire? This volume will do more good than its author will ever guess, or her publishers be able to trace." Net \$1.00.

FREDERICK A. STOKES COMPANY

## Be a Good Judge of Men

Dr. BLACKFORD

If you knew the mental and emotional differences between blondes and brunets, you would be saved many a mistake. Blondes succeed best at certain kinds of work; brunets at other kinds. You persuade a blonde in one way; a brunet in another. You manage blonde employees best with one policy; brunets with another. Blondes enjoy one phase of social life; brunets another. The history of nations—of civilization—is woven through and through with these fundamental differences between blondes and brunets. To know them is to know the very first step in judging men. And it is all in "*Blondes and Brunets*," a little 48-page book by Dr. Katherine M. H. Blackford, who has specialized on this subject for twenty years and is retained by many large corporations to select men. The book is fascinating. You read it in an hour—study it for months. Only ten cents, stamps or silver. Send for it today.

HENRY ALDEN, Inc., Office 1912 50 E. 42d St., New York

## YOU KNOW AT LEAST TEN PEOPLE

who would be glad to receive a copy of *The Independent* with your compliments. If you will send their names and addresses by an early mail, we shall send the copies promptly.

THE INDEPENDENT, 119 West 40th St., New York

Santos Chocano, of Peru, finds a happy simile for the pampa:

Its green monotony afar displayed  
Seems where some great fatigue its rest would take.

Newspaper verse is hard to define. But in so far as the term implies vigor and informality, it would be hard to find better newspaper verse than Australia produces. C. J. Dennis has republished from the *Sydney Bulletin* a series of war poems in Australian slang, called *Ginger Mick*. They are good stuff, elemental and commonplace enough to be genuine, and reasonably consistent. The stanza that follows may or may not be plausible in the mouth of a "bloke," but it has an epigrammatic quality:

They fights; an' orl the land is filled wiv cheers.  
'They dies an' 'ere an' there a 'eart is broke.  
An' when I weighs it orl—the shouts, the tears—  
I sees it's well Mick wus a lonely bloke.  
'E found a game 'e knoo, an' played it well;  
An' now 'e's gone. Wot more is ther to tell?

In *Nocturne of Remembered Spring*, there is almost nothing but reverie, except some remnants of the tiresome sex narrative stuff which Mr. Aiken fancies. But there is an undeniable power in Mr. Aiken's technique, so that he creates his mood as definitely as does orchestral music. Perhaps there will not be, during the whole war, a better epitome of the drab, dream-like misery of the trenches which is so minutely pictured in Henri Barbusse's "Under Fire" than Mr. Aiken's poem in this book, "1915: The Trenches."

To say that *My Ireland* is of uneven quality is to say that it is a book of poems, but in its best moments the verse has a singing, faery lightness that is singularly haunting, and in its worst is marked by a simple sincerity that goes far to redeem it from the commonplace.

Francis Carlin is a true bard of Ireland of the Twilights. Need one say more?

*Old Front Line*, by John Masefield. Macmillan, \$1. *Renascence and Other Poems*, by Edna St. V. Mallay. Mitchell Kennerly, \$1.50. *Gardens Overseas and Other Poems*, by Thomas Walsh. John Lane Co., \$1.25. *Ginger Mick*, by C. J. Dennis. John Lane Co., \$1. *Nocturne of Remembered Spring*, by Conrad Aiken. Four Seas Co. \$1.25. *My Ireland*, by Francis Carlin. Henry Holt & Co. \$1.25.

## British Rustics

TWO collections of excellent short stories. *The Country Air*, by L. P. Jacks, editor of the *Hibbert Journal*, and *Chronicles of St. Tid*, by Eben Phillpotts, both giving unforgettable pictures of English rural life, recall a happier England. Mr. Jacks's "Farmer Jeremy and His Ways" is especially delightful:

I never spoke to the Dook but once. "Jeremy," says he, "I want to shake hands with you. You're a splendid specimen of the British farmer." "Thank you, your Grace," I says; "and you're a splendid specimen of the British Dook," for I was never afraid of speaking my mind to anyone.

Farmer Jeremy's exprest desire that the entire Liberal party "would jump into coppers and boil themselves," sufficiently indicates his political bias.

Mr. Phillpotts' rustics have lost none of the old charm; their humor, philosophy and comment on life are perennially refreshing. The whimsical twist to many of these stories make them joyous reading.

*The Country Air*, by L. P. Jacks. Henry Holt & Co. \$1. *Chronicles of St. Tid*, by Eben Phillpotts. Macmillan. \$1.50.

## Soldier Authors at the Front

For France, Lieutenant Jean Giraudoux writes in his *Campaigns and Intervals* with all the artistic charm, the delicate touches characteristic of his nation. At no time is he over-impressed with the horror of modern war, but rather sees in passing incidents, often trivial, something diverting,

picturesque or dramatic. Yet he leaves the reader in no doubt that at the fitting moment the French soldier rises to a superb courage. (Houghton, Mifflin Company, \$1.50.)

Again in *A Crusader in France*, by Captain Ferdinand Belmont, we have an excellent example of the French reflective temperament, the disposition to analyze impressions and emotions by a man who is clearly as strong in his religious faith as in his patriotic duty. One feels that with him it was a sacred privilege to die for France. (E. P. Dutton Company, \$1.50.)

A volume of letters, *Harry Butters, R. F. A.*, discloses the buoyant optimism of a young American who joined the British service. More than once he affirms an abiding spiritual belief, and makes plain his patriotic affection for the United States. His longing for his own flag to fly beside the one he fought for in the cause he held to be all just, is eloquently pleaded and was finally sealed with his blood. (John Lane Company, \$1.50.)

In *A Yankee in the Trenches*, Corporal R. Derby Holmes describes how he went to war as a British soldier with much the same dubious grin on his face that made Empey famous. But having got into it, the main thing with him was to do his soldier job well, and, tho perhaps Corporal Holmes never thought much about it, that embraces the moral and touches closely upon the spiritual side of human nature. (Little, Brown & Co., \$1.35.)

*On the Field of Honor*, by Hughes Le Roux, is a collection of impressive characteristic extracts from the diary of a French lieutenant, and a revelation of his mother's triumph over her grief at his death for France. (Houghton, Mifflin Company, \$1.50.)

The author of *Conscript 2989* sheds some housekeeping pointers which he acquired while being disciplined on kitchen police duty at one of the camps:

1. Never take it for granted that a man has only one appetite. We have two hundred and seventy men here, but they carry around an aggregate of six hundred appetites.  
2. Never plunge your hands into an ash can full of greasy water without first removing your wrist watch.

The book is an amusing recital of experiences about camp, livened by absurd cartoon sketches by a drafted man. (Dodd, Mead Company, \$1.)

*Facing the Hindenburg Line*, by Burris A. Jenkins, a Y. M. C. A. worker, is a guide from which a newcomer in the field of Y. M. C. A. work abroad will gather how to achieve the best results by approaching soldiers in a friendly, common sense manner. (Revell & Co., \$1.25.)

## Fiction In Light Vein

*The Best in Life*, by Muriel Hine, is a rainbow story of love and tears and laughter, and the joy of life wins out in the end. (John Lane Company, \$1.50.)

*The War Cache*, by W. Douglas Newton, is a stirring tale of the Great War and of the machinations of the German spy system. (D. Appleton & Co., \$1.40.)

*The Great Sioux Trail*, by Joseph A. Altscheler, is an absorbing story of the great Northwest and of the wars with the fierce Sioux nation. (D. Appleton & Co., \$1.35.)

*The Happy Garret*, edited by V. Goldie, is the book of the making of a woman bohemian. It is simple, unpretending and its realism of the stimulating sort. (E. P. Dutton & Co., \$1.50.)

*Flood Tide*, by Daniel Chase, a love story telling of a dreamer forced by circumstances into a business career. The author shows remarkable skill in portrayal of character. (Macmillan Company, \$1.50.)

*The Best People*, by Anne Warwick, is the travel romance of a young woman who is tired of her "Main Street Town" in the American West and thinks if she were only in the social swim with "the best people" life would be delightfully amusing. And it turned out so. (John Lane Company, \$1.50.)

# ROTTING AT THE CORE

(Continued from page 73)

sought a certain Strohmann, who loaned his name for the dirty deal. The court being driven to it on all sides, was finally forced to declare the man not guilty, being afraid to render a decision unfavorable to commercial men."

The former recorder of the Master Mechanics' Union, Herr Heinz Potthoff, in an article in the *Hilfe*, reports among other things: "When army contractors, sugar factories, breweries and establishments dealing in food products, declare a dividend of 20 per cent, 30 per cent, 50 per cent, and more—and double and triple their capital, transfer their property, and present their stockholders with new shares so as not to declare a dividend in excess of such rates—it is war profiteering. Until we make people realize this, no change is possible. Mere laws will not do it. On the contrary the superabundance of instructions which contradict themselves has had the disastrous consequence that respect for law has disappeared. In spite of all failures, I consider the principles of economic regulation necessary and just. But since the just as necessary moral principles are neglected, the regulations are met everywhere with opposition. Because there is a lack of respect for orders, instructions become always longer, more minute and stricter—until they become meaningless, because no one can keep up with them any longer. At the present time there is no offender in Germany who could be put into prison because of violation of war regulations! What a condition!"

That this condition involves the highest in Germany, as well as the lowest, has been shown by the recent exposure of the Daimler Motor Company, whose directors are among those "unimpeachable" classes of whom Germany was once so proud. That company has been making a profit of 173 per cent on a capital stock that had been watered from eight million to thirty-two million marks. The rumor of legal proceedings against the company caused a panic on the Bourse, because so many other companies have been guilty of the same sort of profiteering on government contracts. In a debate in the Reichstag on the Daimler scandal, the charge was made that "work for the army and navy could in many cases be accomplished only by means of bribery." And it is significant that "the government's attitude toward the motions in the Reichstag was somewhat cool."

The government cannot quarrel with the big profiteers who are its most loyal supporters in a war for international plunder. It cannot quarrel with them for reasons that are indicated in the demand of an Independent Socialist in the Reichstag that "the magnates who threatened a strike against the government should be dealt with in the same way that striking workmen have been dealt with." Germany having entered upon a war of piracy is at the mercy of its own domestic pirates. The whole people are stealing from one another, and they are bribing officials and intimidating courts to permit the plundering. Now finally, the lower classes have learned the lesson, and the cities are terrorized by crimes of violence. This is the state in which they have arrived with their "holy war" and their "Gott mit uns." Germany stands like a tree decayed at the heart, supported by the strength of that outer shell which is the army. The shell is still as strong as ever. Nothing but a military disaster can break it. But let it once crack under the strain of acknowledged defeat, and the whole rotten organization of Imperial Germany promises to come down with a crash.

## SCHOOLS AND COLLEGES

### SKIDMORE SCHOOL OF ARTS

SUMMER SESSION

JULY 1ST TO AUGUST 9TH

Home Economics, Physical Education (preparing teachers to meet the New York State requirements), Secretarial Studies, Fine Arts, Music, Languages and General Studies.

For catalogue of regular or summer sessions Address the Registrar

SARATOGA SPRINGS, NEW YORK

### LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

Prepares for library work in all parts of the United States. Entrance examinations June 8. For Circular address E. J. Reece, 476 Fifth Avenue, New York.

### DEAN ACADEMY

FRANKLIN, MASS. 52nd YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$325-\$400 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt.D., Principal

### UNIVERSITY OF COLORADO BOULDER, COLORADO

Fifteenth Summer Session. June 24 to August 3, 1918

In the Foothills of the Rockies. Ideal conditions for summer study and recreation. Courses in thirty departments, including Medicine, Ophthalmology, and Engineering. Able faculty. Eminent lecturers. Attractive courses for teachers. Tuition low. Living expenses reasonable. Catalogue on application to Registrar.

### RANDOLPH-MACON WOMAN'S COLLEGE

Offers courses for A. B. and A. M. Four laboratories, library, observatory, gymnasium, swimming pool. Liberal endowment makes possible very moderate charges. Officers and instructors, 60. Students from 35 states and countries. Address

WILLIAM A. WEBB, Pres., Box 46

LYNCHBURG, VIRGINIA

### CORRESPONDENCE SCHOOLS

**THE UNIVERSITY OF SOUTHERN MINNESOTA** offers to graduates of standard colleges courses in residence or non-residence leading to advanced degrees. Undergraduate and High School courses also offered. Catalogue. UNIV. OF SO. MINNESOTA, Dept. C., Austin, Minn.

### Short-Story Writing

A COURSE of forty lessons in the history, form, structure, and writing of the Short Story taught by Dr. J. Berg Esenwein, for years Editor of Lippincott's.

One student writes: "Before completing the lessons, received over \$1,000 for manuscript sold to *Woman's Home Companion*, *Pictorial Review*, *McCall's* and other leading magazines."

Also courses in Photoplay Writing, Versification and Poetics, Journalism. In all over One Hundred Courses under professors in Harvard, Brown, Cornell, and other leading colleges.

Dr. Esenwein 150-Page Catalog Free. Please Address The Home Correspondence School Dept. 305, Springfield, Mass.

### BECOME AN EXPERT ACCOUNTANT

Executive Accountants command big salaries. Thousands of firms need them. Only 2,000 Certified Public Accountants in U. S. Many are earning \$3,000 to \$10,000 a year. We train you thoroughly by mail in preparation for C. P. A. Examinations or executive accounting positions. Knowledge of Bookkeeping unnecessary to begin—we prepare you from the ground up. Our course and service is under the supervision of a large staff of C. P. A.'s, including William B. Castenholz, A. M., C. P. A., Former Comptroller and Instructor, University of Illinois, Wm. Arthur Chase, LL. M., C. P. A., Ex-Secretary Illinois State Board of Accountancy, and other members of American Institute of Accountants. Low tuition fee—easy terms. Write now for free book of Accountancy facts.

La Salle Extension University, Dept. 450-H Chicago "The World's Greatest Extension University"

### BRIEFS FOR DEBATE

The Single Six-Year Term for President.

The California Anti-Alien Land Law.

State Constabularies.

Independence of the Philippines.

The City Manager Plan.

Public Defender.

The Gary School Plan.

The Death Penalty.

Price Maintenance.

Minimum Wage Legislation.

Mothers' Pensions.

Convict Labor in the United States.

The Problem of the Trusts.

The Monroe Doctrine.

Both sides of all these fourteen debates will be furnished for only 25 cents. Address

THE INDEPENDENT 119 W. 40TH ST., NEW YORK

STATEMENT OF THE OWNERSHIP, MANAGEMENT, etc., required by the Act of Congress of August 24, 1912, of The Independent, With Which Is Incorporated Harper's Weekly, published weekly at New York, N. Y., for April 1, 1918:

State of New York, } ss.  
County of New York, }

Before me, a notary public in and for the State and county aforesaid, personally appeared Harold J. Howland, who having been duly sworn according to law, deposes and says that he is the Secretary of Independent Corporation, owner of The Independent, With Which Is Incorporated Harper's Weekly, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are: Publisher, Karl V. S. Howland; Editor, Hamilton Holt; Associate Editor, Harold J. Howland; Managing Editor, none; Business Manager, none, all of 119 West Fortieth street, New York, N. Y.

2. That the owner is Independent Corporation, 119 West Fortieth street, New York, N. Y. Names and addresses of stockholders holding 1 per cent. or more of total amount of stock: Charles B. Alexander, 163 Broadway, New York, N. Y.; James Douglas, 99 John street, New York, N. Y.; Hamilton Holt, 119 West Fortieth street, New York, N. Y.; Estate of William B. Howland, 119 West Fortieth street, New York, N. Y.; Harold J. Howland, 119 West Fortieth street, New York, N. Y.; Karl V. S. Howland, 119 West Fortieth street, New York, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

INDEPENDENT CORPORATION,  
HAROLD J. HOWLAND, Secretary.

Sworn to and subscribed before me this 1st day of April, 1918.

WESLEY W. FERRIN,  
Notary Public, N. Y. County No. 183. New York County Register's No. 9445.  
(My commission expires March 30, 1919.)

## DIVIDENDS

### WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY

A quarterly dividend of 1 1/4% (87 1/2 cents per share) on the PREFERRED stock of this Company will be paid April 15, 1918.

A dividend of 1 1/4% (87 1/2 cents per share) on the COMMON STOCK of this Company for the quarter ending March 31, 1918, will be paid April 30, 1918. Both dividends are payable to stockholders of record as of April 4, 1918.

H. F. BAETZ, Treasurer.  
New York, March 27, 1918.

### Dividend Notice of the

### AMERICAN LIGHT & TRACTION CO.

The Board of Directors of the above Company, at a meeting held April 2, 1918, declared a CASH dividend of 1 1/2 Per Cent. on the Preferred Stock, a CASH dividend of 2 1/2 Per Cent. on the Common Stock, and a dividend at the rate of 2 1/2 shares of Common Stock on every one hundred (100) shares of Common Stock outstanding, all payable May 1, 1918.

The Transfer Books will close at 3:00 o'clock P. M. on April 11, 1918, and will reopen at 10 o'clock A. M. on April 26, 1918.

C. N. JELLIFFE, Secretary.

## INSURANCE

### Service of The Independent

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Patriotism and Loyalty.

1. Write a systematic brief of **ROTTING AT THE CORE**. Write a single emphatic paragraph in which you point out all the "symptoms of a systemic breakdown in the body of the German state." Prove that the war is a "piratical war of aggression for imperial conquest." Contrast the German and the American workmen. Compare conditions in Germany and in Russia. Write an exposition on "The Decline of Economic Morals in Germany." Contrast the better educated people of Germany and the better educated people of the United States. Write a paragraph of detail on "German Corruption." Write a paragraph of cause and effect on "Reasons for the Present Condition of Germany."
2. Write a précis of **HOW THE BATTLE GOES**. Contrast the advantages won by Germany and by the Allies. Explain orally the new strength of organization gained by the Allies. Write a spirited peroration to a speech on "The Courage and Stedfastness of English and Colonial Troops."
3. Read **IF YOU ARE A JEW**. Give a spirited talk address to Jews, emphasizing the war attitude that all wise Jews are taking.
4. Consult "The Reader's Guide," "The Jewish Encyclopedia" and other works of reference, in order to gain material, and then write a composition on "How the Jews Have Aided in Making, and in Defending the United States."
5. Read **THE LUCKY MEN IN CAMP**. Tell how the editor of The Independent prepares himself for the writing of important articles. Tell how you should prepare for the writing of school compositions.

#### II. The News of the Week.

1. Write short items, for your school paper, on the following subjects: The Effect of the Bombardment of Paris; The New German Gun; What Justifies the United States in Taking the Dutch Ships; Why We Must Eat Less Wheat; Why the Public Is Interested in the Arrest of Dr. Muck; The Present Condition of Russia; The Attitude of Russians Toward the Germans; The Condition of the Crimea; Germany's Aggressions on Russia; The Situation on the Western Front; The Work of American Troops in the Recent Battles; The Growth of the American Army.

#### III. Literature.

1. Read **AN OLD FASHIONED CHRISTMAS DINNER**. What was Irving's object in writing? For what was Washington Irving noted? Give an account of Irving's life. What is "The Sketch Book"? What are "The Christmas Essays"? What is their value? Why did Irving begin the essay with a quotation? Who was "Wither"? Describe the Great Hall. Write an impressionistic description of the scene in the Hall, as if you had been a guest. Describe the harper, the parson, the squire, Master Simon, the fat-headed old gentleman, the children. Describe the dinner table. What was the Wassail Bowl? What spirit prevailed at dinner? Explain: "How easy it is for one benevolent being to diffuse pleasure around him." Invent one of the stories of college pranks that the Squire might have told. Explain the following: black-letter work, Joe Miller, Lord of Misrule, Falstaff, Covenanters, Robin Hood, Kendal Green, Maid Marian. Narrate the after-dinner events. What shows Irving's love for children? Tell one of the anecdotes the parson might have told. Tell one of the ghost stories concerning the crusader. What spirit fills the selection? Why is Irving a delightful writer?
2. Write, in imitation of Irving, an account of some happy time you have had.
3. Read **THE TALK'S THE THING**. Explain the following: realism, romanticism, Shaw, Pickwick Papers, Sam Weller, the Fat Boy, Mr. Dick, Sairey Gamp, Quilp, Uriah Heep, Squeers, Pecksniff, Thackeray, Jane Austen, Charlotte Brontë, H. G. Wells, Arnold Bennett. Give directions for interesting conversation. What characterizes the best books? Why should a book "make us more in love with life"?

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. A Campaign for Intelligent Patriotism—"If You Are a Jew."

1. Why is the opening paragraph of this article a good introduction to the subject under discussion?
2. "Jewish sentiment was distinctly anti-Russian—not pro-German." "The Russian Revolution . . . produced a complete change of sentiment." Explain these two statements rather fully.
3. Make a comparative study of the condition of the Jews in Germany and in the United States.
4. Why is this "a matter in which the interests . . . of all freedom-loving people are at stake"?

#### II. The New American Army—"The Lucky Men in Camp," "More Troops to France," "Ships, Not Excuses."

1. Prove that the title of Mr. Holt's article is well chosen.
2. Upon the basis of the information given here and of information gathered from other sources, write an account of the military training given to our men in the army camps.
3. Write a similar story about their social life in camp.
4. What is your comment on the last paragraph of the article?
5. Discuss the plans for increasing the strength of our army abroad and the conditions upon which the execution of these plans chiefly depends.

#### III. Conditions in Germany—"Rotting at the Core."

1. What evidences are presented in the article of "a systemic breakdown in the body of the German state"?
2. Is the *Volksblatt* justified in its characterization of conditions as "a state of affairs that bears a desperate resemblance to so-called Russian conditions"?
3. "The Government, in fact, cannot quarrel with the big profiteers," etc. Why could the same statement not be made about the Government in this country?
4. "Germany still stands, like a tree decayed at the heart," etc. Explain this figure of speech.

#### IV. On the Western Front—"One Hand at the Helm," "How the Battle Goes."

1. What advantages are to be gained by the unity of command recently adopted by the Allied forces? Why has the policy of unity of command been so long delayed? Why was it adopted just at this time?
2. "On the map, the Germans have won a great victory," etc. Why, then, are the Allies not depressed by their apparent military defeat?
3. Discuss the strategic importance of the city of Amiens? of Arras?
4. Make a diagram of the German military formation described in this article.
5. What part have the British thus far played in the Great Battle? the French? the Americans?

#### V. The Russian Situation—"Another Russian Reformation," "The Revolt in Russia," "The Question of the Crimea."

1. What are the evidences that the revolution is still going on in Russia? Are the Germans gaining or losing power in the East?
2. Why are conditions in the southern part of the empire especially distressing?
3. Discuss one or more of the reforms referred to in the editorial.

#### VI. Industrial Conditions—"To End Labor Troubles in War Work," "Standard Oil Invites Employees to Confer," "I. W. W. on Trial."

1. What limitations upon "freedom of contract" are proposed by the War Labor Conference Board? If these recommendations are adopted what industrial changes will take place?
2. Show how the plans of the Standard Oil Company have the same purposes in view as the War Labor Conference Board.
3. Compare the plans of the I. W. W. with those set forth by the War Labor Conference Board.

# "Dead Broke" on \$3000 a Year

And the Discovery Which Enabled Howard Lindsay to Save \$800 Out of His Income and Later Made Him President of a Large Corporation.

By Victor Jones

Who should walk into the room but Howard Lindsay! Of all men perhaps the last I had expected to find as the president of this great new company. They had told me that Mr. Lindsay, of the Consolidated, was looking for a fine country home and was interested in buying the Dollard Place in Englewood; so as executor of the Dollard estate, I had come to discuss the terms with him.

But Lindsay! Surely some miracle had happened. For it was the very man who had come to me "dead broke" about four years back and had asked me to help him get a new job. But how he had changed! The man I remembered was down at the heel, and timid and ill-kept. The man now facing me was keen-eyed, alert, confident and well groomed.

"You are surprised, Mr. Jones, I can see that without your telling me. I was a pretty sorry object the last time we met—and you may be sure I have not forgotten the good turn you did me when I needed it so badly.

"Let that real estate matter rest for a moment while I tell you how the miracle happened. It won't take five minutes. It all seems simple as A B C as I look back on it now. And come to think of it, it was simple and perfectly natural.

"My new life began when I discovered how to save money. That happened soon after I started in the new job, and it all came about right in my own home. Our family cash account was in terrible shape at that time. Both my wife and I had been used to luxuries at home and 'charge it to Dad' had been our easy way out of any money problem.

"But it was different now and our sole source of supply was my salary of \$3,000. We never went to the theatre that we didn't have the unpleasant feeling that we were using money that ought to go for coal or clothes or food. We seldom bought anything without feeling as though we were cheating ourselves out of something else.

"That year we didn't save one cent. Besides that, we woke up on New Year's day to find a big bunch of unpaid bills to be taken care of somehow or other out of future salary checks.

"When I asked myself the reason for all this I found that I did not know the reason, and no more did my wife, because we hadn't the faintest idea what our money had been spent for.

"Then I looked around among our friends and learned a great lesson.

"The Weeds, I knew, were getting more than \$5,000 a year. They lived in a modest apartment, did not wear fine clothes, seldom went to the theatre, did little entertaining, yet we knew they barely had enough money to pay current bills. They found it out of the question to save any money and found themselves, so Weed told me, in the same predicament that we had faced on New Year's Day.

"In the case of the Wells I found a very different story and one that set me thinking hard. Their income was \$2,000 a year, yet, to my amazement, they confided to Mrs. Brown that they had saved \$600 a year ever since they were married. They didn't have any grand opera in their program—except on their little Victrola—but they did go to the theatre regularly, they wore good clothes, entertained their friends Sunday evenings and were about the happiest and most contented couple of all our married friends.

"Then I discovered the magic secret. The Weeds never knew whether they could afford to make a given expenditure or not. Theirs, like ours, was a sloppy, happy-go-lucky existence with the happiness cut out because they were always worried about money matters. They kept no accounts and just trusted to luck—and so had bad luck all the time.

"The Wells, on the other hand, were getting more real enjoyment out of life than people with five times their income—simply because they knew what they could afford to spend.

"The difference between these two families was that in one case the expenditures were made without any plan—while in the other the income was regulated on a weekly budget system.

"Right there I got my Big Idea and my key to success and happiness.

"We sat down that evening and made up a budget of all our expenses for the next fifty-two weeks. We discovered leaks galore. We found a hundred ways where little amounts could be saved.

"And in no time we were engaged in the most fascinating game either of us had ever played—the game of 'Money Saving.'

"In one short month we had a 'strangle hold' on our expenses and knew just where we were going. In one year my wife proudly produced a bank book showing a tidy savings account of \$800.

"In the meantime an extraordinary change had come over me in business because of my not having to worry about my personal affairs. I was able to give my employer's affairs my full, undivided attention during business hours instead of being harassed and worried as I had always been before.

"I didn't fully realize this until the president called me in one day and said, 'Lindsay, you have been doing exceptionally well. I have been studying your work for the last year and you have saved the company a lot of money. We have decided to give you an interest in the business.' And with that he doubled my salary. I never told him what had worked the change, but my wife and I know well.

"When you consider what my income is now, all that I have told you seems funny, doesn't it? But I am still working on the same plan. Result, I know just what I can subscribe to Liberty Bonds and the Red Cross and all the other war funds, and I never have to wonder whether I can afford to have a new motor car, because my budget tells me—to a penny.

"It all began when we cut a grip on our family expenses.

"So there you are. It is wonderful, isn't it? I often wish I might tell my story to

the thousands of young married couples who are having the hardest time of their lives just when they ought to be having the best time.

"If you ever get a chance, do pass this message on, for there are thousands who don't know what the trouble is, who would give everything to know 'the secret of the fat bank balance.'"

So now I have the opportunity and you are lucky, if only you will act on the wonderful message this story contains.

\* \* \*

The Ferrin Money Saving Account Book is built on the experience of Howard Lindsay. It is simplicity in itself. It contains 112 pages, size 8¼ x 10¾ inches, and is bound in dark blue seal grain fabrikoid, semi-flexible, stamped in gold. This book has been prepared by an expert.

This wonderful aid to money-making—this watchdog of your income and expenditures—will tell you to a penny where your money goes. It will keep absolute track of your expenditures. It will keep you out of debt. It will put money in the bank. It will provide, as nothing else can, a feeling of security, self-confidence and independence that comes only from the knowledge that you have a tidy and growing bank account.

The Ferrin Money Saving Account Book is the first and only device of its kind. It is the only account book based on the budget idea. It is the only one that provides for the income as well as the classified items of expense. It contains compact information on

**Keeping Expense Accounts.**

**Making An Inventory of Household Goods.**

**Making Safe Investments.**

**Making a Budget.**

The Ferrin System takes only two minutes a day. No knowledge of bookkeeping is required. Any child who can read, can keep the accounts in the Ferrin Book. This method is not a hard task. It is just fun. It is more enjoyable than a game—because the pleasure lasts forever.

Skimping and saving are banished and you save money as easily as you spend it.

Now you will not worry about the money you spend for clothes, food, rent or the theatre. You will spend it freely and will have the time of your life because you will know how much you can afford to spend.

## Examine It Free

See how magically the Ferrin Book works. We know what you will think of it when you see it. So we are willing to send you the book without your sending us any money in advance. Just mail the coupon, and back will come the book by return mail. When you have seen what big returns the Ferrin System will pay you, send us only \$3. If you feel that you can afford not to have it, return the book and owe us nothing. Act now, for the sake of your bank account and your future.

## BREAD AND BUTTER?

Under the combined motives of patriotism and economy many people have taken to synthetic butters who hitherto have refused to taste of anything other than that prepared from the fluid extract of Vacca. But dietary habits are hard to break so it is usually necessary to resort to camouflage in introducing a new food. After the housewife has been won over the conservatism of the servant has still to be surmounted. In one case I know of the attempted introduction of margarine into the household caused the cook to leave. She had never worked in a family where they did such thing and she wasn't going to, so there. The mistress accepted her resignation and got another girl to whom she carefully explained that margarine was a pure vegetable compound, free from the tuberculosis germs that sometimes come in butter and considerably cheaper. The new cook listened attentively and said "yes m'm." Henceforth margarine was duly served at the dinner table but when the bills came in the mistress discovered that her cook had been buying gilt-edged butter at 55 cents a pound for her own eating in the kitchen.

Another lady had been using margarine for some time but being afraid of the disapproval of her housemaids she used to buy it herself. One day when she was gone the supply ran out and butter of the old-fashioned sort was ordered from the grocery. But when the mistress of the house returned she found the family complaining that the butter was nothing like so good as it had been in past weeks.

A professor of chemistry in the University of Atlantis suggested to his wife some months ago that she try one of these new butter substitutes which he had analyzed and found to be satisfactory. She did not receive the suggestion enthusiastically and never referred to the subject again, so the other day he made up his mind to trick her into trying it. He bought a pound of margarine and stole some annatto to color it. I should explain that he is ordinarily an honest man and never steals unless he has to. This time he had to for the laws of the state forbid the grocer to sell or give away any coloring matter with margarine but he keeps a box of annatto capsules on the counter and if customers help themselves he never calls a policeman.

Well, the chemist came home while his wife was working with the other ladies of the faculty at Red Cross supplies and taking out the pat of butter from the icebox he tinted and salted and shaped the margarine till it looked and tasted just like what was in the butter dish.

That evening he watched his wife narrowly as she buttered her bread and potatoes but she did not seem to notice the difference. When dinner was over he asked her if she noticed anything peculiar about

the butter. She said she did not. Then his suppresst laughter burst out and he said: "That's margarine you've been eating!" "I know it," his wife replied calmly. "We've had nothing else in the house for the last three weeks."

## REMARKABLE REMARKS

**EZRA POUND**—It rests me to converse with beautiful women.

**EMPEROR WILLIAM**—I represent monarchy by the grace of God.

**ELIZABETH MALCOLM**—The private soldier is the glory of democracy's army.

**PRIMA DONNA GALLI-CURCI**—One must be clothed and for that reason I am clothed.

**BILLY SUNDAY**—Imagine a baseball game without an umpire. Good night.

**SENATOR OLLIE JAMES**—Let me plead with all Americans to not shake the rope.

**REV. W. T. McELVEEN**—The only quality common to all humanity is inequality.

**CARDINAL GIBBONS**—I have always found my countryman fairminded and just.

**GERALD STANLEY LEE**—A good deal of white paper helps people to notice an idea.

**ED. HOWE**—I do not know a great deal, but I can usually tell when my hair needs cutting.

**RAILROAD PRESIDENT E. P. RIPLEY**—The main thing is to marry a girl with good common sense.

**THEODORE ROOSEVELT**—I don't believe in going to war at all if you can help it, but if you go to war—go to war.

**GOVERNOR SENIOR BAMBERGER**—We do not know how long the war will last, but it must continue until it ends right.

**THEODORE P. SHONTS**—The greatest responsibility in the world for the safety of human lives is assumed by the subway.

**A. J. HEMPHILL**—If we win this war we must realize that a slacker dollar is on a par with a draft dodger or a shirker of work.

**ROY K. MOULTON**—This seems to be a closed season for Mexican generals. I haven't heard of one being shot for three months.

**HERR OSBORN**—What a foolish caricature the agitation of our enemies has made out of the picture of the German Crown Prince!

**VICE-PRESIDENT MARSHALL**—I have never been able to dispute that constitutionally and legally the South had its right to secede.

**GENERAL FOCH**—Hurry! Hurry! Hurry! Don't lose even half a minute. If you do your utmost you will make the right kind of victory sure, and you will hasten it.

**PRESIDENT WILSON**—Every sign of these terrible days of war and revolutionary change bids us search our hearts thru and thru and make them ready for the birth of a new day.

**EX-PRESIDENT CHARLES W. ELIOT**—In all the European countries which are now united against Germany many traces of the feudal system survive which stir in the American people sometimes amusement or scorn and sometimes wrath.

**MONTAGUE GLASS**—Next to driving a four horse coach down Fifth Avenue in the afternoon rush hours with a fellow playing a New Year's Eve horn on the back of the roof, holding a box at the Metropolitan Opera House is the highest grade form of publicity that exists.

## What has *This* to do with your Bank Account

ONE of the great responsibilities entailed by the war has fallen on the shoulders of the industrial plant. With restricted fuel supply, they are now accepting the role of "commissaries to the world." But were it not for one thing—industrial efficiency—this enormous overload might have left you neglected—deprived of necessities—and perhaps with an even lower valued dollar.

Plant efficiency has absorbed a great part of the overload—and thus protected your share of the supply. Ten thousand materials as strange looking and strange working as this Sea Ring Packing\* (maintenance materials as they are called) have added mightily in raising the production of the manufacturers—and protected your purchasing power—your Bank Account.

In our measure of values, there is no more important group of products among the many we make than those whose function it is to save power, heat, friction, wear and leakage, used in the maintenance of hundreds of plants. For to the extent that they have served and are serving industry, they are serving the public, which is the ultimate realization of this company's aims.

\*Sea Ring Rod Packing marks a new era in packing rods and plungers of engines, pumps and other machines. Other packings are put into the stuffing box and constantly forced against the rod by the pressure of the stuffing box gland. Constant friction between rod and packing consumes and wastes power. Sea Rings are *not* forced against the rod by gland pressure. Their packing lip is forced against the rod by the pressure of the fluid that tries to escape and so the pressure of Sea Ring Packing automatically varies as the tendency of leakage. This automatic action saves power due to elimination of unnecessary friction between rod and packing. A reduction of friction also means less wear on packing and rod and longer life for both. The Sea Ring typifies the aims of the Johns-Manville Company in their conscientious effort to better conditions in every field to which we render service.

**"ALL IS GOING WELL"—GENERAL FOCH**

*A snapshot of the commander-in-chief of the Allied armies in France with General Pershing, commander of American forces overseas*

## THE ANSWER

**W**ITH clear vision and splendid vigor the President has given America's answer to the great German offensive in the West and the devilish machinations of German conquest in the East.

He makes the distinction vivid between "the ideals of justice and humanity and liberty, the principle of the free self-determination of nations, upon which all the modern world insists," and the German "ideals of power, . . . the principle that the strong must rule the weak, that trade must follow the flag, whether those to whom it is taken welcome it or not, that the peoples of the world are to be made subject to the patronage and overlordship of those who have the power to enforce it."

This is the conflict in which the world is now unmistakably engaged. In such a conflict there is but one choice that we the free people of the United States can make. The choice shall be made plain in "the utter sacrifice and self-forgetfulness with which we shall give all that we love and all that we have to redeem the world and make it fit for free men like ourselves to live in."

It has taken a long time for the American people to be convinced beyond the peradventure of a doubt that "the issues that hang upon the outcome" of the stupendous struggle go so deep as this. We have been slow indeed to admit, to ourselves and to the world, that the contest is between justice and dominion. We have been reluctant to believe that the German leaders were seeking "the execu-

tion of their own will upon the other nations of the world." But we can no longer blind ourselves to the truth. The world must be free or it must be German. There is no middle ground.

"Germany," says the President with perfect accuracy, "has once more said that force, and force alone, shall decide whether justice and peace shall reign in the affairs of men, whether right as America conceives it or dominion as she conceives it shall determine the destinies of mankind."

America accepts the challenge. The American people will oppose to the diabolical force that the masters of Germany have proclaimed as the final arbiter of the destinies of the world the righteous force which is the champion of justice, of right and of humanity. "The majesty and might of our concerted power shall fill the thought and utterly defeat the force of those who flout and misprize what we honor and hold dear."

The President of the United States speaks the inmost heart of the American people when he voices the one response it is possible for them to make: "Force, force to the utmost, force without stint or limit, the righteous and triumphant force which shall make right the law of the world and cast every selfish dominion down in the dust."

"Our utmost sacrifice, the lives of our fittest men, and, if need be, all that we possess," shall be thrown into the scales against the German pretensions to the mastery of the world.

## THE DUTIES OF LITTLE NATIONS

**W**E hear much today about the rights of the little nations, and rightly so, for in such a lawless community as our planet the weak can find neither safety from attack nor redress for injury except by the favor of those who are at once powerful and good natured. But too frequently the nationalist assumes that whereas the Great Powers have both rights and duties the minor nationalities have rights only and are at liberty to pursue their immediate interests without any regard to the effect of their actions upon the rest of the world. This is unjust and even demoralizing, for moral irresponsibility and "sacred egotism" are as bad for Poland as for Germany, for Ireland as for Britain.

Of course it would be unjust to expect the European neutrals to court the fate of Belgium or Rumania by plunging into the war either to avenge the murder of their citizens on the high seas or from motives of sympathy with the righteous cause of the Entente Allies. Only the Great Powers have the moral duty to assume the crusaders' armor; the little nations do their share if they keep peace and neutrality within their own frontiers. But we must at least insist that they do not give active aid and comfort to the enemies of humanity in pursuit of their own narrow national aims.

Agents of Bulgaria, Lithuania, the Ukraine and other long oppressed peoples have a deplorable habit of taking for granted the right to throw their strength to the highest bidder regardless of the purposes for which that strength may be used. One of these nations, at least, made the fatal, selfish choice with most disastrous results. Bulgaria stood high in the esteem of the friends of nationality when the Great War opened. In both England and the United States she was widely regarded as the most progressive and enlightened of the Balkan kingdoms, and she had a very real grievance in the fact that thousands of her nationals in Macedonia, Adrianople and the Dobrudja were still under alien rule. But Bulgaria traded the sympathy of the world for an alliance with the unspeakable Turk and a war of revenge against her Balkan neighbors; incidentally becom-

ing the central link in the long chain of Berlin-Bagdad and thus strengthening the Central Powers, prolonging the Great War by years and endangering all the liberties of Europe.

There appears to be some danger that the new-born nationalities in eastern Europe will make the same mistake as Bulgaria. None of them love Germany, but they may make "deals" with her, forgetting the wise maxim that those who sup with the Devil require long spoons. Finland, distracted by civil war, invited the Germans in, and now cannot invite them out! Poland, Lithuania, the Baltic states and the Ukraine have at times forgotten idealism to play "practical politics," balancing the world's welfare against a few miles of unredeemed territory, only to find themselves all alike the catspaws of Kaiserism. They know now that they have little to hope from the Central Powers, but they should also be told that if the Allies are to continue to fight for their liberties (which is our present most righteous intention) there must be no more haggling with the common enemy at the expense of the common cause.

Finally, a word as to Ireland. No national cause in human history has attracted more widespread sympathy than the Irish, and upon that sympathy has been built a mighty structure of reforms which at last is culminating in the shining promise of Home Rule. If Ireland remains loyal, not necessarily to Britain but to her own idealism, she will retain and increase that world friendship which has meant so much to her. But Ireland must beware of "Ourselves Alone." The universal application of the Sinn Fein motto would mean the death of Ireland, for only the spirit of international altruism could prevent so small a nation from going under in the struggle for existence. If Ireland will remember her old debts of gratitude to France and to America she will not be forgotten by them, but if she sacrifices the independence of France and the security of America to an ancient grudge against England she herself will be forgotten.

The Golden Rule is the last word of political wisdom for all nations, great and small alike.

## THE PEOPLE MUST KNOW

**W**ITHIN the last two or three months a great change has been effected in the mind of the American people upon the war and its significance. They were already loyal in their support of the Government and earnest in their determination that America should do its full part in pushing the conflict to a victorious end. But too much of their loyalty was the act of faith, as an incident will illustrate.

One of the lecturers sent out by the National Security League had been explaining to a rural audience the causes of the war and the reasons for our own participation. In simple terms he had stated a large number of facts, avoiding argument and emotional appeal. At the close of the address an intelligent farmer made his way to the platform and said:

If we could have known these facts long ago our relation to this war would have made a different story. I was opposed to our going into it. I voted for President Wilson because I believed that he had kept us out of war. When he asked Congress to declare war and Congress acted upon his recommendation I was sorry, but I believed that the first principle of good Americanism is to accept the decision of the majority. I felt that I did not understand the matter, but I believed that Mr. Wilson and the Congress did, and I was willing loyally to follow and support them. I mean by this to say that I have been for the war as an act of faith and not because I understood it. After listening to what you have said tonight I know that my whole attitude toward it will be different. I begin to understand it, and to know that we were right in going into it. It seems to me now that the most important work to be done is to put the facts before the people in a simple fashion, so that we shall all know, instead of merely believing, that we are doing the right thing.

The incident is not unique. Everywhere speakers have discovered the same attitude of mind, and it is certain that the work of instruction and explanation which is now being carried on in every part of the country is of paramount importance.

For this war is a crisis in the history of the human mind. It is a war for justice, democracy, humanity and the control of the baser passions by intelligence. Democracy rests upon popular intelligence and knowledge. An autocracy rests upon unquestioning faith and obedience to the imperial command. Ultimately the safety of our American political system and of all the ideals for which America, Great Britain, France and Italy are fighting is resolvable into factors of knowledge and understanding. The people—the whole people, the farmers, the workingmen, no less than the business and the professional men—must know all the more important facts about this war. Above all, the school children and the young people must know about it, and herein especially lies the immense importance of the work which the university professors under the direction of the Committee on Patriotism of the National Security League are now doing in giving their time to patriotic instruction.

The reports which we have received show that everywhere the school and college audiences react enthusiastically to these addresses. They awaken at once to the true story of the American Revolution. They have read or been told, as their teachers and their text-books have presented the matter, that the first great war in which this nation was born and baptized was supported by liberal-minded Englishmen like Burke and Fox and Pitt, but they have not quite grasped the fact that in reality it was not a conflict between Englishmen living in these colonies and real Englishmen living in Great Britain, but was rather between real Englishmen on both sides of the Atlantic and Germans. It was a war against the stupidities and brutalities of a coarse and ignorant German King of England who couldn't speak the English language, who, with the support of a selfish privileged class of Tories, not unlike the Junker gang of Prussia, was Teutonizing British politics. And when that precious crowd was unable to obtain enough English soldiers to put down the American Revolution it resorted to hired Hessians, who were sent over here to commit atrocities,

which they did in fact commit, of the same sort that their kindred have been committing in France and Belgium.

Not less keen is the interest which the boys and girls show in the true story of the Franco-Prussian war, which, for more than a generation, the world believed was unrighteously begun by the French Emperor Louis Napoleon and the French army. The truth became known when Prince Bismarck, in a newspaper interview later confirmed and expanded in his memoirs, confessed that he planned and began that war by ingenious misrepresentation and lying, including the falsification of a telegram relating to the Prussian attempt to put Prince Leopold of the Hohenzollern royal family upon the throne of Spain.

Keenest of all is the interest shown in the story of the Prussian plan to create a Mittel-Europa extending from Hamburg to the Persian Gulf and the endless acts of aggression, perfidy and arrogance with which preparations for its realization were carried on from 1895 to 1914; and in the history of Germany's insolent behavior toward the United States, from the things that happened at Manila in 1898 when Admiral von Goetz told Commodore Dewey that in about fifteen years Germany would start a great war to take Paris, crush England, take New York and Washington and a billion dollars from the United States, and dispose in her own way of South America and the Monroe Doctrine, down to the offer made by the German Government after the war began, to hand over to Mexico a number of our southern states in exchange for Mexican support of Germany.

These are only a few of the facts which every American should know about and which never fail to produce their effect when presented in a straightforward, quiet way to audiences of any description, young or old.

The great task that lies before us today is to destroy, root and branch, the whole system of ideas, purposes and ways and means which constitute German militarism and German Kultur. It will not be enough to defeat Germany. The monstrous organization of brutalities and falsehoods which has ruined Germany and desolated the world must, to use President Wilson's phrase, be laid in the dust. A long and costly struggle may be before us, and it is imperative that the whole people should know what it means, why we are committed to it, and why as a civilized and Christian people we must see it thru to the end.

## THE DURABILITY OF CIVILIZATION

**B**EFORE the Great War it was the fashion to regard our twentieth century civilization as a fragile piece of artistry, easily broken by any of a hundred possible accidents and, when once broken, impossible to rebuild. Even the faintest rumor of war set a-trembling the balance of international credit upon which the industrial life of civilized nations depended, investors were ruined, factories closed and thousands of workingmen joined the ranks of the unemployed. If such were the effects of the shadow of war, what could be the result of war in actual fact? Surely nothing less than social collapse, hunger in the cities, the red flag, the guillotine and the bottomless pit! Nor was war the only peril hid in ambush along the highroad of progress. Periodic scares of the Imminent Failure of the Coal (or wheat, or oil, or nitrate) Supply; Race Suicide and the Rapid Multiplication of the Unfit; the Yellow Peril; the Social Revolution, and many another alarm from the increase in heart disease to the possible recurrence of the ice age were forced upon the attention of the reading public.

Then, in 1914, the world began to throw things at its own civilization. That delicate piece of eggshell china was hurled from its pedestal, buried under a shower of stones and stamped upon with all possible emphasis. More people were taken from productive industry than had, a few decades earlier, been engaged in it. More men were killed than in any previous war in history. More money was spent and

greater national debts accumulated than in any dozen other wars summed together. For nearly four years the most powerful and civilized nations in the world have bent every energy to wrecking the work of all the Christian centuries. Great mischief has, of course, been wrought. But the wonder is that so much is still left intact; the world stands like London after a Zeppelin raid, with a few noble structures in ruins but with streets still busy and the majority of buildings untouched. That France, Germany and Britain are still full of vitality is proved by the vigor of attack and counter-attack in Picardy. The industrial output of these nations, with every available man in the trenches or on lines of communication, has greatly increased with the war; and even the production of luxuries, the provision of amusement and the carrying on of scholarly research in the universities and learned periodicals has been but partly curtailed. No phase of what we term civilization has altogether disappeared, and while taxation has sapped many a large fortune there is some compensation for this in the higher scale of wages which the war has brought to mine and factory.

Only in eastern Europe has social order succumbed to cannon shot. But the Balkans and Asiatic Turkey are lands where war has always existed even under the mask of peace and anarchy under the mask of law. Russia, it is true, has fallen in a few months from the position of one of the Great Powers (perhaps the greatest in potential strength) to a mere geographical expression, a formless prairie tormented with drifting tribal wars. But however darkly we may paint the present or the future of Russia we must do so with colors borrowed from the past. In spite of all its splendid possibilities, Russia was in fact still a barbaric state when it ventured the unequal contest with the compact military empires of Central Europe. A nation ruled by such as Rasputin and Stürmer, where government existed to repress education and public spirit, where treason was rewarded and patriotism viewed with suspicion, could expect no other fate in an exhausting war than the pitiless unmasking of its real self, and that is all that has happened to Russia. But where civilization has struck root in popular soil no earthquake shock has yet proved able to uproot it.

## NO MAN'S LAND

THERE is one territory and one only on the surface of this terraqueous globe that has not yet been appropriated by any nation. This country, twice as big as Belgium, contains vast deposits of magnetite equal to the best Swedish iron ore and of coal equal to the best Welsh, all within easy access from good harbors, and only a few days' steam from European ports.

We are accordingly not surprised to hear that Germany lays claim to this *terra nullius* and is driving in that direction as fast as she can. These are the stepping stones in her northward drive: Kurland, Livland, Esthland, Aland, Finland, Lapland—then comes the jumping off place and if she makes the jump she will land in Spitsbergen. (Always spell it with an s, the Dutch way. If you spell it with a z you tend to substantiate the German claim to it.) In this *Drang nach Norden* the Germans have already taken five of the steps, but are now held up in Lapland by a curious combination of Russian Bolsheviks, Finnish Red Guards, British blue-jackets and American engineers, serving under a commission from Trotzky to defend the freedom of the Arctic Ocean against a joint force of Finnish White Guards, ex-Russian soldiers and German artillerymen. We expect any day to hear that the Spitsbergeners have declared themselves a free and independent nation and humbly beseech the Kaiser to send one of his sons or at least one of his wife's relations to rule over them. The fact that there are no Spitsbergeners except summer boarders who come to the archipelago after fish, scenery, or coal would not preclude such a declaration.

The reason why Spitsbergen has remained uninhabited for three hundred years since its discovery is because nobody could be induced to live there. Even the shipload of convicts once taken there for settlement struck at the sight of its desolate mountains and declared that they had rather go home and be hanged. The Dutch may claim it by right of discovery in 1596. But the British claim it by right of utilization as a whaling station after its rediscovery by Henry Hudson. (Don't spell it "Hendrik" or you will confirm the Dutch claim. He was flying the Dutch flag when he discovered New York City, but the English flag when he discovered Spitsbergen.) If you will take down your Hakluyt's "Voyages" you will find that these islands fell within the scope of the charter granted in 1555 by King Philip and Queen Mary to the "Marchants adventurers" who, as the document states:

Have at their owne adventure, costs and charges, provided, rigged, and tackled certaine ships, pinnesses, and other meete vessels, and the same furnished with all things necessary have advanced and set forward, for to discover, descrie, and finde Iles, landes, territories, Dominions, and Seignoiries unknownen, and by our subjects before this not commonly by sea frequented, which by the sufferance and grace of Almightye God, it shall chaunce them sailing Northwards, Northeastwards, and Northwestwards, or any partes thereof, in that race or course which other Christian Monarches (being with us in league and amitie) have not heeretofore by Seas traffiqued, haunted, or frequented, to finde and attaine by their said adventure, as well for the glorie of God, as for the illustrating of our honour and dignitie royall, in the increase of the revenues of our Crowne, and generall wealth of this and other Realmes and Dominions, and of our subjects of the same.

The Merchant Adventurers of the Muscovy Company who laid the foundation of the Anglo-Russian commerce, continued ever since, received a monopoly of the Spitsbergen fisheries and in 1914 the islands were annexed under the name of "King James his Newland." But the Dutch name and the Dutch claim have not been shaken off, and there are other claimants also; Danish, Swedish, Norwegian and Russian. America, too, might file a claim, for the Arctic Coal Company spent more than \$2,500,000 developing the coal fields, but it appears that their plant and interests were sold in 1915 to a syndicate of Norwegian banks. A Russian company working a Spitsbergen claim for several years had been promised a subsidy of \$2,500,000 by the old Russian Government but, of course, the Revolution spoiled that and it seems that Trotzky at Brest-Litovsk signed away all Russian rights over Spitsbergen to Germany, which is now trying to foreclose on the property.

A year ago the Royal Geographical Society presented a memorial to the Secretary of State for Foreign Affairs calling attention to the mineral wealth of Spitsbergen and presenting evidence to prove that "Great Britain has an undoubted historical claim superior to that of any other nation to sovereignty over the islands, or at least over the most important of them." But Mr. Balfour replied thru his secretary that he was too busy to attend to such trifles just now—or words to that effect. Unfortunately the German Foreign Office seems to have plenty of time to attend to trifles like this—with possibly a potential value equal to Alsace-Lorraine—and it has cast some legal cords over the archipelago that may be hard to untie, unless of course all the Gordian knots are cut with the sword on the plains of Picardy.

And now the Laplanders have held a national convention and demand "a place in the sun." They must refer to the midnight sun.

"Prohibition will not prevent drunkenness." Well, neither the sixth commandment nor the "statute in such cases made and provided" prevents murder. But they both help.

The man who runs the Kaiser's car is not a *chauffeur* but a *schöfför*. Since the Kaiser can't drive the British out of France he is determined to drive the French out of German.

# OUR UTMOST SACRIFICE

## President Wilson's Message on the Anniversary of America's Declaration of War with Germany

Baltimore, Md., April 6.

FELLOW CITIZENS—This is the anniversary of our acceptance of Germany's challenge to fight for our right to live and be free, and for the sacred rights of freemen everywhere. The nation is awake. There is no need to call to it. We know what the war must cost, our utmost sacrifice, the lives of our fittest men, and, if need be, all that we possess.

The loan we are met to discuss is one of the least parts of what we are called upon to give and to do, tho in itself imperative. The people of the whole country are alive to the necessity of it, and are ready to lend to the utmost, even where it involves a sharp skimping and daily sacrifice to lend out of meager earnings. They will look with reprobation and contempt upon those who can and will not, upon those who demand a higher rate of interest, upon those who think of it as a mere commercial transaction.

I have not come, therefore, to urge the loan. I have come only to give you, if I can, a more vivid conception of what it is for.

"The reasons for this Great War, the reason why it had to come, the need to fight it thru, and the issues that hang upon its outcome, are more clearly disclosed now than ever before. It is easy to see just what this particular loan means, because *the cause we are fighting for stands more sharply revealed than at any previous crisis of the momentous struggle.* The man who knows least can now see plainly how the cause of justice stands, and what the imperishable thing he is asked to invest in is. Men in America may be more sure than they ever were before that the cause is their own, and that, if it should be lost, their own great nation's place and mission in the world would be lost with it.

I call you to witness, my fellow countrymen, that at no stage of this terrible business have I judged the purposes of Germany intemperately. I should be ashamed in the presence of affairs so grave, so fraught with the destinies of mankind thruout all the world, to speak with truculence, to use the weak language of hatred or vindictive purpose.

We must judge as we would be judged. I have sought to learn the objects Germany has in this war from the mouths of her own spokesmen, and to deal as frankly with them as I wished them to deal with me. I have laid bare our own ideals, our own purposes, without reserve or doubtful phrase, and have asked them to say as plainly what it is that they seek.

WE have ourselves proposed no injustice, no aggression. We are ready, whenever the final reckoning is made, to be just to the German people, to deal fairly with the German power, as with all others. There can be no difference between peoples in the final judgment, if it is indeed to be a righteous judgment. To propose anything but justice, even-handed and dispassionate justice, to Germany at any time, whatever the outcome of the war, would be to renounce and dishonor our own cause, for we ask nothing that we are not willing to accord.

It has been with this thought that I have sought to learn from those who spoke for Germany whether it was justice or dominion and the execution of their own will upon the other nations of the world that the German leaders were seeking. They have answered—answered in unmistakable terms. They have avowed that it was not justice, but dominion and the unhindered execution of their own will. The avowal has not come from Germany's statesmen. It has come from her military leaders, who are her real rulers. Her statesmen have said that they wished peace, and were ready to discuss its terms whenever their opponents were willing to sit down at the conference table with them. Her present Chancellor has said—in indefinite and uncertain terms, indeed, and in phrases that often seem to deny their own meaning, but with as much plainness as he thought prudent—that he believed that peace should be based upon the principles which we had declared would be our own in the final settlement.

AT Brest-Litovsk her civilian delegates spoke in similar terms; professed their desire to conclude a fair peace and accord to the peoples with whose fortunes they were dealing the right to choose their own allegiances. But action accompanied and followed the profession. Their military masters, the men who act for Germany and exhibit her purpose in execution, proclaimed a very different conclusion. We cannot mistake what they have done—in Russia, in Finland, in the Ukraine, in Rumania. The real test of their justice and fair play has come. From this we may judge the rest.

They are enjoying in Russia a cheap triumph in which no brave or gallant nation can long take pride. A great people, helpless by their own act, lies for the time at their mercy. Their fair professions are forgotten. They nowhere set up justice, but everywhere impose their power and exploit everything for their own use and aggrandizement, and the peoples of conquered provinces are invited to be free under their dominion!

*Are we not justified in believing that they would do the same things at their western front if they were not there face to face with armies whom even their countless divisions cannot overcome?* If, when they have felt their check to be final, they should propose favorable and equitable terms with regard to Belgium and France and Italy, could they blame us if we concluded that they did so only to assure themselves of a free hand in Russia and the East?

Their purpose is, undoubtedly, to make all the Slavic peoples, all the free and ambitious nations of the Baltic Peninsula, all the lands that Turkey has dominated and misruled, subject to their will and ambition, and build upon that dominion an empire of force upon which they fancy that they can then erect an empire of gain and commercial supremacy—an empire as hostile to the Americas as to the Europe which it will overawe—an empire which will ultimately master Persia, India, and the peoples of the Far East.

In such a program our ideals, the ideals of justice and humanity and liberty, the principle of the free self-determination of nations, upon which all the modern world insists, can play no part. They are rejected for the ideals of power, for the principle that the strong must rule the weak, that trade must follow the flag, whether those to whom it is taken welcome it or not, that the peoples of the world are to be made subject to the patronage and overlordship of those who have the power to enforce it.

That program once carried out, America and all who care or dare to stand with her must arm and prepare themselves to contest the mastery of the world—a mastery in which the rights of common men, the rights of women and of all who are weak, must for the time being be trodden underfoot and disregarded and the old, age-long struggle for freedom and right begin again at its beginning. Everything that America has lived for and loved and grown great to vindicate and bring to a glorious realization will have fallen in utter ruin and the gates of mercy once more pitilessly shut upon mankind!

The thing is preposterous and impossible; and yet is not that what the whole course and action of the German armies has meant wherever they have moved? I do not wish, even in this moment of utter disillusionment, to judge harshly or unrighteously. I judge only what the German arms have accomplished with un pitying thoroughness thruout every fair region they have touched.

WHAT, then, are we to do? For myself, I am ready, ready still, ready even now, to discuss a fair and just and honest peace at any time that it is sincerely purposed—a peace in which the strong and the weak shall fare alike. But the answer, when I proposed such a peace, came from the German commanders in Russia and I cannot mistake the meaning of the answer.

I accept the challenge. I know that you accept it. All the world shall know that you accept it. It shall appear in the utter sacrifice and self-forgetfulness with which we shall give all that we love and all that we have to redeem the world and make it fit for free men like ourselves to live in. This now is the meaning of all that we do. Let everything that we say, my fellow-countrymen, everything that we henceforth plan and accomplish, ring true to this response till the majesty and might of our concerted power shall fill the thought and utterly defeat the force of those who flout and misprize what we honor and hold dear.

Germany has once more said that force, and force alone, shall decide whether justice and peace shall reign in the affairs of men, whether right as America conceives it or dominion as she conceives it shall determine the destinies of mankind. *There is, therefore, but one response possible for us: Force, force to the utmost, force without stint or limit, the righteous and triumphant force which shall make right the law of the world and cast every selfish dominion down in the dust.*

# THE STORY OF THE WEEK

**The Third Phase** The great German offensive that started on March 21 has now completed its third week. During the first week it made amazing progress, owing, as we now know, to the failure of General Gough's forces to hold the bend in the Somme River opposite St. Quentin. This defection, which might have proved fatal, was remedied by the rapid extension of the French left, which closed the gap by making connection with the British right before Amiens. The British left at Arras held firm, and with this point as a hinge the right or southern end of the forty-mile line swung back to the point about ten miles east of Amiens, where it joined with the extended French front.

At the juncture before Amiens the Germans directed their main attack during the second week, but, exhausted as they were by their rapid advance of thirty-five miles in the first week, they were not able to make any important gains. The villages in forks of the Somme, the Avre and the Luce where these three rivers run together southeast of Amiens changed hands rapidly for a few days, with no permanent advantage to either. Now the Germans have brought up their trench mortars and other heavy artillery, so we may expect another attempt to drive the point of their wedge into Amiens. Even without a further advance they can bombard the city and the railroad leading from Amiens to Paris, for it is only five miles from the German front.

Foiled then, at least temporarily, in their effort to drive ahead the point of their wedge, the Germans set themselves to widen it. A vigorous attack on Arras proved a costly failure. Attempts to break the British between Arras and Amiens at various points,

Bucquoy, Albert, Dernancourt and Hamel, were fruitless. So in the third week of their offensive the Germans inaugurated movements against the Portuguese at Neuve Chapelle on their right and against the French at Couchy on their left.

## Hindenburg Castles

Field Marshal Hindenburg is trying out on the western front the strategy that on the Russian side gave him his reputation, and has been called by the German military critics, "Hindenburg's castle," from its resemblance to the chess move of that name. It consists in a sudden shift of troops behind the front and opening a new attack at some distance to the right or left. So now when attention was concentrated upon the Somme theater and the public was speculating as to whether he intended to strike at Amiens or Paris, a new offensive opens out at Neuve Chapelle fifty-five miles to the north of the Amiens sector.

This is, like the Somme, a famous battlefield, the scene of the heroic stand of the Canadians at Festubert and the disastrous British charge at Neuve Chapelle three years ago. Here a Portuguese division was stationed, which may explain why it was selected as the point of attack, for the enemy is determined to take advantage of whatever lack of coördination as is inevitable at the junction of alien forces.

The battle opened early on the morning of April 9 with a bombardment more severe than any yet seen on the Somme. The German shells fell upon the villages, roads and railroads for miles in the rear. At 5:15 the barrage fire was lifted to the second line and the Germans took the first row of Portuguese trenches. At 7 a. m. the barrage was lifted again to allow the Germans to charge the second line. By noon the enemy had advanced three miles and by night they had crossed the Lys River four miles from the front. South of Neuve Chapelle four German divisions attacked Givenchy, held by the British Fifty-fifth Division. Twice the town was lost, but twice it was regained by bayonet and bomb.

After the Portuguese had been driven back between Neuve Chapelle and Armentières the Germans launched an attack against the British line between Armentières and Ypres. Here they attacked the famous Messines Ridge and Ploegsteert Wood. Penetrating three miles to the westward brought them to the rear of Armentières on the north as they already were on the south, so that town, demolished by the bombardment and rendered uninhabitable by gas, was abandoned by the British. Sixty thousand gas shells were used in this attack. Arras, which lies between the new offensive and the old, has been evacuated by its civil population.

## Lloyd George's Account of the Battle

In his speech to Parliament introducing a bill for the increase of the man power, Premier Lloyd George began by saying:

We have now entered the most critical phase of this terrible war. There is a lull in the storm, but the hurricane is not over. Doubtless we must expect more fierce outbreaks, and ere it is finally exhausted there will be many more.

The fate of the empire, the fate of Europe and the fate of liberty throughout the world may depend on the success with which the very last of these attacks is resisted and countered.

Up to the end of 1917, the Premier stated, the Germans' combatant strength in France was as two to the Allies' three, but owing to the collapse of Russia and the support of certain Austrian troops, the German infantry on the western front was brought up to a strength approximately, tho not quite equal to the strength of the Allied infantry. The Germans were slightly inferior in artillery and considerably inferior in cavalry and aircraft. The time, strength and place of the German offensive was forecast with remarkable prevision by the General War Council at Versailles. Sir Henry Wilson, Chief of the Imperial Staff, came to the conclusion in January that the attack would come south of Arras, that it would be an attack on the widest front yet assailed, that the Germans would accumulate ninety-five divisions and would throw the whole of their resources into breaking the British line at that point, and that the objective would be the capture of Amiens and the severance of the British and French forces, and that the Germans might possibly succeed in penetrating the British line to the extent of half the distance of the front attacked. These predictions have been verified in almost every detail. The actual number of divisions employed by the Germans was ninety-seven and they advanced between twenty-five and thirty-five miles.

The enemy was greatly favored by the weather. The ground was dry and solid, and yet the mist so great that the Germans actually in some parts approached within a few yards of the front line before any one knew of their approach, so the cross fire of machine guns and artillery depended upon for the defense of the line was not available. The success of the German advance was due to the retirement of the Fifth Army and its failure to hold the line of the Somme or even to destroy the bridges behind them. General Gough, who commanded the Fifth Army, has been recalled in consequence, but it would be unfair to censure him until the circumstances are cleared up by the military inquiry. The Third Army under General Byng held the northern part of the line stoutly and the gap, which at one time threatened

## THE GREAT WAR

**April 5**—Japanese and British land at Vladivostok. Third Liberty Loan launched.

**April 6**—Germans renew attack before Amiens. Germans take Kharkov, Russia.

**April 7**—Germans drive back French to Ailette River, taking 2000 prisoners. American marines landed at Vladivostok.

**April 8**—German raid on American sector at Toul. Bolo Pasha reprieved to secure confession.

**April 9**—Germans launch attack against Portuguese front at Neuve Chapelle. Lloyd George introduces bill to extend draft and include Ireland.

**April 10**—Germans advance two miles on north of Armentières and five miles on south. First American infantry appears on Somme.

**April 11**—Armentières and Estaires evacuated by British. Bessarabia votes for union with Rumania.

THE GERMAN SALIENT

The effort of the Germans was to drive a wedge between the French and British forces and reach the sea by way of the Somme. Checked in their attempt to gain Amiens they have started a drive on the Oise toward Paris and at Neuve Chapelle, Armentières and Givenchy toward the Channel.

to let the Germans thru to Calais, was filled in by the French from the south.

Thus the German offensive failed in its main object, but "The enemy has captured valuable ground which is too near Amiens for comfort or security, and he has succeeded for the time being in crippling one of our great armies." The statements made by the enemy, as to the number of guns and machine guns captured and prisoners taken, are very considerably exaggerated. The losses of the battle roughly represent the relative strength of the combatants on both sides. There is an ample reserve of munitions in Great Britain and France. Reinforcements were rushed over as quickly as possible to fill up the gap in the British army. "No such large numbers of men ever passed across the Channel in so short a time." There have been raised in Great Britain for military and naval purposes "very nearly six million men." It will be necessary, however, to increase very materially the number of men available for military service. All boys over eighteen who have had six months' training are being sent over to France. Seven per cent of the men between forty-two and fifty may be called out and in some cases the age limit raised to fifty-five. More men must be withdrawn from industries and civil service, the age limit must be raised, and conscription applied to Ireland. The Germans, besides their reinforcements from Russia, will have a new force of five hundred and fifty thousand efficient young men, aged eighteen and one-half, to be thrown into the battle line.

Premier Lloyd George pays a high tribute to President Wilson for agreeing to send the American troops wherever they were most needed, instead of insisting upon keeping them in a separate unit. He states, however, that this idea does not emanate from General Pershing or President Wilson, but was

proposed by Mr. Balfour and himself in a conversation with Mr. Baker, and then submitted by Earl Reading to President Wilson.

### Conscription for Ireland

The most sensational point of Mr. Lloyd George's speech was the announcement that the new conscription measure would be applied to Ireland the same as to Great Britain. As he came to the passage "When an emergency has arisen which makes it necessary to put men of fifty and boys of eighteen into the army in the fight for liberty and independence" he was interrupted by Joseph Devlin with the remark, "And for nationalities." The Premier continued, "Especially, as I am reminded, the fight for liberty and independence and for nationalities, I am perfectly certain that it is not possible to justify any longer the exclusion of Ireland." Here John Dillon interrupted with the remark, "You will not get any men from Ireland by compulsion, not a man."

Mr. Lloyd George continued that no home rule proposal ever submitted proposed to deny the Imperial Parliament the power of dealing with all questions in relation to the army and navy. The quarrel in which we are engaged is just as much Irish as English and the Irish parties at the beginning of the war declared their intention to support it. He explained that there had been no register completed in Ireland and it would take some weeks before active enrollment begins. This aroused an uproar, the Irish members shouting "It will never begin," "You come across and take us," and "It is a declaration of war against Ireland." Joseph Devlin, Nationalist member from West Belfast, tried to move that the House report progress until the report of the Irish convention was presented. This aroused a storm of protest but Mr. Devlin shouted, "You cannot howl me down. I won't sit down. You may try Prussian methods in Ireland, but you won't try them on me." John Dillon, successor of the late John Redmond as leader of the Nationalists, said "If Irish liberty were at stake, I would not hesitate to support that policy. I never challenged the justice of war. I don't challenge it now." Mr. Devlin's motion was defeated by a vote of 323 to 80.

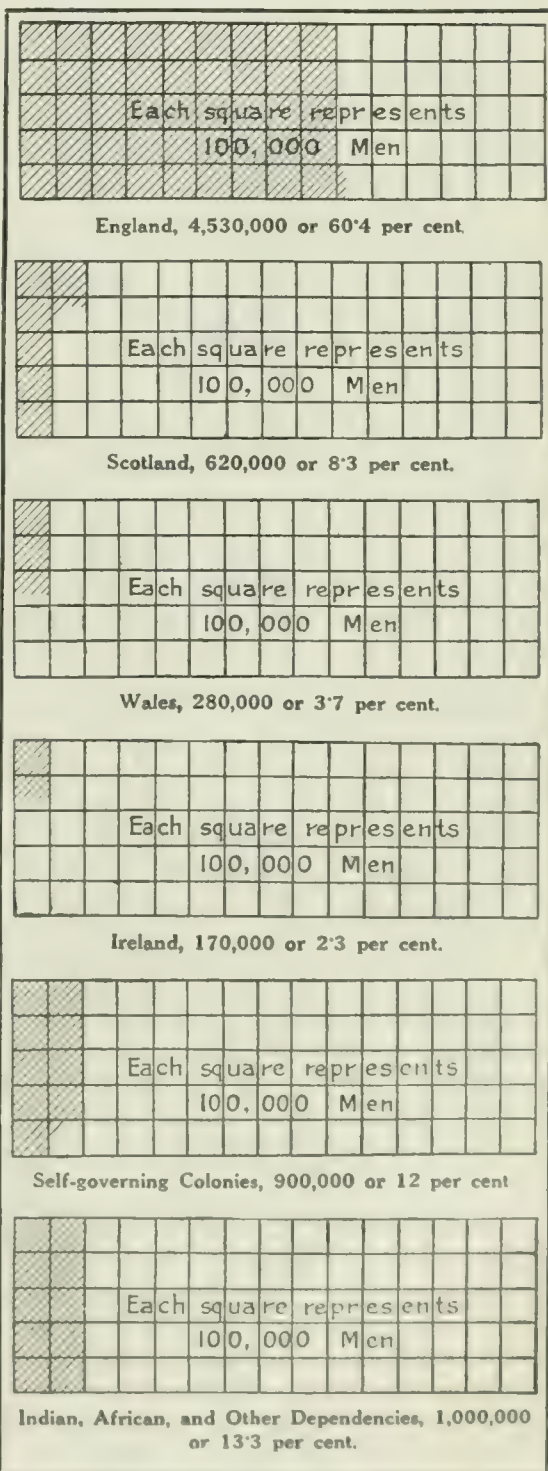

It is understood that the report of the Irish convention which had its first session on July 25 is now ready to be acted upon by Parliament. The introduction of two such controversial bills at the same time make it possible that a compromise may be arranged by which the Irish will consent to conscription as the price of home rule.

The opposition to conscription is not confined to the Sinn Feiners. The Irish Catholic bishops meeting at Dublin passed unanimously a vote of protest against conscription which they said would be "a fatal mistake surpassing the worst blunder of the last four years." The corporation of the city of Dublin by a vote of 39 to 30 warned the Government against revolt if any attempt were made to enforce conscription in Ireland.

### Austro-French Peace Parley

Ever since last summer there have been recurrent rumors that semi-official peace negotiations were in progress, but nothing definite was divulged and the press of all the belligerent countries mostly flaunted the idea of discussing terms with any but a beaten enemy. It was understood that representatives of the Entente and Central Powers had met for the purpose of negotiating exchanges of prisoners and non-combatants, that an international conference of financiers had been held in Switzerland and that the Socialists, altho they had not been allowed to hold a formal conference at Stockholm, had been in communication thru Sweden and Russia; but apart from these the public had no authentic information as to parleys over peace terms, except what took place in the public speeches of the heads of the different governments.

Now, however, we have definite con-

### WHERE ARE THE FIGHTING IRISH?

The situation which impels the British manpower bill, now under consideration in the House of Commons, is summed up in this diagram of the proportionate enlistment of men thruout the British empire. Each block of squares represents the total of 7,500,000 men raised by the empire. The shaded squares show the proportion of men contributed by each section of the empire

firmation from both sides that such negotiations were carried on at intervals between July, 1917, and March, 1918, by the representatives of France and Austria-Hungary. The Austro-Hungarian Foreign Minister, Count Czernin, in his speech of April 2 declares that "Premier Clemenceau had some time before the beginning of the western offensive inquired of me whether I was prepared for negotiations and on what basis." This statement Premier Clemenceau declared flatly to be a lie. The denial, however, appears to apply particularly to the implication that peace negotiations were initiated by Clemenceau. According to a statement of Prof. Paul Painlevé, the negotiations were opened under the premiership of M. Ribot in June, 1917. M. Clemenceau did not know of them until on November 18, when he became Premier as successor to M. Painlevé, he received a communication from the French agent as to the progress of the negotiations.

Whichever party made the first move it appears that the preliminary arrangements were made thru a Swiss intermediary and that on August 7, 1917, Major Armand, an attaché of the Second Bureau of the French Government, visited the Austrian representative, Count Revertata, at his private residence at Freiburg. Major Armand is the son of Count Armand, a distant relative of Count Revertata of Austria. With the approval of their respective governments Count Revertata and Major Armand entered into discussions on August 22 and 23 which, however, led to no results. They were renewed again in November and again at least as late as February 25, 1918. It appears, however, from the Austrian statement that there were other and more important peace parleys attempted:

When M. Clemenceau asked the Austro-Hungarian Foreign Minister whether he remembers that two months before the Revertata affair—that is, about a year ago—an attempt of a like nature was made by a personage of far higher rank, Count Czernin does not hesitate to reply in the affirmative. But for the sake of completeness and entire correctness it should be added that this attempt also led to no result.

So much for the establishment of the facts; for the rest, it need only be remarked that Count Czernin for his part

would see no reason to deny it if, in this or any similar case, he had taken the initiative, because in contrast to M. Clemenceau he believes it cannot be a matter for reproach for a Government to make attempts to bring about an honorable peace which would liberate all peoples from the terrors of the present war.

The dispute raised by M. Clemenceau has, moreover, diverted attention from the real kernel of Count Czernin's statement. The essence of this statement was not so much who suggested the discussions undertaken before the beginning of the western offensive, but who caused their collapse. And M. Clemenceau up to the present has not denied that he refused to enter upon negotiations on the basis of the renunciation of Alsace-Lorraine.

M. Ribot's ministry fell because the Premier refused to admit any compromise on the question of Alsace-Lorraine which the Socialists thought might be settled by a referendum of the people. Clemenceau is equally staunch on this question, and he quotes in support of the French position a letter from Emperor Charles of Austria, dated March, 1917, in which he alludes to "France's just claim relative to Alsace-Lorraine."

Altho Count Armand and Count Revertata were authorized by their respective governments to confer neither of them apparently was given any power to engage in formal negotiations. The Austrian representative in a signed statement dated February 25, 1918, said that his object was to obtain "from the French Government a proposition to Austria which might lead to future peace and be of such a nature as to be susceptible of being endorsed by Austria and presented to the German Government."

Austro-British  
Peace Parley

The personage referred to by Premier Clemenceau as a "figure high in the councils of the Entente Allies" is surmized to be General Smuts, the Boer leader, now a member of the inner War Council of the British Cabinet. He is said to have met in Switzerland Count Albert Mensdorff, who was Austro-Hungarian Ambassador at London when the war broke out. According to the story that has been in circulation, this conference lasted only three minutes. As soon as General Smuts was introduced to Count Mensdorff he said, "Is it true that you wish to make a

separate peace?" The Austrian diplomat began a long and evasive reply, but the British representative interrupted with the inquiry "Yes or no?" Obtaining no direct reply General Smuts said "Then—good night!"

This meeting was mentioned in the London *Times* of March 1st and was recently made the subject of inquiry in the House of Lords by Lord Willoughby De Broke, but he received a severe reprimand from Earl Curzon for putting such a question without previous permission of the Government.

Two hundred and fifty Japanese marines were landed at the Russian port of Vladivostok from one of the cruisers in the harbor on the morning of April 5. In the afternoon the British, who had not been notified in advance of the Japanese movement, followed suit by landing fifty men to guard their consulate. On the next day 250 more Japanese were sent ashore. Admiral Kato, in command of the Japanese squadron, called on the mayor of the city and explained that the action was purely local and temporal, exclusively for the purpose of restoring order and protecting foreign lives and property. Robbery and murder had become alarmingly frequent and the Russian authorities seemed powerless to suppress them. Most recently five armed Russians had held up a group of Japanese and demanded money. When this was refused they opened fire, killing one and wounding two of the Japanese.

But however justified the action of the Japanese may be the effect of it is, as President Wilson anticipated, to alarm and alienate the Russian people, who still regard the Japanese as their natural enemies. For once the bourgeoisie and Bolshevik press are agreed and with one voice they accuse the Japanese of attempting an imperialistic invasion with the connivance of

## INVENTOR OF THE SUPERGUN

The first shots from the German long-range gun bombarding Paris were fired by the inventor of the gun, Prof. Fritz Rausenberger, who also invented the famous 42-centimeter mortar. Professor Rausenberger is manager of the Krupp munition works in Essen

the Allies. They recognize American reluctance to concur in such action, but declare that unless the United States condemns "the robbers' attack upon revolutionary Russia by definite, unequivocal and immediate action" it must be counted among their enemies.

President Sukhanov and other officials of the Soviet or Council of Workmen's and Soldiers' Delegates of Vladivostok visited the various consulates to file protests. The Japanese consul refused to receive them except as private persons. The French consul declined to see them. The British and American consuls received them. When the news of the landing was telegraphed to Moscow, Acting Commissioner of Foreign Affairs Tchitcherin summoned the representatives of France, Great Britain and America and protested against "the Japanese attack upon the Soviet republic." He expressed regret that the Entente Powers had permitted such action and declared that the only solution was the immediate withdrawal of the troops. All the Siberian Soviets have been ordered to oppose armed resistance to the Japanese invasion. Many of the German and Austrian prisoners in Siberia were Socialists who surrendered to the Russians with little reluctance and now fear to return to their native land. These have generally joined the Bolsheviks and will form the mainstay of the new army which they are organizing.

The attitude of the Japanese Government was officially stated by Foreign Minister Motono in addressing a joint session of parliament on March 26 last:

The Imperial Government neither suggested nor proposed military action in Siberia. Nevertheless it regards with gravest apprehension the eastward movement of Germany. Hitherto Japan has received no joint allied proposal, but if such a proposal is received it will be considered most carefully. This will be especially the case if the Siberian situation becomes worse, requiring decisive steps on behalf of the interests of the Allies, in which event the Imperial Government will not hesitate to take prompt and adequate measures in a wholehearted manner.

It is desired to make it clear, however, that the Imperial Government does not regard Russia as an enemy. Japan will not adopt an aggressive policy toward Russia, and does not hesitate to declare unreservedly and sincerely the deep and warm sympathy of the nation for the Russian people.

In Washington The week which saw the opening of the third Liberty Loan campaign was otherwise a notably quiet week. Phrased in the terminology of the despatches from the front, it might be said that there were raids by pro-Germans and counter assaults by American tar-and-feather squads. In spite of the appearance of general inactivity along the line, steady progress was made both in the loan and in the other war activities of the nation. The keynote of the week was struck by the President, speaking at Baltimore, and throwing down once more the gage of force to the German Government. The aftermath of the Lenroot election indicated that political circles in Washington are inclined to consider that the best man had won, and to cooperate with a view

#### THE NEW WAR SECRETARIES

Increase of efficiency in the War Department is promised by the appointment as assistant secretaries of war of the two men who have lately held positions of chief executive importance under Secretary Baker. Edward R. Stettinius (left) has been in charge of the procurement and production of all supplies for the five army bureaus—Ordnance, Quartermaster, Signal, Engineer and Medical. As a member of the firm of J. P. Morgan & Co. he directed the purchasing of war supplies for the Allies during the first of the war. F. P. Keppel (right), formerly dean of Columbia University, has been virtually assistant to Secretary Baker in the War Department since America entered the war.

to eliminating party strife—even to the extent of avoiding certain contests for seats in Congress. Mr. Hoover drew still tighter the domestic restrictions on the use of wheat, the vital foodstuff. Arrangements were made to speed up both the draft and the sending of men to France.

More or less disturbing to the week's equanimity was the report of the Senate Committee on Military Affairs' committee on the Government's airplane program. The report was not long but it said much and said that in terms of unmistakable vigor. Basing its opinion on ten days of secret investigation, the committee told the Senate that:

1. The twelve-cylinder Liberty motor, as now being manufactured, can be used only in heavy planes. It cannot be used in the swift single seater fighting machines.

2. Only four Liberty motors have been shipped overseas, and the rate of production is disappointing.

3. Combat planes have not been manufactured as fast as is necessary.

Officials of the Government in charge of the manufacture of the motor are charged with having misled the public to believing quite the contrary from the facts as the committee finds them. "It is greatly to be regretted that the statements of Government officials have misrepresented the progress of the aviation program," says the report. "This has misled the public, and your committee, cognizant of the facts, has, in the performance of its duty, made this report to the Senate."

Constructive suggestions made in the report center around the proposal of placing the production of aircraft in the control of one executive, appointed by and directly responsible to the President. "The matter of production should be taken out of the hands of the signal corps entirely, and no

man who has any near or remote interest in a company manufacturing airplanes or engines should be permitted to act as adviser or be in authority. While we are developing American aircraft and American engines we should, temporarily, at least, procure an abundant supply of approved types of aircraft and engines of European design."

Reviewing some of the striking points in the testimony laid before it by Major General George O. Squier, chief signal officer of the army, the committee says: that 25,500 Liberty motors have been ordered; that the history of the negotiations for the adoption and manufacture of the combat plane has been disappointing; that finished parts for this plane will not be ready before June; that twenty aviation schools have been established; that there has been serious delay in securing planes for the cadets now abroad; and that training planes are being turned out as per schedule, over 3000 having been completed on April 1.

#### The Overman Bill

The Overman disloyalty bill, which was passed by the Senate on April 11 and returned to conference, has been a storm center of discussion in Washington. Spontaneous uprisings of mobs and groups of citizens against alleged pro-Germans have given heat to the debate. Colonel Roosevelt called attention vigorously to a certain provision of the bill, one "among many excellent propositions to put down disloyalty," placing in the class of disloyals any one who uses "contemptuous or slurring language about the President."

"This proposed law," declared the former President, "is sheer treason to the United States. Under its terms Abraham Lincoln would have been sent to prison for what he repeatedly said of

Presidents Polk, Pierce and Buchanan. It is a proposal to put the President in the position of the Hohenzollerns and Romanoffs."

The Senate debate brought out clearly the fact that no such provision had been in the bill as reported from the Judiciary Committee, but that a similar clause had been written into a bill proposed by Senator Myers of Montana. As agreed to by the conference committee of the two houses, the principal section of the bill is as follows:

Whoever, when the United States is at war, shall wilfully make or convey false reports or false statements with intent to interfere with the operation or success of the military or naval forces of the United States or to promote the success of its enemies, or shall wilfully make or convey false reports or false statements or say or do anything except by way of bona fide and not disloyal advice to an investor or investors with intent to obstruct the sale by the United States of bonds or other securities of the United States or the making of loans by or to the United States, and whoever, when the United States is at war, shall wilfully cause or attempt to cause, or incite or attempt to incite, insubordination, disloyalty, mutiny, or refusal of duty, in the military or naval forces of the United States, or shall wilfully obstruct or wilfully attempt to obstruct or discourage the recruiting or enlistment service of the United States, and whoever, when the United States is at war, shall utter, print, write, or publish any disloyal, profane, scurrilous, contemptuous, or abusive language about the form of government of the United States, or the Constitution of the United States, or the soldiers or sailors of the United States, or the flag of the United States, or the uniform of the army or navy of the United States, or any language calculated to bring the form of government of the United States, or the Constitution of the United States, or the soldiers or sailors of the United States, or the flag of the United States, or the uniform of the army or navy of the United States into contempt, scorn, contumely, or disrepute, or shall utter, print, write or publish any language calculated to incite or inflame resistance to any duly calculated Federal or state authority in connection with the prosecution of the war, or shall display the flag of any foreign enemy, or shall by utterance, writing, printing, publication, or language spoken, urge, incite, or advocate any curtailment of production in this country of any thing or things, product or products, necessary or essential to the prosecution of the war in which the United States may be engaged, with intent by such curtailment to cripple or hinder the United States in the prosecution of the war, and whoever shall advocate, favor, teach, defend, or suggest the doing of any of the acts or things in this section enumerated, and whoever shall by word or act support or favor the cause of the German Empire or its allies in the present war or by word or act oppose the cause of the United States therein, shall be punished by a fine of not more than \$10,000, or imprisonment for not more than twenty years, or both.

Both the attacks directed against this measure and the numerous recent instances indicating the need for Federal rather than local authority to deal with disloyalty to the Federal Government have brought informal explanations from the Administration as to the underlying purpose of the legislation. No law passed by Congress, it is pointed out, can remove the right of any citizen to full freedom of speech except in so far as that freedom can be proved to interfere with the prime, present and pressing business of the nation—namely, the prosecution of the war. The design is to punish those whose intent is

disloyal. There is, therefore, a wide margin of difference between the man who criticizes the Government with patriotic and constructive intent, and the man whose strictures or propaganda is framed with the intent of assisting the enemies of the Republic.

While several of the states have enacted similar legislation, nevertheless it remains the fact that there is no Federal law designed to handle disloyalty of speech, utterance and publication, except, of course, the power possessed by the Post Office to exclude such publications from the mails. This power, while great, is limited, and because of its limitations the Government has been earnestly pressing for more authority to deal with a situation which is regarded by officials of the Department of Justice as alarming.

THE WINNING HAND

#### In Favor of Big Business

Among the recent laws signed by the President is the Webb act permitting combinations of American exporters. This bill has been before Congress for several years and has been advocated by the Federal Trade Commission as well as by other governmental and private bodies. It is designed to remove the restrictions of the Sherman anti-trust act in so far as they relate to American corporations or combinations doing or desiring to do large-scale business abroad. It is a curious fact that a portion of the business community has been against the measure, fearing no doubt that the benefits to be derived from facilitating our export trade would be offset by the danger of encouraging a further consolidation of "Big Business."

The discussion of the past few years, the necessity for prosecuting effectively in competition with European nations our foreign trade program, and the belief that the Federal Trade Commission will be able to prevent or eliminate unfair practises under this new permission, have convinced the majority, however, that the risk to be run is low and the gains to be won are great.

#### The Bridge to Victory

The "keynote of the present situation is management—leadership." This is a sentence from a telegram sent by the Emergency Fleet Corporation to all managers of shipyards now engaged in the construction which is so vitally necessary to winning the war. The telegram frankly confesses disappointment in past performances:

We are keenly disappointed in the amount of tonnage delivered by American shipyards during the month of March and the slow progress made in many yards. Only twenty-one vessels, aggregating 166,700 tons, were delivered during that month, and our minimum estimate was for 197,075 tons. Instead of this reduction from our estimate we should have had an increase. This estimate was made on promises of shipbuilders. Thirty steel ships were launched, with a total tonnage of 219,586. Eleven wooden ships were launched, amounting to 40,000 tons.

We are particularly anxious that you and your organization should put forth a special effort during the month of April. We are anxious that you should keep us fully informed concerning all causes of delay encountered in building ships during this month daily by wire, if necessary. We are concerned with entire program, but we want April to break all records.

Money, material, and men have been supplied without stint by the nation. Emergency Fleet Corporation looks to you for teamwork in applying leadership to speeding up of program.

The indications are that the shipbuilding program and processes of the Government have been graduated from the stage of resignations, investigations and recriminations and have entered upon the stage of actual, rapid construction. The Senate Committee on Commerce has practically concluded its inquiry into Hog Island. Former Chairman Denman told the senators that there was delay at the start in these yards because the engineer in charge attempted to force the board to agree to a contract that would have netted the corporation undertaking the contracts a fee of between \$12,000,000 and \$15,000,000. Later, behind closed doors, Chairman Hurley and J. Leonard Repogle, director of steel supplies of the War Industries Board discussed the situation, and the semi-official reports of this discussion are to the effect that the alleged shortage of steel boils down to difficulty in transportation.

Sixty per cent of the steel ordered for Hog Island has been turned out by the mills, but only about three per cent has been delivered. Within a few weeks, according to this testimony, the railroads and other agencies of carriage are expected to complete the shipments.

Representing the labor side of shipbuilding, a delegation of workmen from the Gulf yards presented evidence which, it is announced, is being used for the purpose of adjusting wage schedules and thus removing the feeling among many crafts of workmen that the profits "are all to the profiteers." It seems that the wages along the Gulf region are \$2.08 per day, which is low as compared with the northern scale. C. H. Frank, spokesman for the men, made the point that the high cost of living is a non-sectional reality and

### THE BARRAGE FROM HOME

Three comments in the New York press on our civilian war drive. Winsor McCay sees in the Third Liberty Loan "The Biggest Gun of All," an immediate answer to Germany's supergun. Cartoon republished from the New York American, copyright International News Service. Robert Carter's sketch of the American soldier protected as he charges on the Kaiser by "The Barrage from Home" was first published in the New York Evening Sun. "The Star Shell," drawn by Rollin Kirby in the New York World, looks at the Third Liberty Loan from Kaiser Wilhelm's viewpoint

that this, coupled with the lack of shelter, or rather adequate shelter, is driving the men away almost as fast as they arrive.

The conclusion of the hearings and the publication of the report of the Senate committee are expected to do much toward clearing the air and consequently advancing progress in the ship construction program.

**On the Farm Front** The announcement by Secretary of Agriculture Houston of a comprehensive production program marks the second time in recent history that the American farmer has been mobilized, so to speak, by Washington and told what to plant. It was almost exactly one year ago that Secretary Houston called at St. Louis the notable conference of agriculturists who mapped out a plan both for production and consumption, the general lines of which foreshadowed not only the planting activities of field and garden, but the educational and regulatory campaign of the Food Administration.

This year the Department of Agriculture goes into greater detail than it was possible to do last year, a fact which observers in Washington adduce as indicating progress in the difficult task of organizing production on a scale that is national and designed to meet a vitally important national and international purpose.

Coincident with this announcement there came last week a significant report of one year's operations of the Federal farm loan system, created by Congress shortly before the war for the purpose of supplying farmers with long-time loans at reasonable interest rates. Wholly aside from its importance as a reservoir of credit, the farm loan system is important as a cooperative enterprise. "Before the system was put in operation," says the official review, "it was argued that our American farmers would not organize for cooperative borrowing. The answer to this seems to be found in the fact that up to March 31, 1918, 2808 national farm loan associations were incorporated,

representing about four associations to each five counties in the United States. These associations average about twenty members, representing a total membership of 56,000 farmers. The twelve Federal land banks have received applications for over 120,000 loans, amounting to about \$300,000,000. Many of these applications have been rejected, reduced or withdrawn. About 80,000 loans have been approved, amounting to over \$160,000,000, and on over 30,000 of these loans money has been paid to the farmers to the amount of about \$80,000,000."

In spite of the fact that this system for providing farmers with the sinews necessary to the fulfilment of the demands of the Government and the Allies is still in its initial stages, the Treasury Department predicts that the expenses of the banks doing business "have been within such limits as to justify the expectation of the Farm Loan Board that these banks will easily be able to operate on a difference of one-half of one per cent between the loaning rate and the rate which they pay on their bonds."

### THE SPOKESMEN OF CAPITAL AND LABOR

After two months of thoro investigation and discussion of labor troubles in war work the War Labor Conference Board made public recently a comprehensive plan for the policy of the Government with respect to industrial relations during the war. The board was formed, at the suggestion of Secretary of Labor Wilson, of five representatives of capital, five representatives of labor, and two representatives at large—ex-President Taft for capital and Mr. Frank P. Walsh for labor. Left to right, the members of the board are B. L. Warden, W. J. Vandervoort, Loyal A. Osborne, L. F. Loree, Frank J. Hayes, T. A. Rickert, William L. Hutcheson, William H. Taft, Secretary of Labor Wilson, C. Edwin Michael, Frank P. Walsh and Victor Olander

## MAKING GOOD ON GUNS

This is the tenth message from the United States Government to the American people. Presented each week in The Independent by George Creel, Chairman of Committee on Public Information, appointed by President Wilson

**I**N the Metropolitan Magazine for April, the patriotic war policy of that publication is assisted by the following sentence: "Even such a visit" (to New York's tenement district) "can bring certain facts vividly before the mind, exactly as the most hurried visit to our training camps is enough to show the wooden guns!"

What are the facts about the use of wooden guns in training camps?

When a state of war with Germany was declared in April, 1917, the military authorities of the United States had available more than 600,000 Springfield rifles and 100,000 Krag-Jorgensens. That is to say, there were rifles enough on hand to arm the rifle-carrying men of an army of a million. If it had been imperative immediately to arm the recruits in the training camps, they could have had Springfields. But it was not imperative. It was not even necessary. The first training in military discipline and rudimentary drill had to be given before the men could be put at rifle practise. And no one but a psycho-analyst could see why wooden guns would not serve as well as metal ones for preliminary training, just as "slob-sticks" are used in the British army.

Our Government arsenals had been turning out Springfield rifles. Private firms were making, chiefly, the Enfield rifle used by the British. It was obvious that the Government arsenals could not produce all the rifles that would be needed by our forces. It was equally obvious that it would be wise to adopt the weapon which American manufacturers had brought to quantity production. Eighteen months after these manufacturers had received their contracts from the British Government, they made their first deliveries of Enfields. To avoid another such delay the War Department decided to adopt the Enfield for the American army, rechambering it so that it could use the same ammunition as the Springfield, and improving the bolt-handle design so as to increase the rapidity of fire.

The War Department wished to give the American soldier the best rifle that could be obtained, in the belief that one way to win a war is to meet the enemy

with superior weapons. The Ordnance Bureau undertook to have the improved rifle ready as soon as the men were trained to receive it. And the Ordnance Bureau succeeded in that undertaking. On September 1, the draft boards began to deliver the first 180,000 men to the cantonments. In the same month deliveries of the improved Enfield commenced.

In other words, instead of rushing to arm a body of untrained men with inferior rifles, the Government took the time to design a superior gun and had it ready to place in the hands of the men as soon as the men were ready to receive it.

At the same time the Ordnance Bureau speeded up the production of Springfields, and increased the output of the new Enfield at such a rate that a million new rifles have been manufactured since April 1917; there are now 1,600,000 such rifles on hand, together with 320,000 Krags and other training rifles; and the output of modified Enfields is now 50,000 a week—which is sufficient to supply three army divisions. The bureau purchased from the British Government its rifle-making machinery in this country for \$9,000,000. This machinery, if it could be obtained at all, could not now be bought for double that amount. And the output of service cartridges has been increased from 7.3 millions a day during January to 10.9 millions a day during March.

Similar reply can be made to the falsehoods that are being circulated about the bureau's machine gun program. Before our first contingents went to France, it was decided that they should use the French machine guns for three reasons: because the Americans were going to fight in the French lines; because the French machine guns were believed to be the best on the battle front; and because the French Government had a sufficient output of these guns to supply all the American soldiers without stinting its own troops. Our War Department accepted the offer of the French to furnish the French machine guns to our first contingents in France, and went ahead with the preparations for quantity production of the new Browning machine

guns that were regarded as superior to the French weapons.

The Navy had chosen to use the English Lewis gun. Our marines arrived in France armed with Lewis guns. And these guns were also used in our aeroplane service. On General Pershing's orders, our marines were rearmed with the French guns as better fitted for trench and field service. The Lewis gun was retained only for our aeroplane work by the War Department. Any criticism of the department for not using Lewis guns is therefore another criticism made in ignorance. The department elected to use the French guns, as a better weapon than the Lewis, and its choice was sustained by experience in the field.

Meanwhile, to each cantonment of the draft army 138 machine guns of different types were delivered for practise work, before the machine gun corps were ready for them; and for each camp of the National Guard 160 machine guns were provided. Work on the new Browning guns proceeded. They proved superior to both the English and the French arms, and the policy of the Ordnance Bureau was justified. The English Lewis weighs 28 pounds; the light French gun 20 pounds, the light Browning 15 pounds. The Browning has stood up under service tests that silenced all its rivals. Rusted with corroding chemicals, and blown full of abrasive metal more clogging than sand, it has continued to function perfectly. The heavier Browning has similarly outclassed all competition by firing 20,000 rounds in 45 minutes and 16 seconds without malfunction. Deliveries of the light Browning gun began in February and will reach maximum production in June, when thousands a week will be turned out. The heavier Browning will come to quantity production a few weeks later.

That is to say, our machine gun program has provided a supply of the best machine guns on the battlefields for our soldiers in France, and it has prepared and brought to quantity production still better machine guns to arm our troops for the coming year. It has, during the year, supplied 17,000 machine guns to our soldiers at home and so accelerated the manufacture [Continued on page 139]

# MOBILIZING AMERICAN MONEY

BY THOMAS W. LAMONT

MEMBER OF THE FIRM OF J. P. MORGAN & COMPANY

SINCE America declared war on Germany just a year ago Congress has enacted a remarkable series of sweeping measures—laws that a few years ago would have seemed to the most radical of us little less than revolutionary. It only needs to mention a few of these to realize how far, under the stern necessities of war, we have traveled. The draft act, the government control and operation of railways, the ship construction bill, the price fixing of food and metals, and now the War Finance Corporation measure, just signed by the President.

Of all these enactments it is hard to say that one is more important than another. We are in abnormal times and, therefore, must resort to abnormal measures. But the most recent of these measures, which has resulted in the creation of the War Finance Corporation, has aroused the eager attention of men of affairs the country over; for the reason that it has been devised to meet a situation highly critical for the industries of the country. Further, the workings of the corporation, if successful, should prove a great stabilizer in the maintenance of the country's prosperity—a maintenance so vital to the continued and vigorous prosecution of the war. In order for the layman to understand the importance of this new organization, it may be necessary to review the conditions that have led up to its formation:

Credit is just like every tangible commodity in that it is not inexhaustible. In fact, it responds more quickly than most commodities to the laws of demand and supply. The interest rate, high or low, required to obtain credit at any given time is the measure of both the demand for and supply of such credit.

During the few years just before the outbreak of the European war in 1914 there had been a general increase in money rates in this country. This meant that the requirements for capital were overtaking the supply. During the course of the war, but before America came into it, there was a great expansion in the gold holdings of the banks in the United States: our imports of the precious metal in a little over two years exceeded \$1,000,000,000. This expansion greatly enlarged the country's basis of credit. There was also a substantial increase in the country's investable funds, represented by the enlarged margin between national production and national consumption; in other words, national savings.

At the same time there were three other developments which more than offset this increase in lending power. One was the increase in our own trade, domestic and foreign; such growth making necessary large borrowings for both working capital and enlargement of productive capacity. The second factor was the return and sale to this country of a great amount of securities formerly held by investors abroad.

Paul Thompson

Thomas W. Lamont

The purchase of these securities absorbed funds that otherwise would have been available for investment in new enterprises here. The third absorbent of funds was the heavy loans made to Great Britain, France, Italy and Russia, all of which later became our allies; also our loans to other foreign countries, such as the South American nations, which had previously done most of their borrowing in Europe. It has been estimated that during the two and three-quarters years prior to America's entry into the war, the American securities repurchased by investors in this country amounted to about \$3,000,000,000 in value, while our loans to foreign countries during the same period aggregated about \$3,000,000,000. So it is manifest that these three great movements yielded a continuous supply of securities, more than enough to absorb that increased lending power of the nation which was created thru enlarged national savings.

With America's entrance into the war, the situation changed for the worse. Gold imports practically ceased, and at the same time there sprang up an enormously increased demand for producing capacity, to take care of the war needs of the United States Government. The steel companies, the shipyards, and almost every type of manufacturing enterprise required new money, both to furnish enlarged plant facilities and also to serve as increased working capital. As a striking example of this feature, I might mention a company as far removed from the munitions field as the American Telephone and Telegraph Company, which reported that during the 1917 year it expended \$118,000,000 for increased facilities, a large part of which were required for the war needs of the Government.

At the same time that these large demands centered on the lending power

of the nation, the United States Government came forward with requests for funds represented by loans. Up to the present time these have aggregated about \$5,800,000,000 in the form of long term bonds; and over \$2,600,000,000 in short term certificates of indebtedness. As a consequence of all this it has become increasingly evident that the lending power of the nation—that is to say, the capital available for investment—is not sufficient to furnish the Government with the sums which it requires, and at the same time to furnish all corporate borrowers with the funds which, under normal circumstances, would be readily obtainable from the investing public.

The Administration at Washington has thus been confronted with two problems which must be solved if the industrial and financial machinery of the country is to be kept running smoothly. One is to discourage borrowings for purposes which, while perfectly proper in themselves, are not necessarily compatible with the war needs of the nation; and the other—the corollary to the first—is to mobilize the available supply of investment funds thruout the country, so that enterprises whose credit needs must be supplied to keep the war machinery in motion may be able to obtain such funds as they require. Both of these problems are dealt with in the War Finance Corporation measure, just enacted into law.

THE provisions of the bill, as I see them, naturally fall into two distinct classes: First, that dealing with the regulation of new capital issues; and, second, that which sets up the machinery of loans for war purposes, including the power by the War Finance Corporation to issue its bonds and thus provide funds for the requisite loans.

The first section follows closely the policy adopted early in 1915 in Great Britain. There a committee was appointed by the Chancellor of the Exchequer to pass on applications for permission to make new security issues, and to secure coöperation in postponing issues which were not immediately necessary. The results of the British committee's activity are apparent in a table contrasting the borrowings in the London market during the year 1913 with those of the year 1917.

	1913	1917
British Government Loans	£1,297,820,000	
Colonial Government and Corporation Loans	56,031,000	13,870,000
Foreign Government and Corporation Loans	61,154,000	
British Municipal Railway and Public Service Issues	13,987,000	314,000
Manufacturing, Mining and Miscellaneous	65,365,000	6,592,000
Total	£196,537,000	£1,318,596,000
Other than Government Loans	£196,537,000	£18,776,000

It is to be noted that, if 1913 be compared with [Continued on page 140]

*Stretcher-bearers bringing back the wounded along the Amiens-St. Quentin road*

IT is now a commonplace of daily observation here in the United States that the dyspeptic city clerk, drafted and run thru the mill of military training, comes out remade into a vigorous animal who is conscious of his stomach only when it requires food. In Europe it is an equally familiar fact that thousands of the men reborn in the same way, come back shattered from the first line trenches only to go thru another and more marvelous process of rebirth or rehabilitation whereby the physical functions are restored and the vocational functions reeducated. Thus for many who go to war in the twentieth century there are two births—that into the world of stalwart soldiery; and that from the hospital world into the new life of a “mutilé,” resurrected and taught in the light of his handicap to go out and earn his living.

Already our American casualty list has grown from zero to nearly three thousand. It does not require a prophet to convince us that before many more weeks pass the scattered handful of returned American wounded will be so numerous that even in this enormous country we shall begin to realize their presence.

Every European belligerent without exception has established a complete and efficient system whereby the wounded who cannot be repaired for active service are reeducated or rehabilitated so as to render them as nearly as possible independent, self-sustaining citizens of the working world. The public

## MEN TWICE BORN

is more or less familiar with this splendid record of reconstruction whereby the blinded, those with one or more amputations, the shell-shocked and the variously crippled, are cared for not only with the most expert of medical assistance, but receive the help of the best educators who stand ready to teach them trades and professions suited to their handicapped condition. The question is already being put: Is this Government, too, prepared to give our war cripples the best that modern science and administration can supply? And if the Government is prepared, what are its preparations?

SEVERAL months of investigation and conference on the part of Government departments and private agencies have developed a program upon which has been based a vocational rehabilitation bill, laid before the Senate on April 8. Out of these conferences and palavers at least three very important documents have also appeared. One is material from the Surgeon General of the Army on the rehabilitation and vocational reeducation of crippled soldiers and sailors; the others are two studies made by the Federal Board for Vocational Education on the same general subject, with particular reference to the educational aspects. Each of the three is a substantial, solid piece of work well worth the attention of students of the war, educators, medical men, public officials, and all who may come directly or indirectly into relations with the intricate complexities of repairing the humans damaged by war both physically and mentally, as well as spiritually and economically.

Basing its estimates on Canadian figures, the Federal Board for Vocational Education reckons that one hundred thousand out of every million men sent overseas will return to the United States during the first year of fighting, disabled or crippled; and that of these, twenty thousand will need some kind of vocational reeducation or refitting so as once more to face the world as independent wage-earners. It is a vast order, but it is no greater than the order which the Allies had to fulfil with scarcely a moment's preparation. Side by side with the doctor there must be the vocational expert or adviser whose duty it is to watch his men and determine by tactful questions along what line of trade or profession it will be possible to teach him effectively. Little

*The pulley sling, a war-time emergency invention, has saved many amputations*

Belgium, driven from her home land, has solved the problem so admirably that it is reported that her war cripples have even captured markets formerly held by healthy American manufacturers. Each of these documents contributes to the entire problem, and thru each of them there is the fine spirit of men who have brought to a most disheartening situation an optimism that cannot be halted short of success.

Early in January a conference on the crippled soldiers and sailors began in Washington with the definite purpose of bringing together representatives of the Government departments concerned as well as representatives of such bodies as the Chamber of Commerce of the United States, the American Federation of Labor, the Red Cross, the National Association of Manufacturers, and the Red Cross Institute for Disabled Men. The Surgeon General of the Army called the conference and presided over it. The conference drafted a bill which in its essential principles is the legislation that it is expected Congress will eventually enact. Put into less intricate language than that of the law, what is proposed is this:

At some time during the convalescence of a wounded man it is evident that he cannot be repaired for further active service. He has become, to greater or less degree, disabled. In former days his future would be that of a pensioner, perhaps an inmate of a soldiers' home, or, if possesst of private means, of in- [Continued on page 139]

## THE "WAACS" AT WORK

"Waac" stands for the Women's Army Auxiliary Corps of Great Britain, an organization which began early in the war putting English women at work where they could most efficiently supplement the fighting force of soldiers at the front

© Underwood & Underwood

### FEMININE TOUCHES ON A TANK

The "Waacs" have entered almost every phase of war work—even to the interior decoration of the "unwieldy Willies"

### HOW HAND GRENADES ARE MADE

The munitions worker at the right, drilling hand grenades, is one of thousands of English women who are fighting as hard in factories as the men fight in the trenches

Press Illustrating

### WAGONERS IN THE LAND ARMY

Women are carrying on the agricultural work of England now, fighting in the fields to help conquer Germany's U-boat warfare by the increased production of home crops

### A CORPS OF BRITISH BAKERS

The things that look like canoe paddles are mud-mixers, for these "Waacs" are on duty close behind the British lines making war bread for the soldiers at the front

Central News

### THE CAVALRY'S CHANCE AT LAST

Practically the first opportunity to use cavalry to any extent in the fighting on the Western Front has come in the past weeks of the Great Battle, when trench fighting has given way to open warfare. The gallant action of the British cavalry, commended by the Commander-in-Chief, is described in the following news dispatch: "Onward they fought, mounted and dismounted, helped to stop gaps in the line and stem the German tide, charged Germans on foot and Germans on horseback, cleared woods and roads with machine guns and rifles, rode out in patrols to reconnoitre the enemy's position, and acted as rearguards to the British infantry"

© Underwood & Underwood

**YANKEE HORSEMANSHIP**  
This photograph of a newly enlisted man and a newly enlisted horse speaks well for the fighting spirit of American cavalry. The other pictures on this page are all official photographs of British cavalry at the front. The men at the right are watering their horses at a base camp depot

### ANOTHER BALLAD OF BALAKLAVA

"Stormed at by shot and shell," the British cavalry rode thru Moreuil Wood on April 1 in a charge worthy to be immortalized with the fame of the Light Brigade. "Twelve hundred men who had been riding thru the night went forward in three waves and charged that dark wood next morning at a hard gallop. The first wave rode to the edge of the wood, and the second to the center, and the third wave went right thru to the other side, riding thru the enemy and over his machine guns and in the face of a hail of bullets from hidden machines. They cleared the wood of Moreuil and brought back prisoners and guns, but there were many empty saddles"

#### **The Story of This Job**

The cut on the right shows the latest Phillips Job. The units contain floor space of 102' x 240', 60' x 340', 180' x 700', 60' x 700', and 120' x 180', a total of 235,000 square feet of floor area.

At one end of the Plant it was necessary to blast out and remove a solid ledge 26' high, while the other end of the same building called for piling 45' deep.

No business man needs to be reminded of the difficulties attendant on fast, accurate, reliable production this past winter. The weather, the fuel famine, the freight tie-ups, and labor troubles are fresh in the minds of all.

The Plant shown in the picture is a one million and a half dollar job, just now being finished for government work, and delivered on time.

## **The Service That We Can Give You**

We draw direct on six co-ordinated corporations for service and material.

We plan and execute every detail. We have instantly ready to put on any big job a heavy equipment of Steam Shovels, Stone Crushers, Concrete Mixers, Hoisting Engines, Elevators, Derricks, Traction Engines, Dump Cars, Rails, Ties, a train of Automobile Trucks, and other necessary equipment.

Your new factory will be ready for you to turn on light and heat and install men and machinery, on or before the date promised. We guarantee quality and date of completion.

The more difficult the job, the better we like it. We are equipped for that kind of work.

*The first warning is the torpedo, the lightning stroke of death, racing across the sea*

**D**AMN the torpedoes! Go ahead!" When Farragut shouted his famous order from the shrouds of his ship at Mobile, he could not foresee that he was establishing a precedent which, fifty years later, was to become the ordinary, everyday watchword of another American fleet.

Between the "torpedoes" of Farragut's time and those which our destroyers in European waters are called upon to dodge each day, there, however, is a great difference. His were merely mines, clumsy affairs at that, altogether lacking the tremendous explosive force of those which the German submarines spew out as a cod lays its eggs.

In addition to this devil's bread which he thus casts upon the waters—it is comforting to know that it sometimes "returns to him after many days," for more than one German submarine has nosed off its own mines—Fritz always keeps a couple of torpedoes gaged at a depth of six feet for the especial benefit of Yankee destroyers.

He shoots them, too, at every *safe* chance, for in spite of his "will to conquer," Fritz is an earnest believer in the doctrine of safety first. Though, for the last nine months, he has taken pot shots at our destroyers time and again, so far he has scored only two hits. The last, I am sorry to say, was a bull's eye—the sorrier because I had cruised for two weeks in company with the vessel that was sunk the other day, and knew some of her officers and crew.

Previously to her sinking, another of our destroyers had had her stern blown off, and though up to that time this single casualty was all that had been scored against our fleet during an eight-months' campaign in mined waters against an unseen foe, it was made the text of a bitter editorial in an American paper. Sitting, without doubt, in a comfortable office, unaware of the hardships and real suffering the men he was attacking really endure, with a lack of sympathy that is only

equaled by his blind ignorance, this omnipotent gentleman wrote:

"THE NAVY FALLS DOWN"

Outside the sorrow and anger that will sweep America at the direct hit registered by a German submarine against one of our boasted destroyers and the outright sinking of a convoyed transport (the "Antilles"), the news of the two reverses to our naval efficiency in the warring waters, cannot but be wholesome in its ultimate effect. . . . The torpedoing of a destroyer, the craft so fast, so agile and alert that they have been

Paul Thompson

HERMAN WHITAKER

WAR CORRESPONDENT  
OF THE INDEPENDENT

considered the one thing afloat that may, with proper alertness, laugh at the lumbering submarine and its leisurely torpedo speed, reflects on no one but the officers and crew of the torpedoed destroyers. These humiliating hits by the Germans are directly chargeable to their inefficiency and carelessness.

The article contains a good deal of this silly and untruthful nonsense. The "Antilles," in the first instance, was not convoyed by a destroyer, but by one of those armed yachts that are serving in French waters under a handicap of low speed. In the second place, the hit registered on the first destroyer, the sinking of the second, are ordinary chances of war. Moreover, we have been exceedingly fortunate to escape so lightly. During the eight months preceding the first hit, our flotilla had steamed a joint distance of over a million miles, a distance equivalent to the circling of the world forty times; steamed it in mined seas, subject at all times to the attacks of submarines. The British destroyer officers wonder at our luck! *Luck?* It was luck—also fine seamanship.

Compare this record with the hard experience of the British who handed over to us the sea lore learned during three years of war at the cost of many disasters. Think of the swift cruisers, battleships, great dreadnoughts, that lie with their fine crews, thousands in number, at the bottom of the sea! Think of the trawlers and little patrol boats that sail forth with all of the swank of a dreadnought to hunt the elusive submarine! Scores of them never return. Others come limping back into port with little left but a hull and screw. One I saw, that had been torpedoed astern, had her propeller shaft bent up and over till the screw looked down the engine hatch and she looked for all the world like a happy dog wagging its tail. What of the mine sweepers and their hard-bit crews that wrest his most dangerous weapons from the very hands of death.

I wish I could tell of the boats that

Herman Whitaker writes out of a full experience, with pen dipped in his own life's struggle, his stories of action and adventure. He ran away from his home in California to serve three years in the British army, busted bronchos on the Manitoba frontier, became a lumberjack in Ontario, pioneered in the Hudson Bay country, fled from the Cree Indians to California. Worked twelve hours a day and read five hours every night. Went to El Paso with General Pershing, joined Villa's Saltillo campaign against Huerta. He is at the battle front now

© E. Mullet, Jr.

A United States destroyer at full speed covered by her own smoke screen

work hand in hand with our flotilla; boats that go out looking for things from which even a destroyer will run. One of their skippers wears the Victoria Cross with the bar for a second achievement; also every other decoration it is possible for a fighting mariner to win. He has been blown up so often that—that it has become something of a bore; never a thrill left in it. His ship has been sunk under him three times, and on the last occasion he served his guns till the water rose to the breasts of the crews and sank the attacking submarine with the last shot before the deck went from under their feet.

Apart from their losses in battle, which have been large, the British destroyer flotillas lose on an average one vessel a month. So no wonder they marvel at our luck. But they do not squeal.

When two of their destroyers were towed into port, one with its bows shot away, the other without a stern, they did not spend any time writing editorials on the inefficiency of the crews and commanders. The British are not built that way. They just took those two vessels, sawed their ends off clean, then just as you might solder a tin toy boat, they joined the odd halves, to make one, and sent the result out to sea. And this little feat symbolizes their spirit—the dogged, quiet, uncomplaining devotion to duty which they share with our own American officers and men.

Having seen the first of our boats that was torpedoed, and talked with members of her crew, and having cruised, as I said before, in company with the boat that was sunk, I can claim to be in better position to pass judgment than the author of the edi-

torial quoted, and the facts are these.

Let us take the last first, recreate as well as we can the picture of what actually happened from the official reports of her commander and crew. She and other destroyers were returning to their base after delivering a convoy at a foreign port; but as she had paused to carry out target practice at sea, the others were out of sight ahead. Imagine her, that graceful boat, careening as she swung on the turns of her zigzag course at standard speed, officers on the bridge, watches set, crew in their berths below or smoking on deck, all things following their orderly bent. At four thirty p. m. dusk was already falling in those winter seas. It would be impossible to see the finger periscope that was probably slipped up just long enough to sight the shot. First notice came when the officer on the bridge saw the torpedo coming at the editor's "leisurely speed" of forty-two miles an hour.

He did the right thing—jammed the helm "hard left" and rang the engine room for "emergency high speed." As the boat leaped under the sudden hard thrust of the screws and began to swing like a scared thing, he could see the red war head of the torpedo as it "porpoised" along the surface leaping from wave to wave. Once it lifted clean out of the water and swerved and he thought it might pass astern. But the instant it dived again the deviation automatically corrected. It struck a trifle aft of amidships and exploded in the fuel oil tank.

The explosion blew twenty feet of the deck clean away, brought down the wireless mast and antennæ—leaving the vessel dumb, unable to call her consorts ahead—flooded the steaming fire room and after crew quarters. So terrific was the explosion, the starboard torpedo tube with its two torpedoes, weighing many tons, was blown two hundred feet in mid air. Yet this was only the beginning. Poised astern, ready to drop on a submarine, were two depth mines [Continued on page 141]

When she fell—the thousand tons of her would strike the water a tremor. She'd quiver like a shaken lance; tremble like a frightened horse for ten minutes afterward

# THE NEW DEMOCRACY

Eighth message from the National Security League, Committee on Patriotism through Education, of which The Independent is the official publication

BY ARTHUR M. WOLFSON

PRINCIPAL OF THE HIGH SCHOOL  
OF COMMERCE, NEW YORK CITY

**E**VERY shot that is fired out of our trenches, every shell that screams across No Man's Land, is a signal that America is fighting for a newer and better civilization. Three years ago we were all talking about the causes which led the men of France and of England to take up arms against Germany. Today we have almost forgotten the war's causes. We are all fighting, in the workshops as well as in the trenches, for a world in which every man shall enjoy his full share in the world's blessings. The Old World notions of government by privileged classes, the old ideals of international relations which grew out of the selfish desire of each nation to get the better of its neighbors are rapidly disappearing and new ideals of international helpfulness based upon national democracy, in which every man shall have a real chance of happiness, are rapidly taking their place.

**E**VER since 1776, we in America have been struggling to realize our ideal of democracy, a government under which it might truly be said that "all men are created equal"; but thus far differences in birth, in education, and in economic opportunity have interfered with our ideal.

The Socialists tell us that our industrial society is so organized that our ideal is impossible of attainment; that between capital and labor there can be no community of interests; that the class struggle must go on till the workers have conquered their industrial freedom; that revolution in this country as well as in Russia is the only means of salvation for the world. But there are deep-thinking and far-seeing men in this country and in England who have seen a new vision, who believe that the new democracy will be established thru coöperation rather than thru class struggle, and that in this way peace will once more descend on the whole world.

The new democracy will be a republic in which men who work with their brains and men who work with their hands will share equally in the government of the people because both are of the people. In the new social order, special privilege of wealth and of position will disappear.

This new democracy will allow very

small space and even smaller consideration for "the purely decorative and unproductive elements of society." It will demand of all of its citizens that they contribute something to welfare of the state. This is the vision which has come to the most enlightened leaders in this country and in England. This is an ideal worthy of the sacrifice which thousands of us are making so that the autocracy of privilege may be completely crushed to the earth.

For more than a hundred years we have been busy in this country developing the machinery of government. We have devoted ourselves to working out the problems of representative government and of the relations between the state and the nation. Thus far we have given scant thought to our economic problems. We have too often forgotten, in our care for the rights of property, the necessity of protecting the interests of those who work with their hands.

In this war we have taken up the gage of battle for democracy and for the protection of weak and oppressed peoples.

If we would be true to the best traditions of this country, we must remember that this battle for democracy must be the last great fight against privilege; that it cannot be brought to a successful conclusion unless we take thought for the rights of the weak and oppressed people at home as well as abroad.

**T**HE new ideal of democracy for which we are fighting must be something quite different from anything which has thus far existed in the world. For centuries men have been talking of democracy; but privilege still exists in the world. In ancient times the men of Greece spoke of the rule of the *demos*—the people—but the *demos* granted no political or economic privileges to the millions of people who were slaves. In the Middle Ages the only people who shared in the political and economic privileges of the country were the king and his barons and their retainers, those who lived on the fruits of the labor of serfs.

In the centuries which followed, serfdom was abolished, but still political power was confined to the men who enjoyed the privileges of wealth in land or in commodities, while the agricultural and the industrial laborer was left with only such protection as they cared to give.

The new democracy will be the result not alone of a new program, but of a new spirit among men. This new spirit will consciously endeavor to remove the causes of strife between classes; it will strive to reestablish healthier relations between the management of industry and the workers; it will remove all opportunity for reckless profiteering; it will make ample provision for the safety, the health and the spiritual and moral well-being of every class in society; it will give to the workers as well as to the owners equal opportunity to share in governing the country in a way that thus far has never been actually realized.

We have talked for generations in this country and in England of democracy, but it is only in the day of our great crisis that we have realized that our democracy has never reached the ideal of the Declaration of Independence.

Today we are awake to our obligations. We know that capitalist and laborer alike must make sacrifices for the cause of democracy. We know that in the future all special privileges must yield to the good of the whole people.

**W**E are engaged in what we all hope is the last desperate fight against the so-called divine right of kings and of privilege. We are fighting so that all men and all nations may enjoy their inalienable rights—life, liberty and the pursuit of happiness. We have seen the light thru the smoke and flame of battle. We know that democracy cannot be safe in the future unless all special privileges are eliminated and the rights of the people secured. We know that in England and in this country we are approaching a period of real industrial democracy.

Our task in the present as well as in the future is to lend a sympathetic ear to the prophets of the new order so that we may discover the foundation stones upon which the new democracy should be built.

# NATIONAL EFFICIENCY

A MONTHLY SECTION DEVOTED TO BUSINESS, PERSONAL AND NATIONAL EFFICIENCY, CONDUCTED IN ASSOCIATION WITH THE NATIONAL INSTITUTE OF EFFICIENCY AND THE EFFICIENCY SOCIETY

## EYES TO THE FRONT!

THE outward sign of a conqueror is a fixed gaze that never falters, never flinches, never swerves. Your aim is as sure as your eye is steady.

The first thing a ball player has to learn to do is to keep his eye on the ball. The first thing a business man has to learn to do is to keep his eye on the business. The first thing a fighter has to learn to do is to keep his eye on the fight. Whoever joins a contest with a reasonable hope of winning must forget the world while the struggle is on. He must see nothing, hear nothing, do nothing, say nothing, want nothing, feel nothing, think nothing, apart from victory.

The fighter who stops fighting one second to look around is a candidate for a knock-out blow swift and final. The forerunner of every defeat was a distraction. Most men are defeated because their lives are a medley and jumble of distractions that keep the mind's attention fluttering hither and yon, while the main purpose of life is neglected and forgotten. The man who can never be defeated is the man whose gaze can never be diverted from his goal. The supreme command given to any soldier, and to any people at war, is this: *Eyes to the front!* And the great soldier, of business or of battle, is the man who has trained his mind and body to focus absolutely on a clear path of progress, looking straight ahead till the goal in view has been reached.

Watch a body of picked troops marching down the street—every man's eyes are to the front. They do not see the shop windows, they do not see the smiling faces and fluttering handkerchiefs greeting them as they pass, they do not see their friends in the crowd, they do not see the crowd; they see but the road ahead, and the officer in command. The people on the sidewalk are gay and care-free, idle and irresponsible, doing nothing for the soldiers, looking only for a new sensation. Their eyes are not to the front.

Compared with our soldiers marching to the battle ground, we are still a nation of people on the sidewalk. We smile to our boys going out to face death for us, we wish them well, we have loaned the Government a few dollars to help buy their equipment, we have paid for a few bandages or conveniences to make their life a little

[BY EDWARD EARLE PURINTON  
DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

less hard, we have saved a bit of meat or wheat or sugar, we have perhaps done occasional jobs of war work in spare time that we never missed; but we have not yet begun to make a real fight of it, we are distracted, interrupted, diverted and amused by scores of things that delay and cripple a civilian army, and that would not be tolerated in Germany for an instant. We do not yet know the personal meaning of the fundamental war command: *Eyes to the front!*

We have no civilian army. Here is our great national weakness in fighting Germany. For twenty years Germany has had her whole population organized into a civilian army, ready for civilian duties the moment war was declared, and trained as minutely, scientifically and completely as the German troops on the firing line. Years before the war started, the Kaiser made plans showing the private citizen of Germany what he should do and how he should do it when the call to arms came; official rules and orders were prepared covering all kinds of war duty in the home, the shop, the factory, the school, the church, and every other institution of the empire. Such tremendous concentration is absolutely unknown to the American people. How are we going to get it? We are a well meaning civilian mob, instead of a well trained civilian army.

We are most handicapped by freedom—the very thing we have boasted so long. We have had no centralized authority; no nationalized will power; no definite purpose and plan for citizen service; no standardized methods for use in all trades, in-

dustries and professions; no government control for all manner of wasteful and wicked abuses; no organization of community forces; no system of economy and science in household management; no applied knowledge of the ways in which other civilized nations, more advanced in some respects, have trained their future citizens and governed the family.

During the past year the *disadvantages* of a democracy have been shown with startling rapidity and fearful distinctness. We have never learned to unite our powers of concentration, to plan for any big thing, look for it, see it, work for it, sacrifice for it, go after it and get it. The muscles of our mental vision are as the muscles of the eyes of a child who cannot look at the same object for even five minutes at a time—the unaccustomed strain is too severe. The German citizen is a machine placed in direct line with the Kaiser's scheme to rule the world; the American citizen is an individual, not placed at all, but moving around wherever he may be jostled or may fall by the weight of his own inclination.

We are going to win the war and eternally smash the Hun. We are going to do it if we have to give our last dollar and shed our last drop of blood. Every decent American thinks and feels this way. But not one American in a hundred has really buckled down to the everyday business of going after the Kaiser, in the way the German citizen has buckled down to the everyday business of supporting the Kaiser. If every one of us, every man, woman and child of sound body and mind in this country, would resolve immediately to make winning the war our *first business every day and every hour in the day*, we could save our country and ourselves millions of dol-

lars, save the lives of thousands and perhaps hundreds of thousands of our soldiers, double the fighting power of the American army, shorten the fearful struggle by many months, and really measure up to the marvelous opportunities and resources God has given us.

We must analyze, organize and energize ourselves. No way has yet been found in a democracy to put the civilian population upon a war footing such as now exists in Germany. There is no more reason for drafting and training soldiers to go to the front and

International Film

*Eyes to the front—a review of the 328th Infantry, N. A., at Camp Gordon*

fight than for drafting and training civilians to stay at home and work. The fighting and working are equally necessary. Why should the young soldier be expected to lay his life on the altar of duty—and others be allowed to remain comfortably at home, surrounded with luxuries, doing and saving nothing more than is politely requested by a system of government powerless to enforce the request? Our soldiers in the field are ahead of German soldiers; but our citizens at home are far behind German citizens at home. The sentiment is here, but the system is lacking.

We should be proud of our soldiers—and ashamed of ourselves. One of the finest bodies of troops the world ever saw has been chosen, collected, drilled, educated, equipt and transported overseas in record-breaking time. The American Expeditionary Force is conceded by military experts, even those among the enemy, to be a model in the cardinal points of skill, strength, speed, courage and resourcefulness. But the average American soldier has in the past few months gone thru the hardest training of his life—he has done more actual work to prepare himself for war duty, has faced more hardships and surmounted more obstacles inside and outside himself, than ten ordinary civilians have done to make themselves equally fit for home service. What has happened? The Germans are more afraid of American soldiers than of any other soldiers—and less afraid of American civilians than of any other civilians. The lesson is plain—we must *learn our job from the soldiers who have learned their job*, we must follow in our home and business life the principles of human engineering that our boys have followed in their camp and trench life. Moreover, we must gain this knowledge, employ this method, by and for ourselves, because the Government officials have no time to teach and direct us.

**W**HY has the American fighter been able to surpass the American citizen at home, in the common war virtues of energy, productivity, loyalty, nerve, optimism, enthusiasm, leadership, self-denial? Because in relation to the war project, the new American fighter is an example of a machine put in order and on the track, while the old American citizen is an example of a machine out of order and off the track. We are not fixed up and lined up for the business of war. The soldier boys are. That is the difference. Only about 10,000,000 of our young men, those who are strong enough and brave enough to fight, have had or will have the essential training for the highest war efficiency. Perhaps 10,000,000 of the citizens are doing their best with only partial training; these include shop, mill, mine and factory workers, heads of relief organizations, and the top notcher business and professional men who have given up their positions and are serving the Government without pay. We have possibly 10,000,000 very old people, very young children, defectives and invalids and other incompetents, all of them unable to turn themselves into good war machines. The rest of us, numbering about 80,000,000, could easily double our war productivity—and have not yet really *begun to train*. About two-thirds of the American people have yet to hear and heed in a truly effective way the marching order that has come to challenge and stir us all: *Eyes to the front!*

Here are fifteen facts to explain the superiority of the American soldier and the inferiority of the American civilian. Whenever you are minus, you can change to the plus class by doing for yourself what the Government does for the enlisted man. There is no reason why you should be less fit to handle your war job than he is to

handle his. Yet, as an active patriot, he is close to 90 per cent efficient, you are probably not more than 40 per cent efficient. Measure yourself as you go along.

1. *The American soldier is put thru a scientific, minute and complete examination, that the majority of private citizens never had in all their lives.* This reveals, beyond evasion or dispute, the physical, mental and moral status of the whole man. Moreover, the youth is not allowed to enter military service without a health certificate; and more often than not he has to go thru a vigorous and rigorous course of medical, surgical or physiological treatment before he is awarded the health certificate. Fully 80 per cent of the drafted men are physically below par; they must be, and they are, made sound and strong in advance of joining the crusade overseas. How are you physically below par? Do you know just where you stand? Do you make it your business to know regularly, at least once or twice a year? Have you had a thoro overhauling by your doctor in the last year, and by your dentist in the last six months? It is a chronic weakness of the American citizen, particularly the American man, to dodge the physician, the dentist, the oculist, every other specialist whose primary function is to keep you well—not to patch you up when you have broken down. A slight defect of the teeth, eyes, heart, stomach, blood, nerves or kidneys may be undermining your health and lowering your productive capacity without your being conscious of the fact and may also be robbing you of the courage, will, energy and endurance to take an active part in war work. Take a mental picture of yourself in perfect health and start now to make yourself look like the picture. Develop your physique so as to double your war work now and to lengthen and strengthen your whole future life. *Eyes to the front!*

2. *The American soldier is given harder work on less pay—for a huge altruistic purpose.* The Government offers him a dollar a day and a chance to save the world. He forgets the smallness of the pay in looking at the greatness of the opportunity. He tackles the job with a vim, courage, power and resourcefulness that he never knew when the biggest thing he had to work for was a pay envelope. The measure of a man is the size of the purpose in him. Has the war made *your* job more difficult, laborious, exacting? If not, something is wrong with you or your job. The war has reduced the man power of the country 10 per cent. The only way for every man to meet the emergency right and hold up his end is to do ten per cent more work, and do it cheerfully and well. More pay? No—more purpose, more principle, more strength of character that doesn't count pennies before exerting itself. Look for a larger burden. Carry it with a song. *Eyes to the front!*

3. *The American soldier is taught to regard methods and principles—not results and appearances.* The man who enlists may have to wait a year before he gets any action at all. But he knows that each order and exercise of daily camp routine, however laborious, tedious and monotonous it may be, will help to make him stronger of muscle and keener of mind than the foe he is sure to meet some day. He works with the arm of science but the eye of faith. This combination is ideal, yet unusual. The average American hustler, who lives on the surface in the realm of the senses, wants results now or not at all. He is tempted to grow weary in well doing because he cannot see *just how* the war stamp he buys, the garden he cultivates, the meat and wheat he saves, the bandages and books he sends, will be of practical, vital use in winning the war. Have you been tempted

this way? Don't please the Kaiser by looking for large quick results and neglecting the small daily war duties. An inch a day, every day, is better than a sudden leap and a long slump. Plod forward, with eyes to the front.

4. *The American soldier has all his time occupied, with every five minute period of the day accounted for.* He doesn't loaf. He rests, plays, enjoys different amusements, but only at specified hours, after the day's work is done. Have you put your day's work on a wartime schedule? Do you know how much time you waste, between 6 a. m. and 6 p. m.? Haven't you at least an hour every day of spare time, in the morning or afternoon, or between jobs, that you might be regularly devoting to some productive line of war work? Have you made a list of all the kinds of war work you might be doing, either at home or in the community, or at odd moments at your place of business? Would it not be informing to keep a record of every five-minute period for at least one day, starting when you wake in the morning and finishing at the hour of retiring, the purpose being to find out where lost minutes have been slipping from your grasp, and how to recover and utilize them in some form of patriotic service? There are at least a half-dozen ways, none of them hard or unreasonable, in which every good American may and should be serving the country, every day till the war is won. We should be glad to help you make out a list of any possibilities relating to your business or profession. Write the Independent Efficiency Service, whose aim in time of peace or war is to help you advance in the quickest and best way possible by keeping your eyes always to the front.

5. *The American soldier exerts and extends himself by the impetus, organization and example of team work.* The knowledge that thousands of fellows like himself are doing the same things, at the same time, in the same way, for the same purpose, goads him on to the maximum of achievement. There is a contagion of conquest powerfully generated by the magnetic friction of large numbers. All mighty movements are mass movements. Are you handicapping yourself in trying to work alone as a war unit? Don't. Organize your family, your school or business or profession, your lodge or club or church. If you can get ten people to join with you in any kind of war service, you multiply your own usefulness not tenfold but a hundredfold, because each of your ten friends will become a center of influence radiating to others the purpose and energy caught from you. What is the largest organization to which you belong? Have you planned how to coöperate with the officials in lining up each member for the special war duties he or she can perform best? Do you know how many patriotic societies and relief associations have branches in your locality? Have you read the literature of at least four national organizations of that kind? Join forces with a lot of fine people who want to win the war as much as you do, and who probably know better how to go about it. You will find the activity and cheer of good comradeship a steady force in lifting you up and drawing you on, with eyes to the front!

6. *The American soldier is a product of discipline, he instantly obeys any order from any superior officer, and he never thinks of protest, argument, doubt or delay.* Few private citizens have this degree of military virtue and patriotic uniformity. Analyze yourself. Did you ever criticize a ruling, or neglect a request, of the Food Administration, the Fuel Administration, the Council of National Defense, or any other war body, official or semi-official, at Washington? Or. [Continued on page 144]

# FIRE!

## The Ounce of Prevention That May Save Your Factory

*A warning bell in each department may save many lives in case of fire*

*Have hose, nozzles, racks and valves of best construction, and keep them always in working order*

*In case of fire or riot in your factory a signal on an electrically driven horn like the one above will start your prearranged safety plans*

*A steel door—neat as a pin—always on guard against spreading fire, gives confidence*

*Little but mighty—the device above can sprinkle water most effectively*

*Where possible danger lies the hand-operated extinguisher should be permanently placed for instant action. Use it in your fire drills, too*

*The chemical engine—if kept in order—can be relied upon for efficient help in a fire emergency. It moves easily wherever it is needed and has plenty of power*

*Guard the exits and entrances of your plant from fire across the way with rolling steel slat shutters like the one above*

*The steel rolling door is just as suitable and important for fire prevention in the bank or the office building*

# WHY THE FIFTEEN THOUSAND FAIL

NINETEEN THOUSAND business men failed in 1915, 16,000 became insolvent in 1916, and last year 13,000 went bankrupt. Every year the number of business mortalities hovers around 15,000. Since approximately 20,000 new concerns are born yearly, the number of business "deaths" equals about seventy-five per cent of the number of "births." Yet there are only eight diseases that are fatal to a business and these are largely preventable. The eight maladies are inexperience, unwise use of capital, nepotism, poor location, poor accounting, over-conservatism, dishonesty and "Acts of God."

## INEXPERIENCE

Inexperience, responsible for more than a third (39 per cent in 1916) of all business fatalities, is of three varieties: one that of a beginner in business; another that of a man successful in one venture in which he was long engaged but a failure in a new effort with unfamiliar products; and a third, inexperience in promoting untried devices. The inexperience of beginners is the most fruitful source of failure.

Every year, thousands of men and women who have been in subordinate positions attempt to enter business for themselves. Seldom have these individuals had the previous training enabling them to cope with the problems of administration. They know nothing about discounts or bills of lading; they are utterly unversed in the tricks of buying, they are uninstructed in the psychology of salesmanship or advertising. A few who learn become masters. But by far the majority struggle ineffectually and sooner or later go down in defeat.

Men skilled in the common rules of business frequently confuse this general knowledge with the particular information needed to run special ventures. Many a man assumes that since he has conducted one business successfully he can direct any activity with equal success. He argues that business administration is an art in itself, and once acquired it may be practised in any line. That is not true. Every business requires a comprehension of many technical details that can be attained only by long association with that business. Yet every year men enter businesses strange to them and expect to succeed on the basis of their experience in some other unrelated line. Only a few make good; in such cases they are usually backed by subordinates who are familiar with the requisite details.

The fateful results of inexperience also show themselves in the promotion of new devices. Promotion is a gamble. Those who make a business of it succeed only by the law of averages. Successful business men engage one idea at a time but stick to it until they have pushed it to some conclusion. Since an inventor never finishes anything before beginning something else, when one heads a company he is almost sure to plunge it in ruin. Furthermore, the introduction of a new article necessitates that the proper market be selected, advertising be fittingly arranged, conservatism and inertia be overcome, and faults in the contrivance itself rapidly and readily corrected. Inasmuch as these things are seldom considered when inexperienced promoters essay to establish a new device, most such exploitations fail.

## UNWISE USE OF CAPITAL

Next to inexperience as a cause for failure stands the unwise use of capital; thirty per cent of the failures are due to this one factor. Many concerns are said to fail from lack of capital. As a matter of fact few businesses under wise management and with the promise of profits are unable to secure capital to operate in normal times.

BY MALCOLM KEIR

ASSISTANT PROFESSOR OF INDUSTRY IN  
THE UNIVERSITY OF PENNSYLVANIA

The "lack of capital" is an excuse for failure rather than a cause of it. The *unwise use* of capital, however, is a prolific breeder of trouble. The most common mistake in business judgment is the apportionment of capital to equipment and stock. Americans have a mania for mechanism. Every business is loaded with machines that do not pay the rent on the space they occupy. Similarly, stock bought as a bargain for which there is no immediate need is a foolish expenditure. Future expansion should not be provided at the expense of present operation. A business should keep as much of its capital in the fluid state as possible because fixed capital is of little aid in paying current expenses.

## EMPLOYING RELATIVES

After inexperience and the unwise use of capital, the most frequent source of failure is nepotism, or the employment of relatives. The saddest example of this sort of thing is the case of a successful father who insists that his son follow in his steps. There is absolutely no guarantee that a successful father will have a successful son.

The father was a selected individual. Starting in business in competition with many other young men, he pushed ahead of them because he was most fitted to rise, thus illustrating the survival of the fittest. When, as so often it happens, a son fails, it means individual tragedy, but he gives way to a better man, so society profits.

Some men, with or without sons, make the grievous error of employing their own or their wife's kinsfolk. Whenever that happens a man virtually signals the sheriff, because relatives are almost sure to take advantage of their blood ties to condone minor infractions of rules and poor work. The boss hesitates to discipline them as he would an ordinary employee, and this favoritism soon demoralizes the whole working force. Lodge or fraternity brothers and even church affiliates come under this condemnation, but to a less degree. Do not employ your friends if you wish to retain your business.

## LOCATION AND ACCOUNTING

Poor location, poor accounting and over-conservatism form another trinity of trouble-makers.

Poor location may be regional or local. A company formed to promote a beverage made from grape fruit established itself in northern New York. This obviously was a poor region because grape fruit had to be shipped from Florida or the West Indies, and sugar brought from Brooklyn. There was no advantage in labor or market in northern New York, so as a consequence the corporation failed.

Within a favorable region there are especially desirable places and others that are correspondingly poor. Thus a city is in general the situation for a department store, yet there are only a few specific corners within a city where a store can succeed. The same thing is true for all kinds of business. A plant located in the wrong region in reference to raw material, power, labor or market; or one in a locality poorly situated in regard to transportation, buying centers, labor or power, is greatly handicapped. It can succeed only by phenomenal good fortune.

Poor location is not such a prevalent evil, however, as poor accounting. It is astounding how little attention is paid to

bookkeeping even in large and seemingly prosperous concerns. The Federal Trade Commission reports that 90 per cent of the corporations of the United States have no adequate method of determining cost. Some small scale operators keep no accounts at all. The lack of scientific bookkeeping is responsible for the downfall of too many a proud, business house.

## EXTENDING CREDIT

Closely allied to poor accounting is unwise extension of credit. Young concerns in their eagerness for business, but to their ultimate sorrow, are apt to sell to shaky customers. Even old established corporations fall into the same trap; the lapse of the H. B. Claffin Company being a case in point. However, business life is safer today than it ever has been because credit granting can be based upon careful, discriminating, reporting thru such commercial agencies as Bradstreet's. The proportion of the total number of failures to the total number in business has shrunk from one and a half per cent in the eighties to 66/100 to 95/100 of one per cent since 1900.

Inability to meet changes in business conditions causes many honorable business names to be smirched with the muck of a bankruptcy court. Old firms often overlook the fact that methods should be plastic not rigid; they lean upon their reputation and take no steps to offset new, aggressive salesmanship. As a result a house that may have been the pride of the trade in its youth topples into the dust in its old age.

## DISHONESTY

Intentional dishonesty is not a frequent source of business failure. Less than six per cent of the total number can be attributed to this cause. Since all business is founded on credit, and inasmuch as the whole system does not come to grief, most business men must be honest. Yet a few misguided individuals do enter business for the express purpose of cheating their customers or their creditors. Retribution usually follows swiftly upon their heels for Lincoln's dictum is still true, "You cannot fool all the people all the time." The transgressor is strangled in the toils of his transgressions.

But some individuals are dishonest unintentionally, family troubles may lead them to mulct their business. This is stealing from one's creditors and brings one eventually into as much tribulation as intentional thievery. If the proprietor indulges in speculation and recoups his losses from his business he may so strain his credit that his practises poach upon the funds due those who have trusted him. Even the payment of an exorbitant salary by the boss to himself is really petty larceny, and ruins a business just as surely as swindling. Another form of dishonesty is neglect thru debauchery, lack of interest or laziness of the business with which a man has been entrusted. No business can run long without an ever present boss, consequently stealing time is as unscrupulous as purloining funds. More firms fail thru unintentional dishonesty of the forms mentioned than by deliberate fraud. Altho some few men may be justified in attributing their failures to unpreventable causes, nevertheless most so-called "acts of God" are due to the negligence of man.

We have pointed out the principal diseases with which businesses are distressed. Inexperience, unwise use of capital and nepotism are three of the most dangerous scourges; but they are closely followed by poor location, poor accounting, and over-conservatism. A few concerns go to pieces because of dishonesty.

# The Growing Movement To Prolong Human Life

FOR many years there has been an ever-growing movement for some central Institute or organization to help prolong human life and make it more livable—a fine, dignified, humanitarian type of organization approved by physicians of the highest ethical standing and irrevocably opposed to quacks, fads and fakes.

So about four years ago, a number of forward-looking physicians, scientists, publicists and men of affairs founded The Life Extension Institute.

Primarily, its purpose is to reduce the Nation's death rate and to raise the level of physical well-being by providing unbiased, standardized periodic health examinations and teaching the simple, every-day principles of personal hygiene that every man and woman ought to know to avoid disease.

These are the broad general principles that have led men like ex-President Taft, Alexander Graham Bell, Prof. Irving Fisher, of Yale, Ambassador Page, Robert W. de Forest, and one hundred other eminent authorities in this country and abroad, to give their services to the work without compensation—other than the satisfaction of seeing its results.

The Life Extension Institute has nothing marvelous to offer except, perhaps, the most marvelous thing in the world—rational, common-sense employment of tested scientific knowledge.

Over 60,000 men and women in all parts of the United States have taken the health services of the Institute and have received its physical examinations, its guidance and instructions. In this vast number of members, many lives have been saved; much illness, suffering, waste and poverty prevented.

The Life Extension Institute itself is not a profit-making institution in the usual sense of the word, but a public welfare organization on a self-supporting basis. Two-thirds of the profits are set aside in a trust fund to be used solely for public health work of a national scope. Thus the independent, non-partisan, specialized character of the Institute and of the professional men behind it inspires confidence and guarantees the genuineness of the service rendered. The Institute co-operates with advanced scientific medicine and works in accordance with its highest modern ideals.

## Human Life Needlessly Shortened

THE LIFE EXTENSION INSTITUTE has no magic system of exercise, diet or hygiene. So far as science knows, there is no universal panacea for the ills of humanity. Yet human life in the United States is needlessly shortened on an average of at least 15 years, and it is the duty of every single one of us to avoid premature physical breakdown.

Every day more than 1500 people die in the United States because they didn't know they were sick until disease had gotten such a start that it was impossible for the physician to check it after he had been called in. Figures show that there are hardly three people in a hundred who do not need some advice or suggestion regarding their physical condition or their manner of living. More than 100,000 men and women between the ages of 40 and 60 die each year in the United States from diseases of the heart, circulation and kidneys—most of

them preventable. These diseases do not develop over night. Detected in time, they can be checked or cured.

The average individual knows only too little about his own body. He may have studied physiology in school, but even those simple rules have been forgotten. Almost blindly he gropes his way through life, fearful of disease and suffering, yet lacking the knowledge to prevent it.

Many a man will take his automobile to the garage every six months to be "overhauled," and yet will not give even passing thought to the most important machine in the world, to him—his body.

Many a woman will go to the dentist every six months to have her teeth looked into "whether they ache or not"—a most commendable procedure—and yet will deny her body the same kind of a safeguarding examination.

## "The First Wealth Is Health"

HOW many men and women there are who have never in all their lives had a real, thorough health examination! How many people really know whether they are healthy or not! How many need their attention called to some hidden disease! How many are taking patent nostrums for some wholly imaginary disease while all the time some other serious difficulty is making insidious headway because it has not been pointed out!

To prolong life, to be protected against disease, and in most cases to restore health you must practice hygiene all along the line. Do a workmanlike job in clearing the body of infection, guarding it from further infection, from strain, from poison, from food deficiency and food excess, and you will be adding years to your life and immensely to your efficiency. But first of all you must have your body thoroughly examined to see if there is something wrong that you do not know anything about.

You cannot escape pneumonia, or heart trouble, or kidney trouble, etc., by saying simply that you have never had it or that you feel all right today. You don't know. Often special laboratory or other diagnostic tests are necessary to reveal the difficulty. The only way to retain good health is by detection and correction of physical impairments and by the improvement of your resisting power to wholly escape the malady that threatens.

Preceding most serious illnesses there is usually a long period of impairment or of progressive changes that gradually reduce the value of the individual to himself and to society. These changes are frequently so slow and insidious that you do not realize them until they are well advanced, but from the very beginning they leave signs that science can detect.

The Life Extension Institute offers you periodic health examinations, quarterly urinalyses, and other laboratory tests for the purpose of detecting disease in its incipency, when proper treatment can check or cure it.

The Institute's system of examinations and reports was formulated in consultation with the members of the Hygiene Reference Board—men who have for years been engaged in analyzing human lives and the influences that impair them. This system has been standardized from the Institute's experience in examining many thousands of individuals. And the physical examination is only one part of the Institute's service!

Membership further includes Monthly Health Journals conveying information regarding the prevention of disease, the improvement of health and the acquirement of physical fitness; and Keep-Well Bulletins dealing with special phases of personal hygiene and right living.

The Life Extension Institute maintains a completely equipped pathological laboratory in its main office in New York. Hundreds of physicians make use of this laboratory, for here are put through many tests which they could not make in their own offices.

In addition to the report of the examining physician, our staff has your personal history blank, covering family and personal history, past illnesses, dietetic and general living habits. All of this data is studied by physicians especially trained in this work.

## A Staff of 5000 Physicians

IT makes no difference where you live. The Life Extension Institute comes to you wherever you are. It has a staff of fourteen examining physicians in its main office in New York, a branch office in Chicago, and a staff of more than 5000 physicians throughout the United States.

The same questions are asked—the same tests made—wherever you take the examination. The same extended blanks are furnished all examining physicians. All reports are reviewed at the main office of the Institute. You could not assemble such a mass of expert medical intelligence in years under any other conditions.

Don't delay. Consider this Health Examination in the form of an investment. If there is anything wrong with you, you want to know about it. And if there isn't anything the matter, you want to know that, too.

The cost of membership in the Life Extension Institute is low, because of its humanitarian character and national ideals.

For your own satisfaction and well-being, as well as your family and those dependent on you, sign and send in the coupon below, requesting further information.

**HON. WILLIAM H. TAFT**

Robt. W. deForest

Irving Fisher  
Eugene Lyman Fisk  
Harold A. Ley  
Charles H. Sabin

The Life Extension Institute has a Hygiene Reference Board of 100 leading scientific men, including the Surgeon Generals of the Army and Navy, and U. S. Public Health Service; several Ex-Presidents of the American Medical Association; Commissioners of Public Health, and others interested in the public welfare. Matters of scientific policy and educational material used in the Institute's service are submitted to this Board for opinion.

Among the many prominent business houses that have asked the Life Extension Institute to examine their vital, important executives are the Guaranty Trust Company, Pan-American Motor Car Company, Solvay Process Company and the Barrett Manufacturing Company. The Standard Oil Company of New York has chosen the Institute to examine the men they have selected for important work abroad. Foreign representatives of the American Red Cross, the Y. M. C. A., and the Y. W. C. A. are examined by the Institute before going abroad.

# RAILROAD METHODS FOR MOTOR TRUCKS

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

A cardinal principal in successful railroad operation is to haul as few empty cars, both freight and passenger, as possible. Paying loads behind locomotives at all times is the desideratum. And in modern railroading this plan is the rule, exceptions being limited largely to special types of cars, such as the coal gondolas, which must return empty to the mines, and cattle cars which carry their loads to the big cities and return empty to the cattle raising districts.

In the past instances of long distance, interurban, highway transportation by motor truck have been comparatively few. With only a one way load even the efficient motor truck could not compete on a cost basis with the railroad freight car which secured paying loads coming and going. Such progress as the truck did make in the long haul field was limited to certain kinds of loads, as in the case of furniture where the saving in handling was an important factor. The development of motor truck haulage was thus largely in city and suburban work, where the lack of a two way load was compensated for by the saving in time otherwise required in the extra loading and unloading. In other words the return load is necessary only when the loading and unloading time is short compared with the traveling time.

All this, however, was prior to the new conditions in the transportation field resulting from the war. These new conditions, the inability of railroad and inland water transportation services to meet the requirements of increased agricultural and industrial production and the added military needs, first became acute about two years ago. Naturally the motor truck stepped into the breach, as it has done under similar conditions in this country in the last few months, and its use for long distance hauling has steadily increased ever since. From the first it was appreciated on the other side that, in order to secure real efficiency, motor trucks must carry loads whenever on the road. Thus a truck delivering goods for its owner, say an English textile manufacturer located at York, to a channel port, should return loaded with raw material or machinery for its owner or some other plant in the vicinity of York.

Special arrangements were made to ensure return loads, and in England this work is now directed by a commission whose membership includes government officials and motor truck users, while in France a governmental commission is in charge. These arrangements abroad are now such that in England, for example, army trucks being delivered over the road by their manufacturers, carry loads of munitions or other fabricated products or food supplies, at least on a part of their journey to channel ports. In France they have gone ever farther in that army trucks, whenever required to travel empty, are available for the transport of loads of any character.

Incidentally there is now a keen appreciation abroad of the close relationship between good roads and successful motor truck operation. Road maintenance in France is being more carefully carried out than ever before, and in England the government is urging municipalities and county officials to increase, rather than decrease, the amount of money expended on the highways and streets, suggesting that economy be practised in other directions. The British Government is also said to be

supporting the plan for a special motor truck highway from the Port of Southampton to London and on northward to Liverpool and York. The plan calls for a highway 150 feet wide, two forty foot roadways being built at first, permitting four vehicles to travel abreast in either direction. This highway is not to pass thru cities and large towns, but will touch their outskirts connecting with municipal street systems. The significant feature is that use of this proposed highway is to be largely limited to motor trucks, passenger car travel being considered of secondary importance.

A supply truck for army camp use

The initial development was of two kinds, one where speed in delivering greatly outweighed the cost item; the other where express services and contract operating enabled the trucks to carry loads both ways over regular routes. Under the latter head are to be classed most of the motor trucks to be found daily on the roads between cities in the Eastern and Middle Western States; the routes between New York and Philadelphia and between Cleveland and Akron, Ohio, without doubt carrying the heaviest motor tonnage at this time.

WHEN the Council of National Defense at Washington early last winter appointed a Highway Transport Committee to encourage the use of motor transportation in order to afford some relief to railroad services, this committee took logical action along the lines already followed abroad, and began a movement for the establishment of return load bureaus, as they are called. It was appreciated that motor truck usage in interurban transportation could hardly become an important factor unless the employment of these vehicles for this purpose went much further than the motor express companies and contractors. About every shipper of goods especially in less than (railroad) car lots, the lcl of railroad parlance, over distances up to two or three hundred miles where the road conditions warrant it, should be encouraged to use his motor equipment for the purpose, purchasing motor trucks if necessary. To make such transportation attractive, provision must be made so that a truck delivering manufactured products from Massachusetts at the port of New York, for example, may be sure of quickly and readily securing a paying return load to somewhere near its home garage. Hence the movement for establishment in every city and large town thruout the country of Return Load Bureaus, which will serve the purpose of connecting up empty motor trucks with goods needing transportation in the direction in which the truck is going.

At the time the Highway Transport Committee undertook this phase of its work manufacturing interests in different parts of Connecticut were coöperating along these

same lines. This fact, coupled with the fine roads of that state and its great industrial transportation requirements, influenced the committee in centralizing its efforts on Connecticut. As a result of coöperation on the part of chambers of commerce and other business organizations there are now about seven hundred motor trucks, with capacities of one ton and over, operating over forty-nine routes, between fourteen manufacturing cities in the State of Connecticut, on a return load basis. Hartford is the hub of this extensive coöperative motor transportation system, and the State Highway Department helped materially last winter by utilizing motor snow plows to keep the roads open. New Jersey stands next in line in point of progress made in establishing agencies for providing return loads for motor trucks, and other leading Eastern states will soon be in line.

Direct governmental aid may be forthcoming if Congress acts favorably on two bills now before it. One would prohibit less than carload shipments over short distances by railroad; the other permits the railroads to operate their own motor truck services for delivering freight to house and store. The latter is copied from England where for years the railroads have used motor trucks for delivering and collecting freight, just as the express companies collect and deliver express matter in this country and also as "feeders."

This Highway Transport Committee has also been partially identified with the plan originated several weeks ago, of sending army motor trucks from the factories where they are built to Atlantic ports and Eastern camps under their own power, with a paying load aboard. It was figured that the thirty thousand army trucks ordered by the Government would require fifteen thousand freight cars for their transport East under the usual plan of delivery. Sending them over the road would thus save 600,000 tons of freight car capacity, while the loads they would carry, figured on a two ton average, would be an additional 60,000 tons saving.

All well and good on paper, but unfortunately the single factor of bad road conditions has jeopardized the success of this plan to date. To be sure the trucks in considerable numbers have made the run from Detroit, Cleveland, Buffalo, and other points to the Eastern seaboard, but in the two items of load carried and condition on arrival there is much to be desired.

THERE are stretches of road in Ohio, on the Eastern route via Pennsylvania, i. e., the Lincoln Highway, and between Utica and Albany along the Mohawk Valley, which are harder on a truck than six months of ordinary service on good roads. And the army trucks must choose between these two routes. As a matter of fact they are now coming over the Lincoln Highway, traversing part of Ohio on the platforms of railroad flat cars. It was formerly said that the principal factor in the successful operation of a motor truck was the driver. Now it is the road.

Roadbed, grades, and distances are vital factors in railroad operating, and we have seen tremendous sums expended to shorten a railroad line a comparatively few miles, and to reduce grades and curves. These factors are just as vital in motor truck operation and when this is properly appreciated we will surely be railroading motor trucks.

*GMC trucks are built in all practical sizes, 3/4-ton to 5-ton capacity — six sizes in all. Each size better suited than any of the rest for a particular class of work.*

## Via GMC Through Freight—

Every once in a while comes an upheaval in the stereotyped way of doing things; traditions are swept away by a more direct, more efficient method.

Just now the pressure has overcome time-honored traffic rules, and transportation has broken out on a new line, due to the exigencies of the time.

The motor truck has superseded the slow freight with its annoying delays, cumbersome routine, and vexing uncertainty.

Instead of draying goods to the freight house at the shipping end, then waiting while they are checked, loaded, hauled, unloaded, re-checked and delivered, many shippers are serving customers direct by GMC Through Freight.

GMC Trucks are taking part in this kind of service as fast as a factory working overtime can turn them out. They are

rolling forth on the paved and unpaved highways of commerce.

In relieving the traffic-bound business world GMC Trucks are playing a prominent part in solving a national problem, And in doing this the road-ability of GMC Trucks has demonstrated that direct-to-destination trucking, regardless of roads or weather, is sure, practical and satisfactory.

No matter what your line of business may be, there is a GMC Truck to fit your requirements. They are built in six practical sizes.

*Let your next truck be a GMC.*

# THE CHAUTAUQUA CIRCLE

A MONTHLY DEPARTMENT DEVOTED TO HOME READING,  
SELF-CULTURE AND POPULAR EDUCATION, CONDUCTED  
IN ASSOCIATION WITH CHAUTAUQUA INSTITUTION

## THE SUBMERGED YEARS,

BY IDA B. COLE

SECRETARY OF THE CHAUTAUQUA  
HOME READING CIRCLE

**T**HERE is a period in the life of the average mother which may be called the submerged years, when she is necessarily absorbed in home and family and when household cares are so exacting that her opportunities for other things are limited. The going-to-school hour in the morning is a sample of mother's activities. She may be soothing a restless baby while at the same time telling Mary whether to wear a green or blue hair ribbon, and Johnny where to find the misplaced arithmetic, answering one of Sammy's fifty-seven questions, giving the daily order to the grocery man who stands at the back door, and watching several articles of food cooking on the top of the stove.

The mother who employs no domestic help fills a number of occupations. She is cook, waitress, laundress, seamstress, dishwasher, nurse, scrub-woman, buyer for the household, and if she lives on a farm perhaps also dairy-maid, poultry raiser and gardener. None of these occupations can be seriously or continually neglected.

And there is such a sameness to the routine! Food prepared with much time and thought only to disappear quickly down the family throats, beds made only to be tossed up again, floors swept to be gone over again the next day, dust removed only to be replaced by more! No wonder she sometimes looks out of the window at the great world beyond and almost sighs because she is "tied to the house."

In these submerged years the mother determines her future. She may fall a victim to the stress and become a pitiful spectacle, mentally run down at the heels, or her brain may become atrophied so that she sinks into self complacency. Why should she bother herself, she asks? Let the school-teacher look after the mind of her child, she is paid to do it. Let the Sunday school teacher look after his morals, she is appointed to do it. Has not she as a mother done her duty when she has filled the child's stomach with food and covered his body with garments? She is content to live on the kitchen side of life and in a home of mental poverty. Such women grow middle-aged in body but mentally they have the unripeness, without the promise, of their "teens."

Again the mother may become bitter during these submerged years and complain that she is unappreciated; and when a woman offers herself as a family doormat the chances are that she will be walked upon.

On the other hand this woman may decide that to be an all-round mother she must develop herself mentally and physically, that she will be the intellectual comrade of her husband and children. She will recognize the fact that home-making is a profession and motherhood a serious business. Her position in the family is not that of a drudge pure and simple but one of dignified service. She must keep herself fit for her task; and if any person needs refinement and the richness that comes from intimate touch with the world's great minds it is the mother. Knowledge and inspiration must come to her in her home. Books are the medium.

The busy mother has no time to plan a course of reading and the Chautauqua Course has met her needs with its well-selected books and carefully prepared helps. The Chautauqua Home Reading Circles have helped thousands of mothers find themselves and keep their poise during these years. Reading of the right kind has given them inspiration, and added beauty and richness to days and tasks that otherwise would have been monotonous and sometimes discouraging.

The submerged years should be very precious for childhood does not last long. One mother writes, "Having the care of a home and four children it has been impossible for me to get away for recreation or study, but the Chautauqua Circle has brought the world to me during these last four years and has been the chief uplifting influence in my life. I shudder to think what life would have been to me without it. The most gratifying thing about the four years' course is the help it has enabled me to give my children. Their faith in me is something to be proud of. I am able to answer their questions, from the sophomore down to the first-grader. If I cannot answer at once, we always go to the Chautauqua corner, and what is more important answer them broadmindedly."

**T**HE Chautauqua reading course is planned for busy people. Twenty minutes a day is needed and every mother owes it to herself and her family to devote at least so much time daily to her own development. Lay aside the work for a few minutes, eliminate or shorten some task, and let your reading take you into other realms of thought. It will rest you mentally, refresh you bodily, and send you back to your duties with renewed vigor. The woman who declares she cannot take even a few moments time for herself each day should remember that the family will appreciate a cheerful, companionable mother more than some unnecessary work done by a mother broken down in health. Most housekeepers perform some tasks which are not necessary for family happiness, and the time thus spent would count for more in the years to come if used for reading. Sometimes, it is true, the twenty minutes a day may be found with difficulty as in the case of a mother of twins who wrote, "I do my Chautauqua reading when the babies are taking their naps, but sometimes the difficulty is that they both do not want to sleep at the same time."

Few women lead as busy a life as the reader who says, "The course has been the chief cultural event of my life. I read in crowded circumstances. I have two children, am post-mistress here, do my housework, cook for the hired help on a 320 acre farm, and clerk in my husband's store. I never read any books which enlarged my views and sympathies as these have."

One Chautauqua Circle mother said to me: "My brain was getting rusty and the

days were so full of work that I did not see where I could get even twenty minutes for reading, but I could not endure the thought that the children were getting ahead of me intellectually so I just laid the matter before the family. When the children realized just how arduous my duties were they were anxious to relieve me. Even the four-year-old offered to 'walk softly when mamma was reading.' The children have been much more thoughtful of me and better than all, they have had more respect for me ever since. I know now that most women can determine their position in their own home and the regard in which the family shall hold them."

I once attended a meeting of a circle whose members were nearly all mothers of young children. Some of them brought the babies to the meeting and there was some one specially appointed to care for them in a separate room or out of doors if the weather permitted, so the mothers had a rest and the babies had a fine visit.

The course of reading is so planned that it may be pursued by the individual who must read alone instead of with a group. One mother says: "I am reading enthusiastically with the ambition to keep abreast of three lively boys whose physical needs are so many that I might grow rusty but for the Chautauqua Course."

Or it may be family reading as in the case of the home from which the following comes: "The family is reading the course and we feel as if we had made a trip abroad with the books on the customs and homelife of other nations."

The Chautauqua Home Reading Course covers a four years' schedule including American, English, European and classical topics and countries. It consists of the reading of four books and the current history in the Story of the Week in The Independent. The reading is planned to extend over eight months of the year and each reader is provided with the Round Table, a teacher element which is issued monthly. It contains programs, review questions, and helps especially intended for those who live in towns where there is no public library or for those who have no time to look up additional references.

Home duties cover a broader field than formerly, and more and more questions once considered entirely out of woman's sphere are left to her for betterment or solution. The man of the family is so engrossed in the affairs of the store or the office, the shop or the field, that he has no time to look after the food question. Indeed, he does not order or cook the food, how should he know about it? He is not in so close contact with the children's daily life as the mother, so why should he be expected to be in as sympathetic touch with the school?
